THIS volume is the completion of a work the publication of which was commenced in 1878. In the first two volumes Judge Fornander, with no written authorities (for none such exist), endeavored to reconstruct the history of the Polynesian race, making use of their legends, traditions, and myths, as they had been orally transmitted from generation to generation, of their religious ceremonies as they existed previously to the introduction of Christianity, of their manners and customs, and whatever else he thought fitted to throw light upon their origin and past history. Of these we have already given some account. This third volume has the character of an independent work.

The great number of languages spoken by the inhabitants of the multitude of islands of the Pacific which are embraced in the common name Polynesia, are supposed to belong to one great family, all the members of which are more or less nearly related. Judge Fornander's object is to show that this family is a branch, and the oldest extant form, of the Indo-European or Aryan tongues; in other words, that the inhabitants of the Polynesian Islands are ethnologically and linguistically our cousins, many hundred times removed indeed, and separated in space by thousands of miles of land and sea, and in time not only by many centuries but by many millenniums of years, but, nevertheless, not so far nor so long that conclusive evidence of a common origin cannot be traced. Judge Fornander possessed some rare qualifications for investigating the character of the Polynesian languages. He had resided in the Hawaiian Islands for thirty-four years. Unlike most foreigners living in a barbarous or semi-civilized nation, he took a warm personal interest in everything connected with the people. The official position which he held brought him into contact with every class of society, from the criminal to the King. He made himself an adept in the national language; he extended his studies to the languages of other islands, and thus acquired a knowledge of Polynesian speech at once extensive and practical. In regard to the Aryan languages he seems to have himself made no special investigations, but he has evidently studied with care the works of Bopp, Max Müller, Whitney, and a very large number of other writers on comparative philology and the general science of language. His work is a comparison of the results of his own long study and practice of the Polynesian languages with the results obtained by others in the field of Aryan philology. We are perfectly willing to admit that his knowledge of the comparative philology of the Aryan languages is as complete as is necessary for his purpose; but we have many and weighty objections to his methods of treating the facts. Throughout his book he appears, not as a judge, but as an advocate. He has a theory to maintain—a theory conceived early in life, and to which he is enthusiastically devoted. We would not have our readers infer that Judge Fornander in any instance consciously misrepresents or distorts the facts. Really great advocates seldom do this. On the contrary, we believe him to be an eminently conscientious writer, but one whose mental eye is blind to everything upon which the light of his theory does not fall. He seems to have little or no appreciation of that cardinal principle of modern scientific investigation, namely, that the investigator should not seek to mould his facts, but should allow his facts to mould him.

Judge Fornander naturally lays great stress upon the authority of Bopp, who, in his now almost forgotten work 'Ueber die Verwandtschaft der Malayisch-Polynesischen Sprache mit den Indo-Europäischen' (Berlin, 1841) advocated a theory in many respects similar to his own. He says, indeed, that to this work "I am indebted for the first idea of comparing the Polynesian and Aryan languages," not for the purpose of testing the truth of Bopp's theory, but "with a view of establishing their common origin." This frank declaration shows the spirit in which he commenced and prosecuted his investigations. Bopp's work met with the unanimous condemnation of the eminent philologists who were proud to acknowledge him as their master in the comparative philology of the Aryan tongues. Among these was Prof. Whitney of Yale, who, in the course of his strictures, remarked: "No man is qualified to compare fruitfully two languages or groups who is not deeply grounded in the knowledge of both." Judge Fornander enters into a somewhat elaborate refutation of the criticisms on Bopp, and says: "I may be permitted to add to Prof. Whitney's maxim, above quoted, that 'no man is qualified to *criticise* fruitfully' a comparison of two languages or groups 'who is not deeply grounded in a knowledge of both.'" We protest against any such addition. Judge Fornander may, we are willing to assume, have a more extensive and accurate knowledge of the Polynesian languages than any living man. Should he write a comparative grammar, say, for example, of the languages of the Hawaiian, Samoan, and Marquesas Islands, he would probably produce an interesting and instructive work. But if his methods, his arguments, and his results were inconsistent with each other and with well-settled linguistic principles, there are scores of living philologists, among them Prof. Whitney, who would be able to point out his mistakes and shortcomings, even though their knowledge of the languages mentioned might be limited to what they had learned from the book itself. To "compare fruitfully" two languages one must undoubtedly be "deeply grounded in a knowledge of both," but the ability to "criticise fruitfully" such a comparison is the result of long study and training not necessarily in the languages compared.

Judge Fornander, in common with many philologists, maintains that many thousands of years ago a race, from which the Indo-Europeans or Aryans are descended, lived somewhere in Central Asia. Here his peculiar theory commences, namely, that a portion of this race separated from the rest, wandered, perhaps by more than one route, to the shores of the Pacific, and, continuing through many ages their eastern course over ocean and land, gradually peopled the many islands of Polynesia. The present inhabitants are the descendants of that primitive Aryan stock. The Malay race came subsequently, and, in opposition to Bopp, Steinthal, and others, he denies all ethnological or linguistic connection between the Malay and Polynesian races except such as arose from intercourse between them. He protests against the attempt "to stick the Polynesian in the Malay pocket," and it is not to be denied that the drift of recent investigation is more and more towards regarding them as races of different origins. This separation of the Polynesians from the original Aryan stock took place, according to Judge Fornander, at a period many thousands of years anterior to the Vedas, and when the Aryan language had as yet developed no inflections at all, or at most only a few germs of the vast and complex system of which the Sanskrit and Greek are the most striking examples.

Now, it is clear that the condition of Aryan speech at that remote period is wholly conjectural. All written documents or inscribed monuments now existing are modern when compared with this long-vanished ancestor. Such a theory leaves one at liberty to conjecture or assume almost anything he pleases or his theory requires, and his conjectures and assumptions are just as valid and just as worthless as those of any other person. Another source of uncertainty and error in Judge Fornander's comparison is of still more importance. The Polynesian languages are remarkable for their phonological simplicity. Judge Fornander says: "The best developed Polynesian alphabet, the Samoan, contains fifteen letters, ten consonants and five vowels: the New-Zealand and Easter Island, fourteen letters; the Tahitian and Marquesas, thirteen letters; the Hawaiian, twelve letters." We may add that the total number of initial letters of the words forming Judge Fornander's vocabulary, which contains words selected from all the above-mentioned languages and many others, is thirteen. To write accurately all the Aryan languages would

require an alphabet containing at least four times as many letters and probably more. The result of this is, that, a Polynesian word being given, the philologist, seeking for an Aryan word with which to connect it, has a wide range of choice, and it would be surprising if he could not find one suited to his purpose. A striking illustration of this is afforded by the words commencing with one of the letters called *mutes*.

In many of the Polynesian languages the only mutes in use are the guttural *k* and the labial *p*. For the *k* of these languages some others of the same family substitute the dental *t*. In Sanskrit, leaving out of view the "cerebrals" (a peculiar class and rarely used to commence words), there are four classes of mutes—gutturals, palatals, dentals, and labials—each class containing four l etters, or sixteen in all. Now, in seeking in Sanskrit for a cognate to a given Polynesian word beginning with *k*, according to the method pursued by Judge Fornander, we are at liberty, so far as its initial letter is concerned, (1) to take any Sanskrit word beginning with any one of the four guttural mutes. (2.) Since the transition of *k* into *t* or vice versa—for Judge Fornander does not, as far as we have been able to discover, tell us which is the older sound—is proved by a multitude of examples, we may take any Sanskrit word beginning with any one of the four dental mutes. (3.) Since the change of a guttural to a labial is very frequent, not only in the Aryan but in many other languages, we may take any Sanskrit word beginning with any one of the four labial mutes. (4.) Since the palatal mutes are only modifications of, and probably all sprung out of, older guttural mutes, we may take any Sanskrit word beginning with any one of the four palatal mutes. (5.) Since the palatal sibillant is demonstrably only a modification of one or another of the palatal mutes, and in like manner the guttural aspirate only a modification of a guttural mute, we may take any Sanskrit word beginning with either of these letters. Hence, a Polynesian word beginning with *k* being given, we may, so far as its initial letter is concerned, seek for a cognate word among all the Sanskrit words beginning with any one of no less than eighteen different letters, or 50 per cent. more than there are in the whole Hawaiian alphabet; and from the Hawaiian language, the one with which Judge Fornander is best acquainted, the large majority of all the words in his vocabulary is taken. But even this is not all. The total loss of an initial consonant is in many cases maintained by great authorities. Thus Bopp, Pott, and Benfey all agree in referring the Lat. *am-āre*, to love, to the Sanskrit root *kam* of the same meaning, so that we may seek the wished-for cognate of our Polynesian word among the Sanskrit words beginning with *a*. Did space permit, we might extend the list still further, but we have given enough to show that a Polynesian *k* may be represented by almost anything and everything in Sanskrit, and that, too, without assuming any transition that cannot be verified by examples.

We have no space to examine any of the words discussed at length by Judge Fornander, but a couple of short specimens, taken entirely at random, will perhaps suffice. These are words commencing with letters other than *k*. The last word in his vocabulary commencing with *h* reads as follows:

"HUPO, *adj.* Haw[aiian], Savage, ignorant, barbarous. Sanskr. *yup*, to confuse, to trouble."

First, as to the form; that a *y* (German *j*) may degenerate into the aspirate *h* can be proved by many examples within the Aryan languages, but an example of the reverse process in any language Judge Fornander would, we think, seek in vain. We must, then, consider the Sanskrit, not the Hawaiian, as the older form. The identity of the next two letters, *u*, *p*, in a word belonging to two languages which have been separated from each other for a period the length of which can only be compared with eras of geology, is in the last degree improbable. As to the final *o* of the Hawaiian word, Judge Fornander says nothing. Next, as to the meaning; Judge Fornander does not attempt to trace the steps by which notions 'to confuse, to trouble,' passed into the notions, 'savage, ignorant, barbarous,' or vice versa. Perhaps he considered the connection too obvious to need explanation. If, however, the Sanskrit root had signified to kill, or to be cruel, or to betray, or to frighten, or to speak a foreign language, or any one of an almost unlimited number of meanings, it would have answered his purpose equally well—in many cases much better than it does now.

Again, under the Hawaiian word, MULI, we are told that it is a preposition meaning 'after, behind'; also a substantive, meaning 'a successor, the last of a series,' etc. To this he refers the Latin *mulier*, a woman, making its fundamental meaning to be 'she "who follows, comes after" the man.' We will not stop to discuss the propriety of dividing the Latin word into *muli* and *er;* but, leaving the *er* out of view, we have the same word, letter for letter, in two languages separated for unnumbered thousands of years, and spoken respectively by two peoples living on almost opposite sides of the earth. Judge Fornander does not seem in this case, as in very many others, to comprehend that such exact accordance weakens rather than strengthens the probability of a common origin. As to the meaning of the two words,it is only necessary to remark that, had the Hawaiian word had any other of the countless meanings in which there is some trace of the vague and general notions of succession, subordination, dependence, or inferiority, his comparison would have been equally satisfactory.

We cannot help thinking that Judge Fornander has missed a great opportunity. The races and the languages of Polynesia are disappearing, at a continually accelerated rate, from the face of the earth. Within two or three centuries the ever-swelling tide of civilization will have swept over them, and the only traces of their speech will be those preserved in books. Had he, for example, without forming any theories at all, used his remarkable knowledge in the construction of a comparative grammar and dictionary of those Polynesian dialects with which he is best acquainted, he would probably have produced an instructive work, and made a contribution to science the value of which would only have been increased by the lapse of time. As it is, this volume contains little of value that cannot be found in other books, and it will either join the "innumerable caravan" of linguistic works which have been constructed "with a view of establishing" a preconceived theory, or it will survive as a noticeable example of wasted learning and misdirected labor.

Baldwin: Being Dialogues on Views and Aspirations. By Vernon Lee. Boston: Roberts Brothers. 1886.

THE writer of this volume, like her young interlocutor, Carlo, exhibits "a boyish passion to understand all modern problems, to be a modern man," if it is not ungallant to say so; and often like him, too, she seems to be sitting "meditating with boyish rapture upon possible adjectives." "Modernness" in the topic, and the extraordinary rather than the exquisite in the expression, are the traits of her work. Cosmopolitanism, of course, is essential; and the characters are collectively of different nationalities, and, individually, of international education, or mixed blood. The æsthetic element in "modernness" is also carefully attended to; each of the six dialogues is relieved on a choice landscape of sunset, or mist, or Italian afternoon, and is set forth in that pyrotechnic diction of the color-sense so curiously like the language in which bridal trousseaus are described. At proper intervals the face of Napoleon turns up on a coin "with a vague splendor as of Mantegna's triumphs, a vague clangor as of Cherubini's music about him"; or else it is the mosaics of Ravenna, frescoes or country plays or Italian villas, Signorelli, Tiepolo, St. Augustine's and Rousseau's Confessions, 'Une Vie,' 'Wuthering Heights'—and the rest of all that.

The characters themselves are marvellous, if one looks at them through the words of their creator. Such, for example, is Olivia, a "strange, diaphanous blond beauty, less a woman than a series of exquisite movements," whose "thinness" is said to "affect one like a kind of intellectual superiority." Baldwin, the hero, who is by no means "modest and militant like one of Plato's youths," has the rôle of intellectual dictator, and goes through the part with a "I have passed through it all myself, my dear boy," which becomes so habitual an attitude to him that at the end, when Olivia closes a glowing page of rhetoric with "Do you not know the paralyzing awe of that moment of comprehension?" he merely "nods"; perhaps some excuse for him lies in the fact that at the moment "only the sea seemed made of something less illusory than delicate tinted chalks on reddish prepared paper." In the midst of such earthly scenes, characters, and æsthetic rag-tag of art, music, and letters, six very serious discussions are carried on, mainly upon religious, scientific, and literary questions of the day.

To come to the substance of the volume, one ought to say somewhat emphatically that it is remarkably full of thought, of the "modern" kind, often forcibly and always brightly said. The "modern" thought which has made most havoc with Vernon Lee is the notion that morality, being the creature of human relations, does not appertain to the Deity. To one who, like Baldwin, has "been there himself," the reading is somewhat wearisome; nor can we think it is healthful for mind or soul, despite the high ethical standard of positivist humanitarianism which is insisted on as the result of the trains of thought. The literary and artistic discussions are less to be objected to, in substance; but here, too, the lapse of the writer on to the social subjects which are "taboo" to the pens of young ladies, is disagreeable. While agreeing with the positions taken so far as the Novel is concerned, one cannot but smile at the phraseology which declares late French literature "a symptom of a particular sort of humorless morbidness which is one of the unbeautiful phases of growth." The matter is not helped by putting the discussion of this topic in the mouth of one who continually remarks that she is "an old woman" and Baldwin can talk out to her. Vivisection is ingeniously treated as a fault of honor, because the animals do not share in the benefits derived from their torture. The Ideal is argued for, and in an able way. Throughout there is a spirit of philanthropy, of practical duty in life, of true aspiration. The book rests upon a fund of knowledge, and is really overbalanced with intellectualism. Indeed, when one considers its faults, it is astonishing how much good can be said of it. The great fault of all is that it is too exclusively "modern"; what is modern is but a small part of that vast experience upon which the problems here discussed rely even for contemporary solution. The great virtue of the book is its reproof to pessimism; but then, as Carlo remarked, "How can one feel bad about a world

in which there are such quantities of interesting questions?" Vernon Lee, it is pretty clear, has not come to the end of her "sums" yet.

Scriptures, Hebrew and Christian; arranged and edited for Young Readers, as an Introduction to the Study of the Bible. By Edward T. Bartlett, A.M., Dean of the Protestant Episcopal Divinity School in Philadelphia, and John P. Peters, Professor of the Old Testament Languages and Literature in the Protestant Episcopal Divinity School in Philadelphia. Vol. i. Hebrew Story from Creation to the Exile. G. P. Putnam's Sons. 1886.

THE Hebrew "story" here presented to young readers "is told in the words of the Bible, but with considerable condensation and rearrangement." The wording is either that of the Authorized Version or of the recent Canterbury Revision, barring some minor changes introduced mainly for the sake of simplification. Into the narrative of events, taken from the Pentateuch and the historical books of the Old Testament, appropriate selections from the Psalms, the Proverbs, and the Prophets are woven. The Law has been left out, its treatment, with that of the Hebrew customs and literature, being reserved for the second volume of the work. The third will contain selections from the New Testament. No comments, explanations, or notes of any kind are appended, save a few very brief insertions in parenthesis, and—in a prefatory table—"A few dates fixed by comparison with the Assyrian-Babylonian monuments." This table evinces, on the part of the compilers, a freer critical treatment of the Hebrew traditions than does, for instance, the selection of the Psalms embodied in the history of David, "as illustrative of the great King's life and genius," and introduced as those "which most critics consider Davidic." Some of these are as un-Davidic on their face as almost any in the Psalter. With the exception of the "Few Dates" and a few more concessions to Assyriology, everything in the volume before us is, in fact, likely to satisfy the most devoted Bible teacher, just as the general execution, internal and external, is calculated to please all readers, youthful or otherwise.

For our part, we should have preferred a stricter adherence to the contents of the Biblical texts, since no critical sifting of the traditions was intended. If the story of the deluge, for instance, is to be told as found, with the ark containing all clean beasts by sevens, and all unclean by twos, and the fowls of heaven by sevens, why suppress the dimensions of the ark, or the age of Noah when he entered it? Why suppress the ages of even the postdiluvian patriarchs, or the years of Sarah when she bore Isaac? Is it on account of intrinsic improbability? Why is not also the talk of the serpent in Eden or of Balaam's ass omitted? If, in the account of Sennacherib's invasion, the young readers can be told that "the angel of Jehovah went forth, and smote the camp of the Assyrians, and they arose early in the morning, and, behold, they were all dead corpses," why not also state that the number of those smitten dead was a hundred and four-score and five thousand? To attenuate the Bible miracles by omissions, and thus render them more acceptable, appears to us a proceeding hardly compatible with fidelity to the Holy Writ or to history.

A History of the Custom-Revenue in England from the Earliest Times to the Year 1827. Compiled exclusively from Original Authorities. By Hubert Hall. 2 vols. London.

THE development of taxation in England is primarily a study of constitutional development, but by most of the writers on English constitutional history, Stubbs excepted, the direct taxes are dwelt upon to the exclusion of the indirect, which are quite as important from the point of administration, though of less importance from the point of revenue. The two volumes of Mr. Hall, compiled with labor and research, and containing much new matter carefully digested, give to the growth and rise of the custom revenue in England a prominence which was before impossible from the want of material. Whether Mr. Hall's theory of the origin of customs—meaning by that term duties upon imports and exports—will be finally adopted, is a question wholly apart from the intrinsic merits of his work. Confined for the most part to the legislation and commercial conditions of a time anterior to written records, he has developed this theory by analogy; and while this is a dangerous instrument of thought, it must be admitted that he has used his materials with discretion and ingenuity, and his conclusion is plausible.

In general, all customs appertained to the King's prerogative, and were levied according to his discretion, or rather according to his necessities. They early became instruments of fiscal oppression, being directed against the commerce of foreigners, either to advance the interests of English merchants or to protect native industry. And while the Crown was, as early as 1275, deprived of much of its arbitrary power of levying customs, its prerogative of restraining trade and imposing onerous burdens on the trade of foreigners remained not only undisturbed but undisputed. Foreign merchants or trading companies frequently purchased immunity; yet, as Mr. Hall says, to the custos of the ports, the riverside baron, the wayside outlaw, and the town apprentice, the Lombard or Flemish peddler appeared fair game for violence and extortion in every form. In the earlier records of the customs the oppressive features, undoubtedly framed with intent, are of higher interest than the revenue or fiscal characteristics. The long struggle between King and Parliament, in which the one upheld its prerogative against the attempts of the other to curtail it—a struggle which ended in giving Parliament a complete control over taxation—has been described in connection with land and direct taxes, and Mr. Hall shows that the same course of events occurred, with some variations, in the import and export duties.

The earliest records of customs in England prove that these taxes had already reached a comparatively high stage of development, and do not therefore explain how they arose. Mr. Hall believes them to have been originally an extension to trade of the arbitrary power of the King over the property of his subject. The practice of purveyance—a tax paid in kind—was probably one of the leading features in the rude system of tribal taxation; and with the rise and growth of commerce it was very natural to extend the practice to imports and exports. Preemption, prisage, and purveyance involve one and the same idea, and the earlier customs are sometimes spoken of as prisage—as the prisage of wines. Indeed, Mr. Hall says that purveyance was separated from customs during the reign of Edward III. at the latest; and many of the rolls and records show how closely the two were connected, if they were separate forms of taxation. The abuses under an uncontrolled power of the Crown became so great and oppressive that the rates both for imports and exports became fixed, and the limiting statutes and convention constitute the great landmarks in the history of the custom revenue. Having secured an immunity from arbitrary taxation themselves, the English were quite willing to see this instrument of restraint and prohibition turned against their competitors, and the policy of extreme protection was in force practically until the reciprocity system of Huskisson began to break down the commercial system by adopting the enlightened policy of Adam Smith; and it is practically in force to-day in the tariff of the United States.

The strong point of Mr. Hall's work is its treatment of early taxation, which is full and valuable; the weak point is the summary manner in which the later history and development are described. He rather ends with the Middle Ages instead of bringing the record down to 1827 as stated in his title-page. But this fault can be overlooked because of the great mass of interesting detail in connection with each special branch of the custom revenue. The importance and relations of prises, tolls, butlerage, subsidies, maltolte, and the various local customs, so bewildering to one who would determine the proper place and function of each, is better shown by a separate treatment than when described as part of a system in which they occupied a comparatively unimportant place. For this reason Mr. Hall's volumes will be quite as necessary to the student of English institutions as to the economist.

The American Salmon Fisherman. By Henry P. Wells. Harper & Brothers. 1886.

ALTHOUGH salmon fishing on the well-stocked Canadian rivers is not at all the high art which many of its votaries represent it on their return to New York, still a fortnight spent near the head of the tide on the Restigouche is scarcely a sufficient preparation for a book on the subject. That Mr. Wells does not agree with this view is evident in nearly every page of his volume. He dissents firmly from some of the most cherished beliefs of the experienced angler, and establishes, to his own satisfaction, the truth of his statements by mathematical formulæ, demonstrating to his readers in the same process his own ignorance and conceit. We doubt if there is a rule of conduct more imperative than that of dropping the point of the rod when a fish is hooked and jumps from the water at the end of a run, lest the sudden strain of his whole weight as he drops back into his native element be brought on the tackle. Mr. Wells shows this idea to be a mistaken one, and that by the dipping of the rod at the leap the fish will throw the hook from his mouth. If he had seen a dozen fish break loose through following his recommendation, and known that by obeying the archaic rule very few, if any, were ever lost at the leap (we have never known of a single case), he might have turned his engines the other way and destroyed the theory which nobody but himself holds. He has fallen into the common error of novices of keeping his salmon on after they are hooked as long as there is a gasp in them. An hour and a half seems his favorite period of time for killing a fish. This reminds us of the Irish story of the Portumna man who hooked a salmon at 8 P. M., played him all night, went home to breakfast in the morning (leaving the rod with a friend meantime), published the details of the struggle in the paper, then went back to the river and landed the fish, which weighed—sixteen pounds! In such water as that on which Mr. Wells made his début, having no heavy rapids or bad places, an average of fifteen minutes would be all a good angler would require to kill his fish. An occasional one might take half an hour, but ten to twelve minutes would do for the majority. An hour and fifty minutes, which is the time he states was required to land a fish said to weigh thirty-two pounds, is simply absurd. We have seen a thirty-eight and a half pounder killed in eight minutes on a very much harder piece of water than that fished by Mr. Wells; and although he says the hour-and-fifty-minute fish was lightly hooked and the fly dropped from his mouth as soon as he touched

the bank, he must have been well hooked, or the protracted dawdling with him would have worn the hold out long before. "Put all the pressure on your fish the tackle will bear, and get him ashore as soon as possible," is the rule which will save more lightly hooked ones than any other.

Among the further items of misinformation which Mr. Wells's book contains are the following. He speaks (pp. 29 and 141) of striking on the rise of a fish, and, after a long explanation of just how the salmon takes the fly, says that not to strike is an absolute condition precedent to success; that "when a salmon so rises as to disturb the surface of the water, it manifests its presence long before it has touched the fly," and "if the angler then strikes he simply snatches the fly from the astonished fish." The rule about not striking is good on the Restigouche and other rivers where the volume of water is large and the current uniformly strong. In such water a trout will hook himself as well as a salmon. The current at the same time keeps the line stretched to its full length, and sweeps the rising fish away from the fly as soon as he touches it, so that if he touches it he is almost certain to hook himself. A salmon does not come at a fly with any more deliberation than a trout if he means to take it, and generally already has the fly in his mouth when his rise is apparent, though the wave he creates while coming for the fly is sometimes seen when he follows it along the surface. Very frequently, however, the fly is taken without the top of the water being at all disturbed by the fish—a sharp tug giving the angler the first intimation of his success. The objection to striking on such heavy water as the Restigouche is not, as Mr. Wells states, that you "snatch the fly from the astonished fish," but that with a heavy salmon going one way, aided by the force of the current, and the angler striking in the other direction, there is almost a certainty of something breaking with the jerk. In certain rivers, where the water is not strong, the fly has to be worked more against the current; and if the angler does not strike as soon as he sees the rise, he will lose a large proportion of his fish. The Nepisiquit River is an example of this kind of water. Mr. Wells's arbitrary rule as to striking, therefore, is good only in heavy water, and for a reason altogether different from the one he assigns.

Mr. Wells's strictures on spliced rods seem rather strange to those persons who have used them for salmon fishing. The only objection to rods put together with splices instead of ferrules, and it is a serious one, is the trouble of putting them together and taking them apart; but when properly spliced, there is no doubt of their superior durability to a ferruled rod, though there may be no perceptible difference in their action. The weak point in a ferruled rod is of course at the ferrules, and, while many never give way there, every salmon angler of experience can tell of many that have so given way, whereas the place of union in spliced rods is the very strongest part of the whole.

On the subject of casting-lines or leaders, Mr. Wells approves of single gut, and professes to test his lines up to eight pounds. To stand this the gut must be exceptionally good, and even a successful outcome from this test is apt to weaken it so that it gives way in the real time of need. It is like proving a horse's capacity to win a two-mile race in the afternoon by giving him a three-mile trial in the morning. If the gut is round and transparent, a test of four or five pounds is plenty to apply. Mr. Wells attributes salmon rising short to his fly on a certain good fishing day to the fact of his using a casting-line of braided (probably twisted) gut. We think him mistaken about this, as, especially in the lower waters of the Restigouche, the early run of fish will take a fly attached to the silk line itself about as readily as if tied to a single-gut cast, and treble-gut casts are used through June just as effectively as single ones. When the water gets low and clear, and fish have been some time in the river, and fished over, they become wary and suspicious.

The gaff in its turn receives Mr. Wells's attention, and he calmly demonstrates that the form now held in most esteem by such anglers as Mr. Cholmondeley-Pennell and Major Traherne is not the thing, and that one he bought of an Indian is. Flies are treated in the same spirit, though, we must admit, in an interesting manner, well calculated to make the tyro think Mr. Wells must be an angler and deserving of confidence. To the general public the book is likely to be attractive though misleading. Despite its pretensions it does not rise above the very low level of the average of American works on angling.

Friedrich der Grosse. Denkwürdigkeiten seines Lebens nach seinen Schriften, seinem Briefwechsel und den Berichten seiner Zeitgenossen. Leipzig: F. W. Grunow; New York: Westermann. 1886. 2 vols., pp. 594 and 504.

THESE volumes appear as a centennial tribute to the memory of Frederick the Great, who died August 17, 1786. The editor, with whose name we are not made acquainted, comments in a short preface upon the toilsomeness of the King's life, more especially upon his prodigious industry in the writing of letters, edicts, despatches, and the like. Impressive figures are given to show the extent of his productivity in this direction, and the value of the product to historical investigators past and future is duly insisted on.

"But," says our preface, "these documents can also be made useful in another way. It is not every one's affair to gather together from huge, inaccessible, or half-forgotten volumes those deliverances of the King which are of the most importance for the understanding of his mind and heart, and which, by virtue of their genial wit and their charm of expression, form unsurpassably interesting and delightful reading."

The editor has accordingly undertaken to do this gathering himself, and it must be said that he has done it well. Intending his anthology for the general reader rather than for the professional student of history, he has been at no pains to present his material in its strictly original form; he translates the King's French, and modernizes, corrects, or annotates his German as occasion arises. Brief bibliographical notes are given at the bottom of the page, and further notes of a biographical or historical character are added at the end of each volume. The separate documents, numbering in all 559, are presented in chronological order, beginning with a letter from the Crown Prince to his "dear papa" of September 11, 1728, and ending with the last letter in Preuss's great collection, a brief note written by the King just before his death. The volumes contain, so far as we have discovered, nothing that is new, and very little that has not been used for all it is worth in more than one history of Frederick's life.

Obviously the difficulties inherent in an editorial task of this kind were very great, and it is not the fault of the compiler if a great many of his pages fall a good deal short of that superlative excellence which he himself claims for the cream of Frederick's writing. There is very little indeed in the two volumes which we should describe as "unsurpassably interesting and delightful," or which we should select for special praise because of its "genial wit" or its "charm of expression." In his better moods, Frederick wrote with much *verve*, and at such times he was capable of rhetorical felicities that would have done no discredit to Voltaire. But the writing to which this statement is at all applicable was always done in French, and the royal French appears here uniformly in elegant modern German. As to the King's German, it has when at its best a blunt, businesslike directness which deserves all the praise usually given to that particular quality of style. More than this can hardly be said. Nor, speaking from a purely literary point of view, are we more impressed with the matter than with the manner of the King's writing. His verses, of which our editor gives us a plenty, are no better than they have always been held to be. His literary judgments are conventional, and suffer from lack of real insight. His philosophy, even if it does not quite deserve the unqualified contempt with which it is commonly spoken of by the transcendentally illuminated, is, nevertheless, not of a kind to sink by its own weight into the affections of a modern reader.

Notwithstanding all this, however, we are far from saying or thinking that the compilation entirely misses its aim. It is historically highly interesting and valuable. It furnishes us in easily manageable compass a portrait of the King which is unimpeachable so far as it goes, and which at the same time goes far enough for all ordinary purposes. The memoirs will be especially useful for the portion of Frederick's career following the Peace of Hubertsburg in 1763. These years take up nearly the whole of the second volume, whereas in Carlyle's work a single book, the last of twenty-one, is devoted to them. This period, though less dramatic and picturesque than the preceding one of war, is yet of scarcely less moment in the history of the Prussian monarchy, and of even superior importance for the understanding of Frederick II. It was not until then that his character as man and as ruler had time and space to show itself completely. To speak at all of this character with reference to the impression left by the work that has been under consideration, would carry us too far for the present occasion. Suffice it to say, we find neither Macaulay's Frederick nor Carlyle's; neither a despotic monster nor a guileless hero-king. Not the least entertaining portion of the memoirs consists of certain specimens of the marginal notes made by Vater Fritz upon petitions, reports, and the like. Our notice shall close with one of these royal glosses written upon a private pension bill somewhat more than a hundred years ago. A Frenchman prays for the continuance to himself of the pension of 75 thalers which his deceased spouse had received as midwife. *Er kann ja nicht accouchiren*, is the marginal comment.

BOOKS OF THE WEEK.

Diercks, G. Nordafrika im Lichte der Kulturgeschichte. Munich: Georg D. W. Callwey.
Eckstein, E. Aphrodite: A Romance of Ancient Hellas. Wm. S. Gottsberger.
Noble, T. C. The Names of Those Persons who Subscribed towards the Defence of This Country at the Time of the Spanish Armada, 1588, etc. London: Alfred Russell Smith.
Packard, Prof. A. S. First Lessons in Zoölogy. Henry Holt & Co. $1.00.
Pratt, Dr. H. New Aspects of Life and Religion. London: Williams & Norgate.
Smart, H. Bad to Beat. Rand, McNally & Co. 25 cents.
Vines, S. H. Lectures on the Physiology of Plants. Macmillan & Co. $5.00.
Vogüé, Eugène-Melchior de. Le Roman russe. Paris: Plon & Nourrit; Boston: Schoenhof.
Ward, W. The Clothes of Religion: A Reply to Popular Positivism. Catholic Publication Society.
Wendté, C. W. The Carol; A Collection of Religious Songs. The J. Church Co.
Wentworth, G. A. Elements of Analytic Geometry. Boston: Ginn & Co. $1.10.
Westall, W. The Phantom City: A Volcanic Romance. Cassell & Co.
Wharton, T. Hannibal of New York. Henry Holt & Co. 50 cents.
Who Took It, and Other Stories. Cassell & Co. 15 cents.
Wing, A. S. Mortality Experience of the Provident Life and Trust Company of Philadelphia: 1866-85. Philadelphia.
Winsor, J. Narrative and Critical History of America. Vol. 3.—English Explorations and Settlements in North America. 1497-1689. Boston: Houghton, Mifflin & Co.
Wood, J. G. First Natural History Reader. Boston: School Supply Co.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 2, 1886.

The Week.

Two Republican State conventions adopted platforms on Wednesday, in Ohio and in Iowa. The most striking feature in these deliverances is the absence of any "plank" referring to the rights of colored men as distinguished from those of any other class of citizens. The Iowa Convention does indeed "denounce the abuses of the elective privilege which in the Southern section of our country, *and in many Northern cities*, continue to make elections a mockery," etc. The coupling of the Southern section with Northern cities removes the abuses of the elective franchise from the category of party politics. How painfully this omission to notice the "greatest crime of the age" will strike Senator Hoar, can scarcely be imagined. The remissness of the Ohio Convention is all the more remarkable since its deliberations were held under the immediate eye of Gov. Foraker, and within hearing of Senator Sherman, both of whom were nearly wild on the subject of Southern outrages in the last State campaign.

The two platforms are alike in demanding pensions for all soldiers who are disabled and in want, without regard to the cause or degree of disability or want. Both denounce President Cleveland for vetoing private pension bills. The Ohio platform calls these vetoes "heartless and wholesale." In the same breath both denounce the Administration and the Democratic party for reckless extravagance in appropriations of public money. The inference to be drawn from these two "planks" is, that the bung should be drawn out of the Treasury in favor of everything called a soldier bill, and the spigot which supplies the daily expenses to the Government stopped up. The Iowa Convention endorses the Morrison surplus resolution, and severely condemns the President for killing it by a "pocket veto," this act having been committed "in violation of the expressed will of the people"—a view which the Republicans of the Eastern States do most explicitly dissent from. The Ohio men had nothing to say about the surplus resolution, but they went to the extreme of absurdity in another direction, demanding an increase of the duties on wool, which will certainly not be tolerated by their brethren in the East. Aside from the points enumerated the two platforms are very much alike, consisting in hearty approbation of virtue, morality, and good order, and vigorous denunciations of the wicked.

Still another Republican State Convention, that of Michigan, has adopted a platform without any allusion to the rights of colored men as distinguished from the rights of white men. Three such platforms in two days constitute a most striking acknowledgment of the success of President Cleveland's Administration in eliminating the negro question from politics. It would not be far out of the way to say that the Republican party has declared "in thunder tones" that there is no longer any such issue, and that the accession of the Democrats to power has been the cause of its disappearance. It is certain that the Republicans never before failed to make the most of it. It is equally certain that they would not fail now to "wave the bloody shirt" if there were any such thing to wave. Moreover, the Republicans in convention assembled are just as keenly alive to the dangers attending Chinese labor, and pauper labor, and contract labor, and prison labor, as the Democrats. It is not that they have forgotten any of the rights or wrongs of the downtrodden and oppressed. They have simply recognized the fact that the ensanguined garment has gone from among us. Surely, nothing could be more easily spared.

A further step towards wiping out the color line in our politics was taken in Pennsylvania on Thursday, when the Rev. J. M. Palmer, a negro clergyman of Pittsburgh, announced his desertion of the Republican party and was nominated for Congressman-at-Large by the Prohibition Convention. Mr. Palmer said that he had been a Republican, and admitted that his race owed a great debt to the Republican party; "but I think," he added, "the debt has been paid, and paid with compound interest, too." The convention in which he stood meant, in his opinion, that black men are to act like white men on public questions; "we are not to be moved any more by our emotion and sensibilities, but to exercise our rights as we see them to be right." "The color line," he declared, "is a thing of the past."

A story comes from Washington that certain Republican managers think of transporting a number of negroes from the South to States like Indiana, where more Republican votes are badly needed. There has been much talk of such a project for years, and there doubtless are Republican politicians silly enough to have seriously considered it. But it would be a dangerous experiment in these days, when the party managers in Arkansas are confronted with bolts among the colored voters, and the stump speakers have to plead with them not to vote the Democratic ticket, and when a negro is the candidate for State Auditor on the Democratic ticket in Kansas.

The Republican managers are divided in opinion as to how the Prohibitionists ought to be treated. One set favors the plan of coddling them, while another is so thoroughly out of temper that it cannot resist the temptation to call names. Senator Frye of Maine is one of the latter wing, and declared in his recent speech that some of the leaders of the third party are "unblushing, impudent scoundrels, who are helped by the Democratic party to defeat the Republican party." But this policy of abuse does not strike many Republicans as good politics. Thus, the Rutland *Herald*, one of the leading Republican papers of Vermont, says of Senator Frye's speech, referring to the "smirch" passage as well as the "scoundrel" business: "Whether this is true or not, we question its wisdom. If the Republican party would win next time, it must cease calling names, come up to its old-time high standards, merit the confidence of the best men, and thus make it impossible for bad men in shining garments to mislead any considerable number."

The action of the Prohibition party in Pennsylvania in putting a full State ticket in the field, composed entirely of former Republicans, makes the situation there extremely interesting. The Republican managers are perceptibly troubled by the outlook, and well they may be. The head of their ticket is a weak man personally, who has been defeated once for the same office. He does not command the full support of his party, as the Blaine faction, which openly opposed him in his former canvass, is not heartily supporting him now. The Democrats also have made a poor nomination in selecting as their candidate for Governor an avowed opponent of the President's civil-service reform policy. In this condition of affairs a full Prohibition ticket with such an experienced campaigner at its head as Charles S. Wolfe is likely to insure a lively canvass, if it does not wipe out that seemingly indestructible Republican majority of 80,000 which the State gave to Blaine.

Mr. Blaine's speech has of course been hailed with the usual round of acclamations by the thoroughgoing Blaine organs, which style it "a masterpiece of lucid exposition" and laud its "luminous diction and elevation of tone." But it is noticeable that the Republican newspapers which are something more than mere personal organs, either are reserved in their comments or openly express their dissent. Thus the Providence *Journal* points out that Mr. Blaine's argument that the great increase in savings-bank deposits in the manufacturing States is attributable solely to protection, is "at once one-sided and incomplete," since it leaves out of sight other important factors, while his omission to give any hint that the tariff requires modification it thinks "is not true statesmanship." The *Journal* exposes the weakness of other passages in the speech, and concludes with this severe characterization of the effort:

> "On the whole, we do not see that Mr. Blaine has contributed anything to the perspicuity of Republican doctrines or to the theory of future success. He wholly ignores the question of the currency; he has not one word to say in behalf of civil-service reform; he sees nothing worthy of notice in the growing material and social prospects of the South, and he perceives nothing for praise or gratitude in the immense agricultural advance and wealth of the country. The speech is the speech of an advocate, and not the speech of a statesman."

Mr. Blaine's notions of "protection to home industry" do not admit that there is any room for reform in the tariff except perhaps in the direction of an increase of duties on imported goods. He "points with pride" to the fact that no word and no vote was ever given by him inconsistent with this view. This statement, like many of the positive declarations made by Mr. Blaine on great public occasions, is extremely misleading. He did

vote to remove the duties on coal in the Forty-second Congress, and he boasted of this vote in a debate in the same Congress, as tending to show his own disinterestedness, he being at the time an owner of coal lands in Pennsylvania. (Vide *Cong. Globe*, First Session Forty-second Congress, page 126.) Now a vote for free coal cannot be distinguished in principle from a vote for free ore, or free salt, or free codfish. In other words, it cannot be distinguished from the principle of the Morrison bill, which was, on the whole, a milder and less radical measure than the one favored by Mr. Blaine in 1871–72

The American Free-Trade League have issued an address to the public which falls in very pat with Mr. Blaine's attempt to revive an interest in the doctrine of "protection to home industry." The address points to the failure of the large Democratic majority in the House of Representatives to pass a bill for tariff reform looking only to the removal of the heavy burden of taxation from a few leading industries, and to the refusal of the Republicans even to consider a measure to that end, although both parties are committed by their platforms to some kind of reform of the tariff. Under such circumstances the Free-Trade League consider that the time has come when all persons who believe in tariff reform should cast their votes for or against candidates for Congress on this distinct issue. Taking the vote on the Morrison Tariff Bill as a guide, it may be seen that a very small change in the complexion of the House would suffice to convert the minority into a majority, and that this change might be effected by less than 5 per cent. of the voters in a few Congressional districts. The address does not propose the formation of a new party, but merely such action as may be necessary to make the tariff-reform vote effective in both parties.

Since Mr. Blaine entered upon the Maine canvass he has been met everywhere with a circular calling attention to the famous scheme of distributing the whiskey tax among the States, which he brought out with such a flourish three years ago, but dropped like a hot potato when he found that it did not take with the public. It was an embarrassing dilemma, but he finally concluded to stand by his old position, much as he disliked to say anything about it. So he said: "I would do it again, and if the issue ever comes where the United States does not need the tax, then let the United States still raise it and give it per capita to the States, and they will find some good use for it." But this reaffirmation of the doctrine only serves to emphasize in the public mind the conviction of the wrongheadedness of a man who can advocate such a policy, and provokes such exposures of Mr. Blaine's weakness as these remarks by the Hartford *Courant*, Senator Hawley's paper:

"Taxing the people, not for the legitimate expenses of the general Government, but for giving a largesse to the several States, would be a blow at the independence of the States quite equal to that of putting into the hands of the general Government the power to prohibit the sale of liquor in the States, or assuming the control of their schools. This notion involves a danger more far-reaching to our Union than the thoughtless may imagine. We lean, as paupers, on the Federal Government too much already."

The Blaine campaign in Maine develops fresh humorous features every day. The laboring men seize every occasion to express their contempt for Mr. Blaine's deliverances on the questions which especially concern them, and some of their speakers make exceedingly effective retorts upon him. Thus, Ralph Beaumont of New York evoked hearty applause from a gathering of 4,000 Knights of Labor on Monday, when he contrasted Mr. Blaine's praise of protection with the wretched condition of the miners in the celebrated Hocking Valley region, and said: "For twenty-five years we've had this protection Mr. Blaine offers us, and we have made more millionaires and more paupers under that system than were ever made in a civilized country on the earth in the same time before." While the labor orators are thus ridiculing his nostrum for the cure of the labor troubles, Mr. Blaine's temper is aggravated by the reception which the press of the country has given Senator Frye's famous "smirch" speech at Houlton ten days ago. He is represented by a reporter of the *Sun*, writing from Houlton, Me., to be very angry with Mr. Frye, and poor Mr. Frye, in his attempts to explain, has been forced to have recourse to the familiar old Blaine dodge of claiming that he was misreported. The joke of this is that it raises a "question of veracity" between Mr. Frye and that thoroughgoing Blaine organ, the Boston *Journal*.

The anti-Edmunds movement in Vermont, according to a saying of Judge Poland reported in the *Herald*, "has produced scarcely a ripple in the smooth current of Vermont politics." This is probably true, but the reëlection of Mr. Edmunds, when it takes place, will produce something more than a ripple in national politics. The Vermont Senator said as plainly as possible in the last Presidential campaign: "I will vote the Republican ticket because I think that the Republican party is the fittest to be intrusted with national administration, but I consider the Republican nominee for the Presidency an unfit person to hold that office." The charge brought against him by the Blaine faction is precisely this. Neither Mr. Edmunds nor any one of his supporters has ever denied or palliated it. Now, if a charge of this kind, which is agreed to be well founded and sustained and not denied by anybody, is of so little moment that it produces scarcely a ripple in the politics of the strongest Republican State in the Union—if the person against whom the charge is made is reëlected by a practically unanimous vote, without previous repentance and absolution—then of course the State of Vermont agrees with Senator Edmunds in this matter. The official promulgation of this doctrine will reinforce in a remarkable way Senator Edmunds's advice to the party to go West and choose an unblemished candidate next time.

There seems to be no doubt that the veteran soldiers of the country have repudiated Senator Logan's claim to be their especial friend. The returning delegates from the Grand Army Convention in San Francisco agree in saying that Logan was roundly snubbed there. He took it upon himself to go there and put himself forward as entitled to "run" the Convention. He unfolded there the idea which he had broached a few weeks earlier in Chicago, that every man who served as a soldier in the war came out of the service less competent to earn a livelihood than when he entered, and was therefore entitled to a pension. The Convention adopted by a vote of four to one a resolution condemning this idea, thus telling Logan to his face that they were not the beggars which he had assumed them to be. Their action has seriously damaged the main claim which Logan had for being considered a candidate for the Presidency, and is a most welcome sign that the pension abuse has been carried to its utmost limits. One by one the old "issues" are being pushed aside by the steady progress of events, and as each issue disappears there goes with it a Presidential candidate.

The Democratic press of the South evidently means to leave no doubt as to its attitude towards the Democratic spoilsmen who conceived the idea of supplanting Cleveland with Hill. The Galveston *News*, the leading Democratic paper of Texas, returns to the subject in another leading editorial article, entitled "Can the Spoilsmen and Jobbers Defeat Cleveland?" The *News* sets forth the scheme of these classes to defeat Cleveland in the next Democratic National Convention by "stocking the New York Convention" and sending a Hill delegation, on the presumption that no party will ever nominate a candidate whose own State delegation is against him. The *News* admits that it is very unusual for a candidate to be nominated who has not the united support of his own State, but it points out that a convention is not entirely hedged in by formalities, and that it is possible that delegates may look behind the returns. "There is such a thing," it says, "as the Democrats of the South and West loving Cleveland for the enemies that he has made, and, thus loving him, proceeding to mow down precedents and nominate him over the protests of a stocked delegation from New York." The *News* confesses that if Cleveland should be defeated for renomination by the spoilsmen and jobbers, it would be fatal to the Democratic party, and it concludes that "if the jobbers and spoilsmen should succeed in New York, the Democrats of the South and West, and of New England and the Middle States, would have a duty to perform." This is healthful and refreshing talk, and the best thing about it is that the *News* represents the prevailing sentiment among Southern Democrats, as is clearly shown by the course of the Democratic press throughout that region.

What everybody just now wants to know is, how the Democrats really feel towards their President. The action of the Democratic State conventions in endorsing the Administration throws some light upon the question, but it is objected that such resolutions may be adopted without sincerity and simply as a matter of policy. The best possible way to test party sentiment is to find out how the members of such conventions feel personally towards the President, and what they report to be the feel

ing of the people whom they represent. The St. Louis *Globe-Democrat* has done the public a service by presenting a long series of short interviews, which show clearly what Democratic sentiment is in a State where the President's reform policy encountered perhaps as many obstacles and as much prejudice as anywhere in the country. When the Missouri Democratic State Convention met at St. Louis, the *Globe-Democrat* sent out a large corps of interviewers among the delegates as they loitered about the hotels or took an excursion down the river. Not half-a-dozen delegates shrank from expressing their convictions with entire freedom. The result is twenty-two columns of fine type, giving the brief replies of about 350 delegates to questions whom they favored for United States Senator, how they stood on the prohibition question, what they thought about the President's policy, and what Democratic candidate they favored in 1888.

The last two points are of national interest, and we have taken the pains to look through all the replies to these questions. They constitute uncommonly interesting reading, being strongly tinctured with the individuality of the speakers, and they are full of encouragement to the friends of civil-service reform. Out of 348 men who expressed their views, no less than 325 declared themselves in favor of Cleveland's renomination. Half-a dozen want to see Gov. Hill made the candidate in 1888, these including several who declared their belief in the maxim "To the victors belong the spoils," while the rest favor Morrison or some other Western man, mostly on the ground that Cleveland's financial ideas are too pronouncedly Eastern. A considerable proportion of the 325 found more or less fault with the President's civil-service policy, complaining that "he don't turn the Republicans out fast enough"; "he don't turn the rascals out fast enough to suit me"; "he caters to the Mugwump element entirely too much." But scores of delegates endorsed Mr. Cleveland's policy without the slightest reservation, and with the utmost heartiness, among them being several office-holders elected by Democratic votes, and several editors of Democratic county papers.

It is observable that the Democratic State Convention of Illinois came short of endorsing the Morrison surplus resolution. Instead, they resolved "that the surplus in the national Treasury be applied in payment of the national public debt, to the end that large accumulations in the Treasury beyond the proper necessities of the public service shall not occur, thus assuring honest and economical government, and relieving the people from unnecessary and oppressive taxation." This is exactly what the Treasury Department is doing and always has done under Democratic as well as Republican Administrations. The Morrison resolution called for the disbursement of a fixed sum monthly, regardless of the "proper necessities of the public service." Mr. Morrison is entitled to sympathy under the circumstances. The Iowa Republicans were much more considerate of his feelings: they squarely condemned the "pocket veto,"

An attempt is being made to organize a sort of "no-rent" or "anti-landowners' party" in the city of New York, to which Mr. Henry George modestly sends word that if 30,000 signatures can be obtained to a petition begging him to stand as its candidate for Mayor, he will make that sacrifice. The aims of such a party can be inferred from the nature of Mr. George's apostolate, which proceeds from the dogma that the reason why those who have nothing are poor is, that anybody is permitted by law to own land. A party founded on the principle that if nobody were permitted to own land or anything else all would be rich, is therefore among the possibilities of the immediate future. The inquiry is often made, Why do not all the conditions exist in America for an agitation of the "rent" question and of the "private title to land" question here as in Great Britain? Our private estates are becoming as large in value as any in the world, and some of the largest of them, as the Astors', consist almost wholly of improved lands held for rental. Moreover, although in Great Britain the system of "rack-rent" has become disreputable and identical with cruelty, not only among tenants, but among landlords themselves, it is a singular fact that all the lands rented in America are rented upon "rack-rent," that term meaning the highest rent a landlord is able to get by freely offering his land to the highest bidder. No tenant in the United States thinks of asking a landlord to rent his land or building for less than the highest rent he can get, and never, since the anti-rent agitations of fifty and sixty years ago near Albany, could the least political capital be made by any party by opposing evictions of tenants who failed to pay their rent. The very tenants who regarded it as the extreme of tyranny when they were turned out of their tenant homes in Ireland, can be daily seen in our district courts applying for writs to evict their own tenants here in a manner at least as summary as is known to English or Irish law; yet no outcry is made and no injustice is felt to exist in the case either by the landlord or the tenant. No one doubts that Henry George or John Most, if either owned a house in New York in which a tenant did not pay his rent, would evict the tenant with ordinary promptness and without making any discrimination between land rent and building rent. The propriety of doing so is not questioned in the conscience of any man or class.

In the interval of waiting before the international yacht races begin, public feeling over them seems likely even to outrun that of last year, when the *Genesta* excited more attention than any boat which ever had been seen in our waters. Though both boats are different this year, the contest still presents the same conditions of complicated interest. It is not only an affair of national pride, but a struggle of types. This leaves it a simple matter for the adherent of sloops, but the most patriotic of cutter men "do perceive here a divided duty." They cannot wish to see the cup go abroad, and they cannot wish to see a cutter beaten by a sloop. Probably among yachtsmen of either class the professional feeling is the stronger, and they wish the best boat to win, though fully persuaded beforehand which boat that is. The general public, incapable of such heights of sportsmanlike virtue, desires at least that the Englishman may be beaten, without accident or "fluke," in good sailing weather.

Through the cloudy atmosphere of the East a few facts respecting the Bulgarian revolutions seem now to be discernible. Prince Alexander was assaulted in the night by a band of pro-Russian conspirators, taken prisoner, and conveyed to Russian territory. He would have been detained there if Russia had dared to hold him, but neither the public sentiment nor the court sentiment of Europe would tolerate deprivation of the Prince's liberty. The plot was conceived and executed without the previous knowledge of Prince Bismarck or Count Kálnoky, although both were well aware that Russian intrigue was working against the Prince and that it might take any conceivable shape at any conceivable time. The counter revolution, an entirely spontaneous movement, took place almost immediately, and the diplomats of the Continent set themselves to the task of keeping the peace by persuading Prince Alexander not to go back to Bulgaria. Probably England gave different advice. The Prince, like the high-spirited man he is, would listen to nothing but the cry of his people calling on him to return.

It would be rash to conclude that the dramatic chain of events of which Alexander's restoration is the latest, has come to a stop in the final triumph of a good cause. What has just happened shows how deep-seated is the antagonism of Russian and Germanic national sentiment. Alexander was hunted down by secret tools of Russian Panslavism merely because he is a German; the whole Russian press sounded pæans over his downfall. All Germany—soldiers and civilians, students and officials alike—exult in his recall. The Czar's Government is unable to resist the current of outraged Russian patriotism and insidious Russian demagogism. Bismarck himself, though perhaps inclined to sacrifice some prestige to the interests of peace, will be powerless to stem the tide of German indignation and Magyar animosity if Alexander of Battenberg is not allowed to continue his reign in the anti-Russian interest. Sooner or later some untoward event will force Russia or Austria-Hungary to intervene and begin the great irrepressible conflict in the east of Europe, for which Russophils long from sincere race prejudice, Nihilists from a desire to embroil Czardom in a perilous adventure, Magyars and Teutons from hatred and dread of the Slav power, and French chauvinists in the expectation of a chance to wipe out the memory of Sedan. Greeks and Rumanians, Poles and Montenegrins, build hopes on it, and their excitement adds strength to the never-subsiding ferment of the "Eastern question." England and Turkey dread the outbreak of the conflict, for they have nothing to gain from it, but they may be called to play an important part in it—jointly or otherwise.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, August 25, to TUESDAY, August 31, 1886 inclusive.]

DOMESTIC.

THE State Department has just received an order issued by President Diaz, the Chief Executive of Mexico, through the medium of a circular issued by Señor Mariscal, the Mexican Minister of Foreign Affairs, and distributed throughout the Mexican States, from which it will be seen that the Cutting episode and the action of our State Department in relation thereto are beginning to bear good fruit, which will doubtless benefit Americans now and hereafter under arrest in Mexico. The order recommends that "in case of the arrest of a foreigner for any cause within the limits of your State, you remit to this Department, as soon as possible, a detailed report of the causes for action or legal process, and of the status of the same."

The Iowa Republicans on Wednesday nominated a ticket headed by F. D. Jackson for Secretary of State. The platform charges that the Democratic party has not kept its promises; condemns the "pocket veto" of the Treasury surplus resolution; favors further pension legislation, and condemns the President's veto of pension bills; calls for protection of American labor against pauper and convict labor at home and abroad, and expresses sympathy with the cause of Ireland.

The Ohio Republicans on Wednesday renominated Gen J. S. Robinson for Secretary of State, and nominated M. J. Williams for Supreme Court Judge. The platform declares that the Democrats have failed to keep their pledges; condemns "the heartless and wholesale vetoes by President Cleveland of the private pension bills recently passed by Congress"; favors a high tariff and "the creation by Congress of a national department of labor, the head of which shall be a Cabinet officer, whose duty it shall be to collect, systematize, and publish statistical information relating to the social, sanitary, educational, and commercial condition of the workingmen of the nation"; and extends greetings to Gladstone and Parnell.

The North Carolina Democratic Convention on Wednesday nominated three candidates for judges. A resolution in favor of civil-service reform offered to the Committee on Platform was quickly voted down. The Convention, rather than pass any resolution approving this reform, adjourned without adopting any platform.

The Texas Republicans on Thursday nominated a full State ticket, with A. M. Cockran for Governor. The platform favors the submission of a prohibitory amendment to the people; opposes the hiring out of convicts, and demands their confinement within the walls of penitentiaries; denounces the oppression of the mercantile and laboring interests by monopolies, and favors the Blair Educational Bill.

The Michigan Republicans on Thursday nominated a ticket with Cyrus G. Luce for Governor. The platform favors a protective tariff; declares that "the money of the Constitution is gold and silver coin; and the paper representatives of money, including gold and silver certificates and Treasury and bank notes, should always be converted into coin of equal denomination at the will of the holder"; denounces the President's pension vetoes, and charges the Democratic party with incompetency. There were two reports on the Prohibition question; the majority report, to the effect that "when any considerable portion of the people desire to express themselves by voting upon a change in the organic law, they ought to be allowed to do so, and that the temperance question is one upon which that expression should be permitted," was adopted by a large majority.

The Illinois Democrats on Thursday nominated H. F. T. Riker for State Treasurer. The platform "cordially approves the Administration of President Cleveland for its faithful adherence to the principles of the Democratic party and to the pledges made to the people before the election, and for its ability, integrity, and economy in the administration of national affairs"; favors a revenue tariff and "a financial policy in which gold and silver coin and paper currency convertible into coin on demand shall constitute the circulating medium; that the surplus in the national Treasury shall be applied in payment of the national public debt, to the end that large accumulations in the Treasury beyond the proper necessities of the public service shall not occur, thus assuring honest and economical government and relieving the people from unnecessary and oppressive taxation"; denounces "all conspiracies to defy or resist the constituted authorities," and declares that "the prohibition by Constitution or by general laws of the manufacture or sale of vinous, malt, or spirituous liquors would be in violation of individual and personal rights, and contrary to the fundamental principles of free government."

The California Republicans on Friday nominated for Governor John F. Swift, who was one of the three special envoys sent to China to negotiate the amended treaty between the United States and China. The platform favors coöperation among laborers and the free coinage of silver; denounces the Democratic national Administration for seeking to deprive the people of silver as a circulating medium; and advocates the passage of laws absolutely restricting further immigration of Chinese, but claims for those now in the country under treaty stipulation the protection of the law.

The Prohibitionists of Pennsylvania held an enthusiastic convention last week and nominated a full State ticket, with C. S. Wolfe for Governor. The candidate for Congressman-at-Large, the Rev. J. M. Palmer of Pittsburgh, is a colored man.

A convention in the interest of the New York State canals, held at Syracuse on Wednesday, voted down all resolutions looking to Federal aid for these canals, and adopted resolutions in favor of their enlargement and improvement by the State.

The Prohibitionists are following up Mr. Blaine very closely in Maine. At the Republican meeting in Lewiston on Friday, circulars entitled "Mr. Blaine Defines his Position" were scattered everywhere. They read: "Mr. Blaine, in his speech at North Berwick, declares himself in favor of Government liquor taxation and a distribution of the liquor revenue among the States. Would not this result in fastening the liquor traffic upon the Republicans? How, as a Republican Prohibitionist, can he advocate such a doctrine? Since Government taxation of the traffic recognizes the sale of liquor and demands compensation for the privilege of the manufacture and sale, does not Mr. Blaine place himself in the light of an open advocate of a national license law?"

Ex-Gov. St. John, in response to the question, "Do you propose to accept a renomination for the Presidency in 1888?" said last week: "I do not want to be nominated again for any office. Still, I am in this fight, and shall take whatever positions my associates assign to me."

Geronimo has sent word to Gen. Miles that he will meet him at the San Bernardino ranch to arrange terms of surrender.

There are indications of serious trouble at the Cambria Iron Works, in Johnstown, Pa., in which over 8,000 workmen are employed. For some years every employee of the Cambria Iron and Steel Works has been required to sign an agreement to keep aloof from all labor organizations, and under this system the works have been kept in almost continuous operation. Recently emissaries of the Knights of Labor have been enrolling the men, and as fast as the company has discovered this the newly made Knights have been discharged.

The drivers and conductors of the Broadway and the Belt Line horse railroads in this city, who "tied up" those lines last week because of a dissatisfaction about their pay, returned to work again on Friday and Saturday respectively on the company's terms. During the "tie-up" both lines engaged some new men, and the Broadway line ran a few cars under police protection. The strikers assaulted a great many of the men who wanted to take their places, and stoned and overturned some of the cars.

The final contracts for the construction of a bridge across the Hudson at Poughkeepsie were signed on Friday with the Union Bridge Company of New York, and work is to begin at once.

A shock of earthquake was felt at about ten o'clock Tuesday night over a large part of the United States, causing great alarm in many places. It was especially severe in the Southern States. In Richmond, Va., it caused a panic among the inmates of the penitentiary, a large part of whom were negroes. The military were ordered out to prevent an outbreak. In Raleigh, N. C., Columbia, S. C., Savannah, Ga., Jacksonville, Fla., Memphis, Tenn., and in many other places throughout the South, the shock was so severe that people fled panic-stricken from their houses. In Cleveland, O., and in Terre Haute, Ind., audiences in the theatres became panic-stricken and rushed out of doors. The shock was plainly felt in this city and in all the suburbs. The shock was most severe at the city of Charleston, S. C. Several lives were lost and a number of people injured. Property was badly damaged.

Gov. Hill on Wednesday approved the removal by Mayor Grace of Rollin M. Squire as Commissioner of Public Works of this city, and the Mayor has appointed in his stead Gen. John Newton, Chief of Engineers in the United States Army, who, to accept the position, has been placed on the retired list.

The Surrogate of this city has admitted to probate the will of Jesse Hoyt, which has been the subject of a noted contest. His estate is valued at from $6,000,000 to $8,000,000.

As a result of the late yacht races in this harbor, the *Mayflower* has been selected to compete with the *Galatea* for the *America's* cup The races will be sailed on September 7 and 9 with a deciding race, if necessary, on September 11.

Thomas E. Benedict, Deputy State Comptroller and former editor of the Ellenville (N. Y.) *Press*, has accepted the position of Public Printer at Washington.

Dr. Oliver Wendell Holmes arrived in this city from Europe on Sunday.

Gen. S. C. Armstrong, of the Hampton (Va.) School, has been very ill. He is improving, but his physicians find that his heart is affected, and have ordered him to take entire rest for two or three months.

The horses attached to a carriage in which Senator William M. Evarts, Mr. Charles C. Perkins of Boston, and Miss Jeannie Matthews, daughter of Judge Stanley Matthews, were riding near Windsor, Vt., ran away on Wednesday evening and the inmates were thrown out. Mr. Perkins was instantly killed, and Mr. Evarts and Miss Matthews received painful but not serious bruises. Mr. Perkins was the author of a number of works upon art which have been greatly praised. His 'Tuscan Sculptors' appeared in 1864, and in 1867 'Italian Sculptors.' In 1878 he published a biographical and critical essay upon 'Raphael and Michael Angelo.' At the time of his death he was engaged upon 'The Cyclopedia of American Art,' which was intended to be an exhaustive treatise on this subject. He was one of the original founders of Music Hall in Boston, was a warm friend and patron of the Handel and Haydn Society, was instrumental in establishing the Art Museum there, and was President of the Art Club for some years.

The Rev. James C. Beecher of Cos Cob, Conn., brother of the Rev. Henry Ward Beecher, committed suicide at the Water Cure in Elmira on Thursday evening by shooting himself through the head with a small rifle. He had been suffering under severe mental troubles for a number of years. Mr. Beecher was about fifty-nine years old, and was the youngest son of Dr. Lyman Beecher.

Prof. William Cook, formerly instructor in German at Harvard, and more lately a professor at the Institute of Technology in Boston, accidentally shot himself in the knee on Friday at Chatham, Cape Cod, where he was spending the summer with his family, and died that night.

Ex-Judge Rufus Paine Spalding, one of the organizers of the Republican party, died in Cleveland, O., on Sunday, at the age of 88.

Brevet Maj.-Gen. George H. Gordon died suddenly of heart disease at his home in Framingham, Mass., on Monday evening. He entered the army during the war as a volunteer, and was made Colonel of the Second Massachusetts Regiment, and was promoted rapidly for meritorious conduct. He was the author of several well-known works upon military matters, including a complete history of the services of his regiment.

FOREIGN.

The news about events in Bulgaria has been very conflicting. After the deposition Prince Alexander was put on a yacht and was landed at Reni, in the Russian province of Bessarabia, on Wednesday. Thence he proceeded to Lemberg, Austria, where he arrived on Friday. It is stated that the Russians refused to allow him a saloon carriage or servants, and only released him after Emperor William had telegraphed to the Czar. At Lemberg a delegation sent from the army and people to represent to him the situation in Bulgaria, and to invite him back to assume the reins of government, was awaiting him. The Prince arrived at Bucharest on his return last Sunday morning. A Bulgarian deputation, a guard of honor, and a great concourse of people met the Prince upon his arrival at Giurgevo. The river was crowded with vessels. Amid deafening hurrahs and salvos of artillery, Alexander embarked on the same yacht that conveyed him to Reni, and crossed to Rustchuk, where the Metropolitan and other dignitaries awaited him. All the consuls, including the Russian representatives, were present and tendered their congratulations, and M. Stambuloff formally welcomed him in the name of Bulgaria and restored to him the reins of power. The Prince replied that he had confidence in his people, and was prepared to sacrifice his life for their happiness. A body of officers then approached, crowned the Prince, and carried him on their shoulders to the palace, followed by cheering crowds. The Russian Consul at Sofia has been compelled to ask for a guard to protect his house and person. Every window in his house was broken by a mob, and the crowd threatened to castigate him if he showed himself on the streets. The military cadets at Sofia who joined in the revolt were ill-treated by their loyal comrades, and were obliged to flee. The traitor soldiers say that each received twenty rubles, and that they were told that Alexander had entered into a plot to sell Bulgaria to the Turks. Two of the revolutionary leaders, after a trial by court-martial, have been sentenced to death and a third to life imprisonment.

The Porte has received replies from the various Powers to a circular which it issued announcing Prince Alexander's deposition. With the exception of Italy, the different Governments merely note the contents of the circular. Italy in addition recognizes the Porte's right to protest against the illegality of Prince Alexander's deposition. A Cabinet council was held in Paris on Saturday, at which, it is asserted, *pourparlers* were issued to obtain the sense of the Powers on the advisability of holding a new conference for the purpose of restoring order in Bulgaria. Bismarck and M. de Giers, the Russian Foreign Minister, have had a conference. The *Gazette* of St. Petersburg advises Prince Alexander not to resume the government of Bulgaria, as such a step would only result in a second and more decisive overthrow. The publication of reports of military manœuvres at Wilna and Warsaw is forbidden. The newspapers are only allowed to copy the official reports. Turkey has been massing troops on the Rumelian frontier.

The Bulgarian Cabinet has been remodelled, and is now strongly anti-Russian. M. Nachevics, the Foreign Minister, was the leading spirit in the movement to counteract the Zankoff plot by which Prince Alexander was forced to abdicate.

A manifesto has been issued by Prince Alexander at Rustchuk. It approves the measures adopted by the Stambuloff Regency, confirms the existing Ministry and the appointment of Mutkuroff as Commander-in-Chief of the army, thanks the people and the army for their fidelity and resolute attitude in favor of independence, implores God's blessing, and urges all to unite in promoting the welfare of Bulgaria.

In a recent interview M. de Giers said he did not know what the Czar's present intentions were, but he was sure Russia would not occupy Bulgaria while that country was tranquil. Russia's position would be very delicate and critical should Prince Alexander insist upon the execution of the men who led the conspiracy against him. M. de Giers spoke in condemnation of Prince Alexander's course, and, alluding to England's action in the premises, said that she used everything that came within her reach as an instrument against Russia.

Paul Deroulède, the French advocate whose presence in St. Petersburg, agitating a union of Russia and France in a war against "their common enemy, Germany," has created a sensation, has been given another banquet, this time by Russian authors, artists, and journalists. The tendency of all the toasts and speeches was to emphasize what the French lawyer described as "the inborn sympathy between France and Russia," and the "beneficent influence which French and Russian literature and art exercise upon each other."

In the House of Commons on Thursday night Mr. Parnell's amendment to the reply to the Queen's speech was defeated by a vote of 304 to 181. This vote was not unexpected. The principal speeches of the week were made by Mr. Parnell, Mr. Chamberlain, and Mr. Sexton. The speeches of the Irish members were bold but not of an incendiary tendency. The gist of Mr. Parnell's speech was that the people would not be bamboozled into accepting crumbs in the way of harbors of refuge, fishery piers, and artificial attempts to stimulate Irish manufacture in place of their birthright of national self-government. Mr. Sexton said that the Parnellites would counsel Irishmen to stand by each other and not be intimidated by any fear of combinations. They would remind Irishmen that Mr. Gladstone's great effort to promote peace between the two countries was supported by a million and a quarter of Britons, and that the majority against it consisted of votes only, not of men. They would do everything possible in fairness and justice to promote peace, but they could not make themselves traitors to Ireland by asking the people during the coming winter to pauperize themselves in order to furnish arguments to their own ruin. Mr. Chamberlain said: "I am not going to vote for any amendment which would be equivalent to a vote of censure on the Government. I am not going to do anything to turn this Government out so long as the Government which is to take its place is committed to the separatist policy." There was a lively discussion on Thursday night over Gen. Buller's appointment to Kerry. Ex-Attorney-General Russell contended that the policy of the Government was to degrade Ireland to the level of a savage and barbarous country. Sir Michael Hicks-Beach said Gen. Buller was selected because the Government believed that he would act uprightly, constitutionally, justly, and humanely. The appointment was a civil, not a military one. Gen. Buller would possess the powers of a divisional magistrate, enabling him to do everything necessary to repress crime and outrage.

In the House of Commons on Monday night the Radicals supported two amendments to the address, condemning the annexation of Burmah. The amendments were negatived by majorities of 76 and 73 respectively. Mr. Clark Radical, moved that the debate on the address be adjourned. Lord Randolph Churchill opposed the motion, stating that it was not conceived with a view to public advantage, and that the Government desired to express its opinion to that effect. Mr. Illingworth, Liberal, likened Lord Randolph Churchill to Satan reproving sin. A lively scene followed. The House finally divided, with the following result: For adjourning, 122; against adjourning, 197. Lord Randolph Churchill then agreed to adjourn the debate. The Irishmen have decided not to adopt a policy of organized obstruction, but will maintain the discussions on the estimates. Mr. Sexton will move an amendment on the Belfast riots in spite of private appeals from the Government. The Government has decided to abandon the idea of recouping Irish landlords out of the tax-payers' pockets. The policy is energetically opposed in private by Mr. Chamberlain, who virtually directs the Government from behind.

Mr. Gladstone has published a brochure of fifty-eight pages on the Irish question. It reviews the result of the recent election, discusses home rule, concedes that it and the land-purchase scheme can no longer run together, and in conclusion says: "If I am not egregiously wrong in all that has been said, Ireland has now lying before her a broad and even way in which to walk to the consummation of her wishes. Before her eyes is opened that same path of constitutional and peaceful action, of steady, free, and full discussion, which has led England and Scotland to the achievement of all their pacific triumphs."

Gen. Sir Redvers Buller left Dublin on Monday morning for Tralee. In an interview in relation to his duties in County Kerry he said: "I wish to distinctly state that I have not accepted a dragooning mission; nor shall I assist in evictions My task will be simply to repress moonlighters and insure the safety of life and property. I propose to affect this by means of flying patrols, who shall be able to communicate speedily with a regularly organized system of supports. I do not know whether my plan will prove a success, but I mean to do my duty."

The British corvette *Diamond* took possession in the name of the British Crown of the Kermadec Islands, in the South Pacific Ocean, on the 1st of August.

Fifty thousand workmen, Socialists, and idlers met in Trafalgar Square, London, on Sunday, in an orderly manner, and passed resolutions denouncing the tyranny of the police and the action of the authorities in imprisoning the Socialist Williams.

The Trades-Unions' Congress in Paris has adopted resolutions declaring that children under fourteen years of age should not be allowed to work, and demanding that the labor of working women be limited to eight hours daily, with no night work.

Greece was on Friday visited by an earthquake, which proved most disastrous in the Morea, and in which the loss of life reaches 600. Pyrgo and Philiatra, both situated on the western coast of the Morea, and four other towns, were completely destroyed.

THE CUTTING AFFAIR FROM THE MEXICAN POINT OF VIEW.

ONE of the alleged objects of the mission of Mr. Sedgwick to Mexico is to ascertain whether there had been any change in the legal basis of the prosecution since the first steps were taken. Some insight into this question may be derived from a study of the Mexican press during the period of the agitation. We limit ourselves, of course, to what the Mexican newspapers had to say of the law of the case, though it may be remarked in passing that their general tone was one of dignity, patience, and confidence in their own Government. It will be observed, also, that reference is had to the press of the capital alone.

Cutting was arrested on the 23d of June. Nothing was heard of any resulting trouble until about the 25th of July, when rumors were circulating in the City of Mexico that Secretary Bayard had made a peremptory demand for the release of an American citizen illegally detained. The press at once bristled with inquiries directed to the *Diario Oficial*, asking the facts in the case. That Government journal declined to make any statement at the time, on the ground that the affair was a delicate matter of diplomatic adjustment. In fact, nothing official was made public until August 12, when all the correspondence between the two countries and the authorized report of Cutting's trial and sentence were published. But there are certain journals, with good reason supposed to be very near to the Administration, of which *El Partido Liberal* is the most prominent, and held to be the most directly "inspired." This paper made frequent editorial reference to the international complication, always asserting that the Government was acting within the laws of the country and without any violation of international right. As to the question of fact, it was taken for granted that Cutting was arrested for having published a libel in Texas. Nothing was said at that time about any theory of "continuing offence." As to the question of law, it was thought sufficient to cite article 186 of the Penal Code, asserting extra-territorial jurisdiction under certain conditions realized in the case of Cutting. A similar position was taken on July 30 by *La Patria*, another semi-official paper, which took pains to set forth both the facts and the law of the case, asserting that Secretary Bayard had been deceived by Consul Brigham into acting with precipitation.

On the 7th of August *El Monitor* published a letter written from El Paso four days before by a lawyer of Chihuahua who had gone to the scene of the trial. This letter, it was editorially remarked, "made clear the jurisdiction of the Mexican court in this notorious case." It had but two substantial points. The first was that the trial was to be had before the Judge of Letters instead of before the Alcalde of El Paso, where it originated. This change of hearing was called for by that section of the Penal Code which makes an alcalde incompetent to try a person accused of a crime punishable with a fine of from $300 to $2,000, and imprisonment of from six months to two years. The second material part of the letter set forth that "in instituting this trial, and in justification of the imprisonment, the authorities of the State rely upon article 186 of the Penal Code," etc. Most important of all, as showing the prevailing legal view in Mexico before the trial, is an article which appeared in the law journal *El Foro* of August 6—an article written, according to Secretary Mariscal, "by an intelligent judge of this capital." *El Foro* explicitly renounces the theory of "continuing offence," to enter upon which would, it declares, "engulf ourselves [the figure is its own] in the difficult field of metaphysics." It concedes that no relation whatever exists between the first and second offences, and definitely sets out from "what took place on American territory." It makes no allusion to the circulation of the libel on Mexican soil. Its whole contention is for the extra-territorial jurisdiction which Secretary Bayard denies. First pointing out that all the conditions of article 186 are met in Cutting's case, it argues that the said article "is not a note in discord with the principles of the rights of nations." Showing that the article in question was copied from articles 5 and 7 of the French Criminal Code, it cites the authority of the leading Mexican jurist and commentator, Ortolan, as to the scope of the article, and in support of its harmony with international law it appeals to the opinions of Foelix, Voet, Boehmer, Martens, Saalfeld, and Pinheiro-Ferreira. For the rest, it contents itself with pointing out that Cutting, even supposing the facts were as he supposed, did not select his proper remedy. Instead of renouncing the jurisdiction of the Court, he should have appealed from it, on the issue of competency, to the Supreme Court of the State, whence the question might have gone, if necessary, to the Federal Supreme Court, and have been settled amicably. There is certainly significance in thus finding that the leading legal opinion of Mexico, before the trial, rested the justification of the prosecution of Cutting on the sole ground of extra-territorial jurisdiction.

If we turn now to the official correspondence, first made public in Mexico on the 12th of August, we get the following facts: on July 6 Minister Jackson addressed a note to Secretary Mariscal, stating that he had received an official communication from Consul Brigham to the effect that an American citizen, Cutting, was imprisoned in El Paso, that the quarters assigned him were abominably filthy, and that the Judge refused to release him on bail. The American ambassador also referred to the fact that the arrest was made for an offence committed on American soil, but added that it was not his province to discuss that matter, inasmuch as it had already been called to the attention of his Department of State by Consul Brigham. Secretary Mariscal promptly responds, July 7, saying that the Governor of Chihuahua has been directed to see that Cutting have a speedy trial, and that the discomforts of his situation be relieved. July 19 Mr. Jackson forwards to Secretary Mariscal the demand of Mr. Bayard for the immediate release of Cutting. July 21 Mr. Jackson again writes to Mariscal, saying that he has waited two days without a response, and has meantime heard nothing of the liberation of Cutting. Thereupon the Mexican Secretary responds on the same day, stating that his Government is doing everything possible to secure to Cutting a fair and speedy trial; that it is not possible for the Federal power to interfere with the legal processes of a sovereign State; that this sudden demand of the American Government must have been made at the instance of private persons or a badly informed press; and protesting the desire of his Government to do everything within its lawful power to assure a friendly peace between the two countries. July 27 Minister Romero telegraphs from Washington that information has been asked both in the Senate and House as to the status of the Cutting affair, and that Secretary Bayard, in a private letter to the Mexican Minister, asks if he can announce that his request for the liberation of Cutting is granted or soon will be, and says that in case this is done within a short time, the information will be withheld. July 28 Mariscal telegraphs Romero that the court is proceeding as rapidly as possible in the case of Cutting, and that the result will depend on the legal decision. July 29 Romero replies that he has communicated the foregoing telegram to Secretary Bayard, who seemed much disappointed, and said that he would lay the whole affair before Congress. This was done on August 2, Mr. Bayard stating in his letter of information that he had been shown by Minister Romero a copy of article 186 of the Mexican Code, in support of the Mexican position. It is interesting to note that Señor Romero did this by order of Secretary Mariscal. This is brought out only indirectly in the correspondence and telegrams published by the *Diario Oficial*. It is evident that Secretary Mariscal did not publish all the telegrams sent to his Minister at Washington, for in a letter to Romero, dated August 12, published in the *Diario* the same day, thus reaching the Mexican public (and perhaps a part of the American) before it reached the Mexican Minister, he says, "I take this pains to defend article 186, *to which I called your attention in a telegram as applicable to the case of Cutting*," etc.

Thus it is clear that the position of the Mexican Government, as well as the theory of the prosecution, so far as the Mexican press knew, up to the time of the trial, was an absolute resting on the extra-territorial jurisdiction of the Mexican court. The first indication of any change of view is seen in the telegrams sent to the Mexican press from El Paso during the actual progress of the trial. These telegrams differ in some particulars from those sent at the same time to the American newspapers by the Associated Press. Thus the despatches of the 6th of August hint that new ground is taken by the prosecution, in asserting that the affidavit of Medina set forth that Cutting had failed to comply with the act of reconciliation, and that he had circulated the libel, printed in Texas, on the Mexican side of the river. So on the next day, when sentence was pronounced, Consul Brigham was reported as asking if the sentence meant that the publication of an article in a Texas paper was held to be a violation of the act of reconciliation, and the Judge was reported as replying that the Court so held. By the 12th of August, on the publication of Secretary Mariscal's last letter to

Minister Romero, together with the full text of the decision of Judge Zubia, the Mexican public was given clearly to see the new ground taken. It is true that both the letter and the decision stoutly stand up for article 186, and the competency of the Mexican court acting under that alone, but at the same time they so develop and magnify the new points as to show that in the last resort dependence would be placed upon them. It is not strange, then, that the Associated Press despatches of August 13 from the City of Mexico say that "the published decision of Judge Zubia is regarded here as putting the case in a new light."

Secretary Mariscal's defence of extra-territorial jurisdiction is an able argument to show that it is in harmony with the laws of almost all countries that have adopted the system of Roman jurisprudence. He admits that it is contrary to the general theory of the common law, though he maintains that it often finds endorsement in the statute legislation of countries that deny the principle of extra-territoriality, citing here a law "proposed" by Livingston for the State of Louisiana, a case before a Pennsylvania court in 1794, and various remarks of Wheaton and Story. But he undertakes this defence of article 186, he says, "not because I judge it indispensable to the jurisdiction of the Mexican courts in this case, for, as you will observe in the decision of the judge which I enclose, the crime committed in Texas by Cutting may be taken, and is fundamentally taken, as a continuation of that committed in El Paso del Norte, where he at once returned to circulate what he had published in El Paso, Texas."

The full text of the decision of Judge Zubia, a long and somewhat rambling document, first makes a prolonged recital of the facts. Nothing new appears here, except an indication of the time when the change of legal ground in the prosecution took place. "On the 22d the offended party enlarged the accusation, setting forth that although the paper, the *Herald*, is published in Texas, Cutting circulated it in great numbers in the interior of the republic." This date, July 22, may have some significance in estimating the effect of Secretary Bayard's demand of July 19. The Judge then proceeds to a discussion of the legal principles involved, in the course of which he shifts his ground once or twice, showing a strong desire to rest the whole case on article 186, but finally concluding that the "continuing offence" theory is safer; decides that, under the dictum, "*ratihabitio retrotrahitur ad initium*," Cutting is on trial for the original libel; and passes sentence accordingly.

Happily the whole affair seems now to be relegated to the slow and harmless interchange of diplomatic notes. We presume that even Secretary Bayard no longer doubts that Cutting was finally condemned, whatever may have been the first thought of the Mexican authorities, under a legal decision which cannot be questioned. Meanwhile, if he can, by especial embassy or otherwise, induce Mexico to expunge from her Code the obnoxious article 186, it may be an excellent thing to do, but it will be a thing which is not likely either to prevent or provoke a war.

THE ANARCHIST DISEASE.

At the Anarchist meeting held on Tuesday week at Cleveland, one Christ Saam is reported as saying that the "reigning class," having declared war (by the Chicago verdict), should have war to the knife; that the struggle would continue until the great Anarchist revolution should sweep away all law and dictation; and that the Constitution as now regarded is not worth the paper on which it is written. A Mr. Ohlsen followed, declaring that "what had occurred in Chicago was liable to take place in Cleveland and other cities." Thereupon a committee of nine (one eleventh of the whole meeting), was appointed to "demand of the Mayor the right to use the public square for a mass meeting of working people" to protest against the conviction of the Chicago conspirators. The Mayor promptly denied the request. There are, therefore, fully 100 persons in Cleveland who profess to believe that murder, if committed in the name of anarchy, ought not to be punished by law. A like number also profess to believe that a meeting to defend and advocate murder can properly be called in a public square as a "mass meeting of working people." What is the exact relation in which such agitators as those at Cleveland stand to the epidemic of strikes which has prevailed throughout the country for a year past? To what extent are they the consequence of the strikes, and to what extent are they the cause?

It is worthy of note that the past year has not been one of physical distress among wage-workers, nor of extended or general loss of employment, nor of exceptionally low wages. The wage-workers and Socialists themselves in their meetings do not attribute their agitation and strikes to their reduced wages and long hours, but to their great and sudden increase of late in economic intelligence. They say that their class have worked heretofore at the dictation of employers because they thought they were obliged to, but lately they have discovered the means whereby labor can dictate to capital, and make it crouch and turn pale. It is in this experiment of making capital "crouch and turn pale" that strikes are frequently instituted. At the centre and core of every such strike can be found not physical distress, not starving babies, nor evicted tenants, nor public soup-houses to feed the famishing able-bodied men lying on their bellies to "wear out their hunger," not processions of the unemployed, as was seen in Ireland in the famine of 1846 and in New York city after the panic of 1857, but only comfortably dressed and well-fed people, with plenty of beer, fully employed, many of them with deposits in savings banks, children at school, reading weekly three or four Socialist newspapers, and ranging themselves under the lead of some prophet of the new dispensation like Martin Irons, who, by what is called the "organization of labor," is enabled to order out of work into idleness and out of comfort into starvation 5,000 men whom he never saw and who never saw him, to whom he never paid a dollar of wages, who did not claim to have a grievance, but on whose behalf he sought to bring on a supposed great social revolution. The only scenes of physical distress which have characterized all these strikes have been those which followed the strikes, not preceded them. Both the Third Avenue and the Missouri Pacific strikes were begun with loud trumpetings of the cash in the treasury with which to pay the strikers as good wages for lying idle as they could earn by being at work.

Remark also that the year of uncalled-for strikes was preceded by a year of unprecedented shrinkage of capital, in which hundreds of millions of dollars of supposed value disappeared from the great corporate stocks of the companies in the United States which employ most labor—all without one cent of direct loss to the laborers themselves, and without any suspension of employment. They kept on at full work and fair wages for the "black year," notwithstanding their wages were, in fact, often paid out of capital and not out of earnings. This, at least, was a gain which they could not have made had the heavy enterprises of the country all been in the hands of men of small capital and perhaps in debt, who would have been thrown into bankruptcy by the great shrinkage. Doubtless in some quarters such a year would naturally be followed by efforts at retrenchment on the part of managers. Yet it is the concurrent testimony of wage-workers themselves and of all observers, that, except where strikes interrupt labor, employment has seldom been so general and steady as it now is, that wages average as high as two years ago, and are made higher effectively by the cheaper prices of commodities.

The salient feature of the striking epidemic is, therefore, that it is caused by the mental mood of the wage-workers, and not by any other grievance than the fact that they do not themselves own the capital which hires them, but have worked themselves into the belief that they ought to own it. As the British Parliament have undertaken to divide the title to land into two titles—a landlord's title and a tenant's title—so the Socialist theory is that by prolonged agitation American legislators and political parties can be constrained into splitting the title to personal property (capital) in two, and making the wage-workers the managers of all enterprises, allowing the capitalists to be retired on a sort of *per diem*, as the princes of India were retired by the East India Company. This vagary marks the present epidemic, not as a period of social distress, of which there is very little indeed; but as a period of mental craze, like that which would in earlier times have attended the general belief that the philosopher's stone was about to be discovered, or that the new Jerusalem, with gates of pearl and golden streets, was about to be let down from heaven by its four corners.

ANOTHER VIEW OF THE HEIDELBERG FESTIVAL.

Heidelberg, August 7.

Heidelberg, although it now yields to several other rivals, and notably to Berlin, Leipzig, and Munich, both in the number of its students and the brilliancy of its professorial staff, has played a great part in German history. In the latter half of the sixteenth century it was the chief seat of Calvinistic theology. In the middle of the nineteenth, from 1815 down till 1866, it exercised no small influence on the intellectual or

ideal side of the movement for the unification of Germany as well as for the winning of political freedom. At most times it has possessed a considerable number of eminent teachers, and some of these, such as Puffendorf in the seventeenth century, Gervinus, Häusser, and Bluntschli in our own time, have filled a place in political as well as in literary history. Add to this that being placed in a comparatively small city, whose population is even now only twenty-six thousand, its student life has permeated the place more completely, and made it more distinctively a university town, than could happen in a large centre of population such as Berlin, Leipzig, or Vienna. All these features, not to speak of its picturesque situation, on which the romantic Germans set much store, have enabled Heidelberg to command a sympathy from the world at large as well as from the German nation such as few other European universities enjoy.

That tendency to overdo everything which the stranger frequently observes in Germany, showed itself in the arrangements for the quincentenary celebration. It lasted a whole week from Monday forenoon till Saturday night, too long a time to keep the stream of sentiment flowing. The programme included not only a religious service, a solemn reception of deputations from other universities, and a banquet, but also an anniversary discourse, a conferring of honorary degrees, a gigantic Commers or student's drinking bout, a reception at Karlsruhe, the capital of Baden, by the Grand Duke, and an "Historical Procession," of which more anon. The Germans, with characteristic thoroughness, went right through the whole of this programme with apparent satisfaction; and the foreign visitors, feeling that the like was expected from them, did the same, albeit somewhat fatigued by having to attend to so much said and done in a strange language. They felt, however, that the ceremony would have gained by concentration, and that they would have derived more enjoyment from opportunities of easy intercourse with the eminent persons assembled than they did from the official receptions and discourses.

These foreign visitors were, however, very few in number compared with the Germans—chiefly, of course, professors who flocked from the other universities; and the festival altogether wore much more of a national than of an international character. Italy, France, England, and America were scantily represented, and still more scanty was the public recognition bestowed upon their representatives. Privately they were entertained with cordial hospitality, but, considering the distance from which they came and the compliment which their presence as delegates from the other great nations of the world conveyed to Heidelberg, it was surprising that a larger measure of official courtesy was not extended to them. The impression which the gathering of German guests made on a foreigner was very striking. All the learning of the country seemed to be gathered under one roof at the banquet—the great hall crowded with faces full of vast knowledge and keen intelligence, bearing names some of them famous everywhere, the rest well known at least to special students of the various branches of inquiry which universities pursue. England and America put together could hardly have furnished forth such a mass of learning as this one dining-hall contained. Yet those present were not a tithe of the whole professoriate of Germany; and some of the best-known names, such as Döllinger, Kirchhoff, Hoffmann, K. Maurer, Haeckel, Von Sybel, Dahn, Wellhausen, Pfleiderer, Von Holst, were not among the guests. Among the different subjects, law was perhaps the most largely represented; for law has long been a department in which Heidelberg shone, and during the time when Vangerow lectured (from 1854 till 1870) it was a nursery of jurists who have now scattered themselves over the other universities. No jurist, however, was an object of so much interest as the veteran Mommsen, who, though he once lectured on law, has obtained far greater fame as the historian of Rome and the editor of the 'Corpus Inscriptionum.' His aquiline nose, keen eyes, and lithe, quick-moving figure, darting like a firefly through the groups of guests, drew the attention of Germans as well as foreigners, who saw in his activity hopes for an old age scarcely less productive than Ranke's.

The most novel and prettiest thing in the whole festival was the historical procession, which set forth, by groups of figures dressed in the costume of their respective periods, seven epochs in the history of the University and city. It filed slowly through the streets, taking twenty minutes to pass, and was witnessed by a crowd of strangers which must have reached eighty thousand. Of the other parts of the programme, those most suggestive to foreign eyes were the students' Commers and the banquet at which the Grand Duke presided. Persons who have themselves not been at a German university are astonished to observe the importance attached to what they regard as a mere drinking bout, at which gallons of beer are consumed, sentimental songs in praise of wine and love are sung, and a mummery of crossing swords and rattling down mugs and glasses upon the table is religiously gone through. But his student life is really the one wild, romantic, reckless, poetical period of a German's life, after he escapes from the rigid thraldom of school, and before the scarcely less heavy yoke of conventional observance and monotonous duty is laid on him by his professional position and the rules of decorum which it prescribes. An American or an Englishman is all his life so much freer, in the sense of being so much more able to please himself in the way of life he leads, as well as in the sense of having less interference from state authority to fear, that he does not feel this exuberant delight in the college years, and remembers them more as the years of intellectual growth, or of the forming of friendships, or simply of enjoyment careless of the future, than as being specifically the years of freedom and romance. To explain why the freedom and romance of German student life connect themselves so closely with wine and beer, though this needs much explanation for the other branches of the Teutonic family, would lead me too far from the present theme, which is to remark on the importance attached to this lighter side of student life, to which neither the English nor the American universities present a complete parallel, and to which those of Italy and Scotland (in some respects the most truly mediæval) have apparently no parallel at all. One is tempted to think that the political tendencies of the German university *Verbindungen* or students' clubs, which were important during the times of absolutism after 1815, may have something to do with the sympathy now shown for them by those who rejoice in the progress made towards liberty and unity.

In the speeches made at this students' night festival, which was attended by the Grand Duke and all the eminent guests, and still more in the speeches delivered at the great banquet—speeches commendably short, clear, and direct—much less was said about the University of Heidelberg, about universities in general, about learning, science, and education, than the foreign visitors expected. They came expecting a festival of learning and they found a demonstration of patriotism. The main theme of all the addresses was German unity, German national strength, German military glory. Fifteen years have passed since the triumphant campaign which left France prostrate and restored Alsace-Lorraine to the conquerors; but the whole struggle was as fresh, as supremely important to the minds of these learned festival-keepers, as if they were on the morrow of victory. Not that the speeches breathed war, or implied the probability of its renewal; so far as they expressly referred to the future, those of the Grand Duke and the Crown Prince were pacific in tone; indeed, the only exception to this good feeling was to be found in some words of the Pro-rector Prof. Becker, which were calculated to give offence to the French visitors. But the intellectual achievements of Germany—achievements that might have been so appropriately commemorated on this occasion; achievements which Englishmen and Americans, Frenchmen and Italians, Scandinavians and Flemings, came prepared to applaud—did not seem to be uppermost in the mind of the German throng. Whatever a speaker began to speak about, he was sure to come round to the reëstablished German empire and the grandeur of the reunited German people.

When one thinks of the causes of this, it is natural enough. Men who have seen that accomplished which was the dream of their youth; men of the younger generation who have actually fought, as did many of these professors, in the campaigns of 1866 and 1870, and wear the Iron Cross upon their breasts; men who expect to be engaged, before a few seasons have passed, in another and perhaps more desperate struggle against France and Russia, cannot help putting war and politics first in their mind. Perhaps this tells against the intellectual life of the nation, making that life less ideal, because the strength of the State so largely depends on its material resources, and turning the ambition of the people into a political rather than an artistic or literary or scientific channel. Some of the older men may be heard to deplore the ultra-practical tendencies of the new generation. Certainly the passion for the greatness of the empire has tended to strengthen monarchy and the monarchical principle, and to weaken the desire for the development of constitutional freedom. What with the fear of France and Russia on the one side and the fear of socialism and anarchism on the other, the Germans seem less disposed now than ever before within living memory to move towards that democratic republicanism which used to appear the natural goal of civilized peoples. The old Emperor William is a popular hero such as America has not seen since Gen. Washington, and England never at all. The Crown Prince and Bismarck come not far behind; the imperial dynasty and its ministers are, in fact, practically omnipotent, and will be supported in any action they may take. In Baden this loyalty to the head of the empire is seconded by a warm attachment to the Grand Duke and Duchess, who, it must in fairness be said, seem to have well deserved it by their popular sympathies, their interest in the University, and the singular simplicity and courtesy of their manners. They sat smiling and apparently unwearied through the most tedious ceremonies, and moved with natural grace and unaffected friendliness among their guests. To one who remembers the distractions of Germany twenty years ago, the present harmony of sentiment, the conviction of every German you talk with that the unity of the nation, the permanence of the empire, are perfectly assured against all local jealousies of particular States or races, is very impressive. Whatever may be the results in the moral and intellectual life of the people, this unity of government and harmony of sentiment are of good augury for the peace of the European Continent, which it lies in the hands of Germany to maintain.

O. D.

AMONG THE TUSCAN HILLS.

CAPRAIA, August 12.

JUST twenty years ago, when Florence was the capital of Italy and the centre of all the preparations for the war against Austria, we accepted an invitation to take a holiday among the hills, and, reaching Prato by rail, partly in a ramshackle trap and partly on mules and on foot, wound our way through chestnut forests and olive groves, past the brick-kilns, up to the hermitage of Capraia. Our host was Giuseppe Mazzoni, one of the most audacious and inveterate conspirators who kept alive the sacred flame of patriotism in Tuscany. Expelled from the college at Pisa, where he had organized the boys "to run away and fight for Greece," his spiritual director prophesied that he would finish in the galleys, and it was not his fault or that of the Grand Duke's that he did not. Triumvirate with Montanelli and Guerrazzi in 1849, he was the only one who voted for the union of Tuscany with Rome, and, when both Rome and Florence fell, went out into exile which lasted for ten long years. On his return he became the natural leader of the Liberals, and opposed the unqualified annexation of Tuscany to Piedmont, insisting on the necessity of a constituant assembly. Capraia was the resort of all the ultras, none of whom, says Mazzoni's daughter, our present hostess, ever agreed among themselves. "We had kept some wine of a splendid vintage for his return, and when it was coming to an end I said none of the last six flasks should be put on the table until three of the company should agree on one single point. No such attempt being made, the flasks remained intact, and when, years after, we opened them, the wine had lost all its color and much of its aroma." (This, by the way, confirms a general opinion that Tuscan wine is not the better for old age.) In late years, yielding to the pressure of his friends, Mazzoni consented to stand for Prato, sat at the extreme Left, and died in 1880 Senator of the Realm, Grand Maestro of the Free Masons. He was one of the first Tuscans cremated, the urn containing his ashes now reposing in the Grand Masonic colombario in Rome.

Leaving Florence yesterday, whose white heated walls render a summer sojourn there intolerable, through Prato, roused from its dull torpor to greet Felice Cavallotti, whose "Daughter of Jeptha" is creating a great sensation on the Italian stage, we wound our way up the old hills, and found at the brick-kilns of Capraia the old net-bottomed cart and aged mule—perhaps the same of twenty years ago. Save that the old hermitage has been modernized and embellished, that the ilex grove is heavier with shadow, and the magnificent magnolia resembles a forest oak, that the new terrace embraces the wide expanse from forest top to horizon—the olive groves interlacing on either side, and the chestnut forests interbranching, yet leaving space for the vision of the villages, the spires, and the belfry towers sleeping in the quiet plain—nothing has changed, and the monotony has a strange fascination as compared with the newness, the variety, and alterations that have transformed the country and the provinces around. You find the same peasants grown older in the fourteen *poderi* into which the property is divided, the same wine presses, oil presses, and pre-adamite system of extracting the juice and the oil from the one and the other. And why should you wish for change, seeing that no such oil and no such wine can be obtained by common mortals elsewhere? For the old métayer system, which John Stuart Mill believed would half solve the social question, still exists intact throughout Tuscany, and nowhere do you find healthier peasantry or better cultivated soil. The relations between the proprietor and the peasants are not as yet even strained, though the former, when you enlarge on the merits of the system, at once show you all its defects, from which, from their point of view, they are the only sufferers.

Before coming up here I spent a day or so at Antella, some two hours' drive from Florence, where wine in abundance, scant grain, and scantier maize are the staple produce, the *poderi* are in excellent condition, and the peasants seem hardworking, healthy, and decidedly attached to the family. Here are the terms of Antella: Land and all capital necessary for stock and implements, excepting hand tools such as spades and hoes, are supplied by the proprietor, who pays a specified indemnity every year for the repairs of carts, etc., but in some cases they are repaired by the proprietor. All crops and proceeds of any kind are halved as well as the expenses for the cultivation, extra manures, forage, etc. All new plantations are laid out at the expense of the proprietor, with the exception of a specified number of new trenches for vineyards, and on him fall all the taxes except the family tax. The only exception to the exact division is in the oil, where the proprietor has the right to the so-called *conii*, viz., about three per cent. of the crop, to compensate the wear and tear of the machinery used in oil pressing. The contract runs from year to year; the peasant can go or be sent away, giving notice in November, but has a right to his share of all standing and sown crops. Curiously enough, there is no law regulating these contracts: all goes by precedent. My host of Antella does not regard land as a lucrative investment as a whole, and dwells upon the drawback that the system gives no incentive for spending capital on improvements, because the spender has half the proceeds and all the expense. Then the peasant shows utter indifference, nay, prejudice, to any innovations, prefers to toil with his own spade to using new small ploughshares, and declines to try any new system of vinification. To tell the truth, when at supper this year's vintage was tasted, in our hearts we sided with the peasants. The system is very simple. The grapes are never gathered until quite ripe; then the choicest bunches are laid out on mats or reed trays—where mulberry trees and hence silkworms form part of the culture. After the grapes, well trodden in the vine-press, have been transferred to the vats, they are left to ferment from fifteen to seventeen days; then the wine, if quite bright and clear, is run off into smaller casks, and now the finest bunches of grapes, almost become raisins, are pressed, and when clarified the casks are filled up to the brim with their juice. This is called "governing" the wine, a system adopted only in Tuscany, but with most recommendable results. Certainly such full-flavored, ruby-colored, and by no means heady wine cannot be obtained at the price of from fourpence to sixpence a litre anywhere out of Tuscany. The peasants sell a portion of their share, but also keep some for home consumption; they have money in the savings bank and very many of them in consols; the passion for having a bit of ground of their own is here not nearly so intense as elsewhere. About Pistoja the contracts differ little, only the peasant pays a few dozen eggs and pairs of fowls and capons, so many pounds of pork, faggots; and the women folk do the washing for the house. On the whole, the system seems to us to insure the greatest possible health and thrift to the greatest possible number.

A noted Liberal and philanthropist, who, besides vast commercial undertakings, has invested a considerable portion of his wealth in land lying between Leghorn and Florence, writes:

"Setting aside all discussion as to the relative excellence of large or small farms, it is certain that the Tuscan *mezzoria* is a perfect social contract between the owner and the tiller of the soil. The landlord brings into the society the land, the stock, the implements; anticipates the necessary sums; pays the taxes. The peasant brings his arms, his diligence, his ability. At the end of the year the entire produce is divided. It seems to me that no socialist, however exacting, can ask for more. Labor, as you see, by this combination is held to be an absolute equivalent for capital; hence, taken as a whole, you find our peasants in comfortable circumstances. Attached to the soil they cultivate, of which they consider themselves as much the owners as the landlord, they show no desire to change their condition—so little so that, despite the causes of discontent which an improvident Government sows broadcast, despite the propaganda of the socialists and the anarchists, our *campagne* are quiet, flourishing, and secure."

In support of this testimony, I may add that emigration, which increases at a fearful rate in Calabria and other southern provinces, and also in the rich Lombard plains, scarcely exists at all in Tuscany. Despite the one-year contract, which at first sight seems absurd, the land scarcely ever changes hands, but passes from father to son through endless generations, just as on the old feudal lands of Venetia. Here in fourteen *poderi* or farms there have been but three changes in the last twenty years. In one case, the sons taking to themselves wives, and too many for one, there was no second farm to give to them; in another case, the children, being all girls, married peasants on an adjacent estate. The houses are decent and the water good; all the peasants' houses on this estate have glass in the windows, thanks to the constant visits paid to Capraia by Dr. Agostino Bertani, to whose intelligent patriotism is owing the inquiry into the agricultural conditions of Italy (which are in general deplorable), and any attempts made to ameliorate the wretched state of the non-Tuscan peasantry. But he, too, looked his last, in the spring of 1885, on these houses whose peasant inmates knew and loved him well, on his favorite ilex grove and olive-shadowed nooks of rest; and long will it be, I fear, before the tillers of the soil will find such another heart and head devoted to their interests, moral as well as material.

As I write, Carlo, the factotum of the family, who tells you in purest Tuscan and oldest terms as to weights, measures, names of implements, and methods of cultivation all you wish to know, brings up the post-bag. What news? Oh, none! only that Maroncelli has been brought back, after his forty years' sleep in Brooklyn churchyard, to a more glorious repose in the Pantheon of his native Forli. How the name recalls that most pathetic story of one's childhood, of the prisoners shut up in that terrible fortress of the Spielberg, on a hill in Moravia, a plan of the cells being kept by the cruel Emperor of Austria, a number indicating the name of the prisoner or prisoners in each cell; how without the Emperor's permission No. 1 could not be removed to the infirmary, though supposed to be dying; nor No. 2 put under constraint, though he had shown evident symptoms of madness; nor a wig of dog's hair be given to No. 3; nor poor Maroncelli's leg be cut off, though it was feared gangrene would set in. How simply Silvio Pellico tells the story of the amputation "after the order did come. Maroncelli was seated at the edge of the bed, with his legs hanging down, and I put my arms round him. Above the knee a string was tied to show where it was to be amputated. The old surgeon cut all round about half an inch deep, then turned back the skin and cut through the muscles; the blood flowed in torrents from the arteries, but he tied these up with a silken thread and then sawed through the bone. Maroncelli never uttered a cry; he gave a look of compassion to the severed leg, and bid me bring a rose from a glass in the window. 'I have nothing else to give you for freeing me from an enemy,' he said to the old surgeon, who took the rose and cried." Even

when liberated, Italy was no safe resting-place for the poor cripple, so he made his home in the New World. The *monumentomania* prevalent in Italy suggested the claim for his ashes; but if Maroncelli and the other martyrs of the Spielberg could reawaken and speak their minds, I doubt me much they would say one and all, This is not the Italy that we conspired and suffered and died for: leave us in peace—

"Finchè il danno e la vergogna dura."

Another batch of socialists, after an entire year's detention, have been tried and—all acquitted.

J. W. M.

Correspondence.

ENGLISH TURF MONUMENTS.

To the Editor of The Nation:

Sir: A recent number of your paper has just been forwarded to me, by which I see that you have honored a so-far-distant foreigner with a favorable notice of a recent book of mine upon certain ancient turf monuments of the west of England. It occurs to me to trouble you with a line to correct a misprint (following one of my own printer's which unluckily escaped revision) which may possibly perplex some American antiquarian, if any such should jot down among his *visenda* in this country the Giant of Corne. The name ought to be "Cerne," which is a small Dorsetshire town, about three miles from the Maiden Newton station on the S. W. Railway.

I do not know whether you will care to insert a correction which will reach you so late; but if by chance you do, may I take advantage of the opportunity to offer whatever help I may be able to afford to any American archæologist who may be visiting our North Wiltshire monuments of antiquity?—I am, sir, your obedient servant,

W. C. Plenderleath,

Hon. Local Sec. Wiltshire Archæological Society.

Cherhill Rectory, Calne, Wilts, August 19, 1886.

MR. TILDEN'S BEQUEST.

To the Editor of The Nation:

Sir: Allow me to submit the propriety of your suggesting publicly to the trustees of the Tilden Library fund the establishment of a library for the use of scholars and literary men throughout the country. It seems to me (if the terms of the will allow) such a library, open to all writers and students with proper limitations and credit, would more admirably express the design of this munificent bequest. It would be a more fitting memorial to the national career of Mr. Tilden, and the contribution it would make towards accuracy and breadth in our literary, political, and scientific productions would be invaluable.

Very truly, Thos. P. Ballard.

Columbus, Ohio, August 27, 1886.

[We do not quite make out whether our correspondent has in mind a national *circulating* library or not. Nearly all our great libraries are now accessible to "scholars and literary men" who visit them.—Ed. Nation.]

WORK FOR PAUPERS AND CONVICTS.

To the Editor of The Nation:

Sir: There are two armies in our State, standing in close relation to each other, which are suffering moral death within themselves and dealing economic ruin to the people. One army is formed of those persons who by their bad passions are compelled to live in prisons; the other is made up of their neglected parents, wives, and children, who are supported in institutions, schools, and hospitals. Many methods for solving the problem of employment for these wasting armies have probably been considered, yet it is not a problem impossible to solve. The moment has arrived when the overcrowding of institutions and prisons urges us at least to lay plans in order to prevent, if possible, further waste and destruction.

Perhaps a suggestion for the future may be found in the following experience. During the past winter in Boston it was necessary to limit the rate of taxation and reduce the appropriation for street-cleaning. Suddenly there was an unusual snowfall, followed by a thaw, and there was no money to relieve the highways. Everywhere the gutters were like flowing rivers, the streets like morasses. The people cried out in their discomfort; the contractor was at his wits' end. At the very same moment there were men at the Wayfarers' Lodge who were employed in piling up wood and throwing it down again to be repiled, because that was the only plan which could be thought of for keeping them occupied; and the men in the Charlestown State Prison were one-half idle and one-half at work upon contracts for labor which belonged properly to honest laborers outside. Perhaps if the Charlestown men had been worked in chain-gangs on the streets, the public could have traversed the highways without loss of time or money, and the men themselves would have felt the benefit of wholesome labor; at the same time paupers in the Wayfarers' Lodge and elsewhere might have been given the contract work which employers were striving to get done at "prison prices."

Why should not the criminal classes, so far as practicable, be made to maintain themselves and the pauper classes? Why should not unemployed pauper women and children make the clothes used in institutions, besides performing inside labor of the kinds unsuited to men? Money would thus be set free which would return to benefit the honest laborer in a thousand ways which we hardly dare to anticipate and can only suggest.

Apart from the moral deterioration into which we are falling by the present plan of releasing drinking men and others from the support of children and old persons, we are pursuing a method which is really impoverishing the State, because the size of these unhappy armies is daily increasing. We are pulling down barns to build greater, without even the mean excuse of hoarding this world's goods. We are heaping up destruction instead of creating a new moral force, a force which is really waiting to be born under the ribs of death. Annie Fields.

Boston, August, 1886.

VALUE OF THE SILVER DOLLAR.

To the Editor of The Nation:

Sir: Will you be so kind as to answer, either by letter or in the columns of your paper, the following question:

What is the value in London of one hundred silver dollars, United States currency? Please give the value in gold, United States currency; also in gold, English currency.

The foregoing may seem to be an almost puerile question, but upon the answer to it hinges an argument thought to be of some weight in this part of the country, and I wanted to get an answer from an authority of some weight.

A Subscriber.

South Carolina, August 24, 1886.

[The *bullion* value of one hundred silver dollars is now approximately seventy-one dollars in gold, which is the equivalent of fourteen pounds twelve shillings English money. The value of American silver dollars in London *for purposes of trade*, if there were any such dollars there, would be the same as their trade value in New York minus the cost of transportation, which for so small a sum as one hundred dollars would be practically nothing. The trade value of the silver dollar is at present the same as that of the gold dollar, or of the greenback dollar, or the national-bank dollar.—Ed. Nation.]

INDEPENDENT SCHOLARSHIP.

To the Editor of The Nation:

Sir: Those who have read Dr. Freeman's latest work, 'Methods of Historical Study,' have "surely" (to use his favorite qualifier) been impressed by a book so breezy, so stimulating, so suggestive. To one point touched upon by the great English historian, an American pedagogue would like to add the weight and emphasis imparted to anything by an appearance in the *Nation*. Dr. Freeman says:

"I spoke some time back of the fashionable idolatry of the last German book. . . . Now it is a fact, a fact that we may perhaps set down among 'things not generally known,' but still a fact, that the last German book is sometimes not equal to the German book that went before it, sometimes—may I dare to say it?—not equal to some English book that went before either. Yet we cannot afford to cast aside either the last German book or the German book last before that. . . . We must read the German books. . . . I only demand the right to keep our independence, and to believe that on many matters of historical learning, an Englishman—an Englishman on either side of ocean—is better fitted to judge than a German" (pp. 288-289).

In behalf of American scholarship I should like to enter a protest against *our* lack of independence. For many years I have deemed it strange that our best scholars should be content to follow so very closely in the tracks of the German masters. If a play of Sophocles is to be edited, the introduction will likely be adapted from Schneidewin. If a new series of college text-books is to be edited, it will probably be based on the latest German works, the notes being to a large extent translations of the German notes. Of course we must have and must closely study the great Germans; but is it necessary to copy them so closely? A teacher of Greek myself, I have often wondered why the translation of Curtius's 'Schulgrammatik' should be used in preference to our American grammars. Curtius's treatment of some important matters in the syntax is "surely" much inferior to what can be given by many an American scholar.—Respectfully,

Dummkopf.

KOLONAI.

To the Editor of The Nation:

Sir: The June number of the *American Journal of Archæology* (Baltimore) contains a most interesting paper on "A Proto-Ionic capital from the site of Neandreia" (Mount Chigri), by Mr. Joseph Thacher Clarke, of the Assos Expedition. Mr. Clarke mentions, incidentally, the ancient Kolonai, and quotes from the *Journal of the Archæological Institute* (London, 1860), "On the site and remains of Colonoe," by F. Calvert. He remarks he does not share in the opinion I express of placing Kolonai at Beshik Tépé, three miles to the *north* of Alexandria Troas. As there is no Beshik Tépé in the position indicated, it is evident a typographical error has been made (I have not the number of the *Journal* to refer to). My intention was to write the word *south*, not *north*. There is another Beshik Tépé (which gives its name to Beshika Bay) ten miles to the north of Alexandria Troas, excavated by Dr.

Schliemann in 1879. This site is too far removed to enter on the subject of the argument in question.

I may add, Mr. Clarke, in his map of the district, places Kolonai where I hold it to be, that is, on the coast and on the left bank of the small stream that comes from the hot springs (Lidgia) of Alexandria Troas, corresponding to the ancient site on Beshik Tépé, three miles to the south of Alexandria Troas. It is here my excavations of the ancient tombs, described in the article on Kolonai, were made.

I am glad to be in unison with Mr. Clarke, the more so as he has so successfully proved the suggestion of the identity of ancient Neandreia with Mount Chigri, first made by me in my paper "On the site and remains of Cebrēne" (London, 1865).

FRANK CALVERT.

DARDANELLES, August 12, 1886.

THE TOMBS OF MYCENÆ.

TO THE EDITOR OF THE NATION:

SIR: I hardly hoped that Mr. Stillman would allow his views on the age of the tombs of Mycenæ to be affected by what I wrote in No. 1097 of the *Nation*. Indeed, I expressly disclaimed all intention of discussing the age of any stone wall with so accomplished an expert as Mr. Stillman, "provided the facts were beyond question." My position is simply this. There is a dispute about the age of certain walls discovered at Mycenæ by Dr. Schliemann. Most of those whose opinions on such matters I respect, believe that these walls were originally built in the heroic age, not later than the Trojan War. Others, of whom Mr. Stillman is chief, believe that they were built about a thousand years later. Now I was told by a Greek workman at Mycenæ in 1883 that many important parts of these walls had been rebuilt *under his own direction* in 1878 or 1879. It seemed and it still seems to me that this statement was an important fact in the case, whatever might be the final decision on the case itself. And where experts disagreed so broadly, it seemed to me that at least some unprejudiced people, who cannot judge of the age of a stone wall by its looks, might find help in this direction.

But Mr. Stillman now tells us that certain "facts *are* beyond question." One of these facts is this: that the outer wall which sustains the tombs "has been in part demolished and restored to its original condition *with the original material*, and is now in the same state as that in which it was originally found." This may be true, but it is not "beyond question." At the meeting of the Hellenic Society in London, July 2, Dr. Schliemann said of these walls: "Their conglomerate character, including fragments of true Hellenic building, was fully accounted for by the fact that they were *not yet ten years old*, having been rebuilt by the Greek Archæological Society in 1878, from materials lying on the spot, in order to consolidate the terrace of the tombs" (*Athenæum*, July 10, 1886). Dr. Dörpfeld, in a recent letter to the *Times*, says: "*Atmost the whole* masonry of the tumulus was restored some years ago, out of the old materials, by the Greek Archæological Society, in order to give a better support to the tombs; and yet your correspondent [Mr. Stillman] has ascertained from this masonry that it was constructed by a barbarian tribe at a period subsequent to Pyrrhus." I have referred in my former letter to the split stones with fresh surfaces seen by me in a wall at Mycenæ, which I was told "had been replaced exactly as it was found," and to my informant's explanation that he sometimes had to break the larger stones so as to handle them! Mr. Stillman now thinks that none of the restored walls are of any account in the discussion; and he apparently relies chiefly on certain old house-walls between the base of the tumulus and the great city-wall, which he holds to be "long posterior to the ancient city" and "clearly anterior to the tumulus." This is another of the "facts beyond question," and it may be so at some future time; but at present it is most vigorously questioned by Dr. Dörpfeld, who denies that these walls were house-walls at all, and thinks they were covered with earth in ancient times. Of course we do not know what reply Dr. Dörpfeld may make to Mr. Stillman's more recent argument on this subject.

I have merely attempted to say enough concerning the present state of this discussion to show that the testimony of my Greek informant, whatever may be the ultimate judgment on its value, is just now by no means irrelevant to the case.

W. W. GOODWIN.

PLYMOUTH, MASS., August 28, 1886.

Notes.

PORTER & COATES will bring out, in a volume separate from the Comte de Paris's great work on the civil war, the episode of Gettysburg, edited by Col. J. P. Nicholson. It will include the most complete rosters yet published of the opposing armies. Maps will, of course, be added.

One of Hauff's tales, 'Das Kalte Herz,' edited with English notes by W. H. van der Smissen, lecturer on German in University College, Toronto, will be issued by D. C. Heath & Co., Boston, on September 10.

Cassell & Co. publish immediately 'John Parmelee's Curse,' rewritten by Julian Hawthorne.

'Dollars or Sense?' a story for Anglomaniacs, by Arthur Louis, is announced by Brentano Bros.

Early this month Thomas Whittaker will have ready 'Liturgies and Offices of the Church, for the use of English Readers, in illustration of the Book of Common Prayer,' by Edward Burbidge, M.A.

'Cynewulf's Phœnix,' edited by Prof. W. S. Currell, as the fourth volume of the "Library of Anglo-Saxon Poetry"; and 'The Parts of Speech, and How to Use Them,' by Mrs. N. L. Knox-Heath, are in the press of Ginn & Co.

We learn that the Rev. E. H. Plumptre's translation of Dante—both the minor poems and the 'Commedia'—is nearly ready for the press. It will make two volumes of about five hundred pages each, and the approval it has already received from various scholars (Mr. J. A. Symonds among them) should make its appearance a matter of lively interest.

George H. Buchanan & Co., Philadelphia, will hereafter confine the use of this firm-name to their printing business. As publishers they will take the style of Arnold & Co.

We have already remarked on the animus of Capt. George M. Wheeler's Report on the Third International Geographical Congress and Exhibition at Venice in 1881. It is proper to add that the volume is embellished with specimens of the chief Continental topographical maps, showing parts of Switzerland, Prussia, Saxony, and France, as well as of the island of Java.

The report of the Commissioner of Fish and Fisheries for 1883 has just come from the Government Printing Office, though bearing the date of 1885. There is a very minute account, with plates, of the *Albatross*, and at the close of the volume there are numerous figures of cetaceans accompanying directions to the keepers of life-saving stations and lighthouses as to the collection of specimens. The Report and the many appendices contain a vast amount of information concerning fishing and fish-propagation, in foreign parts as well as in this country.

We have also on our table a valuable Report on European Dock-yards, by Naval Constructor Philip Hichborn, U. S. N., illustrated by a large number of plans and sections, with photographic views of iron-clads, torpedo-boats, machinery, etc., etc.

A map showing the distribution of broods vii. and xxii. of the periodical cicada is annexed to the report of Dr. C. V. Riley, Entomologist of the Department of Agriculture, whose pamphlet on the Mulberry Silk-Worm—a manual of instructions in silk culture—is now, by the way, issued in a sixth edition.

The 18th and 19th annual reports of Prof. F. W. Putnam, Curator of the Peabody Museum of American Archæology and Ethnology at Cambridge, to the Trustees have just been published in the same covers. Special interest attaches to the reëxamination of mounds in the Scioto Valley, Ohio, described by Squier and Davis in 1840. Prof. Putnam sees in certain jadeite ornaments from Costa Rica, formed from celts, evidence of migration from Asia. Dr. W. F. Whitney offers some notes on bone diseases of the native races of North America, as determined from the remains secured for the Museum.

Dr. George H. Moore, in a paper read last December before the Massachusetts Historical Society, concluded, from his researches, that the negro poetess, Phillis Wheatley, first used in America the name "Columbia." This was in a poem addressed to Washington in October, 1775. Col. Albert H. Hoyt, however, in the *N. E. Historical and Genealogical Register* for July, is able to point out the word in a volume of poems composed in 1761, mostly by Harvard graduates, in commemoration of George II. and congratulation of George III. He has also found it in poems printed in the *Massachusetts Gazette* of April 26, 1764, and Boston *Gazette* of February 13, 1775. "Columba" was sometimes used for Columbia, from 1772 onward. Col. Hoyt asks for any reference earlier than he has given.

At Leipzig has been published an authorized German version of the late Helen Jackson's 'Ramona,' made by Elizabeth H. Denio, Professor of German at Wellesley College. The story may well, in this guise, achieve a transatlantic popularity. The German edition is in clear and open print.

"Les Demoiselles de Saint-Cyr," by the elder Dumas, has long been a favorite French play for class reading. There is no neater or more available edition than that just published by Macmillan & Co., with introduction, arguments before each act, and very copious notes, by M. Victor Oger. Like the other school publications of this firm, "Les Demoiselles de Saint-Cyr" leaves nothing to be desired in point of execution. The text is good and very clear, and the lines are numbered. There are nearly sixty pages of notes, historical and grammatical, containing in some cases very felicitous renderings of French idioms. M. Oger, having a very easy French text to deal with, has occasionally gone out of his way to bring in erudite comparisons with English and Latin, as when he tells the elementary learner, in a note to *tâtant le tapis*, "Tâter (from Latin *taxare*, a form of *tangere*) is idiomatically equivalent to *feel*, which is probably cognate with *palpable*."

There is not much to remark in *L'Art* for August 1 (Macmillan). The leading paper discusses the new Rijksmuseum at Amsterdam; and sundry letters of H. Regnault's are printed for the first time. The most important plate is a very skilful and interesting engraving from the burin of Mme. Lucie Tonnet-Contour, after Courbet's "Man with the Leather Belt."

To the *Gazette des Beaux-Arts* of August 1 M. Got, the dean of the Comédie-Française, contributes a most interesting paper on the fine collec-

tion of pictures, statues, and MSS. now housed in the Théâtre-Français, and pleads for additional rooms in the Palais Royal, but communicating with the Théâtre-Français, to accommodate the precious MSS. beyond the risk of fire, always large in a theatre. Among the illustrations to this paper is a fine etching of Houdon's masterly seated statue of Voltaire.

Under the alluring title of 'Les Jeux de la Jeunesse, leur origine, leur histoire, et l'indication des règles qui les régissent' (Paris: Hachette; New York: F. W. Christern) M. Frédéric Dillaye has prepared a volume of 400 pages, which, interesting as it is, is not half as interesting as it ought to be, because the author has been content with haphazard gatherings and has not really investigated. The chapters on French games are far better than those on lawn tennis and cricket, and the illustrations of the latter are altogether too Gallic. Few of the illustrations seem to have been made for this book, most of them being apparently drawn from the enormous stock of the publishers.

The latest addition to Hachette's series of foreign novels is 'Un Roman sur le Nil,' translated by M. M. S. from 'Mirage, a Nile Novel,' by "George Fleming."

For the twelfth time M. Albert Soubies has issued his 'Almanach des Spectacles,' the most concise and exact of the several French theatrical year-books. The volume for 1885 is as neatly put together and as beautifully printed as its predecessors, although the etching of Mlle. Pierson, by M. Lalauze, is not quite up to his usual level. One of the most useful departments of M. Soubies's little book is the theatrical bibliography, which fills twelve pages.

In anticipation of the seventh International Congress of Orientalists, which is to meet in Vienna on the 27th of September, the work of unrolling and deciphering the papyrus manuscripts of the Archduke Rainer's collection is being carried on with exceptional energy and vigor. It is believed that so great an amount of new material will be in readiness to submit to the inspection of the Congress that scholars will, for the first time, be in a position to appreciate the full importance and significance of this collection, the thorough and systematic exploration of which is just begun, and of which only scattered and fragmentary accounts have yet appeared to whet the appetite of students.

In the matter of the rediscovery of the autograph MS. of Petrarch's Canzoniere, so fully described in the *Nation's* Munich letter, the *Allgemeine Zeitung* states that the Accademia dei Lincei at Rome has rendered a decision decidedly adverse to M. de Nolhac's claim of priority. After an examination of the memoir presented by Dr. Pakscher, in which he gives a full account of his discovery, the Academy decides that priority belongs to him, and that M. de Nolhac has been unable to prove that his discovery of the MS. was the earlier.

—In noticing elsewhere the sudden and lamentable death of Mr. Charles C. Perkins, of Boston, we have enumerated some of his admirable traits as a citizen of marked public spirit, and his chief literary productions in the field of art, to which he had principally devoted himself, and in which his reputation was securely established. He was among the foremost of the yet small body of men in this country qualified to instruct in matters of art, and in that capacity he was for many years, at irregular intervals, a voluntary and an invited contributor to the *Nation*. He was the author of the recent review, in these columns, of the revised edition of Herman Grimm's 'Life of Raphael'; and Prof. Grimm's explanatory rejoinder, printed in our last issue, was on the press at the time the fatal accident occurred to Mr. Perkins. The last private communication which we received from the latter related to the rejoinder in question, and must have been written just before he started from Newport for Vermont.

—M. Charles Yriarte, in true knight-errant style, sets off in the springtime for foreign lands in search of adventures and of archæological lore, and always finds an abundance of both, whether he seeks for it in Morocco or in Venice, in Sicily or in Rome. This year he goes into little-known places in Spain, following his hero, Cæsar Borgia, whose portraits he had before discovered, whose weapons he had handled, and whose letters he had collected, all of which he afterwards described in the pages of the *Revue des Deux Mondes*, *Les Lettres et les Arts*, and other periodicals. Now M. Yriarte has returned from Spain, and he gives in the *Journal des Débats* for August 5 some of the results of his journey, in a way that it would be difficult to equal for picturesqueness, fulness of incident, conciseness, and clearness. This short article, "Où est la tombe de César Borgia?" is a model of artistic arrangement and execution, and, in spite of its subject, is as interesting as it is picturesque. When the complete work which M. Yriarte must be preparing upon Cæsar Borgia appears, no one who has read this short passage can fail to take it up with the delighted expectation of finding in it all the charm of a mediæval chronicler, and all the exquisite finish of a modern French artist in language. That M. Yriarte succeeded in finding not merely the tomb of Cæsar Borgia, but even his mortal remains, gives a poetic completeness to this interesting search, which the reader follows with something of the personal excitement of the seeker himself. At the foot of the cathedral steps in the little town of Viana, following the traditions he had gathered from the people of the place, and with the help of the authorities, M. Yriarte at length uncovered the rude receptacle of tiles within which lay the bones of Cæsar Borgia. They were placed there by the orders of a Spanish prelate, his successor in the archbishopric of Pampeluna, who had them removed from the magnificent tomb within the walls as unworthy to rest in that sacred place, and laid where for centuries they have been trampled over by all the generations of pious worshippers who have gone in and out of the cathedral and all the noisy traffic of the market-place near by. How the skull which crowned the perfect skeleton lying there crumbled away at the touch, how they covered up again the remains without further disturbance, how the story was distorted into the profanation of a church, and how the successful archæologist finally established his innocence and the truth of his discovery, M. Yriarte tells in his concise and graphic fashion. In any work of art, it is not so much the material which is valuable as the workmanship, and in this respect the little essay is a masterpiece.

—M. Léopold Delisle, the erudite Administrator General of the French National Library, has recently issued a pamphlet of forty pages entitled, 'Instructions pour la rédaction d'un inventaire des incunables conservés dans les bibliothèques publiques de France,' in which he urges the desirability and usefulness of a general catalogue of all books printed before the year 1501, now existing in the public libraries of France, and goes on to show that such a catalogue might be prepared with comparative ease within a reasonable time. His plan, which is very like that followed in Bolton's 'Catalogue of Scientific Periodicals,' is to describe each edition but once, adding to the descriptive notice the name of each library possessing a copy. He estimates that on this plan a catalogue of the possible 100,000 incunabula to be found in the French libraries might be brought within the compass of five or six volumes, containing some twenty or twenty-five thousand entries. Of course it is essential to the success of such a catalogue that all the incunabula shall be described upon one uniform system, and M. Delisle has accordingly drawn up a full and precise code of rules to be observed in cataloguing early printed books. Particular stress is laid upon the importance of making mention of printers' marks, illuminations, and manuscript notes of historical or literary interest, whenever they occur. The rules are followed by nearly a hundred specimen titles illustrating their practical application. This code of rules, coming from so competent an authority in bibliography as M. Delisle, is likely to become the standard manual of the subject. It is gratifying to learn that the desire for a general catalogue of incunabula is in a fair way of being accomplished. The Minister of Public Instruction has had M. Delisle's rules printed as an appendix to a circular addressed to the Mayors of French cities. In this circular the Mayors are directed to place these rules in the hands of the librarians of the respective cities, and to request them to prepare lists of all the incunabula under their care, in conformity with the rules of M. Delisle, and to transmit these lists to the Minister as soon as they are completed, in order that the work of compiling the general catalogue may begin without delay. It is to be hoped that the French librarians will respond promptly and generally to this appeal, and that we may look forward to the early publication of a catalogue which will be of inestimable value to librarians and scholars.

—In the *Preussische Jahrbücher* for August will be found an interesting and suggestive article of twenty-nine pages on copyright in Germany, written by L. H. Müller, a Hamburg lawyer. The article consists of three parts, the longest, most logically developed and carefully written being an argument against the accepted view of the *nature* of copyright. Mr. Müller expresses in vigorous language his belief (which he holds in common with some in this country) that the idea that there can be property in ideas is a sham and a delusion, of which even its advocates are conscious. The introduction, however, deals with the conditions of literary life in Germany, exhibiting in detail its unhealthful state, injurious to authors and publishers alike; while the conclusion gives the author's plan for remedying the evils mentioned. Briefly stated, these evils are three in number: (1) the high price of books, which prevents any considerable sale, and so hinders that increase in the common stock of culture which would result from a greater circulation of sound literature; (2) the small pecuniary reward which the authors get; and (3) the degeneration of the publishing trade into a mere lottery, in which the chances of profit are based upon exceptional works whose popularity none can foresee. In this lottery the only thing certain is that the more tickets bought—*i. e.*, the more books, of whatever value or want of value, issued—the greater the chance of drawing a prize. The injustice to authors, of course, consists in the fact that the successful book makes, not his fortune, nor even the publisher's, but merely reimburses the latter for losses caused by reckless acceptance of worthless works.

—Mr. Müller's statistics, which he professes to have compiled from trustworthy sources, are especially interesting in comparison with those of our own trade. For an ordinary book the cost of paper, per sheet, is ⅝ to ½ a cent; presswork is so cheap as not to be worth counting; composition varies all the way from $7.50 to $15. Altogether the first 1,000 copies of a 12mo (the entire volume) cost only $125 to $150! We believe

the usual estimate for such a volume in this country (including, however, binding and stereotype plates) is $1,000. Subtracting the last two items it would still be $750. Now such a book in Germany sells for 75 cents, and of this the author, provided he has established his reputation so that the venture is comparatively safe, gets 5 per cent.; the cost of production, publication, interest, etc., consumes 25 per cent. more; while 70 per cent. is divided as profit between publisher and bookseller. Mr. Müller proposes to abolish this system so as to make Germans a book-buying people, and, incidentally, to make the literary profession a more profitable one, by doing away with statutory copyright. His plan is essentially the same as that of Mr. George Munro for international copyright—every one should be at liberty to publish, provided he will pay the author his percentage, which, Mr. Müller reckons, the latter could safely estimate at 33 per cent. on a smaller retail price but indefinitely increased number. The author, of course, would not be permitted to make an exclusive contract, *i. e.*, to require from one publisher a larger percentage than from another. As to practical difficulties, there would be no more than in any other business in which the principal is occasionally obliged to obtain, by legal process, an inspection of the agent's books. Or, the author could stamp or sign all the authorized copies, so that, like patent medicines, they should bear the inscription "None genuine unless accompanied by the inventor's signature."

DR. HEDGE AMONG THE GERMAN CLASSICS.

Hours with German Classics. By Frederic Henry Hedge. Boston: Roberts Brothers. 1886. Pp. 531.

Dr. Hedge's 'Prose Writers of Germany' appeared in 1848. In our fast-living era that date seems a long time ago, and yet to this Nestor of American German scholars it must be but as the day before yesterday compared with the time when he had his first introduction to the Teutonic mind. He went to study in Germany as far back as 1818, a time when Carlyle's inspiriting voyages of discovery were still in the future. Probably no one else now living is so well able as is Dr. Hedge to relate the entire early history of German studies in this country, and to describe the effect of these studies upon American, more especially upon New England, life and literature. For our own part, we could have wished that some portion of the large and handsome volume which he has just given to the public had been devoted to such a retrospect. The theme is certainly an alluring one, and could but lead to many interesting reflections upon the difference between the present time and the time when German literature dawned as a new star on our intellectual horizon; when the German race was as yet but sparsely represented among us, and the German language, not taught in school or college, was known to but few; when, on the other side, Prometheus had not yet been chained to the rock by Kratos and Bia; when Germany was still in some proper sense the empire of the air and a home of the soul for children of the air; when—but we must resist the seduction of musing further upon the chapters which Dr. Hedge might have written, and turn to those he has actually offered us.

'Hours with German Classics' consists of a selection of lectures delivered by Dr. Hedge in his capacity as academic teacher. A prefatory note explains that the essays are "far from assuming to constitute a history of German literature," but aim rather "to exhibit some of its characteristic phases as exemplified by writers who fairly represent the national genius." It is also stated that, from considerations of space, many writers of note, especially the philosophers, have been omitted, the reader being referred for a treatment of these to the author's earlier publications. From the language of the preface it might perhaps be inferred that pains had been taken to avoid in this new volume the fields already worked in the older ones; but such is not the case. Nearly all the great writers, from Luther down, who are discussed in the present work were discussed in the one of 1848. And the method of the two books is likewise much the same. We have, namely, in each a biographical sketch of every author treated, a critical estimate, and some translated specimens of his work. In the former volume the stress falls upon the specimens, which are all in prose; in the new one it is the biography and criticism which are accented, and the citations are largely in verse. The newer sketches are more copious, more discriminating, and more independent. They are also superior in point of style; and, having said that, we consider ourselves to have atoned for the *brutalité* of calling attention to the following sentence from the essay on Novalis: "On the 25th of March, 1801, before his twenty-ninth birthday, he fell asleep, to wake no more in the flesh, while listening to the music of the piano, on which his brother Carl was playing at his request."

The erudition and critical capacity of Dr. Hedge are so well known that little need be said about them here. As to the twenty chapters in this new volume, however, the exact praise which belonge to them is, that they are excellent academic lectures. And when this has been stated it goes without saying that they do not rank with the best grade of literary essays. Criticism in its highest manifestation is hardly compatible with the exigencies of good classroom instruction. The critic as lecturer is more or less handicapped by the function of the teacher. He must give instruction upon elementary matters. He must not only be perfectly clear (no one is exempt from the duty of lucidity), but he must deliver matter that is somewhat adapted to being taken down in black and white and worked up for examination. He may not as a rule assume in his hearers information much beyond what he himself communicates. He must speak to listeners that are not at home in the higher walks of criticism, and he must speak to them largely of books and of authors which they have not read. Conditions of this kind are fatal to that freedom of movement and that delicacy of touch which are the life of the best critical writing. Dr. Hedge's 'Hours' is, therefore, not a book to which the specialist should go expecting to find there the best that can be said, or even to find matter which is always on a par with the best that has been said, about the authors treated. It is rather a reference book for the learner who desires to "orient" himself among the German classics; to learn who the great writers are, when and how they lived, what they wrote, what their literary and personal characteristics were, and how they are looked upon by good judges in general, including Dr. Hedge in particular. A work of this kind, which goes over in a familiar and conventional way ground that has often been gone over before, and the great bulk of which, both facts and opinions, belongs to what may be called the routine outfit of every well-read student of German letters—a work of this kind must derive its chief title to recommendation from its literary workmanship, from its choice of subjects for treatment, and from its use of illustrative material.

Of the first of these as exemplified in the work before us we have already spoken; it deserves high, if not the highest praise. As to the choice of subjects and of illustrative matter, this also commends itself to our judgment, though not without an occasional exception. Thus, right at the outset, we should hardly regard the Gothic Bible as entitled to any time in a programme consisting of "hours with German classics." Dr. Hedge does so regard it, and justifies himself on the ground that he is but following the precedent of German writers; "the Gothic Bible being," as he says, "a work which German philologists unanimously claim as the oldest monument of German literature." But this statement is decidedly wide of the mark, or else, what is very likely the case, the phrase "German philologists" does not here signify precisely the same body of men that it signifies to a Germanist of the younger generation. It is indeed true, unfortunately so, that the native manuals of German literary history usually begin with Ulfilas or even with the pro-ethnic "Aryans." But these manuals are not usually made by philologists, and those who do make them know, or ought to know, that they really have no more business with the Gothic Bible than with the Norse Edda or the Anglo-Saxon Beowulf. Gothic is a branch by itself of the Germanic family, and has, even within the family, no specially close affinity with the German. Its nearest congener, if it has any, is the Old Norse (but this, says Noreen, is "not proved"). At all events, the extant fragments of Ulfilas's Bible are no more Old German than they are Old English or Old Norwegian; and the felonious appropriation of them by Germans for the purpose of gaining a few centuries of antiquity for the beginnings of their own literature, is a thing to be reprobated rather than imitated outside of Germany.

It is perhaps hardly necessary to say that both Ulfilas and the other "eldest monuments" are treated by Dr. Hedge solely from the literary point of view. The linguistic aspects of the Gothic are disposed of by quoting the Lord's Prayer for the purpose of "showing how much of modern German there is in it"—a thing which no ordinary reader would ever discover without a good deal of skilful assistance. Our author's strength is as a philosophic critic of philosophic literature, and not as a philologist in the now current sense of that term. Thus we read, among some general observations upon the German language: "'Tis not a sonorous language—the excess of consonants forbids; but fine vocal effects are possible in it through the ease with which it forms compounds, *e. g.*, *Windesungestüm.*" Again: "If not orotund, like the languages of the Latin family, it has softer combinations of sound than any language with which I am acquainted. Take this from Goethe's poem 'Der gefangene Graf':

> 'Doch wird ein liebes Liebchen auch
> Der Lilie Zierde loben.'

Or this from Schiller's 'Pilger':

> 'Ach kein Steg will dahin führen,
> Ach der Himmel über mir
> Will die Erde nie berühren,
> Und das dort ist niemals hier.'"

Now the comparative "sonorousness" or "orotundity" of different languages, or their relative capacity for "soft combinations," are concepts with which phonetic science finds it very difficult to operate, and that for the reason that there is no standard for the measurement of these qualities. They are matters usually of national prejudice, and always of subjective impression. What one deems highly mellifluous may or may not be pleasing to another, and commonly is not when the other is of a different race. To take the case in point, we for our own part should never think of quoting *Windesungestüm* as a fine vocal effect; and the lines from the "Pilger," like most of Schiller's lines, seem to us rather deficient in melody. As to the verses from Goethe, we, too, think highly of them; but the "softness" which impresses Dr. Hedge resides, as we surmise, in no peculiar quality of the German

language, but simply in the "liquid" alliteration, which is as easy in one tongue as in another.

Of all the writers treated by Dr. Hedge the most space is naturally enough given to Goethe, who is throughout handled *con amore*. In the first quarter of this essay, which occupies nearly ninety pages, we have the author at his best. The second quarter consists chiefly of translations, and the last half is made up of an exposition of 'Faust' and the 'Mährchen.' This last Dr. Hedge calls the "subtlest of allegories"; and he sees in it with Baumgart a "prophetic prevision of the destinies of Germany." In this sense he gives a detailed interpretation of it. The world is already full of hard work for scholars, but we should like to commend to the plucky exegetes of the 'Mährchen' the question whether Goethe's Green Snake is not the parent of our numerous modern sea-serpents. In the remarks upon 'Faust' the erroneous statement is made that the whole of the third act in the Second Part had been completed previously to 1808. The question is also considered whether the final redemption of Faust was a part of Goethe's original plan, or whether he at first intended to follow the legend. Dr. Hedge inclines to the latter view. But surely the question is set at rest by the oft-quoted letter of Goethe to W. von Humboldt, in which he says, under date of March 17, 1832, that the general conception of 'Faust' had lain clear in his mind for sixty years. Such a statement would have been impossible if, midway in the sixty years, he had introduced into his conception the most radical change that could possibly be made. And the internal evidence upon the point is no less strong than the external. From the first moment of our acquaintance with him, Faust utters the inmost thoughts and feelings of Goethe himself. But one does not deliberately send his own soul to hell. Nor is there, as Dr. Hedge seems to think, anything inconsistent with this view in the last line of the "Prelude":

"Vom Himmel durch die Welt zur *Hölle*."

That familiar *crux* can be found satisfactorily explained by almost any of the recent commentators. The words are not intended to describe the final goal of Faust's career.

And here we must take a somewhat abrupt leave of Dr. Hedge's work. The few further points we might notice, were there space, are certainly not of more importance than those that have already been touched upon, and from the paucity and character of the strictures made our high average estimate of the book may be inferred. We note in conclusion the following misprints: "Diutish" (Diutisc or Diutisch), p. 11; ἀθανατίξοντες, p. 13; μνησστήρες and Hettel (Hetel), p. 56; "Reineke *der* Fuchs," p. 60; "Hans Sachen's" (Sachsen's), p. 88. "Ufnan," p. 99; *Ca*tholic," p. 229; "Gödike" (Goedeke), p. 347, 362; "Ingolstadt," p. 430; "Wiedestedt" (Wiederstedt), p. 449; "Witte*m*berg," p. 450.

RECENT LAW BOOKS.

Sir William Anson's 'Law and Custom of the Constitution, Part I, Parliament' (Oxford: Clarendon Press; New York: Macmillan & Co.) calls to mind, by its title, Dicey's excellent treatise; but it is a very different sort of book. Dicey was not concerned with stating the details of constitutional practice; but only with marking clearly the leading characteristics of the British Constitution, in a legal aspect, and its place as compared with other systems. Sir William Anson undertakes to state in some detail what the different parts of the machine are and how they work. The early history of the matter is briefly sketched; the various changes in recent centuries are pointed out; and we are informed just what the arrangements are to-day. One who would know, *e, g.*, the exact qualifications for voting in the United Kingdom to-day, what they were made by the Act of 1867, by the Reform Bill of 1832, and so on, may find it all here.

"I have endeavored," says the author, "to state the law relating to existing institutions, with so much of history as is necessary to explain how they came to be what they are. . . . The lawyer primarily wants to know what an institution is, and then the circumstances of its growth. I have tried to satisfy his first requirement, and, as to his second, to put him in the way of obtaining more knowledge than I can pretend to possess. . . . Professor Dicey . . . has drawn with unerring hand those features which distinguish our constitution from others, and has given us a picture which can hardly fail to impress itself on the mind with a sense of reality. I have tried to map out a portion of its surface and to fill in the details. He has done the work of an artist. I have tried to do the work of a surveyor."

After some preliminary chapters, the writer deals with the "Meeting of Parliament," showing who are summoned and how, giving the formal details of the opening of Parliament and explaining its adjournment, prorogation, and dissolution. The House of Commons is fully dealt with in about a hundred pages; and then the House of Lords, the Process of Legislation, the Crown in Parliament, the Executive and Legislature in Conflict, and, lastly, the High Court of Parliament. An excellent specimen of the author's neat and skilful handling of his subject is found in the ninth chapter, where he traces "the various ways in which one of the three parts of this legislative body has tried to act independently of the other two in respect of legislation, or to control or influence the others so as to get legislation practically into its own hands." This book, it may be said, in a word, furnishes the information of a practical manual, stated in an interesting manner, and elucidated by brief but sufficient historical narrative, and by legal explanation and analysis. It is well calculated to accompany such a book as Prof. Dicey's. It is a difficult work done with excellent judgment. In a second part the author will deal with the Executive. Sir William Anson, it will be remembered, is the Warden of All Souls, and is the author of a valuable work on the Law of Contract.

Mr. T. Henry Dewey's 'Treatise on Contracts for Future Delivery and Commercial Wagers, including Options, Futures, and Short Sales' (Baker, Voorhis & Co.) is an interesting book, and well written. The greater part of it is contained in the third and fifth chapters, entitled, respectively, "Facts and circumstances which have been considered by the courts as indicating an intention to wager," and "Wagers considered in reference to brokers and commission merchants"—this last chapter being cast into the form of eight rules, with a pretty full accompanying statement of cases. The other three chapters are devoted to "Wagers" and "Evidence." The author states the common-law validity of a wager in England and in most jurisdictions here, naming certain exceptions, as Pennsylvania, Missouri, and several of the New England States; and he adds references to the English statute of about forty years ago, declaring wagers void, and to a like statute in New York. As regards the present state of the law in this country it is added: "As a general rule it may be stated that in this country all wagers are void, either at common law or made so by statute." After a reference to various special statutes in England and here against "stock-jobbing," "short sales," etc., the author remarks:

"The history of these acts furnishes an interesting and instructive study, and, taken as a whole, they show how useless it is to legislate against the natural laws of trade. The English statute sought to prevent short sales in public funds, . . . and prohibited contracts known as 'puts,' 'calls,' and 'straddles.' After lingering on the books for a century and a quarter, scorned and violated every day, . . . the true result and effect of it was shown, and it was repealed. . . . The act of Congress in reference to gold sales, and the New York statute against stock-jobbing, and the Pennsylvania statute against short sales, have all of them met with the same fate. . . . The Massachusetts statute against short sales and the Georgia statute against 'futures' remain, but that either of these statutes prevents in any appreciable degree short sales or options in these States is extremely doubtful. . . . What will be the effect of the Ohio statute [of 1885] remains to be seen."

Apart from special statutes, the author gives as the true test of what is unlawful this:

"Where the parties to a contract in the form of a sale agree expressly or by implication at the time it is made that the contract is not to be enforced, that no delivery is to be made, but the contract is to be settled by the payment of the differences between the contract and the market price at a given time in the future, such a transaction is a wager. The form of the sale is a mere cover, the real intention being to bet upon the market price at some future time, the sum wagered being the difference of the two prices as that may subsequently appear."

It will be observed that this requirement of "a contemporaneous agreement, express or implied, that the sale is not to be enforced," is one that does not necessarily interfere with short sales or even with options in any of their varieties of "calls," "puts" or "straddles," and "spread-eagles." These pleasing phrases are clearly explained by the author. In the business of the "bucket shop" the form is that of a sale, but the substance is a wager. The chapter relating to brokers and commission merchants is a valuable one, and develops the important distinction between statutes which declare wagers void and those which make them illegal. It is perhaps pardonable in just such a book as this—dealing with a novel topic, and likely to be read, in a great degree, by unprofessional readers—to quote fully from the cases; but the author has carried this too far. And five precious pages of the text are given up to repeating a note by Dr. Francis Wharton to a case in the *Federal Reporter*. That learned author, by the way, may well grieve to see himself fathered with a statement about the doctrine of laissez-faire as "accepted in the main by Adam Smith *and by J. S. Miller*." But, upon the whole, Mr. Dewey has made a valuable and important book.

'A Treatise on the Construction or Interpretation of Commercial and Trade Contracts,' by Dwight Arven Jones (Baker, Voorhis & Co.), is a work that interests the reader, because it shows thought, and study, and a considerable examination of the cases; but it is a disappointing book. The author has made an honest effort to handle thoroughly a difficult subject, but with very imperfect success. He should have waited longer before publication; his book would have been a much better one if he had delayed it a good while longer. In the course of twenty-three chapters he deals, among other things, with the nature and scope of construction, with parol evidence as an aid of construction (under the three heads of explanatory, supplementary, and contradictory parol evidence), with the admission of usage, with rules of construction, and with alterations. Very sensibly he treats construction and interpretation as synonymous. By "commercial and trade contracts" he appears to mean written ones, although he does not expressly say so. It might have been very instructive if he had considered how far the rules of construction ordinarily laid down as applicable peculiarly to written contracts are really equally applicable to oral ones. Mr. Jones does good service in discarding the test of latent and patent ambiguity, and in giving his reasons for it. In this course he is well supported by modern writers, *e. g.*, Wigram, Stephen, and, last but not least, Nichols,

the editor of Britton, whose valuable contribution to the Juridical Society Papers "on the rules which ought to govern the admission of extrinsic evidence in the interpretation of wills," is too little known. But the habit is still inveterate with our judges of expressing their opinions in the terms of this quaint, confusing, ill-understood, and ill-applied discrimination. The chapters on "alterations" are good rather as affording materials for the discussion of this perplexed topic, than as furnishing in themselves any satisfactory discussion of it. We look for better work than this from Mr. Jones when he shall have studied and pondered his subject more fully.

Mr. James H. Deering's small volume on 'The Law of Negligence' (San Francisco: Sumner Whitney & Co.) is one of those convenient digests—containing in small compass references to an enormous mass of cases—which the San Francisco publishers have been for some time giving out. This book is mainly taken up with the statement of what the cases tell us is the law as to "negligence in particular relations," arranged alphabetically in thirty chapters, beginning with "Animals" and ending with "Wharves and Docks." A few other chapters deal with the "General Principles of Negligence" and the "Remedies for Negligence." It is, as we have said, a convenient book, of the order of handbooks for a practitioner's ready reference, and shows great diligence in collecting the cases. The omission of an index of the cases is a grave defect; even in a *mere* digest (and this is something more than that) such an index is highly important.

An important book on 'Attachment and Garnishment,' by Mr. W. P. Wade, in two volumes, is published by the new San Francisco house of Bancroft, Whitney & Co.—a firm made up by uniting the law department of A. L. Bancroft & Co. with the enterprising and favorably known house of Sumner Whitney & Co. Mr. Wade has done a very elaborate and useful piece of work in digesting in this treatise a subject which has peculiar difficulties, as being mainly a matter of statute, and is at the same time peculiarly important. It is important to mercantile men and their legal advisers to have some ready means of knowing what remedy they may have against the property of a debtor in any part of the country. But it is a difficult and unattractive task to explore and reduce to form the varying statutory provisions in forty-six different jurisdictions in this country. This is what Mr. Wade has done. The first volume is devoted to the "Attachment of Tangible Property by Direct Levy." The second deals with Garnishment, otherwise called the "Trustee Process," "Foreign Attachment," and "Factorizing." Each volume has its own index and table of cases—a convenient arrangement. Over three hundred pages of the second volume are devoted to a compilation of "the statutes of all the States, without abridgment, upon the subjects of attachment and garnishment, by whatever name the latter may be called." In point of fact, in his presentation of the statutes, the author has done both more and less than what he describes. He gives the laws of the United States and the Territories as well as those of the States. On the other hand, he does not give them fully; *e. g.*, the laws of Massachusetts as to garnishment (or, as it is there called, the trustee process) are omitted.

A thoughtful and courageous little book is 'The Elements of Right and of the Law' (San Francisco: A. L. Bancroft & Co.), by George H. Smith. The author has a low opinion of the fundamental doctrines of the existing English treatises on jurisprudence—Bentham, Austin, Amos, Maine, Holland, and Markby. When a student at law he was "utterly bewildered by the confusion reigning in Blackstone and other text-books with regard to the nature and general principles of private right." He undertook to write an elementary treatise on the law, "which should at least be free from logical inconsistency," but found it necessary first to ascertain "the nature of the law and of its fundamental principles; and he therefore temporarily abandoned his original design and devoted his studies to this problem. The result, after the patient and persevering meditations of a quarter of a century, . . . is contained in this volume." The work is in three books: first, Elements of Right; second, Elements of the Law; third, Historical and Critical Review of the Several Theories of Jurisprudence. The author conceives of a right as something which "necessarily implies the idea of rightness, and all rights are therefore moral rights, and there cannot be a right of any other kind. Hence there cannot be such a thing as a legal which is not a moral right." The word "right" denotes "the aggregate of the principles by which rights are determined." The term "*jus*," on the other hand, is used to denote "the body of rules and principles . . . by which courts are governed in deciding questions of right, or by which, in other words, actions are determined." The word *jus* has been used to mean also "the practical means adopted in such States for the determination and enforcement of rights"; the word "law" is used by the author as signifying this—"the law of procedure." "The problems presented by *jus* and by right respectively, though intimately connected, are yet essentially different in their natures. . . . In the one the problem . . . is to determine, in view of all existing facts, including laws and customs, the cases in which rights exist; while in the other it is simply to ascertain in what cases actions, whether just or unjust, are given by the State."

We have made these selections as indicating fairly well the general aim and conceptions of the author. He makes the legal doctrine of rights to be no other than that of "*scientific* morality, by which the principles of positive morality ["the common moral convictions, or concurring consciences of the people"] are in the main demonstrated to be true, and at the same time its errors and defects corrected." This book is far from being a first-rate one, but it is still an original and valuable contribution to the subject of jurisprudence. In its aim to give a wider ethical outlook to that science many students of the subject will heartily sympathize. Not so many will think that the author is successful in establishing so great and wide a fund of law for judges to draw upon as that of "scientific morality." An index of cases is needed.

A result of the enormous multiplication of law reports is the publication of special digests and collections of the cases on particular subjects. An important undertaking of this sort in five volumes has lately been published, entitled 'Defences to Crime: The Adjudged Cases in the American and English Reports, wherein the Different Defences to Crime are Contained, with Notes' (San Francisco: Sumner Whitney & Co.). It is edited by Mr. John D. Lawson. There is no doubt of the very great value of these volumes to the practitioner or student of the criminal law. They constitute in themselves a library of nearly 2,000 cases reported substantially in full, and over 3,800 cases cited and more or less digested in the notes; our figures are those of the editor. It is a pity that the reader should be told in the preface to the last volume that the object of the series is that of bringing together "all the reported cases in which a particular defence has been set up on a trial or in an appellate court"; and, again, "all the criminal cases relevant to the prosecution or defence of a criminal accusation." On the contrary, we are expressly told in the prefaces to the hird and fourth volumes that the undertaking is only to gather "all the cases in which the defence in question has been *successfully* maintained, . . . not all in which particular defences are raised or discussed." *That*, it is added, would take twenty-five or thirty volumes. Besides, "as this series is for the defence lawyer and not for the prosecution," we are told, somewhat naïvely, that he needs "only the cases where a particular defence has been successful."

The first of these volumes is merely a reprint of Horrigan and Thompson's 'Collection of Cases on Self-Defence—Select *American* Cases.' That book was published in 1874. Why should the publishers place this twelve-year old collection in the series and not bring down the cases to the present time? Why retain such a mark of antiquity as the citing of Stokes's case by Horrigan and Thompson thus: "53 N. Y.—"? Certainly this is slovenly work. The second volume is Mr. Lawson's valuable book of two years ago, cases on "Insanity and Drunkenness." The third volume has the cases relating to "Disabilities of Parties"—and so touching corporations, infancy, agency, etc. Volume iv relates to "Special Defences to Crimes against the Public," and deals with a long list of crimes. The fifth volume is concerned with "Special Defences to Crimes against the Persons and Property of Individuals"—another long list. Notwithstanding the very moderate order of merit which one finds in the editing and annotating of these volumes, they make up a library of very great value to the criminal lawyer, and are especially to be commended to the practitioner who is at a distance from large collections of law books.

'The Constitutions of the United States and of the State of Ohio, with Amendments, Annotations, and Indexes; also the Articles of Confederation, 1777, and Ordinance of 1787' (Cincinnati: Robert Clarke & Co.) is a thin volume, royal octavo, prepared with care, and, apparently, with accuracy. It is, of course, mainly for a local market, but it has points which commend it to general use, namely: a good citation of cases under different parts of the national Constitution, a brief historical memorandum of the facts relating to that instrument, and especially a remarkably full analytical index to it. The Ordinance of 1787 and the two Ohio Constitutions of 1802 and 1851 are given, with their amendments and with full annotations and indices. There ought to be just such a volume in every State of the Union.

Prof. Holland's 'Elements of Jurisprudence' (Oxford: Clarendon Press; New York: Macmillan) has reached its third edition in less than six years, a fact that speaks well for the growing interest in the thorough and well-stated discussion of legal principles. The author attempts "to set forth and explain those comparatively few and simple ideas which underlie the infinite variety of legal rules," and his purpose is accomplished in a manner which greatly clears and illustrates the whole field of law. There has been much discussion of late about the introduction into our colleges of a general course on law. Technical courses are not to be thought of, so long as there is any attempt to keep separate the professional school and the college; but a certain grounding in "those comparatively few and simple ideas which underlie the infinite variety of legal rules" is something which might be and ought to be open to all students at our higher institutions of learning. An excellent text-book for a serious and thoughtful class would be this well-known book by Prof. Holland. A difficulty, perhaps, about such a course would be the finding of a competent teacher; but that would not be so very great in any institution, like Columbia or Harvard, that could draw from the company of

carefully trained young lawyers which is likely, to-day, to be found in a large city.

It is difficult to state the contents of this book in a manner which would interest our readers, without going into considerable detail; and it is not important to do it, for the book is well known to legal scholars. The principal changes in this edition appear to be those mentioned in the preface, viz.: the "working out in greater detail" of the "analysis of a right," and of certain points as to the essentials of contract. A valuable and important passage is inserted in the twelfth chapter, enforcing the view that agreement is not always necessary in contract. "This view," says the author, "opposed as it is to the current of authority from Javolenus to Mr. F. Pollock and Sir W. Anson, was originally put forward with some diffidence. It is now restated with more confidence, since English friends who were at first decidedly opposed to it are converts to its truth, while a similar view, after having been, as it seems, for some years academically debated in Germany, has definitely come to the surface in the important work of Prof. Leonhard." The author, in saying that section 17 of the Statute of Frauds "renders void" a contract, while section 4, "though it does not void the contract, allows no action to be brought on it," appears to have overlooked the later English cases, which abandon the older doctrine about section 17. The statement is inaccurate that "English law requires that a contract . . . which, under the Statute of Frauds, has been necessarily made in writing, should be discharged in like manner." But such errors are very few, so far as we have observed, in this thoughtful and highly instructive book. Prof. Holland's accomplishments as a student of the Roman law have proved an excellent outfit for the work here undertaken. We commend the book to judges, to teachers of law, and to any general student who wishes to grow acquainted with the general principles of law.

Mr. William P. Wade's 'Treatise on the Law of Notices as affecting Civil Rights and Remedies' (Chicago: Callaghan & Co.), appears now in its second edition; the first was published in 1878. "The text," says the author, "has received additions to the extent of about 130 pages." The writer tells us in the preface to the first edition that before printing it he was reminded of certain difficulties about his task "by the oft-repeated interrogatory, . . . 'Notice of what?'" He would have done well to heed the intimations of that question. After a writer on "Notice" has got through with the discrimination between actual and constructive notice, he would seem to have little else to do than to present cross sections of various parts of the law, as the law of agency, of carriers, of real property, of evidence. Our auther reaches the climax when he adds in this edition a chapter (and it is a very poor one) on "Facts of which Courts take Judicial Notice." It is true that he does this with the expression of an opinion that it does not belong here; but many people had complained of its absence, and, he naïvely adds, "all other considerations have been subordinated to that of utility." The inserting of such a chapter is mere incoherency. When the author was greeted with the "numerous complaints" to which he refers, he might fairly have asked his critics whether they supposed him to be writing a book on the *word* "Notice," and not, rather, on a *subject* thus denominated, and a subject capable of being reduced under some general principles. Yet, truly, such a question might have caused the author himself disquieting reflections. The book, as we have indicated, seems to be one of little merit.

A second edition of Mr. Victor Morawetz's 'Treatise on the Law of Private Corporations' (Little, Brown & Co.) has appeared in two volumes. The first edition, in one volume, was published in 1882. It was an excellent book; and now its value has been increased by a careful revision and rearrangement of the text, as well as by important additions. Especial attention seems to have been given to the chapters on the Validity of Corporate Acts, the Legal Consequences of the Formation of a Corporation without Authority of Law, and the Rights of Creditors. The author is a lawyer of no ordinary talents—acute, and not sparing of labor. Being of the mind of Lord Mansfield, apparently, when he said that "nothing is so apt to mislead as a metaphor," he deals peremptorily with that conception of a corporation which makes it a legal person, having high-sounding attributes of "immortality" and the like, as merely a convenient figure of speech. This, to be sure, is no new idea. What is new and very valuable is the careful and logical working out of the doctrine that "the word 'corporation' is but a collective name for the corporators or members who compose an incorporated association." The books, for a practitioner's use, are few which embody so much careful and exact thinking as this, and so much discriminating and first-hand research among the cases. It is probably the best treatise we have upon the subject.

There is little in the greatly expanded size of Mr. Herman's book on 'Estoppels' (Jersey City: F. D. Linn & Co.), swollen now in the second edition to two volumes, to give it any better claim upon the legal profession than belonged to the first edition. The present generation suffers not from a lack, but from a glut of law books. The mills of the courts grind neither slow nor fine; and the topic upon which thousands, or the point upon which scores or even hundreds of cases, cannot be cited, is hardly to be found. The crying need of the present day is not amplification, but assimilation and contraction. The production of law books is only too easy; the difficulty is to insure their quality. The next writer, therefore, whose boast is that, instead of the 565 pages and 2,700 citations of his first edition, there are 1,449 pages and 16,000 citations in his second, has not rendered a service to his profession, but inflicted harm upon it, unless his added matter is original and relevant. Indeed, we should hail the day when an author announced that his second edition was smaller than his first, as it often might well be by the condensation of related matter and the elimination of settled discussion. Exactly the reverse has been Mr. Herman's method; the book abounds with what we must regard as little else than stuffing, namely, citations beyond necessity and matter which is slightly, if at all, relevant to the text, and is fully and appropriately treated elsewhere. We give a few examples. At page 1,211, under estoppel as to "principal and agent," to support the recondite proposition that ratification is equal to original authority, to two lines of text there are cited *one hundred and one* cases. These are arranged neither by date nor place, so as to define the development and variations of the doctrine or its local application; but tumbled down in one indiscriminate heap. So at section 20, one hundred and forty, and, somewhat later, two hundred and twenty cases are cited on other points: but all in the same way. If the propositions they are cited to sustain needed so much authority, the salient points of difference should be indicated. If there were no such differences, such an accumulation is a monstrous abuse. The quality of the text is equally reprehensible. Repetition abounds. On page 2 we have seven different statements of what estoppel is, and but one of them that can be called even an approximately fair definition.

RECENT NOVELS.

Constance of Acadia. Boston: Roberts Bros.

Face to Face. Charles Scribner's Sons.

A Ranchman's Stories. By Howard Seely. Dodd, Mead & Co.

The Head Station. By Mrs. Campbell-Praed. Harper's Handy Series.

Violetta. After the German of Ursula von Manteuffel, by Mrs. A. L. Wister. Philadelphia: J. B. Lippincott Co.

The Evil Genius. By Wilkie Collins. Harper's Handy Series.

It is in a general way true that the value of human endeavor is in proportion to practical result, immediate or remote; yet many are the lives, beautiful, strong, altogether tragical, for which this standard of judgment is inadequate and unfair. Such a life was that of Constance Bernon, of La Rochelle, Mme. La Tour. The author of the historical romance, 'Constance of Acadia,' has brought into a light which she well can bear this woman who was great in herself, and great in her aims, rather than in temporary achievement or in permanent impression upon the cause and the country that were hers. Her soul was passionately devoted to noble principles, her mind persistently self-directed towards high issues; to hasten the establishment of a French Protestant kingdom in Acadia, her body knew no weariness, her spirit no discouragement. Yet for all that, practically speaking, she lived in vain. The Huguenots, whom she hoped and prayed might rise from the ruins of La Rochelle to set up their altars in the wilderness, never won any appreciable footing in Acadia. The mass of the early French settlers was Romanist; their posterity is priest-ridden. The Indians, among whom she labored incessantly, were ever more easily won by the miracle-working, painted puppets of the Jesuits, than by good works coupled with tedious appeal to an invisible, unsymbolized God. The carnal, astute husband, whose spiritual welfare was only dearer to her than were his worldly honesty and honor, could be, without inconvenience, either Catholic or Protestant, servant of Louis of France or Charles of England; could shift politics and religion as garments whenever the self-interest of Charles La Tour demanded a change. Little more than two centuries have elapsed since she died on the bastion of her forest fort, defending against Charnacé (the lover of her youth) her faith, her home, and her handful of followers; yet on that very spot her name is but a vague memory, while to the world familiar with Joan of Arc and the Maid of Saragossa it is unknown.

Clearly no page of history offers better opportunity for romantic and dramatic treatment than this. The events are comprised in a few years, and are fitted to the character of the actors as nicely as if devised by a cunning dramatist. The march of the tragedy is relentless, from the sacrifice of love for duty, made by Constance and Charles de Menou (Charnacé), in Rochelle, till the tide of Fundy washes over Constance, and the body of the brilliant, subtle, spiritual French noble lies frozen by the shore. The strain of it is indeed so intense that one almost feels the final, comic touch of the marriage of Charles La Tour with the so-called widow of Charnacé to be a deliberate wile of the dramatist, intended to relieve the depression of his audience.

The author of 'Constance of Acadia' has not taken even legitimate advantage of the materials at his hand. He has not missed the drama, but he has not given it its proper force and prominence. The fine outline is obscured by deviation from the natural succession of events. The arrangement is so unskilful that a reader unacquainted with the particulars of the duel between

Charles La Tour and Charnacé for the possession of Acadia must have difficulty in following them. There are sentences and paragraphs which must be read over and over, and which, after all, depend for interpretation upon the reader's perceptions or imagination. The expression is so clumsy and imperfect that we can only ascribe its defects to the influence of original French documents, whose form and style have clung to the author along with the substance. These defects are specially noticeable in narration, and in the characterization of Charnacé; it is almost impossible, from the text, to get any notion of the tremendous struggle between love and religious fanaticism in the breast of a man so receptive, so susceptible to temporary influence, so passionate and proud. The delineation of Constance, a much simpler, more defined nature, is more satisfactory, and that of Charles La Tour is distinctly keen and admirable. There is room in him for a display of humor, of which the author has a good deal, and of which he makes best use in the chapters describing La Tour's visit to Boston, and the Puritan debate in which a question of conscience was opposed to a question of cash down. But if, through technical inaptitude, the author may fail to accomplish his expressed object—the popularization of colonial history—he has not shirked dry investigation, he has not lacked feeling for his subject; and he has produced a work which may be read, and ought to be widely read, with both interest and profit.

'Face to Face' is a novel with two motives, which are developed with a seriousness that verges on solemnity. The first is to make exact and impartial comparison between British and American social customs, and to reprove gently the Anglomaniacs of America. Owing to the poverty of illustrative incident and to the preponderance of expository platitude, the chapters devoted to these topics are fatiguing, but nevertheless full of instruction for an anxious multitude inquisitive about social matters. The second motive is profounder: it is to prove that the capital and labor question is a burning one, and that the present generation must wrestle with it. There is something delightfully ingenuous in the author's treatment of this motive. There is a simple frankness in his use of threadbare argument and a well-worn situation which shows them to be new to him, and makes them as good as new to the reader. The individuality of the author is therefore so interesting that one takes little note of the people whom he employs to display it. Still, it strikes one as improbable that a Girton girl should have such a store of geographical ignorance as had his philanthropic heroine, or that a fastidious and cosmopolitan gentleman should constantly preface his remarks with "I presume," and embellish them with "Humph!"

'A Ranchman's Stories' may disseminate knowledge about sheep-raising in Texas, but they cannot excite interest in the industry or liking for the men engaged in it. The value of fictitious sketches of the semi-civilized phases of life depends on the author's perception of incident and character fitted for imaginative treatment. He must be able to soften the coarseness, almost savagery, inseparable from that life, and to bring into bold relief those human qualities which ennoble and beautify any life, however squalid or degraded. The people in these sketches are as dull as their sheep, almost as dull as the pedantic, descriptive passages, while their distinctly human attributes are uniformly offensive.

Mrs. Praed, in her Australian novel, 'The Head Station,' does not flinch before the unpleasant realism of life on a cattle ranch, but she makes the agreeable as prominent as the repulsive, and introduces us to people not wholly brutalized, depraved, or illiterate. She has in a remarkable degree, too, the art of familiarizing the reader with foreign landscape and foreign habits of living. After reading the first chapter, one feels that he has really been dawdling through a hot summer day on the Doondi veranda, watching the cattle graze in the pastures, and the shifting light and shadow on the mountains in the distance. Almost every descriptive passage, and there are many, imparts something of this rare pleasure. If the author had drawn upon her effective backgrounds only the one strong love-story of Hester and the tutor, she would have written a book nothing of which could be omitted without loss. But it is too much to demand sympathy with half-a-dozen hapless lovers, two of whom, at least, are of a sentimental and commonplace kind, out of place in so clever a book.

'Violetta' is below the standard of novels usually chosen by Mrs. Wister for translation. The story runs smoothly, and there is the agreeable union of homeliness and military glitter which make the atmosphere of most novels of upper-class German life. The one unusual situation is the Baroness von Treffenbach's flight from her husband, and the unusualness is not in the fact, but in the underlying reasons. The woman, who had been a great singer, was neither inconstant nor unloving, but the moment came when the monotony of assured rank and respectability pressed on her so heavily that she had to go. There is much to be said in behalf of a woman in such a case, but the author has little more charity for the Baroness than has the world, which passes a superficial yet inexorable judgment on the deed. The younger Treffenbach is very well characterized, but a prig of thirty years' standing is not to be reformed in a day. Even during the honeymoon he probably drew from his pocket a MS. nicely calculated properly to repress the too volatile and light-hearted Violetta.

In 'The Evil Genius' there is little to remind us of the lively ingenuity and the extreme technical cleverness of the author of the 'Moonstone.' The meaning of this long, unpleasant tale about conjugal unhappiness and infidelity is not plain, and neither plot nor characters are worthy of an hour's attention. It is just possible that Collins has here attempted to preach morality rather than to write a story. The result of his effort is so hopelessly confusing that it is charitable to ascribe his failure to his having struck out on a new path too late in life.

Sacred Mysteries among the Mayas and the Quiches 11,500 Years Ago. Their relation to the sacred mysteries of Egypt, Greece, Chaldea, and India. Free Masonry in times anterior to the temple of Solomon. Illustrated. By Augustus Le Plongeon. 8vo, pp. 163. New York: Robert Macoy. 1886.

When an author tells us that he has discovered the ancient hieratic alphabet of the Mayas; that by means of it he can decipher the bas-reliefs and mural inscriptions that are found in the deserted "cities" of Yucatan; that he has "learned at the fountain-head the esoteric meaning of some, at least, of the symbols, the interpretation of which has puzzled many a wise head," and fails to point out the steps by which he has arrived at these wonderful results, we can only congratulate him upon his good-fortune and bewail our own ignorance. But when he goes further, and tells us that the traditions handed down in the sacred books of the Hindoos, the Egyptians, and the Jews—as, for instance, those that relate to the fall of man and the death of Abel—were founded upon occurrences that took place some 11,500 years ago in Yucatan; that the statue, and the heart, partly cremated, of Prince Coh (or, as Dr. Le Plongeon formerly called him, Chaacmol), the Maya original of the Hebrew Abel, had actually been discovered; or when, basing his conclusions upon a study of these bas-reliefs and mural inscriptions, he assures us that "the philosophers of Mayax must have known that the waters cover the greatest part of the globe (about three-fifths); and that water, being a combination of gases (oxygen and hydrogen), the most subtile of fluids, must have been the first form of matter produced," criticism may well stand abashed for the want of suitable terms by which to characterize the statements. We might, it is true, deny them outright, but that would be discourteous, and we have too high an opinion of Dr. Le Plongeon and the work he has really accomplished to be guilty of such an offence; or we might call upon him for the proof, but that would be idle, since we are given to understand that he has in vain sought a publisher for the works to which he refers us, and in which, if anywhere, this proof would be forthcoming. Under the circumstances, then, all that we can do is to insist that statements like these are of such a revolutionary character that nothing short of the most indisputable evidence will secure their acceptance; and that, failing this, the facts upon which our author depends for the support of his theory as to the civilization of the ancient Mayas and the connection between them and the peoples of the Old World, are either not admitted (as is the case with the statement about the existence of the "lost Atlantis"), or else they do not justify the conclusions which he seeks to draw. Free Masonry may be "the great-grandchild" of the sacred mysteries of the Greeks, and it is possible that the Greeks may have obtained these mysteries from the Egyptians; but that the Egyptians or any other of the Old-World peoples derived them or any other of their customs directly from the Mayas 11,500 years ago, or at any other time, are propositions which, in the present state of our knowledge, cannot be accepted.

Great Lives. A course of history in biographies. By J. I. Mombert, D.D. First series. Boston: Leech, Shewell & Sanborn.

Teaching history by biography is an excellent method, provided the characters are selected with judgment and the lives so related as to convey some unity and continuity of impression. It is not easy to see on what principle of selection Dr. Mombert's "great lives" are chosen. Romulus and Lycurgus might pass muster, although they cannot be called historical personages; but Hercules is a pure myth. The selection of Saint Boniface and Godfrey of Bouillon shows a just historical sense; but to have both Washington and Franklin, and Lincoln and Grant, violates the sense of proportion, especially as there is no name between Cæsar and Constantine, between Godfrey and Columbus, or between Elizabeth and Peter the Great. The lives are, on the whole, well told, although not always adequately; for example, that of Scipio Africanus the younger ends with the capture of Carthage, nothing being said of his subsequent career. The lists of "authorities" appended to each life are curiously incomplete and misleading. For Luther we have Mosheim, D'Aubigné, and Bunsen; for Napoleon, Thiers, Alison, and A. Hugo. Neither Mommsen nor Freeman is referred to, nor any of the recent excellent short works (of the Epochs series, for instance); Milner's history of England and Duller's of Germany ("for young students acquainted with German") are mentioned several times. There are several maps, which have the merit of giving a clear general view, with the omission of irrelevant detail. In the map of the Napoleonic period the "French Empire" does not extend to the Baltic, but does include the kingdom of Italy.

Specimens of Persian Handwriting. Illustrated with facsimiles from originals in the South Kensington Museum. By E. H. Palmer, M.A., late Lord Almoner's Professor of Arabic, Cambridge, etc. To which are added illustrations of the Nâgarî character. By Frederic Pincott, M.R.A.S. London: W. H. Allen & Co. 1886. Pp. vi, 52.

THE first part of this volume was prepared by the unfortunate Orientalist who perished so miserably in Egypt, and who is now commemorated in St. Paul's Cathedral. The remainder of it has been executed, and the whole prefaced and edited, by a rising scholar whose labors in connection with Hindî and Sanskrit there has more than once been occasion to commend in the columns of this journal. Its directions for writing the Persian and Nâgarî characters are as detailed and explicit as could be desired; and it cannot but prove eminently serviceable to all whose use of it is demanded by their vocation. Previously to the reform of the Indian civil service, introduced just after the abolition of the East India Company, it had, for some two generations, been a rare thing to find Indian magistrates or judges that had not forgotten the knowledge they acquired at Haileybury of reading and writing the languages of the Hindus and Mohammedans, whose interests depended so largely on the possession, by those who administered the law to them, of capacities which they had been too indolent or too unscrupulous to maintain. All this is now, under the improved order of things, essentially altered. It is mainly for the benefit of candidates for the Indian civil and military services, to whom may be added missionaries employed in the northern half of Hindustan, that the work of Prof. Palmer and Mr. Pincott is designed; and better guidance than that which they furnish could not easily be devised.

The Story of Germany. [The Story of the Nations.] By Sabine Baring-Gould, M.A., with the collaboration of Arthur Gilman, M.A. New York: G. P. Putnam's Sons. 1886.

IT is no easy task to write a consecutive history of a country whose annals are so devoid of unity as Germany, and we will not say that all the difficulties of the task have been overcome in the volume before us. But certainly it would be hard to find a more entertaining book, and one better calculated to give the young reader an interest in history. The picturesque and personal elements in the narrative are just what young readers want; and—to take illustrations at random—the personality of Prince Eugene (p. 268) and the circumstances of the seizure of Strassburg (p. 261) will, we warrant, never be forgotten by them. We think the author has erred in making his chapters too short; and, as we have already intimated, he has not always made the thread of connection sufficiently plain. The War of the Spanish Succession is introduced (p. 270) by a mention of the death of Charles II., but we are not told who this monarch was and on what ground the several claims were preferred. Neither is it correct to say that Joseph Ferdinand advanced a claim, he being already dead. The Hohenzollern genealogy (p. 265) will, we think, be found rather confusing by young persons. The illustrations deserve all praise, being, almost without exception, the representation of real objects, often the facsimiles of old pictures, all well calculated to convey useful information, and, what is better, to impress the historical imagination. There are a number of excellent portraits—Frederick III., from his tomb; John Frederick of Saxony, by Cranach; Joseph I., enveloped in wig and cloak; a sketch of peasants by Dürer and of patricians by Amman; several views by Beham; the house of Henry III. at Goslar; that of Barbarossa at Kaiserswerth. It would take too long to enumerate all the pictures of genuine historical value.

A Handbook of English History, based on the lectures of the late M. J. Guest, and brought down to the year 1880. With a supplementary chapter upon English literature in the nineteenth century. By Francis H. Underwood. Boston: Lee & Shepard. 1886. 8vo, pp. 614.

A FEW years ago (see *Nation*, September 4, 1879) we commended Mr. Guest's 'Lectures on the History of England' for its interest and suggestiveness. It appeared to us unusually well adapted to the use of young people just becoming acquainted with English history. A reëxamination of the book, as edited by Mr. Underwood, confirms us in this judgment. We know of no better sketch of its size. It is, as we said in our former notice, somewhat disproportioned, giving relatively too little space to modern history. Another defect, that it ended with the reign of George III., has been remedied by the editor, who has brought the narrative down to the present time, and has also added a map of the Saxon kingdoms in the tenth century, borrowed from Freeman. The work of the editor appears to have been done with good judgment. The redundancies and repetitions of an oral style have been pruned away, and expressions that were only suited to English readers have been altered to some neutral form. Generally the changes are an improvement, but in a few cases not. The added chapters, embracing the reigns of George IV., William IV., and Victoria, are too brief and compendious—perhaps necessarily brief, but certainly abounding to excess in names and dates. We will only say further that the merits of the book—as is natural in a course of popular lectures—are rather in picturesque narration, and that constitutional history (as in the contest of the seventeenth century) is perhaps necessarily meagre.

BOOKS OF THE WEEK.

Adams, O. F. August. Boston: D. Lothrop & Co.
A Wife's Confession, and Other Stories. Cassell & Co. 15 cents.
Bancroft, H. H. History of the Pacific States of North America. Vol. xvii. California, vol. v. 1846-1848. San Francisco: The History Co.
Bonnières, Robert de. Le Baiser de Maïna. Paris: Ollendorff; Boston: Schoenhof.
Broglie, Duc de. Souvenirs 1785—1870. T. ii and iii. Paris: Calmann Lévy; Boston: Schoenhof.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 9, 1886.

The Week.

THE line of the earthquake appears to have been nearly north and south, and to have embraced with greater or less intensity nearly the whole region on this side of the Mississippi. The violence of the shocks reached a climax in South Carolina, where the city of Charleston has been almost laid in ruins, with considerable loss of life. The damage done in other parts of the country has been trifling, and in many places it is evident that most of those who felt the earthquake did not know it until they looked in the newspapers the next morning. But the smallest quake extending over such a wide area, and becoming extremely violent at any one point, contains a suggestion which is amply sufficient to shake the nerves of all dwellers in the great cities on the Atlantic coast. The vibration which has left Charleston a wreck, if it took place even for ten seconds among the cloud-capped towers and gorgeous palaces of New York or Boston, would make fearful havoc.

The small extent of knowledge respecting the causes of earthquakes, even among those scientists who have given the subject most attention, is strikingly shown by an incident which has just happened in London. Prof. Dawson, Principal of McGill College in Montreal, read on Wednesday week before the British Association an exhaustive paper on the geological formation of the bed of the Atlantic, with especial reference to its bearing upon the question of earthquakes. The paper was highly praised and regarded as a valuable contribution to the discussion, but within a day came the full account of the Charleston upheaval, and Prof. Dawson now frankly makes this confession:

> "The phenomena of the present earthquake convulsions in America and elsewhere, but particularly in America, are extremely puzzling, and completely upset some of the conclusions set forth in the address I read last evening."

Mr. Blaine's canvass in Maine has passed the point where it need be considered seriously. Instead of leading the attention of the country to himself as a statesman of broad national views, he is now engaged in a bitter personal wrangle with the leaders of the Prohibition party, in which they appear to much better advantage than he does. So far as this course is going to have a national effect, it will work greatly to his disadvantage. He is not going to help his standing as a candidate by embittering the temperance voters against him even more than they were before. Every time that he assails Neal Dow and Mr. St. John he assails the cause of which they are the leaders, and alienates thousands of voters from himself. He is, in fact, by every speech he makes, reducing the Blaine party to a snugger minority than ever, and no friend of honest politics can regard his work otherwise than with complacency.

A correspondent, who was among the Independent Republicans of 1884, thinks it is time that these Independents should declare their position for 1888, and that in doing so they should now openly enter the ranks of the Democratic party. Several sentences in his letter show that he is not a man who has trained himself to consider political questions from a strictly non-partisan standpoint. Had President Cleveland, following the advice he now gives, "recognized" the Independents by dividing the offices among them, he would at the start have incurred the ill will of the party which nominated him, and to which he had to look for support, without gaining a whit more of the cordial approval of those men who went outside their own party to vote for him than he has by the course which he has pursued. And had leading Independents accepted offices from him, the commendation which he is receiving from men of their class would have lost a large part of its value and effect. What this haste to "fuse with the Administration party" would lead to, our correspondent himself indicates in his criticism of the course of the New York Independents in not preferring Hill to Davenport as a candidate for Governor in this State. A man who can, in the light of present circumstances, look back with any regret because his vote was not cast for Hill, can hardly expect a place among safe political advisers.

The Independent voter has much less to fear from his continued independence than our correspondent thinks. Who the Presidential candidates will be in 1888 no man can now tell. Mr. Blaine certainly is not so near a renomination as this writer thinks. It should be every good citizen's wish that both parties will place in nomination the most unexceptionable candidates whom they can secure. Then, whichever party wins, the high office will not be disgraced. The influence of the Independents, while they remain Independents, will go far in bringing about this result. For, scoff as party workers and party writers on both sides may at the Mugwumps, the leaders of both parties know that the Mugwump vote may turn the scale in more than one State in 1888. Knowing this, they will make a greater effort to satisfy that vote than they would if, on the one hand, it was enrolled on their side, or, on the other, was openly arrayed against them. We are inclined to think that this independent position of the Independents will make more for political reform than would their presence in the party caucuses, granting that while they remain Independents the caucus doors will be closed to them. If the Democratic party shall continue to grow in wisdom as it is growing now under President Cleveland's teaching, and shall make that wisdom manifest at its next Presidential convention, no Independent will have to censure himself for not taking early part in its councils. And if, as our correspondent assumes, a second nomination of Blaine will be equivalent to a second nomination of Cleveland, why then, the result will almost take care of itself.

The improvement in Indiana politics which began with the recent Democratic State Convention has been still further advanced by the Republican State Convention last week. The Democratic gathering was rendered notable by the high character of the delegates and the prominence of the progressive young element in the party. It heartily applauded Cleveland, and showed most clearly the new spirit which the President has infused into the party. So promising an opening of the canvass did the Democrats thus make that the Republicans felt compelled to elevate the standard of their platform. The resolutions, as a whole, are decidedly above the average, while the deliverance on civil-service reform is explicit and progressive:

> "We favor a thorough and honest enforcement of the Civil-Service Law, and the extension of its principle to the State administration wherever it can be made practicable, to the end that the corruption and flagrant abuses that exist in the management of our public institutions may be done away with, and they be liberated from partisan control."

We gather from the columns of the *Civil-Service Reformer* that the "boss" of Baltimore politics is not Senator Gorman, but one J. Frank Morrison, President of the Crescent Club of that city. There are bosses and bosses. New York has had large experience of the breed, but she has never had a boss who would allow convicts to go around town collecting political assessments before their term in prison had expired. This, it appears, has been the function of one William Wagner, a saloon-keeper who killed a man last year "under the most brutal circumstances," and received the light sentence of two years in jail, the sentence expiring in the autumn of 1887. Notwithstanding his supposed incarceration, Wagner has been out on several blackmailing expeditions, collecting money from saloon-keepers not yet convicted, by threatening to expose them for selling liquor on Sunday. The watchman of the jail accompanied him. It is urged in mitigation that the watchman was the real culprit, and that as he could not write, while Wagner could, he took the latter along as an amanuensis. Twenty dollars was the amount exacted as hush money from each saloon visited. The watchman, when called to account, said that the money was raised for political purposes, and expressed surprise that anybody "in politics" should question the proceedings. When informed that they would be questioned he left for parts unknown. The question of immediate interest is whether the boss-ship of Mr. Morrison includes the Baltimore jail, as that of the late Mr. Tweed included the penal and reformatory institutions of New York. It is all very droll.

The report of the Legislative Committee of the Knights of Labor is a document of some value, since it discloses the ideas which the Venerable Sages of the organization deem of most importance in national politics, and also the

names of the Congressmen whom they esteem most deserving of their support and confidence. As to measures, we find that the Knights' Committee did everything in their power to promote the passage of the Morrison surplus resolution. Indeed, they claim the credit of having dug it out of the Committee of Ways and Means, where it had lain buried more than five months. They insinuate that Mr. Morrison himself felt no interest in the measure, and they punctuate this slur by leaving his name out of the Directory, while putting in that of his colleague, Mr. Springer. The surplus resolution as it passed the House meets their hearty approval, but, as amended by the Senate, "it would have been the greatest victory that Wall Street has gained since the credit-strengthening act of 1869." Accordingly they commend the action of the President in refusing to sign it. In other words, the "pocket veto" which has been so severely condemned by some of our Republican friends in the West, is endorsed by the Knights as being in the interests of "the people." What a horrible thought it must be to the Republicans of Iowa that they did not comprehend the interests of the people when they passed a resolution denouncing the pocket veto. We shall depend upon Gen. Weaver to keep them reminded of this betrayal of the popular cause all through the campaign. The only measure or series of measures reported upon, aside from the surplus resolution, are the land-grant forfeiture bills. As to these the Committee merely report progress and ask leave to sit again.

We see that the journeyman plumbers have resolved that no boys who have learned plumbing at the Trade School shall be employed in this city. Is there no one who can reason with our journeyman friends, or have they had their own way so long that reasoning would be in vain? Have they forgotten that they are living in America and not in Russia, and that the whole foundation of American prosperity consists in education and freedom; in giving to every boy, however poor his parentage or humble his condition, an opportunity to rise and learn? What would they say to a convention of doctors which should resolve that they would not attend hospitals any more because a poor man who breaks his leg is treated there without charge? What would they say to a convention of army officers for the purpose of procuring a law abolishing West Point, so that there should be no young men coming into the army to take their places? What would they say if men who knew how to read and write should refuse any longer to pay taxes for schools, so that they could keep in their own hands the advantage which the knowledge of reading and writing gives, and keep the rest of mankind in ignorance?

As the "Consular Regulations" are, we learn, about to be subjected to a severe revision by the officials of the Department of State, we beg to inquire if some method cannot be devised by which we may be spared the mortification of having a large number of our consuls supported at the expense of foreign bankers. By paragraphs 546, 547, and 549 of the present Regulations, our consuls, who are paid a fixed salary, are permitted to apply the fees collected by them to the payment of their own compensation, office expenses, and clerk hire, and are required to transmit the residue to the United States bankers at London, and, in case the fees are not sufficient to cover their salaries, they are authorized to draw on the Treasury for the difference. Of these drafts it is safe to say that one-tenth, after having been "cashed" at the bank of the place where the consul resides, and after having passed through the hands of a score of people in due course of business, are rejected by the Treasury because drawn against an appropriation which has become exhausted, or which has "lapsed," or which does not seem to be properly chargeable with drafts of the character of those presented. Or payment is refused because the account of the officer upon which the draft is based has not been received, or has not been adjusted, or does not warrant payment. When these reasons are reported to the banker who has advanced the money on the drafts, he, of course, looks to the consul, if by some good fortune he is still in the service; and fortunate is the consul who can make it clear that there has been no "crookedness" on his part, and that there is no displeasure with him at home. If the banker is not saved from loss by the consul, he indignantly inquires of the Treasury if servants of this Government, required to give bond for the proper discharge of their duties and faithful accounting of all moneys coming into their hands sent abroad, supplied with blank bills of exchange, which they are authorized to fill up and negotiate, are to be made a charge upon him. The exasperating and incredibly "audacious" reply is, that it is not the policy of this Government to pay drafts not warranted by the state of the accounts or the appropriations, in order to protect foreign bankers and with a purpose of holding the sureties of the consul liable.

The result of this system is, that some consuls cannot discount their drafts abroad, but are obliged to wait for a remittance from the Treasury after the settlement of each quarter's account; others are accommodated after payment of an enormous discount for the risk assumed, for which, by the way, they are reimbursed by the Government, and all are constantly reminded of the contempt which the consular service has brought upon the United States. Now, it may appear incredible, but all this can be remedied by one stroke of Mr. Bayard's pen. It is usual both in the State and Treasury Department to deplore this sad condition of affairs, and to visit the blame upon Congress. It is true that Congress could years ago have put our consular service upon the respectable basis which Mr. Belmont's bill, soon to become law, we hope, has established; but the Secretary of State, by the exercise of the same power which was exerted in the adoption and execution of paragraphs 546, 547, and 549 of the present regulations, can, unaided, entirely remove the evil to which we have adverted. In lieu of these paragraphs, he can require our consuls to deposit with the London bankers all fees which they collect, and to draw on them for their salaries and expenses. This would not only insure prompt payment of their drafts, and consequently avoid the excessive discount now paid annually by the Government, but would actually result in a gain, as exchanges are nearly always in favor of London wherever our consuls are stationed. Of course, it might be found advisable to modify such a regulation so as to permit certain of our consuls to transmit their fees direct, and to draw upon the Treasury, and to establish in China another Government fiscal agency for the convenience of the service in the East.

The scavengers of the metropolitan press are now devoting all their energies to hunting down a woman who, having once given them great opportunities for "enterprise" by marrying her father's coachman, has now aroused them to new exertions by leaving her husband without saying where she was going. Whole columns on the first page are devoted to the results of the search, with a fine collection of "theories" as to the cause of her flight and the place of her hiding. The "theory" is a great favorite with the scavenger, for under cover of following it out he can dig up the whole of the woman's married life by publishing all the vulgar tattle which he can find in bar-rooms and on theatre curbstones concerning it. We presume that there is an active market for this disgusting stuff, and that the "great editors" who are responsible for its publication find that it "pays" them well. There ought to be a law compelling them to sign their names to it.

The number of gun accidents this year has been unusually large, and the carelessness which caused some of them unusually great. One young man at Lake Placid was actually driving over rough roads in a buckboard with the muzzle of a loaded gun laid against his body and the stock between his feet, and in lighting a cigarette he gave the trigger the needed twitch with his foot, and blew his elbow off. Another young man in Pennsylvania met with a more extraordinary accident still. He had 'oaded his gun, and inserted the top of a lucifer match in the hammer to make sure of a discharge, and, thus prepared, leaned on it with the muzzle close to his face. The stock slipped, the trigger caught in a plank, and the charge tore the side of his head off. The accidents do not diminish in number, because a fresh crop of youths take to gunning every summer, and because they never seem to learn anything more about a gun than how to load and fire it. The fact, is that the carrying of a sporting gun is fully as important a part of sporting drill, if we may call it so, as the shooting. A man beginning to shoot should at once acquire habits of carrying which will stick to him, without his taking thought, so that he will instinctively keep the muzzle away from him. It ought to be disgraceful and ridiculous for a sportsman to be seen with the barrel of his gun pointing into his body, or using it as a staff to lean on, or as a walking stick to hit things with.

The *Westminster Review* for July, in an article on the Registration of *Titles* as distinguished from the registration of mere deeds and instruments affecting title, shows that the

Australian colonies have a system of state insurance of recorded titles, whereby a small fraction of the fees paid for recording titles is set apart as a fund for indemnifying every person who is defrauded of his land by the recording of a false title, and the State guarantees the validity of every title actually recorded. This makes titles good in every recorded purchase in a manner even more complete than commercial paper is valid in the hands of a bona-fide endorsee. The object of the writer is to prove that in England a like system of registering titles failed, because the law failed to provide an indemnifying fund out of which an owner who should happen to be "recorded out of his titles," or to lose his title by a false record, should be reimbursed, while the Australian system succeeded because of the provision for such a fund. In 1880 the assurance fund of the various registering colonies in Australia amounted to £180,000, while the total of all the compensations paid to injured owners had been only £2,500, and the several funds of Tasmania, New South Wales, and New Zealand were actually intact, as were those of western Australia. The percentage charged is one-fifth of 1 per cent. on the value of the land conveyed. This is certainly cheaper as well as more effective than the means by which the titles are passed in most parts of America. We notice, however, that the article is marred by an error in the statement that the Australian system has been adopted in Iowa. The writer enumerates:

"In England and Ireland (to an almost inappreciable extent, however), in the Australasian and in some other colonies, in Iowa, U. S. A., in the Hanse Towns, in Prussia, Hesse, and some other districts in Europe, and in the French colony in Tunis, registry of titles has been established."

As to Iowa this is erroneous, the registry there being simply a registry of deeds with the same effect exactly as in the other States.

The Central Association of German Industries, nearly a year ago, was driven by the handful of bimetallists in that country to propose a discussion of the monetary-standard question among the forty-five branches of the Association, to be followed by answers to a series of questions definitely stated. The discussions have been held and answers returned by thirty-four of the branch associations. Three of these advocate the introduction of the double standard. Twenty-one have decided in favor of the present gold standard of the German Empire. Three are opposed to any use of silver, except for subsidiary coins; that is, they favor calling in and suppressing the outstanding thalers. The answers of the remaining branches were more or less hypothetical. The disappointment of the bimetallists is great, since the movement was initiated by them in the expectation that the business men would take the view so industriously disseminated in England and on the Continent that the hard times of the past three or four years were due to a shortage of gold. This notion had the respectable authority of Mr. Goschen to give it support, but it has even made less impression in Germany than in England.

The same conception of the causes of hard times has been vigorously pushed in this country, and it is worth while to ask what the advocates of the Goschen view have to say about the manifest and acknowledged revival of business that has set in during the present year. A remarkable variety of causes for the improvement have been put forward to explain this agreeable change. The latest one is that offered by Mr. Blaine in his speech at Houlton, in which he ascribed the revival of business to the defeat of the Morrison Tariff Bill. Other philosophic minds have held that it is due to the success of the Democratic party in the last national election. Still others ascribe it to the defeat of the Morrison surplus resolution. It may be, for anything we know, connected with the progress of civil-service reform, but we would not undertake to affirm this with any positiveness. One thing we do know, and that is that there have been no unexpected additions to the world's stock of gold in the past six months. The Gold Famine is just as intense now as it was last year and the year before. All the nations and governments are bidding against each other for possession of the yellow metal. Everything that was going on in the monetary world in the hard times is going on in the better times that have apparently come.

Mr. Gladstone's pamphlet, which has been reproduced in this country by the Messrs. Scribner, is, we believe, only the beginning of a literary campaign on the home-rule question on behalf of himself and his immediate followers. Others on the same topic will probably follow from the same quarter, and it is, we believe, in contemplation to issue a volume of essays from various writers, each dealing with a different phase of the Irish question. Mr. Gladstone is himself one of the few men who are equally powerful with the tongue and the pen; and probably his most effective work in winning over the English public to his Church disestablishment scheme, and in rousing its indignation over the Bulgarian intrigues, was done with the latter.

The first part of the pamphlet has comparatively little interest for the American reader, being mainly a defence against the charge made during the canvass by Lord Hartington, Mr. Chamberlain, Mr. Bright, and others that Mr. Gladstone was either suddenly converted to home rule, or else had long entertained the idea but had concealed it from his colleagues. His answer is that he had long entertained the idea, but was not bound to make any formal communication on the subject to his colleagues until events had brought the question within the domain of practical politics. These points he fortifies with numerous quotations. The second part is, however, extremely interesting, if only as an example of Mr. Gladstone's wonderful skill in "putting things." The majority returned to the new House against home rule was, he says, 110, a large one undoubtedly, and this verdict was, Lord Salisbury said, irreversible. But the election of 1841 returned a majority of 91, pledged to the maintenance of the Corn Laws. That same House, however, repealed the Corn Law in 1846 by a majority of 98. Another example is the change of English opinion about the late civil war in America. Another ground of hope is the cessation since the election of all the Tory talk of further coercion, and the fact that the majority of the present House is avowedly ready to legislate in the direction of Irish wishes. Moreover, Scotland has approved of home rule by 3 to 2, Ireland by 4½ to 1, and Wales by 5 to 1. So that, of the four nationalities comprising the United Kingdom, three have approved of the Gladstonian policy. In England alone 129 votes in its favor were recorded against 336 opposed, and the minority came largely from the more intelligent regions, such as Yorkshire and Northumberland. This portion of the argument, which is worked out in considerable detail, is very effective, and takes in some degree the shape of a plea for home rule for all the four nationalities.

There has been nothing more lamentable in recent history than the way Prince Alexander has "gone back on" the journalists of both hemispheres; they being the only persons bound to publish their opinions from day to day. When he returned to Bulgaria he was made the object of unmeasured eulogy, which he almost immediately made a little ridiculous by his prompt abdication. The English press of all parties seems to be completely puzzled by the situation. Nobody even pretends to know what Prince Bismarck means by conniving at the Russian treatment of Alexander. The only thing certain in it is, that it shows that Bismarck does not care what England thinks. Some of the papers appear to be irritated by the theory that Austria is expecting Great Britain to pull her chestnuts out of the fire. There are signs, too, of preparation for the worst in the suggestion made by the *Standard*, that even if Russia does get Constantinople it will make her vulnerable in Europe and distract her attention from India. The disguise of this blessing is, however, very thin.

A series of experiments with the Pasteur method of inoculation for hydrophobia, made by Dr. Frisch of Vienna, leads the *Medical News* of Philadelphia to repeat that "there is as yet no good evidence that the application of the theory of Pasteur has rescued a single patient who without his intervention would have had hydrophobia." This is a very weighty judgment adverse to the conclusions of the French investigator, if they may be properly called his conclusions. The remarkable discoveries of Pasteur in other fields of study predisposed the learned world to accept his researches in hydrophobia for something more, perhaps, than the author himself claimed for them. In this light they were accepted by Dr. Frisch, a friend of Pasteur, "who had every reason to hope for a different result from that which he obtained." Dr. Frisch's experiments were conducted upon one definite line, and no other, that of inoculating animals with real hydrophobia, and then applying the Pasteur method of prevention. Only one rabbit and only one dog out of fifty or sixty animals experimented upon were saved, and upon these Dr. Frisch thinks that the inoculation did not "take."

SUMMARY OF THE WEEK'S NEWS

[WEDNESDAY, September 1 to TUESDAY, September 7, 1886, inclusive.

DOMESTIC.

THE earthquake of August 31st caused great destruction of property in Charleston, S. C. Seven-eighths of the houses in the city were rendered unfit for occupation, and fifty-seven people were killed, ten of whom were white. The damage to property is estimated at $8,000,000. Relief subscriptions have been started in many cities.

Another earthquake shock was felt all along the coast from Washington to Florida on Friday night, and inland as far at least as Williamsport, Pa. In Charleston it was very severe, and the panic thereupon renewed was as serious as ever. A large ruin in King Street was thrown to the ground with a crash, and several other tottering bits of masonry came down. A white woman, name unknown, was killed by a falling wall.

Several slight shocks occurred on Saturday and Sunday. The destitution of the people is wide-spread, and suffering is apprehended unless there is speedy and generous aid.

A slight shock of earthquake lasting five seconds was felt in Charleston on Tuesday morning, and two shocks in the afternoon. A shock was felt at Evansville, Ind., on the same day.

About $95,000 of relief money had reached Charleston by Monday, and it was believed that $500,000 would soon be received. Much alarm was caused on Monday by falling walls.

In a telegram dated Fort Bowie, Arizona, September 6, Gen. Miles says: "The hostile Apaches surrendered on the 4th to the troops in the field as prisoners of war. I arrived here last night with Geronimo, Natchez, and three others. Capt. Lawton brings in the remainder. All will be shipped out of this country about 2,000 miles east. I am also moving all from Fort Apache in the same direction."

It is now expected that further negotiations to secure a change in the law in Mexico, in consequence of the Cutting incident, will be suspended until October 1, the date when our new Minister, Mr. Manning, will enter upon his duties. Minister Jackson is already on his return to this country.

The following letter, signed by the President and officers and all the members of the Jockey Club of the City of Mexico, has been sent to Mr. A. G. Sedgwick: "We have received the letter which you have been pleased to direct to the members of this association, informing them of the false and shocking stories which have been put in circulation to discredit you, and commenting unfavorably on your behavior on the night of the 28th of the past month, on which date took place the ball given by this club. We take pleasure in saying in reply that we certify by means of this letter that we have not the slightest reproach to make to you or of your conduct, your behavior from the beginning to the end of the ball being that of a gentleman whose good manners, amiability, and courtesy won the esteem and sympathy of all whom you met. We hope that this may be useful to you, and that there may cease with it the causes which have brought the annoyance naturally felt by you on account of the telegrams which, we are told, have been sent to the press of the United States, and we are to sign ourselves your obedient and faithful servants."

The Illinois Republicans on Wednesday nominated John R. Tanner for State Treasurer. The platform opposes allowing non-resident aliens to become landowners, favors "protection of American labor," "arraigns" the Democratic Administration, and says: "Under this free republic, which is a Government 'by the people and for the people,' the disciples of anarchy can find no legitimate excuse for propagating their treasonable and disorganizing principles, and we denounce such propagandists as unworthy of citizenship; but we recognize the right of all men of every calling, organization, and association, to form to promote their mutual good and protection, and we favor such wise legislation as will protect the rights of all and promote that harmony which ought always to prevail between employed and employer."

The Missouri Republican Convention on Thursday nominated John Cravens for Supreme Judge, M. F. Butler for Superintendent of Public Instruction, and S. W. Crawford for Railroad Commissioner. The platform censures the President for his vetoes, arraigns the Democrats for broken promises, and favors protection. A resolution in favor of a prohibitory constitutional amendment caused a long debate, and a substitute as follows was adopted by a vote of 571 to 40: "Resolved, That whenever a respectable number of citizens of the State shall petition the Legislature for the submission of any proposition to amend, change, or modify the Constitution in any matter which is a proper subject of organic law, their request shall be granted."

The Indiana Republican State Convention on Thursday adopted a platform arraigning the national and State Administrations, favoring the principle of protection, bimetallism, and the steady reduction of the national debt, and approving a thorough and honest enforcement of the Civil-Service Law and "the extension of its principles to the State Administration wherever it can be made practicable, to the end that the corruption and flagrant abuses that exist in the management of our public institutions may be done away with, and they be liberated from partisan control." R. S. Robertson was nominated for Lieutenant-Governor.

The California Democrats on Friday nominated Washington Bartlett, Mayor of San Francisco, for Governor.

Forty-seven delegates attended the Republican Anti-Saloon Conference in Binghamton, N. Y., on Tuesday, almost all of them preachers and farmers. Not more than eighty persons were in the hall at any time. Resolutions were adopted in the way of pledging the party to submit a prohibition amendment to the people.

The election in Arkansas on Monday resulted in a victory for the Democratic ticket by the usual majority of 20,000.

The Republicans elected their State ticket in Vermont on Tuesday by about 18,000 majority. The movement against the reëlection of Senator Edmunds seems to have been a complete failure. Very few anti-Edmunds representatives were elected.

Gov. Pierce of Dakota has issued an order to Territorial officers, regents, directors of public institutions, and others, directing their attention to President Cleveland's order of July 14, and saying: "If this is right for officials holding Federal positions, it is right for those who hold places of trust and emolument under appointment from the Executive authority of the Territory. Such officers are therefore required to abstain from all officious intermeddling with primary meetings or conventions, and from assuming active conduct of political campaigns. If all officials will abstain from using the influence of their patronage in party nominations, leaving the people free and untrammelled to act as their wisdom directs, the public service will not suffer, but will be exalted."

Labor organizations paraded in great force in many of the large cities of the United States on Monday.

The creditors of the late Archbishop Purcell held another large meeting in Cincinnati on Sunday. They are getting desperate at the delays to which they have been subjected by the assignee, Mannix, and the courts. They began proceedings by demanding that Messrs. Miller and Tafel, the newly appointed trustees of the assigned property, shall collect rent from the church for all property mentioned in Purcell's assignment, including the cathedral, the archepiscopal residence, and various churches and schools, in all about $1,000,000. The creditors further demand that the trustees shall hold the moneys thus collected for their benefit until the court disposes of the case. A resolution was also adopted calling upon Irish Catholics everywhere to renounce and overthrow the secular power of the priests.

The first of the races for the *America's* Cup was on Tuesday won by the Boston yacht *Mayflower*. She was 12 minutes and 8 seconds ahead of the British cutter *Galatea*, by corrected time.

All the sick people at Biloxi, Miss., have recovered, and Surgeon Godfrey of the Marine Hospital has reported to Washington that he has failed to find any yellow fever there.

Gen. Lloyd Aspinwall of this city died on Saturday at the age of fifty-six. He led the Twenty-second New York Infantry during the Gettysburg campaign, and was commissioned Brigadier-General on December 1, 1865. He also commanded the First Division of the National Guard of New York.

FOREIGN.

The Bulgarian revolutionary troops on Wednesday occupied the heights of Sofia. The Loyalist troops surrounded them, compelled them to surrender, and then disarmed them placing the officers under arrest. Zankoff, the Russian who was the leading spirit in the revolution, was arrested, but his release was later ordered by Prince Alexander. The Prince on Wednesday arrived at Philippopolis and met with an enthusiastic reception.

Prince Alexander arrived at Sofia on Thursday and was received with enthusiasm. An attempt was made to wreck the train which carried him. The revolutionary regiments at Sofia on Friday surrendered unconditionally to Prince Alexander, and appealed to him for clemency.

On August 30 Prince Alexander sent the following telegram to the Czar through the Russian Consul at Rustchuk: "Sire: Having reassumed the government of Bulgaria, I venture to offer to your Imperial Majesty my most respectful thanks for the action of your Consul at Rustchuk, whose official presence at my reception showed to the Bulgarians that Russia did not approve of the revolution—an act directed at my person. I also thank your Imperial Majesty for despatching Prince Dolgoruki as Envoy Extraordinary to Bulgaria. My first act on resuming power is to assure your Majesty of my firm intention to make every sacrifice to forward your Majesty's magnanimous intention to extricate Bulgaria from the grave crisis through which she is passing. I beg of your Majesty that you will authorize Prince Dolgoruki to place himself in direct communication with myself as speedily as possible. I shall be happy to give your Majesty decided proofs of my unalterable devotion to your august person. Monarchical principle compelled me to restore the legality of my crown in Bulgaria and Rumelia. Russia having given me my crown, it is into the hands of Russia's sovereign I am ready to render it."

The Czar replied to Prince Alexander as follows: "I cannot approve of your return to Bulgaria, foreseeing from it sinister consequences for the country already so sorely tried. The mission of Prince Dolgoruki has become inexpedient. I shall abstain, so long as your Highness remains in Bulgaria, from any intervention in the sad condition to which the country is reduced. Your Highness must decide your own course. I reserve myself to judge what my father's venerated memory, the interests of Russia, and the peace of the East require of me." This reply created a sensation, as it was believed to indicate that Alexander must abdicate or fight.

The London *News* of Friday morning said: "Prince Alexander has been abandoned and isolated by agreement of the three empires. Nothing could exceed the humility of his letter

to the Czar, which is only equalled in degree by the brutality of the Czar's answer. Everybody is discussing the unexpected early meeting of the German Reichstag. The pretext alleged for summoning the Reichstag—namely, to ratify the commercial treaty with Spain—is nowhere believed to be the true reason. Russian intervention in Bulgaria is confidently predicted within a week. The growing irritation of Austria, and Prince Bismarck's wish not to meddle with Russia, excite widespread uneasiness"

The *North German Gazette* (Bismarck's organ), referring to the articles of the Ultramontane and Liberal press regarding Prince Alexander, says: "Germany, unless she forthwith declared war against Russia, could only protest against any further interference with Alexander, or perhaps against Russia taking further steps in the direction of Constantinople. Russia would energetically repel the insinuation of such an intention, and Germany's friendly relations with Russia would be ended."

Prince Alexander on Saturday publicly announced his intention of abdicating the throne of Bulgaria. He made an affecting address to the officers of the army, in which he said: "I see around me officers who are devoted to me, and I can quit Bulgaria addressing praise to those officers, and with the conviction that order will not be disturbed. In whatever circumstances I might find myself I would place my influence at the service of Bulgaria, I will pray to God for her. My heart will ever be with my officers, and I shall be the first to ask to be admitted among them as a volunteer in a campaign for Macedonia. I cannot remain in Bulgaria, for the Czar will not permit me, because my presence is inimical to the country. I am forced to quit the throne. The independence of Bulgaria requires that I leave the country. If I did not, Russia would occupy it. I will, however, consult with the superior officers, and constitute a regency which will endeavor to protect the interests of my officers. In any case I rely on the army." He has issued a decree summoning the National Assembly for September 11. It is expected that he will go to England. Bulgarian officers favorable to the Prince held a meeting and decided to retain him by force. The news of Alexander's abdication created consternation in Vienna. German officers, also, are indignant against Russia. It is asserted that Emperor William proposed Alexander's telegram to the Czar as the best means of effecting a reconciliation, and that the Czar's reply was, therefore, a direct blow at the Emperor. On the other hand, it is asserted that Bismarck recommended the abdication. It is feared that the departure of the Prince will result in civil war.

MM. Stambuloff and Radoslavoff appeared at the Russian consulate in Sofia on Monday, and in the name of the Government demanded —First, the name of the candidate for the Bulgarian throne whom Russia favors; secondly, a formal promise that Russia will not occupy Bulgaria; thirdly, that the present constitution be maintained, the freedom of Bulgaria respected, and the country allowed to manage its domestic affairs; and fourthly, that if Russia send a general to Bulgaria, he must act merely as Minister of War and organize the army under Bulgarian, not under Russian officers. These demands were telegraphed to St. Petersburg. In the House of Commons on Monday night the Under Foreign Secretary stated that a change in the Government of Bulgaria could only occur in accordance with the Treaty of Berlin and with the consent of the Powers signatory to that treaty. England, he said, had no separate interests in reference to Bulgaria. The election of a new Prince of Bulgaria must be unanimous. The Government, said the speaker, had hoped much from the ability and great qualities of Prince Alexander, and they deplored the treachery and violence which had interrupted his reign.

Bulgarian notables sent a petition to the Czar asking whether Russia would allow the National Assembly to elect a successor to Prince Alexander, and whether Russia would grant Bulgaria a loan.

The Czar has accepted the proposals made by the Bulgarian notables as the conditions of the Prince's abdication. He will recognize the regency, the union of Bulgaria and Rumelia, and the independence of the country, and will appoint a Russian military plenipotentiary resident at Sofia. MM. Stambuloff, Karaveloff, and Mutkuroff constitute the Regency Council. The Stambuloff Cabinet has resigned, and a new Ministry has been formed with M. Radoslavoff for Premier and Minister of the Interior. Prince Alexander has started for the frontier. The Bulgarian Government has asked the Powers to guarantee Russia's promises.

It is stated that Russia continues her endeavors to form an alliance with Turkey. The Bulgarian Government has offered Prince Alexander the sum of 3,000,000 francs. The Prince refused to accept more than 500,000 francs. Russia has also offered Alexander money for his personal wants.

It is rumored in Constantinople that, in accordance with advice given by two friendly Powers, Turkey is making military preparations on the Asiatic frontier. It is also said that orders have been given to supply the army in Erzerum and along the border with additional guns, stores, and munitions. This activity is due to movements on the part of Russia, which is supposed to be making efforts to gauge the military and naval strength of Turkey.

In the House of Commons on Wednesday evening Mr. Sexton moved his amendment to the address in reply to the Queen's speech. He denied that he had acted contentiously. He charged that the riots in Belfast had been conceived and prosecuted in the interests of the present Government. He demanded that the Government restore order in Belfast now, and not await the results of a protracted inquiry by a commission. He asked Lord Randolph Churchill what the Government proposed to do to induce Protestant employers of Belfast to fulfil their duty, and reëmploy the Catholics they had discharged. It was impossible, said Mr. Sexton, to connect these riots with the question of home rule. With or without home rule, he declared, riots would ensue unless the Government brought those who had incited disorder to book by the use in Ireland of public forces, promptly and decisively, as they were used in Hyde Park, London, Amsterdam, Chicago, and elsewhere. Lord Randolph Churchill's Belfast speech, Mr. Sexton asserted, had tended to excite a spirit of disloyalty among the people, and he believed that the riots were got up in order to influence the division on the Home Rule Bill in the House of Commons, and to affect the result of the general elections. Sir Michael Hicks-Beach, Chief Secretary for Ireland, denied absolutely that Lord Randolph Churchill's action had in anywise led to the Belfast troubles.

On Thursday night the debate on Mr. Sexton's amendment was continued with considerable warmth. The remarks of Maj. Saunderson (Cons.) were especially bitter. Mr. Sexton's amendment was finally rejected by a vote of 225 to 128. The address was adopted in Committee without division.

In the House of Commons on Friday night Mr. Labouchere moved an amendment declaring that Lord Randolph Churchill's speech in Belfast was calculated to provoke breaches of the law and ought to be withdrawn. He insisted that Churchill was morally answerable for the killing and wounding of so many persons in Belfast. Maj. Saunderson moved an amendment to Mr. Labouchere's amendment, denouncing the presence of British subjects at the recent Irish Convention in Chicago, calling attention to the statement freely made that some Commoners avowed that they had taken the Fenian oath, and declaring that if this statement were true the members in question should be severely censured. Lord Randolph Churchill said the Government would oppose both amendments. The matters alleged in Maj. Saunderson's amendment, he said, were in no wise pertinent to the speech from the throne, and a discussion of the amendment would only still further waste the time of the House. Mr. Saunderson's amendment was rejected without a division. Mr. Labouchere's amendment was rejected by a vote of 202 to 119. The House then agreed to the report of the address.

Mr. Parnell will soon introduce a bill intended to stand between the landlords and the tenants during the winter. Though the Government will not forward this bill, it will doubtless see the advantage in letting Mr. Parnell state his case. The latter will draft the bill on the lines of his recent speech in the House, giving power to the county courts to suspend evictions absolutely on payment by the tenant of two-thirds of the next rent into the court, providing the tenant makes a legal statement of his inability to pay in full. He will submit the bill to the Gladstonian leaders before introducing it

Mr. Parnell, it was reported, had come to terms with the Government, and arranged to withdraw that part of his Land Bill which relates to revaluation in exchange for the Government's acceptance of the part relating to the suspension of evictions. On the other hand, it is said that the Government will discuss it, but also oppose it.

Lord George Hamilton, First Lord of the Admiralty, replying to interrogatories in the House of Commons on Friday, denied that any agent of the United States had access, through the firm of Sir William Armstrong & Co., to the designs for naval vessels under confidential consideration by the British Government.

The Right Hon. Cecil Raikes, Postmaster-General, stated in the House of Commons on Thursday that the Government were prepared to consider tenders for mail service across the Atlantic by way of Galway, and had under consideration the establishment of a mail route from Ireland by way of British North America to India and the Far East.

The *Pall Mall Gazette* declares that England will abandon the island of Port Hamilton, off the coast of Corea, because of the conviction that its occupation would prove a source of weakness in time of war.

Sir J. Fergusson, in the House of Commons on Tuesday night, denied that the Government had decided to abandon the island of Port Hamilton.

Samuel Morley, the British philanthropist, is dead at the age of seventy-seven. He was for many years the champion of Protestant non-conformity in England. He has represented Bristol in Parliament since 1868. As a business man he was very successful, being the head of a firm of wholesale hosiers. He has given more than $100,000 of his wealth yearly to charity and benevolent objects. He has written much, advocating equal rights for all men and reforms for the working classes.

In the deciding heat on Wednesday of the International Sculling Sweepstakes, on the Thames course, William Beach of Australia defeated John Teemer of the United States.

A long reply in behalf of Canada to the case presented by the United States on the seizure of the Gloucester fishing schooner *David J. Adams* has been filed in the Vice-Admiralty Court at Halifax. The Attorney-General denies that "the bait was to be used in fishing in the open sea or on the Banks, and outside and beyond said bays and harbors or said three marine miles or said limits and dominions; and in respect to the remaining allegations in denial of the allegations of the petition, he denies each and every one of them."

The American schooner *Highland Light* was seized on Wednesday near East Point, Prince Edward Island, by the Canadian cruiser *Houlette* for fishing inside the three-mile limit.

Advices from the provinces of Sechuen and Cochin China show that the natives are massacring Christians by wholesale. Whole villages occupied by Christians have been destroyed.

EARTHQUAKE THEORIES.

WHILE the South is suffering from earthquake shocks, the North is having a terrible visitation from earthquake theories; they attack the brain and produce a more or less serious mental deterioration. The earthquakes centring in the Carolinas have been ascribed to sunspots, to lunar action, and to the linear pull of a string of planets; to the earthquakes in Greece; to volcanic action, to chemical action, to electric action. Hardly any attention is given to the simplest and most natural of all explanations, and only the most cautious theorists venture to suggest that the Carolina earthquakes are due to earthquakes in Carolina. Yet this seems to be a very rational suggestion, and the grounds for the exclusion of the other causes are easily appreciated. Earthquakes have long been studied in many lands, and a very satisfactory understanding of them has been reached: they are neither solar, planetary, nor electrical, but are of definite mechanical origin in the earth. Several sufficient causes have been suggested for them in close conformity with other results of geological investigation. There is no need of wandering about in search of new, vague, unverifiable hypotheses, at least until the explanations now current with seismologists are proved incorrect.

The arguments in favor of control external to the earth are all based on approximate coincidence of occurrence between the terrestrial effect and the distant hypothetical cause. This line of argument is certainly a venerable one: it has been followed ever since it occurred to man that facts needed explanations. It is perhaps worth while to state seriously the grounds for excluding all the hea venly bodies from a significant share in terrestrial disturbances—the grounds of what might be called the "cosmical Monroe doctrine." External causes of earthquakes must be effective only as they can pull one part of the earth more than another, and thus distort it so far as to produce cracks and tremors. It is perfectly well understood that this "differential attraction" diminishes as the *cube* of the distance of the attracting body; and if our readers will take the trouble to perform the rather long but easy arithmetical computations to this end, they will find that the moon is more powerful in this respect than all the other bodies of the universe together. Even the enormous mass of the sun does not make up for his distance, the solar differential attraction being only about one-third that of the moon, while that of the planets is absolutely insignificant. Earthquakes should, therefore, follow lunar cycles if periodic at all; but it may be most confidently asserted that lunar cycles are hardly visible in the occurrence of earthquakes. Perrey and Mallet have definitely settled that question. Moreover, if the moon has any effect, it can only be in touching off a mechanism whose potential energy is due to terrestrial action; and even in this limited way it is not of much importance, if any, for the earth does not quake most where the highest tides occur. Earthquakes are localized by purely terrestrial, geological structure, and are in the great majority of cases caused by volcanic or by mountain-making forces.

The explanation of the Carolina earthquakes by the shocks in Greece is in one respect like the theory of external causes. It is not satisfied with anything that involves long local preparation, but refers the whole process to an immediate cause, and is done with it. It is a representative of the theory of special creations in the inorganic world, and takes no sufficient account of the gradual development that is just as visible in the present conditions of the earth as in the present forms of its inhabitants. There may be, indeed, a germ of truth in the Grecian idea: it is possible that Carolina had got into a touch-and-go equilibrium, and only a little urging was needed to set it off. But there has not yet been presented any independent verification of this open suggestion, and no one ought to be excommunicated for withholding belief in it. As to the Carolina earthquake being a direct effect of the shock in Greece, that is utterly incredible. The line of shortest distance from Greece to Carolina passes Nova Scotia and Cape Cod; why, then, did not New England, on this hypothesis, feel the shock sooner and stronger, instead of later and fainter, than the Carolinas? No; this earthquake is a home product. It began nearest to the point where it was first felt, and the Carolinas must not try to shirk the responsibility by throwing it off on Greece.

Volcanoes and earthquakes are so commonly associated that the reporters may well be excused for finding signs of eruption in every crack in the ground that gives forth bad-smelling water and mud. Lyell is, perhaps, in part responsible for this confusion of ideas, for, in his 'Principles of Geology,' sand and water phenomena very similar to those that now characterize the district about Charleston, are regarded as of decidedly volcanic aspect. But, as a matter of fact, these pseudo-eruptions are too cool and superficial to be compared with true volcanic eruptions from deep sources and at high temperatures. They have been carefully studied in connection with different earthquakes, notably in India and in Austria, and are sufficiently explained as the bursting up of shallow underground water, when crowded by the passage of the earthquake wave. As such, they are trivial, secondary phenomena—effects and not causes of the disturbance. There is not a single feature in the recent earthquake, so far as it is reported, that bears the least tinge of volcanic action; for while it is perfectly true that the bursting out of imprisoned lavas does cause the earth to tremble about their vent, it is also true that other processes within the earth are competent to cause quakings on its surface. The recent studies of the Swiss Earthquake Commission have proved this to demonstration. Earthquakes are very common in the Alps, and are definitely referred to known lines of structural dislocation there; volcanic action is utterly absent. Indeed, when one regards the wonderful distortion of the rocks exposed in mountainous regions, and admits (as he must) that similar distortions may still be in progress in one place or another, it is not a little singular to find that mountain-making has until lately held no very prominent place among the causes of earthquakes. But it holds the first place now; it is of all causes the most competent to the end, and the best accordant with the general relations of earthquakes. It is very probable that the greatest number of earthquakes in all parts of the world are of orogenic origin, and the known geological structure of our Atlantic slope gives good reason for including not only the recent shocks, but all the recorded earthquakes of the region, under this class. Still, at the present writing, it is premature to say even so much as this, and it is better to wait till the Geological Survey has accumulated the facts before theorizing upon them.

Chemical and electrical hypotheses are so gratuitous that they are hardly worth discussion. Electricity may with justice complain of much thoughtless treatment in this way: comets' tails and sunspots, cyclones and tornadoes, and now even earthquakes have been attributed to it—not to the known action of electricity, to be sure, but to the unknown. It is so mysterious an agent that it is called on to do all sorts of work. It is perhaps significant that those who thus call on it are as a rule not electricians (in the physical, not telegraphic sense of the word); and that those most expert in this branch of science are the most cautious in evolving electrical hypotheses.

A few exact records of the time at which the earthquake was felt in various parts of the country would have done more to advance our knowledge of it than all the premature hypotheses that it has evolved. It would be possible at least to learn pretty closely where it began, beneath what point, and at what depth below the surface; and then the geological structure of its origin might be examined, and some basis for theorizing be discovered. Let the newspapers, therefore, give more emphasis first to the importance of the immediate record of the hour, minute, and second at which the shock is felt; and, second, to the necessity of prompt comparison of the timepiece from which the record is made with accurate railroad time. It is not the lack of good watches, intelligence, or presence of mind that prevents such records; there are thousands of men in the country able and glad to make them if they only knew it was worth the trouble, and that it would lead to any desirable end. Direction of oscillation is of secondary importance; violence of shock can easily be described from memory; nothing else is of so great importance as the hour, minute, and second at which every shock begins, culminates, and ends. Faint tremors deserve as careful record as destructive shocks; they may be destructive somewhere else. It is rather late to shut the stable door when the horse is stolen; but in studying earthquakes there is no better time for calling attention to the mode of recording them than just when the whole country is astir over a big one. When the next one comes, a community should be ranked by the number of good time records as well as by the number of relief dollars that it furnishes.

REMOVAL OF THE APACHES FROM ARIZONA.

Now that the news comes that Geronimo is really captured, and that he and his immediate following will be sent East, the question of the removal of the whole tribe will naturally be revived. Since 1882, and even previously to that

year, the Southwestern press and people have clamored for a removal of the Apaches to some distant place, where they might be either so hemmed in by populous surroundings as to render them powerless, or else so isolated as to make it almost impossible for them to reach civilized settlements. In either case they intended to get the Indians out of the way—good-naturedly, by persuasion and treaty, if possible, forcibly if necessary.

The people of Arizona are not to blame for this. The Apaches have never been very desirable neighbors, though they are far from being as fierce and untamable as is often alleged; and if some sympathy is wasted on them by Eastern philanthropists, there is also a great deal of exaggerated antipathy towards them. Of course we are speaking only of the main tribe. The Chiricahuas are a distinct band, in whose case the only method of redemption is indicated by the Spanish proverb: "Muerto el perro, se muere la rábia." Lately a demand for the removal en masse of the Apaches seems to have reached the official ear at Washington, and high officials are said to look favorably upon the measure. It matters not where the Apaches are removed to, once the transfer is achieved; but the question is a serious one whether or not it is advisable to attempt it at all. It is even doubtful if the people of the Southwest would be benefited by it.

No matter how many councils may have been held with "chiefs" and "old men" at Washington or elsewhere, and how positively this or that "prominent" Apache may have expressed himself in favor of a change of abode, such individual utterances have no official value, no binding effect upon the whole tribe. One chief may have been duly authorized by his "rancheria" to make certain pledges, and the rancheria may be disposed to fulfil them. Several chiefs will thus faithfully and truthfully represent a portion or a majority even of the tribe; yet their promises do not go beyond their immediate constituents, if that term can be used. There is not, at the present time, among the Apaches one leading spirit of sufficient religious preponderance to persuade or coerce them into joint action. Neither is there a group of principal men whose influence is felt all over the tribe, and who work harmoniously together, as, for instance, Manuelito, Mariano, and their relatives, among the Navajos, or old San Juan and Patricio among the Mescaleros. Three-fourths might consent to the removal, while one-fourth would stubbornly refuse to go. What then? To coerce this fourth means an Indian war, more desperate and far more destructive than that with Geronimo and his handful of cut-throats. It means the ruin of southern Arizona and of southwestern New Mexico.

But it is not even certain that any considerable number of the Apaches are in favor of leaving their reservation, unless they should be transferred to some of their old homes on the Mimbres, on the Upper Gila, or near old Fort Tularosa. These localities are not yet thickly settled, though occupied by a sufficient number of whites to call forth a very lively and well-grounded protest against an eventual neighborhood of wild Indians. Besides, all these places lie in southwestern New Mexico, not far from the Arizona line, and the change would be similar to "moving" from New York to Hoboken, or from Cincinnati to Covington. On the other hand, any attempt to coerce the Apaches into settlement at a greater distance might easily result, not in a partial, but in a *general* war, which would throw 1,000 to 2,000 armed Indians upon defenceless settlements, upon unprotected ranches, mines, and even towns. True, such an outbreak could not fail to settle the Apache question forever in course of time, but at what cost! Military experience has shown that large bodies of savages can easily be defeated, yet after the Indians are whipped their real warfare begins. It is not in the interest of the Southwest to provoke such a calamity.

Nevertheless, if the Apaches were only removed from their present location, and even if they were settled just across the border, in New Mexico, the people of Arizona would be satisfied. Why? Because the real cause of their clamor is not constant dread of outbreaks; it is a desire on their part to own the lands now constituting the White Mountain and San Carlos Reservation. The Apaches are not half as dangerous as they appear. They very seldom molest any one who does not molest them, and, under Gen. Crook's supervision, they have entered the path of timid progress. Why should that progress be interrupted for the benefit of others? Their reservation is partly a beautiful country. Its northern half is mountainous. Wide plateaus, covered with beautiful pine timber and fairly watered, surround the central peaks of the Sierra Blanca. In the west and northwest there are some valleys of rare beauty and fertility, as around Fort Apache, on the Carrizo and at Shibicu. Those spots certainly look very desirable. The Southern section, however, the San Carlos country proper, is hot and frequently arid; its mountains are forbidding in appearance and mostly dry. Even the Apache dislikes this part of his present home, and wishes to be removed from it, but not to Florida nor to the Indian Territory. A child of the mountains, high and *dry*, he could not prosper among swamps or in lowlands. His objections to removal are not based upon any knowledge of countries beyond his own. If he should refuse to go, it would be on the ground of Indian conservatism, which it is so difficult to overcome, of Indian religious ideas and beliefs, which will compel him to resist to the bitter end.

There is another reason why the Apache reservation is coveted by its neighbors. It contains coal measures, which the mining interests of the Globe districts may need. Such mines could be opened and worked without prejudice to the Indians, to whom they are of no value, and it is not necessary to drive them from their soil in order to secure the coal. The mines might be leased, and the result would soon tell how far they are desirable. If Globe must have the combustible (of which there is hardly any doubt), and that combustible is there in sufficient quantity and satisfactory quality, the demand for opening up its seams appears legitimate. It can be satisfied without injuring the Apaches. But the Government should not yield rashly to importunities having in view the removal of a large tribe, irrespective of possible disaster to citizens. Neither should it suffer individual utterances of men who represent only tribal fractions to seduce it into any action. Only when there is ample evidence of the fact that the Apaches collectively are willing to go can their removal begin. It will then be beneficial, because it can be effected peaceably.

COQUETTING WITH ANARCHY.

CAN there be such a reorganization of society as will place the employers of labor under the feet of the wage-earners, merely because the latter are, or are supposed to be, superior in numbers to the former? In Great Britain the wage-earners are estimated to be three-fourths of the entire people, and in the United States they may be more or less than half. Conceding, for the argument, that the wage-workers in the United States are or may become the greater number, is it in the power of numbers to effect an economic reorganization of society such as is predicted by Mr. Thomas Davidson, a so-called "philosophic Socialist," in the New York *Sun*? He says:

"But besides all these facts, tending to turn the condemned Anarchists into martyrs should their sentence be carried out, there is another and more momentous fact to which it is impossible to give too much heed. There exists in every civilized land at present an irresistible tendency, in large measure justified, towards a new economic reconstruction of society; and the crimes of these men are but the natural results of the action of this tendency upon thoughtless, impetuous, and misguided natures. With this tendency, even in its worst expressions, it is wise to deal cautiously, lest in our ignorant precipitancy we, too, should turn out to be Anarchists, resisting a law higher than human. We cannot stop the tendency; at best we can but guide it to its goal with a minimum of disturbance to society and morals."

Now we peremptorily deny that there is any tendency anywhere towards an economic reconstruction of society, or that any such economic reconstruction is one whit more possible than would be a reconstruction of physical nature, so that the skies should be pea-green and the foliage on the trees sky-blue. Nothing of the kind is coming, has begun to come, or could be brought about by any manifestations of physical force or any unanimity of social consent. If an economic reconstruction of society were going on in the direction of socialism, there would be somewhere visible proofs of the fact, for society is the most visible of all things. The striking workers would be buying factories and starting car lines, buying stock in railroads; and on the other hand townships and counties would be surrendering their lands, heretofore held by private owners, into a communal ownership, under which each one would apply for his annual allotment, as is done in the *mir* or rural commune of Russia. The watering-place hotels would be passing under control of the chambermaids and waiters. The great mercantile houses would become democratic associations of salesmen and bookkeepers. Steamships would be owned by their crews, and their "captains" would be selected by ballot. Banks, mines, and farms would all be showing the same drift.

But, in fact, never was there less tendency among workingmen and women towards dispensing with "bosses" in production. The collarmakers of Troy lost in a six weeks' strike

wages enough to have built, equipped, and started a better collar factory than Troy contained, but they did not make a single collar while on strike. The Third Avenue strikers ran a line of free stages against the car line, into whose cash box those who rode dropped their voluntary contributions, thus resolving themselves into an association of alms and not of workers for pay. Where, then, are the evidences that an economic reconstruction of society is going on? Almost the sole experiment in Socialism of any moment now on trial is that of M. Godin at Guise, in France, who starts with an ample fortune, as did Robert Owen, and the outcome of whose experiment cannot yet be predicted. The war of the cranks upon capital, based on the extremely crude, barbarous, and anti-social wrong-headedness of Karl Marx and his followers, is no more a tendency towards economic reconstruction than the similar predictions of William Miller, and the craze which ensued among his followers, were a tendency of the world to come to an end.

It is to be regretted that a few college professors and preachers should be caught by the "new dispensation" chaff, and should say the many ridiculous things they do. President Adams of Cornell, for instance, presides over a university which was built and endowed out of "surplus profits" of the telegraph business. Hence he seems to have become strongly impressed with the notion that the class of profits to which he owes his position should be abolished. He, therefore, in a labored essay on the "Sphere of State Interference in Industry," adopts the shibboleth of the Socialists that taxation should be used as an engine to cut down profits. He holds that the Legislature should classify all industries for taxation into those in which capital will yield a continually increasing return, those in which it will yield a moderate return, and those in which it will yield the minimum of return. The first he holds should be taxed down to equality with the second. It is ludicrous that any professed teacher of economic science should conceive that a Legislature could classify industries in this manner. He might as well propose that wild geese in flight over the State should be taxed accordingly as they fly east, west, or south. Curiously enough, he selects farming as the business which could be classified as yielding moderate returns, whereas certain farms in Dakota and Wyoming, such as the Grandin and Dalrymple farms, have yielded a return of more than 100 per cent. per annum, while the railways, whose surplus profits he regards as a permanent fund for sumptuary taxation, did not for the first thirty years of our railway history pay interest on their cost, and had to be everywhere coaxed into existence as our colleges now are, by State, county, and municipal aid.

Prof. Ely of Johns Hopkins University has written a semi-Socialist history of 'Modern German and French Socialism,' in which he coquets with Anarchy, very much like the good woman who always bowed when Satan was mentioned, "not knowing into whose hands she might fall." He also declares, in *Harper*, that "the railways must be reduced to complete subjection to *us* as their masters," thereby assuming that the private capital invested in railways can be taken from the stockholders, if on a count of noses a majority shall favor it.

All the froth and frivolity of Socialistic agitation, however, is very far from indicating that the possessors of wealth are about to step down and out in behalf of those who have nothing. The real parties, if any, who have earned retirement, are the professorial and clerical Socialists who coquet with Anarchy, hoping thereby to get a larger sale for their own wares, instead of boldly and bluntly explaining to workingmen the fallacies that underlie the assumptions of their pet agitators. When capital loses its power over labor, the twenty-five cents of capital with which a laborer seeks to buy a meal in a restaurant will buy him nothing, for the act of buying a meal in a restaurant is merely a manifestation of the power of capital over labor. Though the poor man may choose not to class himself among capitalists, every use he makes of his wages when earned is an employment of capital to control labor and labor products. If society could be so reconstructed on the basis of State Socialism that the State would insure to all a support, then simultaneously with the fall in the value of capital would come the annihilation of the present value of labor, for nobody could get paid for rendering services which the State guarantees shall be rendered to all for nothing. Under State Socialism no money could have value, because money implies that there are those who need it, and Socialism, in promising that no need shall exist, virtually promises that no money shall exist. But where no money can exist society is remitted to one of two alternatives, idleness or slavery—the torpor of Africa or the bondage of Egypt. This is the kind of millennium the professorial and clerical Socialists are coquetting with.

MR. GLADSTONE'S WORK AND PLAY.

LONDON, August 26.

MR. GLADSTONE, who is as energetic a holiday maker as he is a worker, has betaken himself to the high lands of Bavaria. But he has distinguished himself in parting, and he has left behind him a bomb which will explode next Saturday. The bomb which Mr. Gladstone has left behind him is the pamphlet which will be issued on Saturday by Mr. Murray on the Irish question. The fidelity with which Mr. Gladstone sticks to his old Tory publisher is a remarkable instance of his regard for early associations. Nearly half a century has passed since Mr. Gladstone, then, as Lord Macaulay describes him, the hope of the stern and unbending Tories who distrusted Sir Robert Peel, gave to the world through Mr. Murray his essay on 'The State in its Relations with the Church.' The orthodox Tory volumes which occupy the counters and line the shelves of the great house in Albemarle Street must feel a flutter pass through their leaves in the presence of these revolutionary manifestoes.

Mr. Gladstone's visit to Germany is paid to Lord Acton, who has a seat on the Tegernsee, in the Bavarian Alps, between Munich and Innsbruck. Mr. Gladstone will have during this visit the rare experience of finding himself in the society of a man more minutely and more variously learned than himself. Some of Mr. Gladstone's intimate personal friends complain that he has the inconvenient habit of lying concealed behind a book or newspaper, apparently absorbed in it, and suddenly emerging to ask the authority for some too rashly hazarded statement or the reason for some doubtful opinion. With Lord Acton Mr. Gladstone himself will have to be on his guard. Lord Acton is, as no doubt many of your readers know, one of the few English or Irish Catholics—Sir Rowland Blennerhassett is another—who, sympathizing with the Döllinger school of theologians, have yet declined formally to join the Old Catholic movement. He was the founder and main supporter of the *Home and Foreign Review*, the *Chronicle*, and other journals which were allowed to advocate Liberal Catholicism for a short time, and were then suppressed. It is understood that the *English Historical Review*, now in its third quarterly number, owes its existence to his encouragement and munificence. Not being a Roman Catholic magazine, it is safe from the Church.

Lord Acton's family is curiously entangled, so to speak, in Continental alliances. Sprung from an old cavalier stock—the first baronet received the title as a reward of his fidelity to Charles the First—it has now become as much Italian or German as English. The grandfather of the present Lord Acton, the sixth baronet, was an adventurer of a type scarcely known in our time. His career, in the course of which he was Prime Minister of the two Sicilies and Commander-in-Chief of the Royal Army and Navy, is as remarkable as that of Alberoni or Ripperda, and as little creditable in some respects. The son of this adventurer, and the father of the present Lord Acton, married the heiress of the Duc de Dalberg, and she became the wife in second nuptials of the present Earl Granville. But for this alliance, which brought him as a child of five or six years of age to England, Lord Acton might have remained an Italian subject. Younger members of his family are at present, or have lately been, Senators and Ministers of Marine, and otherwise engaged in the public service of Italy. Lord Acton himself has married a daughter of the Count Cerco-Vallay of Bavaria. If Lord Acton had anything like Mr. Gladstone's impulse of expression or of his grandfather's impulse to action, a great name might have been added to the history of our time. As it is, Lord Acton's achievements have been confined to the collection of perhaps the finest library in England, and to the mastery of all the learning that it contains.

Mr. Gladstone will no doubt have opportunities of discussing German theology and Irish politics with Dr. Döllinger, his master in the former and his adversary in the latter. For the moment, however, Irish politics are in abeyance; and a Bulgarian outrage, as atrocious though not so bloody as the outrages which raised his indignation eight or ten years ago, revives the perpetual Eastern question. The saying of an old diplomatist, that kings have no cousins, is probably as false as any saying which any diplomatist, old or young, ever uttered. It was a family question, the nomination of a Hohenzollern to the throne of Spain, which gave occasion to the Franco-German war; it was also a family question, that of the Spanish marriages, which contributed to the fall of Louis Philippe and to the convulsions of the Peninsula; and the family compact of the two branches of the Bourbons and the division of kingdoms among the Bonaparte house were elements in the embroilment of Europe. It is scarcely a secret that the court had much to do with the policy of Lord Salisbury in supporting the union of the two Bulgarias, the separation of which was the great achievement of himself and Lord Beaconsfield in the

Treaty of Berlin. Prince Henry of Battenberg, the husband of our Princess Louise, is the brother of Prince Alexander, whose continuing or vanished title to be called Prince of Bulgaria will probably be decided in a few days or weeks. Prince Henry of Battenberg has succeeded, it is understood, to the position of confidence and affection near the Queen which no member of her family has fully occupied since the death of the Prince Consort, and her Majesty is understood to share the sympathy with which he viewed his brother's gallant enterprise in Bulgaria. A granddaughter of the Queen's, one of the daughters of the Crown Prince of Germany, is said to have found the hero of her girlish fancy in the gallant Prince, whose fortunes she has followed (in the journals) with enthusiasm.

The interposition of the Emperor and Bismarck, who do not wish to see the conference of Gastein hampered by more tender interviews, has, it is said, found it expedient to interpose with considerations of state policy. Whatever may happen in the domestic sphere, it is probable that not only Bulgaria but Turkey too is doomed. Bismarck is indifferent. Russia may have Bulgaria and even Constantinople if she chooses; Austria will pass, if Buda-Pesth does not block the designs of Vienna, through Bosnia and Herzegovina to Salonica; Greece will enlarge her frontier—and all this while Mr. Gladstone was fancying that he had found salvation in the phrase the European Concert, and Lord Salisbury was babbling about the maintenance of the Turkish Empire.

THE DUC D'HARCOURT'S REFLECTIONS.

PARIS, August 26, 1886.

I SPOKE lately of a work by the Duc de Noailles on American institutions. I have now before me a work by another French duke, the Duc d'Harcourt, entitled 'Some Reflections on Social Laws.' I will say something first of the author. He is the head of the eldest branch of the French Harcourts (there is a branch in England, one of whose members is Sir William Harcourt), and he owns the ancestral château of Harcourt. He was educated at the Polytechnic School, and served in the war of 1870 as an officer of artillery. After the war he was elected Deputy to the Constituant Assembly. He was still young and did not take any part in the debates, except on military matters. He belonged to the monarchical party, but he showed great firmness of character and did not enlist under any parliamentary chief. He was an independent, and for this reason probably was not reëlected to the present Chamber. He is now living in retirement in the province, and the book which he gives us was written away from Paris and from its political atmosphere.

"Circumstances," says the Duc d'Harcourt, at the opening of his work, "having made me a deputy about ten years ago, the spectacle of the political struggles in which I had, willingly or unwillingly, to take part, notwithstanding my inexperience, inspired me with the desire to study the political science which was supposed to direct my votes. I had never been engaged in this study before. People will tell me that it would have been better to begin this study sooner, and, as my vote might be useful or harmful to millions of human beings, it would have been wise and honest to know their affairs before deciding on them. I confess it, but the reader will, I hope, be as indulgent to me as the French are to those to whom they confide the task of government."

Are there any laws for social phenomena as well as for physical phenomena? The individual, to be sure, remains free, and it is impossible to prophesy his action; but the will of a number of individuals can often be predicted, and in this respect it is possible to affirm that there are social laws. When I cross one of the bridges of Paris, I should be taxed with madness if I said that a man whom I meet is going to throw himself into the river and to commit suicide; but if I consult the statistics, I shall find that the average number of people who commit suicide every year by throwing themselves into the Seine remains nearly the same. What methods, asks the Duc d'Harcourt, ought to be employed in the study of social phenomena? In the study of physical phenomena the method is empirical, and you can organize and invent experiments. You cannot do so with mankind; you can only study past events. History becomes the only possible method, and no absolute demonstration is possible.

If you turn to history, you are met at once by many difficulties. Is history ever truly written?

"I have," says our author, "been an eye-witness and sometimes an actor—very subaltern, to be sure—in a certain number of the great events of the last thirty years. I have seen very near me some historical facts, and have been able to judge in what manner they were understood by contemporaries and transformed for written history. I remember, for instance, in what manner was prepared before me the report of Marshal MacMahon on the battle of Solferino. It was the very day after the battle; we were still on the summit of the hill where the struggle had ended. The Marshal told the general who was the head of his staff to prepare a report. The general ordered two of his officers to write it, and they set immediately to work. The work seemed easy. The field of battle was at our feet, and we embraced it all at a glance. All the officers who had carried the orders were together."

Nevertheless, when the report of the officers was brought to the General, he remonstrated and made objections. I need not go into details, but finally the report was so much altered that hardly anything remained of the original draft. So much for the value of historical documents. We have now a school of history which calls itself the documentary school; we would recommend this little story to its attention.

History—I mean written history—affords but an uncertain basis for social science. The Duc d'Harcourt candidly confesses that he only became conscious of his ignorance at the age of forty, after having been mixed up with politics and political men. He maintains that, without the knowledge of man, history gives insufficient data: the historian must be a moralist. "The knowledge of men is more useful for the understanding of history than the knowledge of history can be for the understanding of man." History and personal experience—these are the two best sources of information for the student of sociology. In his study, the Duc d'Harcourt begins by the analysis of the influence of personal interest, of egotism, on human societies. He first cites the words of the famous economist Bastiat, at the opening of his 'Harmonies économiques': "Personal interest is the principle of action of all men. From it, I confess, proceed all the social evils—war, slavery, monopoly, privilege; but from it also proceed all the good things, since the satisfaction of necessities and repugnance for pain are the motive powers of mankind." The Duc d'Harcourt does not admit this overruling influence of personal interest. He shows by many examples how it is counterbalanced by good as well as by evil passions, and especially by religious ideas and by the religious sentiment. He also analyzes the effects of what he calls "l'entraînement par l'exemple." I must quote him, to make him understood:

"Take a peasant, preach to him as much as you like how useful it would be for him, a thirty-six millionth of France, to go and defend the tricolor flag against the Mussulman countries of the Mediterranean coasts; he will not for an instant move from his plough. You take him by force, give him red trousers, comrades torn like himself from their fields and their affections, he goes gayly, and dies with intrepidity. . . . Similar phenomena are observed in all reunions—in the political assemblies composed of learned men, as well as in the tumultuous meetings of the populace, in deliberative assemblies as well as in great armies. . . . There is a real force in example, which defies analysis, as it never works alone. . . . In short, I find the following impulses in mankind: 1st, personal interest; 2d, religious and moral sentiments; 3d, the natural affections: 4th, the influence of example on the imitative instinct."

Successive chapters are consecrated to these various forces. The Duke first analyzes the effects of personal interest in the political field. He studies it on the electors, and notices that it has but little effect on the peasant elector, who expects nothing, or next to nothing, from society, from those who direct society, while it has a great influence on the elector in the cities, who expects everything from men. His description of a rural election is picturesque. He shows the peasants arriving with heavy steps, in small groups, and at long intervals, and putting, with an embarrassed air, a square little paper, folded in four, in the hands of the mayor. "At six o'clock in the evening, all is ended; the telegraph is at work all night, and the next day the papers announce to France and to Europe what is the will of the French people." The horizon of the rural elector is very narrow: it is the Commune, of which he knows all the houses and the inhabitants, and the Department, a collection of cities and villages, the names of which he has heard since his infancy. The Duc d'Harcourt gives curious examples of the electors' indifference to general ideas. The diffusion of newspapers will, he believes, counteract this natural indifference: but he is afraid that when the peasants fairly understand that their votes have an immediate influence on the military organization of the country, "the immense majority of them will only vote for candidates who will declare resolutely against every kind of standing army." It is curious to hear him say, "So far, in my part of the country, the inhabitants do not seem to feel that there is any relation between themselves and the Chamber of Deputies. It is a question of time, and I believe that a great change is preparing."

The Duc d'Harcourt is not an admirer of universal suffrage. When he comes to the electors of the towns, he shows them led away by high-sounding and vague programmes, indifferent to the morality of the persons whom they choose, caring but little about their disinterestedness, their private qualities, incapable of distinguishing a good policy from a bad policy. Leaving the electors and coming to the elected, he shows that his real duties are constantly at variance with his interest in keeping his popularity. If he follows the dictate of duty, his electors will lose sight of him, and if they understood his conduct, they would not appreciate it. In order to keep the popular favor, he must, in the Chamber, always occupy attention; in his electoral college he must subsidize the press and give favors to a few party leaders.

In order to show experimentally how things are managed in a French Chamber, the Duc d'Harcourt gives the detailed history of the elaboration of a law in the Chamber of Deputies, selecting a law on the administration of the army, prepared in 1873 by a grand commission of the Ministry of War, presented to the National Assembly in 1873, and only finally voted in 1877. The law, passed first without any change by the Senate, was sent to the Deputies and examined in the bureaus. Let us enter the bureau of the Duc d'Harcourt:

"This is how things go when there is a question of a military law, or in general of a law in which daily politics is not in question. Ten or twelve deputies (or forty-five) come into a room where there is a great table covered with a green cloth. Three or four sit down and write letters to their electors; two or three smoke silently in a

corner, the rest in the windows. . . . The President, sitting before a zinc urn of an antique shape, is serious. The call is for one o'clock; at half-past one he looks at the clock and says solemnly, 'Gentlemen, I am afraid we shall not be more numerous; don't you think that we might begin the deliberation?' There is a mute assent; the pens continue to glide over the paper, the clouds of smoke to rise. Then comes the deliberation, which is no deliberation at all; the bureaus have each to elect a commissaire, and all the commissaires together appoint a reporter. There is often no candidate. 'Gentlemen,' says the President, 'I beg you to nominate a commissaire.' Somebody nominates a republican colleague, who is smoking at the end of the room. 'Why,' says this gentleman, 'I don't know the question at all; anybody would do better than myself.' 'You will study it; you are too modest; do accept.' And he accepts, and the same ceremony begins for some other law; and this is how the laws go through the first stage, the deliberation in the bureaus."

I cannot follow the Duc d'Harcourt in the details of the discussion of the law by the commissaires. The end of it is that, of the military law—a very elaborate law, which had no less than 299 articles—50 articles (all containing some innovation) were voted without being even read, and full powers were given to a sub committee to make all the necessary modifications. These gentlemen remained away about ten minutes, and, when they returned, they found that the commission had voted the whole law *en bloc*. This is not all. On the day of the final vote on the law in the Chamber, all the members of the commission voted against it, with the exception of the reporter whom the commission had charged with the defence of it. The Minister of War begged them to bring in a bill of their own, and a whole year was spent before the matter came again before the Chamber.

There is a class of men who seem to be independent of the caprice of the multitude—the functionaries. Their power is derived only indirectly from the people. The Duc d'Harcourt studies in turn the obscure functionaries of the bureaus, the innumerable receivers of taxes, the prefects and sub-prefects, the military, whose promotion is not arbitrary, but subject to strict laws. He passes a severe criticism on the ambition of some, the servility of others; his conclusion is this: "The efforts of individuals do not concur in procuring the good of society if they are not inspired by moral principles; and personal interest is not a sufficient force." The second part of the book is the analysis of the intellectual forces which have to play their part in a well-organized society; and the Duc d'Harcourt places above all the religious sentiment.

Correspondence.

A CARD FROM MR. SCHUYLER.

To the Editor of The Nation:

Sir: After your statement of the result of your search for the nominations made by Mr. Washburne, published in your number for July 29—which, I must admit, greatly surprised me—nothing remains but for me to express my very great regret at the appearance in my 'American Diplomacy' of the erroneous paragraph. My publishers have been requested to cancel it in copies still for sale.

What I said was solely from the point of view of the good of our service, and I had no intention of accusing Mr. Washburne of any moral obliquity. In the interest of civil-service reform it is gratifying to note that a wholesale removal of officials, which twenty years ago was considered by politicians as not only justifiable but praiseworthy, now meets with general reprobation.

I am, sir, your obedient servant,

Eugene Schuyler.

Alassio, Italy, August 21, 1886.

THE SPRINGFIELD (ILL.) POST-OFFICE.

To the Editor of The Nation:

Sir: Through the columns of the *Nation* I desire to call attention to a notorious instance of violation of the spirit, if not of the letter, of the Civil-Service Law. I allude to the discharge, by the newly appointed Postmaster of Springfield, Ill., of the whole force of letter-carriers employed in that office, and the filling of their places by stanch Democrats. As a consequence, most of the mail is delivered two hours later than ever before, and the weekly list of uncalled-for letters is three or four times larger than under the old régime. The gentleman who is at the head of the Post-office, Mr. H. W. Clendenin, continues to serve as a member of the Democratic State Central Committee.

It seemed fitting that the friends of reform throughout the country should be made cognizant of the above painful state of affairs. These transactions are rendered more painful when we reflect that they are carried on within sight of the last resting-place of Abraham Lincoln. In such a place we might reasonably look for the prevalence of something higher than the spoils theory; for who can doubt that, if living to-day, the great President would stand with his great coadjutors in the work of emancipation—would stand with Beecher, Curtis, Lowell, etc., in the Mugwump party of 1886?—Respectfully,

J. B. Barnhill.

Xenia, Ill.

GEN. WEAVER AND THE ADMINISTRATION.

To the Editor of The Nation:

Sir: While your correspondents are calling your attention to the unanimity and heartiness with which Democratic conventions, State and Congressional, are endorsing Mr. Cleveland and his Administration, I want to direct your attention to one notable exception.

A few days ago the Democrats of this district, the Sixth, met in convention at Oskaloosa and renominated Gen. Weaver for Congress. They adopted four resolutions. One, the first, endorses the State platform; the second laments the death of Mr. Tilden; the third asks the miners to vote for Gen. Weaver because the last Legislature refused to give them relief; while the fourth is a lengthy and fulsome eulogy of Gen. Weaver and his work in Congress. Neither Mr. Cleveland nor the Administration is referred to. I suspect that Gen. Weaver either wrote these resolutions himself, or, through one of his henchmen—and they were present in full force—dictated them. I can in no other way explain the shameful performance, for I *know* that the Democrats of this district are very proud of Mr. Cleveland and of this Administration. Some of them, indeed most of them, are not in sympathy with Mr. Cleveland's civil-service ideas, but they see the handwriting on the wall and are preparing to submit to the inevitable.

I desire in the near future to give the *Nation*, for the benefit of our civil-service reform friends, a brief summary of the manner in which the patronage in this district has been distributed under that eminent reformer, Mr. Weaver. If perchance the facts could be brought to the President's notice, he would be able to form a more accurate opinion of Mr. Weaver, and of the value of his pretended friendship for him and his administration. Of course I do not hold the President responsible for Mr. Weaver's shortcomings, but the story will serve to show up the iniquity of the system that recognizes the offices in his district as the property of the Congressman.

A good many Democrats, the writer among the number, believing as we do in the President and his methods, cannot support Mr. Weaver and preserve our self-respect. But we cannot support his opponent, Mr. Donnell. He is a gentlemanly man, and has fair ability, but he is a thorough spoilsman, and has no well-defined ideas on any public question. On the tariff and finance he is all at sea. I am told that he will make his canvass on the "war" issue, while Mr. Weaver will find his strength in advocating cheap money and in appealing to the basest elements in human nature. The Democrats in this district are sadly in need of a Moses to lead them out of the wilderness. David W. Norris.

Grinnell, Iowa, August 30, 1886.

Notes.

The fall announcements of G. P. Putnam's Sons include a large number of historical works. Besides some nine volumes in the "Nations Series," we notice Mr. Howard W. Preston's 'Documents Illustrative of American History, 1606–1863,' with introduction and references; a 'History of the U. S. Navy,' by Edgar Stanton Maclay, in two octavo volumes, with maps and documents; 'Reminiscences of the Filibuster War in Nicaragua' (1855–60), by Gen. C. W. Doubleday, a participant; 'Memorials of Half a Century,' by Bela D. Hubbard, whose field of reminiscence is the region of the Great Lakes; 'Woodstock,' an historical sketch, by Clarence Winthrop Bowen; and, among children's books, 'Uncle Sam's Medal of Honor,' by Gen. Theo. F. Rodenbough; and 'Chivalric Days and Youthful Deeds,' by E. S. Brooks. Retrospective also are 'American Literature from 1607 to 1885,' by Charles F. Richardson, Professor of English Literature in Dartmouth College; and 'Humorous Masterpieces from American Literature,' edited by Edward T. Mason. Other announcements by the same firm are as follows: 'The Romances of Chivalry,' by John Ashton, with fifty illustrations "in facsimile" (a term used by this compiler in a peculiar sense); a poem, 'Risifi's Daughter,' by Anna Katharine Green, hitherto known as a writer of fiction; 'The Old Order Changes,' a story of to-day, by W. H. Mallock; 'Outlines of Music,' by Louis S. Davis; 'Problems and Socia Studies,' by the Rev. R. Heber Newton; and 'A Study of Sociology,' by President John Bascom.

Leach, Shewell & Sanborn will publish 'Forty Lessons in Punctuation and the Use of Capitals,' by Milton Quay; and 'Good Reading, for School and Home.'

In November E. P. Dutton & Co. will have ready 'Twenty Sermons,' by Phillips Brooks, D.D.; and 'Sermons, Doctrinal and Practical,' by Morgan Dix, D.D.

Thomas Whittaker publishes directly 'Half Hours with a Naturalist: Rambles near the Shore,' by the Rev. J. G. Wood.

'The Terrace of Mon Désir,' a story of Russian life, by an American lady; Grimm's stirring brochure on 'The Destruction of Rome,' translated by Miss Sarah Holland Adams; and 'Ralph Waldo Emerson: His Maternal Ancestors,' with reminiscences of him, by his relative, David Greene Haskins, D.D., are in the press of Cupples, Upham & Co., Boston. Of the interesting sketch last named only 350 copies will be printed, and from type.

Harper & Bros. have nearly ready 'Contributions to the Science of Education,' by Prof. W. H. Payne; and 'Mary and Martha' (Washington), by Benson J. Lossing.

A Texan novel, 'Cynthias Dallas: a Nymph of the Colorado,' by Howard Seely, author of 'A Ranchman's Stories,' will be published by Dodd, Mead & Co.

T. Y. Crowell & Co. will publish next week 'The Labor Movement in America,' by Prof. Richard T. Ely, of Johns Hopkins University.

The great fire by which the firm of A. L. Bancroft & Co., San Francisco, suffered so severely, has led, among other changes, to the withdrawal of the publication of the historical works of Hubert Howe Bancroft, and the incorporation of 'The History Company,' of which Mr. Bancroft is President and N. J. Stone the Business Manager. Its imprint is already placed on the latest volume of the 'California' series.

The late Prof. William Cook, of Cambridge, in whom the *Nation* lost an occasional contributor, and whose department was instruction in German, published just before his untimely death a convenient "Alphabetical Table of the Principal Prefixes and Suffixes by which Nouns, Adjectives, Verbs, and Adverbs are formed in German," mostly from Whitney's Grammar, and designed mainly for reference.

Mrs. Lamb offers the most entertaining article in her *Magazine of American History* for September. Her theme is the New York Historical Society, and as usual her text is freely interspersed with portraits and other illustrations. The faces of nearly all the presidents of the Society, from Egbert Benson down, are here engraved, the array being a very distinguished one.

Mountain-climbers and humbler pedestrians alike are indebted to the Appalachian Mountain Club for a tracing from the map of the Massachusetts Topographical Survey now in progress, showing the northwestern corner of the State on a scale of 1:30,000, or twice that which will be adopted for publication. It embraces Williamstown, South Williamstown, Adams, and North Adams, with the whole of Greylock—a region of rare beauty and great variety of scenery. Figures of elevation accompany the contour lines. The map is folded in stiff covers, of size suitable for the coat-pocket, and is sold in Boston by W. B. Clarke & Carruth.

There has been no lack of school editions, *éditions classiques*, of the principal plays of the great French dramatists of the seventeenth century. A new series has now been begun by Hachette in Paris under the general title, 'Théâtre Classique' (Boston: Schoenhof). Four plays have already been published: "Cinna" and "Nicomède," by Corneille, with notes by M. Petit de Julleville; and "Iphigénie" and "Esther," by Racine, with notes by M. Lanson. Other plays by Corneille and Racine and Molière are announced to appear soon. The text followed in every case is that of the "Grands Écrivains de la France," and each play is accompanied by grammatical, historical, and literary notes, based in a measure upon the annotations of the larger publication. In many respects the notes of the school edition are fuller than those in the complete works, explaining with care allusions which might escape the young readers for whom they are intended, and also giving much collateral information interesting to readers of any age. There are copious grammatical explanations, and abundant citations of parallel passages from Greek and Latin authors.

M. Henry Becque, the author of "La Parisienne" and of other plays which have met with more or less success, has published his lecture on 'Molière et l'École des Femmes' (Paris: Tresse; Boston: Schoenhof). In it he protests against the mania which has become almost universal of attributing to writers of plays, and to Molière in particular, philosophical or political or moral ideas which they could never have had. "Tartuffe" and the "Misanthrope" are the two comedies of Molière on which commentators have especially exercised their ingenuity in discovering depths of meaning and intention. "L'École des Femmes," one of the simplest of plays, has not escaped such learned interpretations. As M. Becque remarks, a little more and the recent creation of *nos lycées de jeunes filles* would be traced back to the exposition by Molière of the dangers of ignorance in the case of *Agnès*. The author, putting aside all the ideas of reform attributed to Molière, sees in the play only one thought, common to many comedies, that love is the privilege of youth. This he develops by a pleasant analysis of a few scenes and by constant allusion to other works of the author.

M. Jules Simon, in the eleventh edition of 'L'École' (Paris: Hachette), has inserted an entirely new preface, in which he expresses himself very energetically upon some of the recent French laws upon educational matters. He had said, in the preface to the tenth edition, published in 1881: "The republic has realized almost all the wishes expressed by the author in this little book." Now, however, he protests against the excessive *laïcisation* of the public schools, in which he sees rather "a political action than an effort for the amelioration of education." He closes by maintaining that schools cannot be neutral in religious matters.

In *Le Livre* for August M. L. Derôme describes an edition hitherto unknown of three of La Fontaine's 'Contes,' thus contributing to the restoration of the purity (if this term be allowable) of the text of the best forgotten work of the fabulist. M. Spire Blondel concludes his agreeable series of articles on the writer's tools. P. van der Haeghen, writing of the private press of the Duchesse de Luynes, tells what is a twice-told tale in *Le Livre*, if our memory is not greatly at fault. However, he adds some fresh details concerning the cleverness of the Duchess at the case, where she even caught the swing (*un certain balancement du corps*) of the regular compositor. Among the reviews in this number we remark that of 'La Correspondance de Harper's Ferry,' by Raoul de l'Angle-Beaumanoir, which has reached a second edition. It promises a fund of amusement for the American reader. Fancy a plot which makes a charming woman compromise herself, during John Brown's trial, by writing "too pressing" letters to three of the jury which condemned him. Imagine, further, that the existence of these letters worries her after she has become the wife of the American Consul at Havre, in the midst of the civil war; that she sends a poor wretch who is enamoured of her to recover them, which he accomplishes "par des ruses sauvages et à travers les péripéties les plus amusantes et les plus dramatiques"; and that she then dismisses him as a lover, and he meekly disappears. The French historical novel could no further go.

Mme. J. W. Mario, who has but just completed her voluminous life of Mazzini, has already engaged to write a biography of her friend the late Dr. Agostino Bertani.

—Thirty-seven years ago the publication of the *Astronomical Journal* was begun in Cambridge by Mr. Benjamin Apthorp Gould. Twelve years later, in the middle of 1861, its continuance becoming impossible, the announcement of its suspension closed with the words, "It is my fervent hope to resume the publication of the *Journal* at an early day, by commencing the seventh volume soon after the suppression of the present insurrection." Dr. Gould now issues a circular letter in which he says that, under all the varying circumstances of the succeeding years, this hope was constantly cherished, and the suspension of the publication was regarded as only temporary; and at last, in 1869, arrangements were fully matured for its reappearance, when occurrences took place which led to the establishment of the Argentine National Observatory, and to his departure for South America to assume its directorship. Dr. Gould's eminent services to astronomy in this capacity are known to all; and now, on his return to this country, he proposes a resumption of the publication, should the proposition meet with favor. His plan is to continue the *Journal* in the same form and spirit as before, and under essentially the same conditions These imply a devotion to the advancement, rather than to the diffusion, of astronomical knowledge, yet without disregarding the importance of a prompt announcement of important discoveries. They imply, also, the dissemination of original researches only. The numbers of each volume will appear at irregular intervals, and it is hoped that a volume may be completed as often as once a year. It is understood that Dr. Gould will begin to issue the first volume of the new series as soon as he has the promise of subscriptions enough to cover about one-third of the outlay for actual publication; and those disposed to subscribe are asked to notify him as soon as may be convenient. We cannot but express the hope that Dr. Gould will receive the necessary encouragement from those interested in the advancement of astronomy.

—In No. 1064 of the *Nation* some account was given of the British Archæological Association a year ago visiting Hollingbury Copse to inspect the Shaksperiana there. Those Shakspere rarities render that "rustic wigwam," as its owner calls it, more and more a place of pilgrimage. A full hundred pilgrims have just wended their way thither, members of the British Medical Association, which last month held its annual meeting in Brighton. Though the Copse is three miles from the city and more than four hundred feet above it, Mr. Halliwell-Phillipps often walks home from town, and no doubt many of the pilgrims were pedestrians. They were well paid for their pains. The early Shaksperian relics consist of about fifteen hundred separate articles illustrative of the personal and literary history of the cosmopolitan dramatist; no other collections, not even those at Stratford-on-Avon, possessing anything like so large a number of authentic memorials of biographical interest. Sparing no expense or exertion for many years, Mr. Halliwell-Phillipps would seem to have long ago gleaned every grain that could be picked up in the field of his special research. Yet among the forty-seven articles specially described in the pamphlet printed for the convenience of the medical visitors, five are recent acquisitions and never had been exhibited before their visit. One of these five is the first edition of 'Pierce Penilesse,' the earliest work—even earlier than Greene's 'Groatsworth of Wit'—in which there is an allusion to any of the plays of Shakspere. Only one other copy is known to be extant. Another is the head of Shakspere in an oval, engraved by Stafford in 1655, of such rarity that only three other copies are known. A third is three of the original title-deeds of Shakspere's residence, New Place—the only ones of the poet's time known to exist, dated 1532, 1563, and 1567. Title-deeds long after those years were jealously guarded by their owners (American public registries being unknown); and, as Shakspere never mortgaged the estate, these three indentures, which are preserved uninjured, may be fairly included among the very few personal relics of the dramatist upon the authenticity of which no doubt can be entertained. These documents were recently discovered by Mr. Richard Sims of the British Museum in the archives of a county family, and at once came into the possession of Mr. Halliwell-Phillipps. Never was there a better confirmation of the text "He that seeketh findeth." Another curiosity, which deserves to be styled a "preciosity," is a fragment of four leaves only, but unique, no other vestige of a copy having as yet come to light, of the first edition, 1598, of the first part of "Henry IV." It contains the only existing record of what Mr. Halliwell-Phillipps holds to be the

true reading in *Poins's* speech: "How the *fat* rogue roared!" It is something, he says, at this late day to recover even one lost word of the immortal text. But the pearl and pride of his accumulations—he has hung it in his dining-room that his eyes may feast on it as he breaks his daily bread—is a proof-copy of the Droeshout portrait of 1623. In the guide to his guests, accordingly, he has printed a page from the art critic, Fairholt, as well as the testimony of the late Director of the National Portrait Gallery, "whose knowledge of early engraving was unrivalled," to thicken other proofs which to some beholders might demonstrate thinly, that his engraving "is the *only* likeness of Shakspere in existence which has come down to us in a genuine, original, unaltered state."

—A few years ago Mr. John Henry Pratt and Mr. Walter Leaf, both fellows of Trinity College, Cambridge, edited, with the title 'The Story of Achilles,' books i, ix, xi, xvi–xxiv, of the 'Iliad.' The best proof of the excellence of the work is the fact that a second edition has since been published. About eight years ago Mr. Pratt met with a lamentable death by drowning in Lake Como. Mr. Leaf has meanwhile continued his Homeric studies, and the great number of important works in regard to the Homeric poems which have appeared since that time, together with other circumstances, has induced him to commence the publication of an edition of the whole of the 'Iliad.' The first volume (books i–xii; pp. xxviii, 422) is now before us in the shape of a beautiful 8vo in the best style of the publishers (Macmillan & Co.). It is not a "text-book for schools and colleges," but is intended to serve as "a guide to students anxious to know more of Homer than they can learn from elementary school books." In his general introduction Mr. Leaf treats of the text, the scholia, and the origin of the Homeric poems. He does not consider it possible to restore the original text of Homer. We must be satisfied with the text which tradition has handed down to us, and be contented to trace the tradition as far back as possible. He says, "The canon by which every reading has been judged is, *the best tradition of the fifth century* B. C.," and he gives us the comfortable assurance that the text of the 'Iliad' which we read to-day is, in all essential points, the same as that which was read by Herodotus and Thucydides. Mr. Leaf's account of the origin and development of the Greek scholia on the 'Iliad,' and of the ingenious methods by which the authors of the different scholia have been discovered, contains much that will be new and interesting to those who still retain some lingering fondness for the history of Greek literature, although their Greek studies ended with their college course. In regard to the origin of the Homeric poems Mr. Leaf holds—in common with the vast majority of classical scholars, except the English, and possibly with a majority even of those English scholars who have not passed the prime of life—that they are not the production of one author. He has his theory, like the rest, of the gradual growth of the 'Iliad,' and he endeavors to point out those books and parts of books comprising a comparatively small portion of the poem as it now stands, which formed the original nucleus, out of which by additions and interpolations, some of them perhaps made by the original author, the present 'Iliad' was formed. To the discussion of this matter a short introduction to each book is devoted, as is also a considerable portion of his commentary.

—M. Alfred Rambaud has published the first part of a work which will be completed in two volumes, 'Histoire de la Civilisation française' (Paris: Armand Colin; New York: Christern). In the present volume he has carried his history through the period of the Fronde. The work is elementary in character, but for its execution it deserves the highest rank. It is not so elementary, however, as not to presuppose an ordinary knowledge of the general facts of French history, for it is in no sense a narrative of events; nor is it so advanced as to address itself to those who have already made a special study of history. It is an attempt, and a successful one, to raise the teaching of history above the mere learning of a succession of sovereigns. Without omitting the military and administrative events, it seeks to give the history of institutions and of the nation in all its elements—aristocracy, clergy, bourgeoisie, and people of town and country. M. Rambaud's book is eminently an educational work: every thought of mere elegance of form is laid aside for the sake of clearness and simplicity. The result is that the 'Histoire de la Civilisation,' unlike most French works with a similar title, is not adapted for current reading. It is a book to put into the student's hands for study or consultation. Its arrangement, divisions and subdivisions, and lists of sources, make of it an excellent advanced class-book, or rather a practical reference volume of catalogued facts. But this must not be taken too literally: M. Rambaud is a Frenchman, and he cannot but strive to give even the dryest facts in a way that makes them presentable. Without ever falling into the pyrotechnics of history, of which Michelet was always lavish, certain paragraphs are such complete pictures in themselves that we feel how difficult it is for the author to allow his erudition to interfere with the artistic finish of his work. As an example of this may be mentioned the two pages on "Ce qu'étaient les nobles au temps de Louis XIII." (p. 564), or the paragraph "Les Duels" (p. 566). His material is, however, generally rebellious to such treatment, but he always has such a mastery over it as to present it in a form perfectly clear and free from any disturbing display of erudition, even carefully avoiding references to foreign or out-of-the-way books, or to editions not accessible to those for whom he writes. The volume has a very useful index.

—Seven cities disputed the honor of being Homer's birthplace, but in the case of Liszt, says the Berlin *Boersen-Courier*, it seems as if seven cities would soon be contending for the privilege of counting his grave among their "sights." The tale which hangs hereby is this. It caused considerable surprise throughout the Continent that Liszt was so suddenly buried at Bayreuth, without much ceremony. Director Mihalowitch of Buda-Pesth, who happened to be in Bayreuth at the time, made every effort to prevent Liszt's burial there, by sending telegrams in all directions to noted Hungarians who might exert their authority in securing their countryman's remains for his native land. Among other despatches there was one from a friend of Liszt's in Rome, the Princess Sayn-Wittgenstein, who asserted that in 1861 Liszt had made a will in which he expressed his desire to be buried at Buda-Pesth. Of this will nothing was known at Bayreuth, where it was not supposed he had any will at all, as he died "as poor as a church-mouse," having even sent his last pocket money to a young musician who begged for assistance. So much for Buda-Pesth; now as to Weimar. The pupils of Liszt who attended the funeral asserted unanimously that Liszt had always desired to be buried there, where he won his great triumphs in first familiarizing the world with the works of Wagner, Berlioz, and others, making of Weimar what Bayreuth is now. It caused surprise, therefore, that the Grand Duke of Weimar did not send to Bayreuth to claim Liszt's body. The reason why he did not do so was because he received a telegram from Bayreuth stating that Liszt had expressed a desire to be buried there. The telegram came from the financial manager of the festival plays, who got his information from Frau Cosima Wagner, Liszt's daughter. And where did she get it? From Mishko, Liszt's servant. Frau Wagner prayed all night over her father's corpse, and in the morning she asked Mishko if Liszt had ever stated where he wished to be buried. Mishko replied that Liszt had only once spoken on the topic, a few years ago, when a noted Hungarian patriot's body was transported to Pesth. He then said that the notion of a travelling corpse was something dreadful to him, and that he wished to be buried where he died. It is now feared that, as everything depends on the servant's word alone, efforts will be made to exhume Liszt's body and transfer it to Pesth or Weimar. After all, however, Pesth has no special claims on him. As the *Boersen-Courier* remarks, Liszt was "cosmopolitan in thought, German in feeling." And Dr. Hanslick says, in the *Neue Freie Presse* of Vienna: "He preferred, even in Germany, to speak French; corresponded with Germans in French; wrote his books in the French language. And yet his mother-tongue was German. Born and bred in a border county of Hungary, where at that time the German language and customs prevailed, Liszt *never knew a word of Hungarian.* He was German, Frenchman, Hungarian—whatever you please."

—More interesting to the world at large than the ultimate resting-place of Liszt's remains is the question regarding the existence of his memoirs. Some time ago notices were repeatedly published abroad that Liszt was hard at work on them, that he was putting the finishing touches to them, etc. It would seem now that all these notices came from the canard-breeding establishment, which seems to favor the musical world especially. Hanslick states that "on my questioning him in 1878 whether he did not intend to write his memoirs, he replied that his life took up so much of his time that he could not possibly write it too." It is possible, however, that he may have changed his mind since. It would be a tremendous loss, and not to the musical world only, if he had not done so. In his youth he was intimate with Victor Hugo, Musset, Sand, Lamartine, Berlioz, Chopin, and other great men of the French capital, of whom he could tell many an interesting story. Liszt's life practically comprehends the whole history of modern music. He was born two years before Wagner, one year after Schumann, two years after Chopin and Mendelssohn. Had all these composers possessed his vitality, what added treasures musical literature would possess. And there is hardly a modern composer whose fame was not accelerated through Liszt's efforts. Hanslick admits that the "Lohengrin" performances at Weimar hastened the general appreciation of that opera by a decade. Schumann alone was for a time ignored by Liszt, who might have greatly benefited him; but he has since publicly expressed his regrets at this circumstance. And as for minor musicians and students, what Hanslick says is by no means exaggerated: "There is only one voice regarding the self-sacrificing unselfishness with which he met the importunate wishes of pupils; one voice only regarding the ever-prompt kindness with which he favored young composers, answered their letters, looked over their manuscripts, accepted their dedications, yes, even tried to find publishers for them. In this uninterrupted kindness towards others, whose wishes he attended to in preference to his own works, his own interests and comforts, Franz Liszt stands quite alone in the history of the art." As Hanslick often heard Liszt play, it is of interest to read what he has to say on this topic: "With Liszt's playing I can compare nothing else. Rubinstein, to-day beyond

doubt the greatest of the virtuosi, surpasses him only in physical power. Liszt may have varied in his skill, he may have been occasionally out of humor or eccentric, but coarse he never was. Any one who has heard Schubert's 'Wanderer-Fantasia' or Weber's 'Invitation to Dance' by Liszt and later by Rubinstein, knows which of the two was the much nobler and more refined musician." This must be taken *cum grano*, because Hanslick invariably follows the German maxim that about the living nothing but ill should be spoken; and Rubinstein unfortunately is still alive. Hanslick also wrote some years ago (when Liszt unfortunately was still alive), that the interest in his music was entirely inspired by his personality, and that with the last person who knew Liszt the last applause would cease. Perhaps the Viennese critic would be surprised to hear that, at the forty-eight popular concerts given by Mr. Thomas last year in New York, where not one in a thousand, perhaps, had ever seen Liszt, his compositions ranked in frequency of performance immediately after Beethoven and Wagner, who headed the list.

—A number of years ago, while presenting to the readers of the *Nation* (No. 341) fugitive outlines of a rich collection of "Hebraica" and "Judaica," then acquired by the temple Emanu-El of this city, we remarked on the places of publication most frequently met with on the title-pages of that, as of almost every other, Hebrew library. We enumerated the Italian towns, from Venice, Mantua, and Ferrara to Pieve di Sacco, Soncino, and Sabionetta; the Dutch, from Amsterdam and Leyden to Franeker; the German, from Berlin and Leipzig to Altdorf and Rödelheim; the towns of Eastern Europe, from Wilna to Saloniki; and also Basel, Paris, Oxford, Smyrna, and Jerusalem. But America remained unrepresented. The library referred to probably contained none of the Hebrew or "Judaic" books published in this country previous to that date, very few of which deserved a scholar's or book collector's attention. Things have changed since. Jewish literature has taken root in this country, gradually developing with the increase of the Jewish element in our population, with its advance in mercantile and industrial pursuits, in prosperity and culture. There can be no more striking evidence of this than the almost simultaneous appearance on our desk of three eminently scholarly publications by American rabbis. The one is a collection of critical essays in German or English, by Dr. S. Adler, of this city, bearing the Hebrew title 'Qōbēṣ 'al yād' (New York, 1886). The more important of these essays are "Der Versöhnungstag in der Bibel, sein Ursprung und seine Bedeutung," reprinted from Stade's *Zeitschrift;* "Pharisäismus und Sadducäismus," from Graetz's *Monatschrift;* and "Talmud," one of the most learned and comprehensive contributions which Johnson's Cyclopædia can boast of. Of Dr. M. Jastrow's, the Philadelphia rabbi's, 'Dictionary of the Targumim, the Talmud Babli and Yerushalmi, and the Midrashic Literature,' of which the first part is soon to be given to the public (London: Trübner & Co.; New York: G. P. Putnam's Sons, 1886), only a specimen lies before us in print, but we have seen considerable portions of it in manuscript, and it is impossible to exaggerate the conscientious zeal and devotion to philological and antiquarian science of which this stupendous work is the product. It is to be completed in about twelve parts of 96 quarto pages each, which, "if the proper support be extended" by the world of scholars, "will follow each other at intervals of about three to six months." But the work by which American scholarship is, for the first time, made to shine in the domain of Hebrew literature proper is the 'Sepher Iyyōb' ('The Book of Job'), with a new and most elaborate commentary in the language of the text, "by Benjamin Szold, rabbi of the Oheb-Shalom Congregation of Baltimore" (Baltimore, 1886). It is saying much, but we venture to affirm that in future any Hebrew collection of Bible commentators that does not contain this American book will be as defective as if works of Rashi, Aben Ezra, or Kimhi, were absent from its shelves.

PERKINS'S FRANCE UNDER MAZARIN.

France under Mazarin. With a review of the administration of Richelieu. By James Breck Perkins. G. P. Putnam's Sons. 1886. 8vo, 2 vols.

THE back of these handsome volumes bears the title 'France under Richelieu and Mazarin,' and each title describes with sufficient accuracy, although neither with precision, the scope of the work. The chapters upon Richelieu are much less in amount than those upon Mazarin, and at the same time are considerably more than a mere introduction to the period of the later statesman. Although this strikes one at first sight as somewhat out of proportion, both in relation to the greatness of the men and the importance of the events which they controlled, yet, after all, it serves the author's purposes extremely well. His subject is Mazarin, a man and a period very little known, but so closely dependent upon the more familiar period that preceded it, that it was necessary to give a somewhat complete account of this earlier period—and not a mere sketch—by way of introduction. The book is therefore properly entitled 'France under Mazarin,' and the admirable account of "France under Richelieu," which precedes it, is an integral part of the work.

Whether the administration of Mazarin is worth relating in this detail is another question. Certainly the foreign relations, with the two great treaties (of Westphalia and the Pyrenees) negotiated in these years, deserve the most careful study; and these chapters are in every way praiseworthy. But the first of these, at all events, was the outcome of Richelieu's policy rather than Mazarin's; and the event which occupied the greater part of this period, and which is here narrated in great detail—the War of the Fronde—is perhaps the dreariest and most characterless chapter of modern history. Its value consists solely in the picture it presents of the utter worthlessness of the governing classes of France; and this has its bearing upon the history of the subsequent hundred and fifty years. It also has its significance in its relation to the previous century. The sixteenth century is a distracted period of French history, and at no time has royalty sunk so low as under the last Valois; but there were heroic characters in this period, some men at least of nobility and earnestness of purpose. The seventeenth century exhibits nothing but meanness and self-seeking, joined with absolute indifference to morality. It is a fact very significant of the change in the times, that nearly every representative of the great Huguenot families of the previous century now professed the religion of the court, having abjured the stern puritanical virtue as well as the religion of their grandsires.

In estimating the work of one of the world's great men, as Richelieu assuredly was, we have a right to consider not merely whether what he did was brilliantly and successfully done, but also whether it was the best thing to be done. From a statesman of the first order we may demand positive and permanent benefits to the country which he rules. Richelieu's policy may be summed up as two-fold—the greatness of France and the absolute authority of the King. It is in the first of these that he earned, without question, the rank of a great statesman. The great peril to Europe at just this juncture was in the house of Austria; and Richelieu deserved the thanks of the world for having—from whatever motives—joined hands with Gustavus Adolphus to hold this bigoted and tyrannical power in check. We cannot quite agree with Mr. Perkins's qualified regrets at the outcome of the Thirty Years' War in this regard, expressed at the end of the first volume. All that he says of the fatal results of the war, in "the establishment of the power and separate rights of a multitude of petty sovereigns," is perfectly true. Germany, like France, needed to become a united nation, but not under Ferdinand of Styria. His triumph would have not merely put an end to the disintegration of Germany—a thing much to be desired—but would have at the same time crushed all elements of free government, and have extirpated Protestantism. All Germany would have been reduced to the condition to which Bohemia had been reduced. Better by far the chaos of 200 years, with the germs of a vigorous life ready to start, than the intellectual and moral deadness which Ferdinand would have created.

In France Richelieu did establish a central power, and thus bring France out of the turbulence and misrule of the sixteenth century. But we see in the experience of France something of what Germany escaped. Richelieu was a wiser man than Ferdinand, and was no bigot. He did not trample out the reformed religion as Ferdinand would have done, neither did he wholly destroy provincial autonomy; but he made it easy for a later tyrant to accomplish both. It is to Richelieu's over-strained centralization—and yet less stringent than Germany would have suffered—that France owed the hopeless misgovernment out of which she only made her escape at last through the crisis of the Revolution. France needed a vigorous national life, and Richelieu gave her a despot.

In this we see the limitations of his individuality and his class. As a French nobleman of the seventeenth century, it could not come into his mind to take the welfare of the people into account, or to consider that the nation had a life and interests apart from those of the King. He found the people of France on the whole well-to-do and contented, after the sagacious and economical administration of Sully. He left them poor and exhausted; but this was a thing about which he did not concern himself. He found the provinces of France in the possession of an exaggerated degree of independence. He had not the wisdom to build upon the foundation afforded by these institutions of a long historical growth; he could not comprehend any method of ridding the country of the abuses of this system, except by destroying the system itself. It is true the institutions of self-government—if we can call them so—were very incomplete, and were not strongly rooted in the habits and sentiments of the French people. This Mr. Perkins shows very well. But at least they were capable of development, and this Richelieu could not understand.

We have very little but praise for the work before us. Mr. Perkins begins with a judicious discussion of the work of Richelieu and Mazarin, showing that they did not, as has been sometimes asserted, overthrow all checks upon the royal power and make the King absolute; rather that they organized this already existing absolute power, and neglected to establish checks or to develop free institutions. About a third of the work is given to Richelieu; about a third (six chapters out of twenty) to the Fronde; and three chapters at the end are of a general nature, upon the administration, society, and religion. The reader lays aside the book with a higher estimate of Mazarin's ability and character.

The style is for the most part excellent—serious

and perspicuous in discussion and in the delineation of character, animated in narration. Only rarely one finds a slipshod sentence like this (vol. i, p. 272): "Following this success by the capture of Thionville, a thing that had been unsuccessfully attempted in 1639, would show that a man's hand was still at the helm." On page 255 we read: "the two men whom it was believed would enjoy the most favor from the new regent." A characteristic of the style—we think a fault—is the omission of "that" in indirect discourse (p. 87): "Its States met and declared their local rights were violated by the King's edict." The translations from French are as a rule good and idiomatic; on page 395, however, we read: "There are now, sire, ten years that the country is ruined." Mr. Perkins is generally careful to use good English words and phrases; it is therefore a surprise to find the French forms *Escaut* (for *Scheldt*, p. 339) and *Fiesque* (for *Fiesco*, vol. ii, p. 4). We note a few misprints. Vol. i, p. 19, Brandenberg for Brandenburg; p. 32, l. 11, their for there; p. 95, de Guesclin for du Guesclin; p. 210, councils for counsels; p. 477, canon for cannon.

BISHOP KERFOOT.

Life of the Right Reverend John Bishop Kerfoot, D.D., LL.D., First Bishop of Pittsburgh. With selections from his Diaries and Correspondence. By Hall Harrison, M.A., Rector of St. John's Church, Howard County, Md. 2 vols. James Pott & Co. 1886.

Mr. Harrison has done the work intrusted to him in a painstaking and judicious manner. He has kept himself for the most part out of sight, and allowed the Bishop to express himself freely and fully in his journals and correspondence. At the same time he has not aimed at any colorless impartiality, but has allowed himself from time to time "the delights of admiration." The book is one that will make its principal appeal to those who find themselves in places similar to that which Bishop Kerfoot occupied, and to those profoundly interested in the ecclesiastical polity and history of the Episcopal Church; to the general public, very little. And yet it is to be desired that those who will read it least should read it most; for it is a book eminently calculated to convince those who were not of the Bishop's fold that here was a good shepherd, an earnest, honest, and industrious man, doing his best in his own way to make love and righteousness abound. There is no better antidote for the keenness of our sectarian animosities than the reading of biographies of men who did not walk with us. Bishop Kerfoot was an ardent, even a passionate Episcopalian; but to read his biography, and especially his own letters and journals, is to be made aware that his Christianity and his manhood transcended his particular opinions.

Bishop Kerfoot was of Scotch-Irish parentage, and was born in Ireland in 1816. His father removed to this country in 1818, and he followed with his mother and three other children the next year. The parents had been Wesleyans. The boy received his first impulse to the Episcopal Church from Dr. Muhlenberg, who came to Lancaster in 1820 and opened a Church Sunday-school. Afterward he attended the Doctor's "Flushing Institute" for a number of years, and received from him a distinctly evangelical impression which faded somewhat as time went on. But so did not his love and admiration for his early teacher till he gave to him such comfort as he could in his last sickness. The most notable incident of his boyhood was the delivery of an address to Lafayette in 1825. It was full of excellent advice and admonition, and a facsimile of the original MS. is a welcome addition to the illustrations of the book. His deacon's orders were taken in 1837, and he was ordained a priest on his twenty-fourth birthday. For a time much pulled asunder by conflicting demands upon him and his own indefinite desires, in 1842 he assumed the charge of St. James Hall in the diocese of Maryland, then presided over by Bishop Whittingham, one of the most remarkable men of his order in the United States, with whom Kerfoot's relations were most intimate and affectionate until the former's death in 1879, only a year or two before his own.

Financial troubles combined with "minister's sore throat" to make the early years of his life at St. James anxious and harassing, but the ailment insured a trip to England, and the financial difficulties were already lessening, and the school had greatly multiplied its buildings and increased its usefulness, when Kemp Hall, the principal dormitory and place of instruction, was destroyed by fire during a fearful winter storm in January, 1857. Bishop Whittingham "worked up" the event in a manner calculated to make a metropolitan reporter green with envy, and his account has been incorporated in his seventh chapter by Mr. Harrison. Mr. Kerfoot's conduct was certainly deserving of the highest praise. His only thought was for his boys. Until their safety was assured, he did not hesitate to put his own in fearful peril. Bishop Whittingham's account of the disaster was eloquent with an ulterior aim, which he accomplished. Funds came to the rescue of the school, and a new site for it was selected twenty miles from Baltimore, where the unfinished buildings, arrested by the civil war, still make their mute appeal to those who cherish the memories of Whittingham and Kerfoot, for the fulfilment of their hope.

Mr. Harrison's chapters for the period coinciding with the civil war derive considerable interest from the fact that the College of St. James—it had grown from a school into a college of some sort—was situated in a region which became the tramping ground of the contending armies. Principal Kerfoot, like Bishop Whittingham, was a thorough Unionist, but he found no reason to complain of the Bishop's admonitory circular to his clergy, instructing them, in case Maryland seceded, to omit the usual prayer for the President of the United States. First an Episcopalian, and then a patriot. But so many of the St. James boys were from the South that the school lost a majority of its students on account of the principal's position and the various exigencies of the situation. Things went from bad to worse. In June, 1861, the College grounds became the site of the first encampment of Union soldiers in a Southern State. In 1862 an authorized prayer for Union victories stirred up a great commotion, and in July of that year the last public commencement was held. Then came Antietam, and Dr. Kerfoot's letters and journals abound in interesting particulars of the invasion. The College life went on in 1863 with lessening numbers till Lee crossed the Potomac in June. Mr. Harrison finds it necessary to apologize for Dr. Kerfoot's characterization of the conduct of the retreating rebel army; but no apology was needed. The College rectory and other buildings were ransacked and plundered without mercy. Dr. Kerfoot went into the hospitals and worked until his health broke down. In October the College entered on another year with about thirty students. The work continued fitfully throughout the year. In August, 1864, Early came raiding into Maryland, and Dr. Kerfoot was made a prisoner and put on his parole to secure Dr. Boyd's release from the Union prison at Wheeling, Va. Failing of this, he was to go to Richmond.

There is a very interesting appendix to chapter xi, giving an account of this whole business. Particularly interesting is the account of Dr. Kerfoot's meeting with Bishop Whittingham in Baltimore, after he had given his parole. The Bishop insisted that Dr. Kerfoot had no right to put the Government in a position where it even implicitly accorded to the South the rights of a belligerent. He would send him to Fortress Monroe until the war was over. Bishop Whittingham was nothing if not logical, and he had the courage of his convictions even when they involved a friend in a very miserable plight. The Government was of a less Roman firmness, and Dr. Boyd's release discharged Dr. Kerfoot from his parole; but no attempt was made to resume the College work at St. James.

This ruin of so many hopes after more than twenty years of faithful service was followed by a year as President of Trinity College, Hartford, Conn. The position did not prove congenial. There was no family life as at St. James, and the boys were given to all manner of collegiate silliness. He had, however, done something to establish himself in the esteem of the students and the confidence of the trustees when, in the fall of 1865, he was elected Bishop of Pittsburgh. The general convention immediately preceding his election was an exceedingly important one, and its action was extremely characteristic of the Episcopal Church in dealing with the problems of the war. Mr. Horace Binney offered a resolution that the House of Bishops, in the religious services appointed for a day of special thanksgiving, should advise especial thanks "for the removal of the great occasion of national dissension and estrangement to which our late troubles were due." Bishop Whittingham was the principal opponent of this resolution in the upper house and Dr. Kerfoot in the lower. It was buried under an overwhelming majority. It was perhaps the prudent temper exhibited by Dr. Kerfoot on this occasion that marked him as a fit person to preside over the new diocese of Pittsburgh, permission to form which had been granted at the general convention. He did not accept the office without much urgency from without and much inward questioning. From the time of his consecration till his death he proved by his executive ability and by his personal influence that no mistake had been made in his election. His heart was in his work and his judgment was generally just. That the diocese was newly organized, and that Presbyterianism was everywhere in the ascendant, made the eager Churchman's life a very busy one. Illness and ecclesiastical business took him to Europe several times. He was a member of the first Lambeth Conference in 1867, of the second in 1877, and of the Bonn Conference in 1874. His relation to the ritualistic controversy is the subject of two or three of Mr. Harrison's most interesting chapters. His position was substantially the same as that of Bishop Whittingham. So far as ritualism was an æsthetic matter, concerned with the beautifying of churches and the enrichment of their services, he was himself a ritualist. It was with the doctrinal elements of the movement as they bore upon baptism and the eucharist and the use of confession—its Romanizing tendencies—that he had no sympathy.

The last years of his life had much sickness and sorrow to impair their happiness; and also great disappointment on account of the failure of a plan of church extension in Mexico to make good his expectations. He died July 10, 1881. The impression we derive from his biography is that his character was much greater than his talents, and that these were mainly of the executive order. He had strong affections, and he was widely and profoundly reverenced and loved. His church had never any reason to suspect his loyalty. The different pictures of his face, among the illustrations of the book, are full of interest. That representing him in his early manhood is

rarely beautiful, and most engaging in its sweetness and its purity, with little promise of the later strength.

India Revisited. By Edwin Arnold. (Reprinted, with additions descriptive and poetical, from the *Daily Telegraph.*) London: Trübner & Co.; Boston: Roberts Bros. 1886. Illustrated. Pp. 324. 8vo.

THE first impression of the author of the 'Light of Asia' on landing in India last November, after a more than twenty years' absence, was, how great the change! "I left Bombay a town of warehouses and offices; I find her a city of parks and palaces." He had not passed a day on shore, however, before discovering that this change was only on the surface, and that "the background of Hindu fashions and manners remains unchanged and unchangeable." Still, while this was true of the great mass of the people, he found in the social life of the higher classes a marked difference between the India of the present day and that which he had known. The position of the women had greatly changed. For instance, accompanied by his wife and daughter, he visited a native gentleman who "led them to the drawing-room, where they were at once joined by the wife and daughters of the Hindu knight. These amiable native ladies could talk English perfectly, chatted on social topics, compared tastes in dress and tints, and in all respects observed our own usages of intercourse, except in the graceful local addition that, at the close of our visit, they presented to their English friends deliciously fragrant bouquets of roses and jasmine, and offered the aromatic *pan supâri* and the rose water." On the same day, at a musical entertainment given by a Parsee gentleman, there were, besides the English guests, "some eighty or a hundred of the leading members of Parsee, Hindu, and Mohammedan society, including at least forty native ladies."

At Poona, where Mr. Arnold was formerly the principal of a college, he has the same mingled impressions, caused by great external changes joined with the unaltered life of the people. At times he writes in a half-regretful tone of bygone customs, as if he preferred the old to the new. Coming upon "a stone memorial of a Sati, with the usual hand, arm, and foot-marks engraved, which show that a Hindu widow here immolated herself," he says it was "a splendid courage and a beautiful faith which inspired those Indian wives." Of the nautch he also speaks enthusiastically, but adds, in reference to the performers, "because so many of them can read, write, and are, in fact, the cleverest and most accomplished, as well as the most generous of their sex, the Hindus have come to shudder at the idea of education for their wives; and this is one of the greatest obstacles to female instruction." At Baroda the travellers were the guests of the Guicowar, who thus honored the man who has best interpreted the native thought to his countrymen. Under her young ruler, who was "suddenly called from humble life in a village of the Deccan" to ascend the throne, this state has greatly improved. "Education is being extended to the low-castes and villagers, and municipal improvements of a sweeping kind are in progress." The wild-beast fights, for which it was formerly famous, have been practically abolished, but their memory is still preserved in a huge rhinoceros, the hero of many battles, who now lives a retired pensioner chained up under a grove of trees. A singularly interesting chapter describes a visit to Bhaonagar, a "model native state" on the Gulf of Cambay, where Mr. Arnold was the guest of the Maharaja. Here, at a reception in his honor at the college, the conversation with the Pundits turned on various points of philosophy, literature, and religion. These scholars came finally to this agreement: "that names and forms are nothing; that truth in all religions is one and the same; that, at the last, the Vedantist, the Buddhist, and the illuminated Western philosopher see by one light."

From Bhaonagar, passing through Ahmedabad, Mr. Arnold came to the Rajput city of Jeypore. It is as if we were transported back to the days of the 'Thousand and One Nights' to read of this enchanting place. The whole city is "a delicate rosy red, relieved with white." The street by which the party entered, absolutely straight and more than two miles in length, "is an interminable perspective of roseate house-fronts, bathed by soft sunlight, nowhere ungraceful in style of building, and at many spots on either side of the way broken magnificently by stately fronts of palaces and long lines of light pavilions, embellished with columns and cupolas, and enriched with floral or pictorial frescoes in all sorts of designs." Among these buildings, preëminent in beauty is the "'Hall of the Winds,' a vision of daring and dainty loveliness, nine stories of rosy masonry and delicate overhanging balconies and latticed windows." In strong contrast to these scenes is a row of strongly barred cages where are confined, as state captives, eight man-eating tigers, which "have been snared in pitfalls, where the tiger is left until hunger has reduced him to extreme weakness, upon which the captors manage to draw him forth and shut him up in a life-long imprisonment." In the dreamlike "Silver House" is preserved a Persian manuscript, "made by the orders of Akbar the Great at a cost of forty thousand pounds, and illustrated in the most exquisite manner with colored and miniature pictures, all of an incredible delicacy." At Ulwur, however, there was a copy of the 'Gulistan' valued at £50,000, but "beyond price for the purity of its script and the splendid color and delicacy of its pictures." In the armory of this latter place was a superb collection of swords, some of which "had pearls enclosed in a slot within the breadth of the blade, so that the pearls run up and down as the point is raised or depressed"; and among the jewels in the treasury were "two emeralds of prodigious size, with Persian couplets carved upon their lucent green."

By a sudden transition we pass from these scenes to equally vivid descriptions of the "Camp of Exercise" at Delhi and stories of the siege in 1857. Glorious as are the architectural monuments of Delhi and of Agra, to a description of which Mr. Arnold devotes two chapters, he evidently has a keener intellectual enjoyment, if not a deeper feeling still, in visiting the sacred city of Benares and the hallowed country of the Buddhist chronicles, where the 'Light of Asia' "was born and dwelled in his Pleasure-House; where he meditated his doctrines during six years, and where he publicly taught them; and where his body was burned." Step by step he followed the traces of the "Master," as much a pilgrim as any of those who thronged the shrines, the cave in which Buddha actually dwelt, and the Bôdhi tree where "the sun of Truth rose for Prince Siddârtha." The remainder of Mr. Arnold's journey has less of interest, though there is not one dull page in his narrative, sparkling with vivid word pictures and interspersed with ballads and snatches of poetry and song. From Calcutta he goes to Ceylon, where he is received with special honor by the Buddhist priests and people for having to quote from one of their addresses, "caused the revered name and sublime doctrines of our Lord Buddha to be respected and valued by scores of people of various Western nations." On his homeward journey he turned aside, on the invitation of the Nizam, to visit Hyderabad, where another series of brilliant entertainments awaited him. In the last days of February he was again in Bombay, having during the winter months crossed the peninsula from west to east and from south to north.

Mr. Arnold's style is often too ornate, although admirably adapted to his subject, and at times his fondness for Indian words makes his meaning obscure. The architectural illustrations are in general very good, but those of the scenery are sometimes quite indistinct.

Books for a Reference Library: Being lectures on the books in the reference department of the Free Public Library, Birmingham. First series. London: Simpkin, Marshall & Co. 8vo.

IN this volume we have a good example of the sort of work which might be carried on with advantage in connection with every public library, but which has until lately received little attention in this country, though we are glad to see that in one or two of the papers read at the Milwaukee meeting of the American Library Association the need of just such aid as is here given to readers was strongly emphasized. The authorities of the Birmingham library, believing that their excellent collection of reference books had remained almost unknown to the majority of the citizens, determined in 1884 "to organize lectures which should have the effect of opening up to the inhabitants of the borough some knowledge of the most valuable contents of the great treasures which were in the library"; and the volume before us contains the first fruits of this determination.

The first two lectures are by the Chairman of the Library Committee, and take up the subjects of Law and Jurisprudence, and Legal and Constitutional History, respectively. In his introductory remarks the lecturer points out that while the library possesses an admirable catalogue, "there is nothing that requires a greater knowledge of books to use properly than a catalogue," and hence the necessity of calling upon specialists in various departments to undertake for readers the useful if homely office of fingerpost to the catalogue's contents. He then proceeds to characterize briefly the works which it would be most profitable for any one commencing the study of law to read. The place of honor is given to Austin's 'Jurisprudence,' and occasion is taken to note the confusion arising from neglecting to bear in mind the two senses of the word law. Bentham's works are next mentioned, and attention is directed to the more important of them. Bentham and Austin are given as representatives of the school of analytical jurists, and Sir Henry Maine is placed at the head of the school of historical jurists. His works are described, with some remarks as to the order of reading to be pursued, and his treatment of the subject. After naming several other works on the general subject of jurisprudence, the lecturer turns to the subject of English law, recommends Blackstone's 'Commentaries,' noting the principal editions, Nasmith's 'Institutes of English Law,' and Kent's 'Commentaries'—"an admirable book, and valuable to the English student because it is strong where Blackstone is weak." Passing from books which give a general survey of the whole field of English law, the more important works in special departments, such as criminal law, property law, etc., are named and described, and the lecture concludes with a brief mention of some of the best law dictionaries.

In the second lecture attention is called to the importance of a knowledge of the original authorities, such as the statutes at large, the year books, state trials, etc., and the best works on the history of English law are enumerated and characterized; the works of Glanville, Bracton, Fortescue, and Coke are recommended for the-

rough study; and the remainder of the lecture is devoted to works on the constitutional history of England. It is remarked that in historical reading, where there must be a constant use of authorities, the reader is referred from one book to another, so that half-a-dozen of the chief books on a subject will introduce a student to all the others.

From this brief summary an idea of the method pursued may be obtained, and it will suffice to mention simply the subjects of the remaining lectures, viz.: Greek and Latin Classics, by the Head Master of King Edward's School; Books on Shakespeare, by S. Timmins, who does justice to the labors of American scholars in this field; Botanical Books, and the Botanical Books of the Nineteenth Century, two lectures by the Professor of Botany in Mason College, who, speaking of the French translation of Grisebach's 'Vegetation of the Earth,' says: "In reference to this and other German works, I may here remark that when a French translation exists and an English does not, it is preferable to get the French translation rather than the German original; because there is a tendency among German scientists to involve themselves in sentences the beginning of which they have forgotten before the end is reached, and elucidation is usually one of the first duties of a translator. The French language is one that lends itself to the simplest possible description, so that, provided an English translation be not to hand, the French is decidedly preferable, as a rule, to the German original." Unfortunately the tendency here condemned is not confined to the scientists, for some of the worst offenders in this respect may be found among modern German philologists. The seventh and concluding lecture is on "Some Art Books," chiefly with reference to the decorative arts, and intended more especially for the guidance of those engaged in art industries. An appendix contains short-title lists of the books in the Reference Library illustrative of the subjects treated in the lectures.

Notwithstanding a certain note of insularity perceptible in some of the lectures, and excusable, perhaps, considering that they were addressed to a local English audience, the book is not without value as a guide for American readers, though its chief claim to our attention is that it offers an example worthy of imitation by the authorities of American libraries, and of college libraries especially. No class of men should be better qualified to give to students a brief outline of the bibliography of the subject in hand than the professors in our universities; the character, merits, and relative importance of the principal works should be explained, the best periodicals pointed out and described, so that the students may be able not only to read intelligently the standard works, but to keep in touch with the results of modern thought and investigation as well. To some extent and in a fragmentary way this is done, no doubt; but we hope that before long a lecture on the bibliography of the subject will be considered an indispensable introduction to every course of lectures delivered in our universities.

A Simplified Grammar of the Japanese Language (Modern Written Style). By Basil Hall Chamberlain. London: Trübner & Co.

THIS handy little volume of a hundred pages has been printed in Japan under the eye of the author, and is noticeably free from slips of the pen or printer's mistakes. It gives a clear analysis and presentation of the modern written style of the Japanese language. The author, who has for years been an alert student of the tongue spoken by the Mikado's subjects, is also an indefatigable reader of the ancient literature. He has already distinguished himself by his 'Classical Poetry of the Japanese,' and few papers read before the Asiatic Society of Japan are so rich in nuggets of thought, information, and discovery as are his. An active member of the Romaji-Kai, or Roman Letter Society, which aims to substitute in popular use the Roman letter for the native syllabary, he has studied his theme from all points of view, and the result is a manual of singular clearness.

Mr. Chamberlain considers it an open question whether the Japanese is to be put into the group of Altaic languages with the Turkish, Hungarian, Finnish, Mongol, and Manchiu. It is manifest, however, that he believes the evidence leans that way. Hence, in his view, the "Japanese assumes prime importance as being by far the oldest living representative of that great linguistic group." "Its earliest extant documents go back in their present shape to the beginning of the eighth century of our era, and its literature has flourished uninterruptedly from that time downward." To the Corean its structural resemblance is very great, reaching even into the minutiæ of idiom.

Wisely abandoning the idea of attempting to adapt the cumbrous system of the Greek and Latin grammarians to the Japanese, thereby introducing needless difficulty, our author handles his subject according to a method of his own. Old classifications into declensions, conjugations, and the like, are abandoned, but a thorough study of the structure of the language enables him to present the problem in its simplest principles. Mr. Aston, his predecessor, was the first to introduce light into the chaos of Japanese grammar as writers up to his time had left it; but while Mr. Aston deals with the whole range of literature, Mr. Chamberlain concerns himself only with the written language of to-day.

In Japan, as in most Asiatic countries, the difference between the spoken and written forms of the same tongue amounts to that of difference of dialects. Even to a fluent speaker of the vernacular the sentences of a newspaper, letter, postal card, or advertisement are mysteries. Even the vocabulary seems strange, though the chief puzzles are structural. The natural fruits of a long and varied career of a language having a thousand years of literature behind it are seen in the four categories of written style now in common use. The standard translation of the Bible is in the semi-classical style, while the lower-class newspapers indulge freely in the semi-colloquial style. The ordinary vehicle of contemporary literature, approved by a majority of Japanese gentlemen, is the Sinico-Japanese or Chinese style. This is the outgrowth of the long study of the Chinese classics, and the slavishly literal translation of them. As compared with pure Japanese, it reminds one of Johnsonese or Carlylese when set beside the English of classic authors. The fourth style, which bristles with grammatical peculiarities, is almost wholly Chinese in phraseology. The introduction of the telegraph and postal card is making inroads on this style, and driving it into desuetude. In general, it may be said that the last few years of Western influence in Japan have noticeably lowered the forms of the written language toward those of the spoken tongue.

In his pithy chapters on the Phonetic System the author gives needed caution as to the pronunciation of Japanese words: "The native pronunciation of both vowels and consonants is less broad and heavy than in most European languages, and especially in English." Americans often dispute concerning the pronunciation of such names as I-wa'-ku-ra, Yo-ko-ha'-ma, Sa'-tsu-ma, Mi-ka'-do (I-wa-ku'-ra, Yo'-ko-ha-ma, Sa-tsu'-ma, Mi'-ka-do). They single out some one syllable and lay a heavy stress upon it, whereas in Japanese there is no tonic accent, but rather a clear flowing enunciation, which develops all the sounds, but emphasizes none. So also in a sentence, the singling out of a word for a special ictus is unknown to the Japanese. We have often heard natives reading a book, a speech, an address, and noticed the absence of inflection, which gives a sing-song style to their finest productions. We remember the feeling of surprise that came over us when even the Mikado himself followed the same habit—so vicious to an American, so musically correct to the native tympanum. In the theatres, of course, the opposite and, to us, more natural method is followed.

The second division of the work concerns itself with uninflected words. These consist of substantives, pronouns, numerals, and postpositions. No words are more curious to a foreigner of analytic mind than the personal pronouns, which, instead of signifying 'I,' 'thou,' 'he,' etc., mean "servant," "awkward person," "young," "selfishness," or something of impersonal or substantive meaning. No mistakes of foreigners are more frequent or productive of more merriment to the lower classes than these, which maladroitly reverse the position of superior and inferior. In no grammar extant is this whole subject of the pronoun more luminously set forth than in the little manual before us. In entering upon inflected words, adjectives and verbs, the real difficulties of the language are encountered. The wealth of hypothetical and oblique forms, the vast number of ways in which one may speak in Japanese without being nailed to positive statement, the network of circumlocution, and the dynamics of shadows, are minutely set forth. They give one a vivid idea of the possible diplomatic powers of those who wield this speech; they also explain easily why so few foreigners graduate beyond the simple indicative forms. The chapter on syntax seems rather short, albeit the points made are well illustrated by typical examples, while the final portion on the epistolary style prepares one to read one of those stilted and curious productions called a *tégami*, or letter. The whole work is a model of brevity and perspicuity. We are glad to see that a Romanized Japanese Reader, by Mr. Chamberlain, with text, translation, and notes, is in press, and thus the needed companion volume will not be lacking.

Affaiblissement de la Natalité en France: Ses Causes et ses Conséquences. Small 8vo, pp. 152. Paris: G. Masson. 1886.

THE Marquis de Nadaillac is well known to the scientific world as the author of a number of much-valued works on prehistoric archæology. His latest literary production, however, relates to the decreasing birth-rate in France, its causes, and the discouraging consequences which this alarming symptom of weakness augurs for the future of the French people. His small volume embodies the results of a careful study of the vital statistics of all nations among which the institution of the census is known.

The evil so unceremoniously laid bare by the author had already made itself felt at the beginning of the Christian era, when, according to Suetonius and Tacitus, the Romans endeavored to increase the population of Gaul by establishing in certain parts of the country settlements of foreigners, chiefly of Germanic stock. The oldest count of parishes and hearth-fires of which a knowledge has come down to the present time was made towards the year 1328, under the reign of Philip of Valois. It shows that in an area equal to three-fifths of France as she existed before 1870, there were 2,943,763 fires, representing approximately a population of 11 millions of souls; and, admitting the same proportion for the whole of France, the number of 18 millions would be reached, and thus the result obtained that during a period embracing five centuries

and a half the population of France has only doubled.

Matters have not improved in recent times, as shown by a table giving the number of births for a population of 10,000 souls during more than a century, namely, from 1770 to 1880:

Births from	1770-80.....380	Births from	1841-50.....274
" "	1801-10.....325	" "	1851-60.....267
" "	1811-20.....316	" "	1861-68.....264
" "	1821-30.....309	" "	1869-80.....245
" "	1831-40.....289		

The author points out that the decrease in the birth-rate has gone on in years of war, of epidemics, revolutions, and financial crises, as well as in the prosperous times of peace, wealth, and industrial expansion; and he is forced to regard it as inherent in the race, the social and economic conditions under which it maintains itself, and, above all, the national character. Comparing these results with those obtained in other countries, the Marquis is struck with the differences he meets on all sides:

"We see in Russia," he says, "507 births among 10,000 inhabitants; in Hungary 416, in Würtemberg and Saxony 400, in Prussia 384, in Austria 381, in Italy 370, in England 337, in Belgium 322, in Denmark 312, in Switzerland 297. France occupies absolutely the lowest rank among the countries of Europe in which the annual births are registered. Switzerland, which precedes us immediately in the scale, is yet considerably ahead of us. Among our Belgian neighbors, who speak the same language, who profess the same religion, and have the same legislation, who, by their customs, industry, mode of life, the fertility of their soil, and the salubrity of their climate, bear the closest resemblance to our northern populations, the birth-rate, far from being on the decline, is increasing. In 1866 there were only 316 births among 10,000 inhabitants; to-day 322 are counted."

He views with some apprehension the rapid increase of population in neighboring Germany, which country, though drained by incessant emigration, has added in each of the eight years embracing the period from 1872 to 1880 nearly half a million to its inhabitants. "Notwithstanding the gaps caused by emigration," the author says, "the German population is rapidly growing. Every German household forms a large family; every French household forms a family of few members; such is the truth in its brutal reality. This considerable growth, united with the strength of her Government and the order established in her institutions, insures the preponderance of Germany in Europe. It would be fruitless to conceal the gravity of the danger."

France is a country of immense resources, owing to the fertility of the soil, the intelligence, industry, and, on the whole, frugal habits of her population. Few facts have astonished the world more than the facility with which France rose again after the cruel defeats of the late war. An indemnity under which more than one nation would have succumbed was paid three years after the treaty of 1871, and yet the prosperity of the country equalled—if it did not surpass—that of the most brilliant years of the Empire.

"But," says the Marquis, "the picture has a dark spot which must not be overlooked: if our birth-rate were equal to that of our neighbors, the number of our children would be annually increased by three hundred thousand, and these children, so long consumers before becoming producers themselves, would cause a heavy expense, which cannot be estimated at less than a milliard per annum. It is therefore the saving of this considerable expense which nourishes every year luxury or adds to the general wealth. We buy a part of our riches at the price of our flesh and blood, and the selfish enjoyments of the present at the cost of our inevitable enfeeblement in the future."

Malthusian theories find no favor with the Marquis de Nadaillac; he considers marriage and paternity as natural rights, with which the legislator cannot interfere. The apprehension of an insufficiency of the means of subsistence, so conspicuously dwelt upon by the school of Malthus, appears to him quite chimerical in the presence of our modes of transportation by steamers and railways. A few months ago a quick-sailing steam vessel of 3,000 tons made the passage from Buenos-Ayres to Marseilles in seventeen days, having on board a cargo of maize and other grain, which it transported at 5 francs per ton. The spreading of railways in British India will bring to the ports of Europe in constantly increasing quantities the cheaply acquired products of a rich soil. "It is really strange that at a moment when our agriculturists are with good right alarmed by the ridiculously cheap importation of cereals from the most distant quarters, the prospect of inevitable famines is held out by certain parties." The author is convinced that the development of cultivation and industry can yet for a long time make front against the increase of population.

Mythologie der deutschen Heldensage. Von Wilhelm Müller. Heilbronn: Gebr. Henninger; New York: B. Westermann & Co. 1886. Pp. 260.

THIS work of Prof. Müller deserves to take rank hereafter among the best books upon the subject with which it deals. It is a compact and erudite treatise, which makes its appeal entirely to the reader's scientific interest in the heroic legends of the ancient and mediæval Germans. Writing for scholars who are assumed to be tolerably familiar not only with the old saga literature itself, but also with modern theories concerning it, the author omits for the most part any detailed recital of the legends, and devotes himself to the interpretation of them. His position among mythologists may be described as eclectic. On the one hand, he repudiates the view that heroic lore is in general out of all relation to historical facts; on the other hand, he argues that it usually contains another element than transfigured or perverted history. This other element is religious in character, being a poetic construction by the popular imagination (if that be a suitable name for the myth-making organ) of certain natural phenomena. The Heldensage as we know it is generally the result of an interfusion of these two ingredients, the historical and the religious myth, the separation of which is, according to Müller's view, more or less within the power of the investigator. In some cases, that of the Greeks, for example, little can be done in this direction. Here the religious element greatly predominates, and in any case our trustworthy historical knowledge of the Greeks during their myth-making period is very scanty. The case of the Germans, however, is more hopeful, since the tales of Walter, Siegfried, Tell, and the like, have grown up in times which are open to our historical scrutiny.

The chief aim of Müller's work is to examine the principal heroic sagas of the Germans with a view to effecting this separation. To this end he makes free use of certain principles of interpretation which, though sound enough to afford valuable auxiliary evidence, are hardly of a nature to carry conviction alone. Thus a combat between two heroes is construed as the mythological version of an ethnic struggle between their respective nations; the death of one of the combatants stands for the subjugation of his people; and the successful warrior's marriage of a foreign wife typifies the vassalage of the bride's people to the bridegroom's. On the other hand, a hero's battles with dark and malignant demoniac agencies are to be regarded as survivals of an ancient natural religion. For example: Siegfried as slayer of the dragon is the descendant of an old god of light in conflict with the powers of darkness; but Siegfried as the friend and ally of King Günther, as the husband of Kriemhild, and as finally the victim of Hagen's treachery, is an emblem of tribal vicissitudes.

We cannot here enter into the details of Müller's argument, or give any account of the many ingenious combinations and deductions in which his book abounds. One point, however, may properly receive brief notice. Having in mind the methods of certain scholars, one naturally desires to know in these days how any recent writer upon mythological matters looks upon the value of etymology as an instrument of research in his field. These words from the book we have been considering are therefore of some interest:

"Since names, like all other words, may have different meanings, and only the connection shows in what sense they are to be taken; and since, also, a root may exhibit in derivatives and compounds the most varied applications of its original sense, it comes about oftentimes that even an etymology which is from a purely linguistic point of view correct, may either contribute nothing to the understanding of a myth or may lead to the strangest errors, unless one first comes to understand the meaning of the tradition from the substance of the tradition itself."

This seems to imply that Wilhelm Müller of Göttingen, unlike the more illustrious Max Müller of England, looks upon etymology as a useful handmaid but a dangerous mistress in mythological inquiries.

Bondestudenter. Fortælling af Arne Garborg. Copenhagen: P. G. Philipsen.

THE tendency to turn from national self-glorification to self-criticism is generally a healthy one, and the success of Mr. Garborg's 'Peasant Students' is due to the baldness with which it exhibits a series of most unflattering portraits of the typical figures in Norwegian society and politics. An uncompromising cynicism pervades the book, and the moral is pointedly indicated that in a small state a man, if he amounts to anything, has the choice between hypocrisy and martyrdom; he cannot afford to be wholly true, wholly honest, wholly anything. The theme of the story is really the disadvantage of belonging to a small state—the misery of small surroundings, and small standards of vice and virtue and human worth. Men cannot avoid elbowing each other too closely, and, in spite of a blatant idealism publicly professed, their actions are prompted by a stern regard for utilities. The author frankly recognizes that it must be so, and does not find fault with utilitarian conduct; but he pours out the vials of his wrath upon the public hypocrisy—the spirit of lying—which compels a man, as a matter of fashion, to profess a worn-out and impracticable idealism. He shows that a man who should undertake to live in accordance with the sentiments which the church and society in Norway avow, must beg, steal, or starve. Thus, the fiction that the Lord provides for those who believe in him, without any particular exertion on their part, is made the subject of scathing satire. The loudly professed faith in the peasants as a sort of hazy abstraction—as the sound core and the saving strength of the nation—is held up to ridicule; and it is shown that the peasants themselves, whenever they succeed in acquiring a little culture, make haste to sever all ties that bound them to their former condition.

The hero of the book, Daniel Braut, is, as the title indicates, one of these peasant aspirants, not so much for culture as for the sordid concomitants of culture—good food, ease, and pleasant surroundings. He owes his opportunity to rise to the romantic belief in "the people," which then was prevalent (and is yet), and naturally, as the Norse proverb says, "howls with wolves among which he finds himself." He chimes in with all the vague declamation about the peasant's strength and virtue (though privately dis-

trusting it), and assumes to a moderate extent the opinions of every social and political clique with which he comes in contact. His efforts to acquire the *frons urbana* of which Horace speaks —the readiness of speech and ease of manner which mark the dweller in cities—are amusingly and pathetically described. It takes, however, more than one generation to make a gentleman. The peasant stamp is too deeply impressed upon Daniel to be obliterated by any artificial veneering.

It will be seen that as a mere piece of social satire 'Bondestudenter' is interesting and effective. As a story it is colorless, and overloaded with lengthy discussions. A multitude of persons who have nothing to do but to convert the hero to their views, appear and disappear in a most bewildering manner. There is not a love episode or anything approaching it, from the book's beginning to its end. Women play no part whatever in it, except in affording opportunities to the hero to be unfaithful to his ideals. His first love, Inga Holm, flits as a beautiful shadow through the early chapters, but does not do anything nor utter a word. The second, Bertha-Marie, is equally passive and incorporeal; and the third, Hanna Steensrud, is but the unlovely incarnation of the mammon which Daniel finally weds. Being presented with the alternative, starvation or unfaithfulness, he has no hesitation in choosing the latter. And the author is inclined to approve his choice.

Shaftesbury (the first Earl). By H. D. Traill. [English Worthies. Edited by Andrew Lang.] D. Appleton & Co. 1886. 12mo, pp. 218.

As long as Macaulay and Dryden hold their place in English literature, the first Lord Shaftesbury will hold his place as one of the most interesting of historical characters, and the type of a certain class of politician. No member of the "Cabal" has come down to us with an unstained reputation, and the efforts that have from time to time been made to rehabilitate Ashley have effected little more than to convince the world that, if less honest than Clifford, he was, on the whole, a better man than Buckingham, Arlington, or Lauderdale. By an unusual fortune of heredity, it is his best qualities that have been transmitted to his distant posterity, and it is not perhaps too much to say that there may be traced in the recently deceased Earl qualities, and certainly a general drift of intellectual sympathy, which distinguished his ancestor.

Mr. Traill, in his very interesting sketch of Lord Shaftesbury, takes a middle attitude as to the character of his hero. "It seems to me," he says, "that, if Shaftesbury's apologists sinned against the injunction to 'nothing extenuate,' the severest of his censors have no less certainly defied the prohibition to 'set down aught in malice.'" On more than one occasion he justifies him, or at least brings in a verdict of "not proven," where Macaulay and Campbell had visited him with severe censure. But on the whole he can only confirm their verdict. In an admirable summary of his earlier career (pp. 94 to 97), he remarks that "all his repeated changes of party find their simplest explanation in a theory of pure self-interest, and some of them are explicable in no other way." But, after all, "the only reason why he changed sides oftener than his rivals was because he had a keener eye for coming events than they, and a readier skill in adapting himself thereto." Then, after citing the apt passage from Hudibras, he adds: "This account of the matter seems to me to be as accurate as it is witty. I have no doubt that Shaftesbury felt real twinges of Royalism some time before the Restoration, and shooting pains of Protestantism before the anti-Catholic movement of 1673–80. He foresaw in each case the impending ruin of the party to which he had attached himself, and for no man had the *victrix causa* a more overmastering attraction than for him. He had not the faintest sympathy with the eccentric preference of Cato: in that matter, at any rate, he was on the side of the gods."

History of the Scottish Expedition to Norway in 1612. By Thomas Michell, C.B. T. Nelson & Sons. 16mo, pp. 189.

THE Scotch expedition narrated in this book was an incident in what is known as the "Calmar War" between Sweden and Denmark, when Gustavus Adolphus, having recently succeeded to the throne, undertook to obtain mercenary troops from western Europe. Most of these troops, under Mönnichhofer, succeeded in landing on the coast of Norway and making their way to Sweden. A small body of Scotchmen, three or four hundred in number, under Ramsay and Sinclair, were intercepted by a body of peasants at Kringelen and cut to pieces, very few escaping with their lives. Mr. Michell finds it hard to understand how so large a body of troops as this could have been destroyed by the inconsiderable number of peasants who are reported to have attacked them; and the "tömmervælte," or artificial mass of beams and stones, which the reports all speak of as having been rolled down upon them, seems to him quite inadequate. It cannot have destroyed, he thinks, more than twenty-five or thirty men (p. 63). His theory of the matter is "that the three hundred Scots were not all armed," a conclusion arrived at partly from the accounts of the affair, partly from the relics of the fight. On this theory "the almost entire annihilation of the three hundred men by four hundred Bönder is seen to have been easy enough." We do not ourselves, however, see anything incredible in three hundred well-armed troops, after being thrown into confusion and partly crushed by the "tömmervælte," being then cut to pieces by a superior number of armed peasants of the neighborhood. The peasants of Norway were not the helpless serfs of France or Germany, but well-to-do and warlike freemen, the real rulers of their country.

There are a number of rather rude illustrations, and an appendix containing copious historical documents; also, an index of names of persons.

The Second Punic War, being Chapters of the History of Rome. By the late Thomas Arnold, D.D. Edited by William T. Arnold, M.A. With eight maps. Macmillan & Co. 1886. 8vo, pp. 435.

THE account of the Second Punic War in Arnold's 'History of Rome' is generally recognized to be one of the masterpieces of English historical composition. Unfinished as it is, breaking off abruptly soon after the battle of the Metaurus, it has a certain completeness and unity which well warrant its being published by itself as the best and most graphic history of a most important epoch. Its editor, a grandson of the author, has provided it with the apparatus which it very much needed, and with notes embodying the results of the latest scholarship. He has not thought it worth while to continue the work to the end of the war, or even, as Archdeacon Hare did, to append the account of the last years of the war written in 1823 by Dr. Arnold for the 'Encyclopædia Metropolitana.' "That account is of altogether different texture and value to the portrait of Hannibal which Dr. Arnold drew in the maturity of his powers, and no service is done to his memory, but rather the contrary, by attempting to stitch the two together."

Mr. Arnold's brief introduction presents well and forcibly the reasons for this separate publication, as resting upon the special character and merit of this portion of the original work. His most important contribution, however, is in the extended notes at the end of the volume, chiefly upon the questions of topography with which the history of this war abounds. We have here collected complete materials for determining the disputed localities of Hannibal's pass over the Alps, the battles of Trebia and of Thrasymenus, and the rest. As a whole, in regard to these controversies, it appears that "the general result has been to weaken the authority of Polybius and to raise that of Livy" (p. 386)—on the ground, in Dr. Arnold's own words, of "the total absence of geographical talent in Polybius." He therefore rejects the view, accepted among others by Niebuhr, Arnold, and Mommsen, that Hannibal crossed by the Little St. Bernard; for Livy, "who appears to have faithfully copied out a good authority, takes Hannibal from the head of the Durance valley," and this leaves us only the choice between the Mont Genèvre and the Col d'Argentière. As between these, he is disposed "to say that Mr. Freshfield, who has the advantage of being the last man to review the whole question in the light of his predecessors' labors and of his own personal experience, . . . at present holds possession of the field"; and Mr. Freshfield supports the Col d'Argentière. With regard to Thrasymenus, he abstains from expressing any judgment, being "strongly of opinion that the question is now in a state at which it can only be advanced by some scholar with the opportunity and inclination to make a thorough and leisurely personal examination of the ground, texts in hand" (p. 389).

It is to be hoped that this volume will meet with a hearty reception, and will do something to give the present generation a closer and more immediate acquaintance with its distinguished author.

Armstrong's Primer of English History, for school and family use. With maps. A. C. Armstrong & Son.

THE compiler of this Primer has accomplished, with a reasonable degree of success, the difficult task of squeezing the entire course of English history into a little over a hundred small pages. The matter is selected with good judgment, and presented with a laudable avoidance of unnecessary detail; the fault that strikes us in the general plan being that the most important statements seem insufficiently emphasized. None but important facts are, of course, intended to be given at all; but even here there is a difference, and the reader or pupil ought to have certain things impressed very deeply upon his mind.

The destructiveness of the Black Death (p. 38) is much underrated by the statement that "more than fifty thousand persons" were its victims. Probably there was that number in the single county of Norfolk, and it is pretty well agreed that at least a third of the population of the eastern counties was carried away. The statement that it was "followed by social disturbances among the laboring classes" is a good illustration of the want of emphasis of which we have spoken. It means very little as it stands, and to make it worth inserting at all it ought to be shown what these disturbances were, and why they arose. On page 64 we read Duke (for Earl) of Warwick. The extreme difficulty of combining brevity with accuracy is illustrated by the table of sovereigns on page 52, which gives (in the Spanish column) Catharine of Navarre, Ferdinand V. of Castile and Ferdinand II. of Aragon—as if the last two were different persons (but where is Isabella of Castile?); also by the map of "Europe, illustrating Continental wars"

(p. 86), which, designed to illustrate a series of wars, is not exact for any one period. It is inserted at the accession of William III., but belongs to the middle of the nineteenth century; the Austrian Netherlands are called Belgium, Genoa is annexed to Sardinia, Silesia to Prussia, and Galicia to Austria. By an oversight, the name Burgundy stands east of the Saône (in Franche-Comté—an historical Burgundy, to be sure).

Lives of Greek Statesmen. Second Series: Ephialtes—Hermokrates. By the Rev. Sir George W. Cox, Bart. Harper & Bros. 1886. 16mo.

Sir George Cox has made Greek history so distinctly his field that whatever he writes in relation to it is sure to be read with interest. The reader of his 'Lives' is struck with the ease and picturesqueness of narration which come from a long and minute familiarity, and which place him in imagination in the presence of the generation whose political intrigues and contests are described as if it were his own period. A very clear picture of Greek society is therefore sketched in relation to these ten personalities. The former volume, also containing ten lives, extended from Solon to Gelon; in the present we have a practically complete history of the period from the close of the Persian war to that of the Peloponnesian war. It is really a misfortune that all the modern nations have softened the Roman c (representing the Greek κ), so that the forms of proper names that have come down to us do not give us the equivalents of the original. Hence no end of confused and discrepant usage in writers of the present day. *Kimon*, of course, is not only a more correct form, but a pleasanter sound than *Cimon*, just as *Kikero* is pleasanter than *Cicero;* but nobody says *Kikero*—except *as a Latin word;* why, then, *Kimon?* Again, what is gained by printing *Perikles* and *Hermokrates?* Even the distinction between literary and classical usage is not always easy to observe. Mr. Cox says *Thucydides;* why not then *Macedonian?*

BOOKS OF THE WEEK.

Allen & Greenough. Select Orations of Cicero. Edited with Vocabulary. Boston: Ginn & Co. $1.40.
Amicis, Edmondo de. Constantinople. New edition. G. P. Putnam's Sons. $2.50.

THE LATEST AUTHORITY ON EARTHQUAKES.

Earthquakes and other Earth Movements.

By JOHN MILNE,

Professor in the Imperial College of Engineering, Tokio, Japan.

International Scientific Series.

With 38 Illustrations. 12mo, cloth. Price $1.75.

An attempt is made in this volume to give a systematic account of the various Earth Movements. These comprise *Earthquakes*, or the sudden violent movements of the ground; *Earth Tremors*, or minute movements which escape our attention by the smallness of their amplitude; *Earth Pulsations*, or movements which are overlooked on account of the length of their period; and *Earth Oscillations*, or movements of long period and large amplitude.

SHOULD OWN A COPY OF

The American Citizen's Manual.

THE AMERICAN CITIZEN'S Manual. By Worthington C. Ford. New Edition, Complete. Two parts in one volume. Cloth, $1.25.

A work planned to afford in compact form a comprehensive summary of the nature of the organization of the Governments of the United States, National, State, and Local, and of the duties, privileges, and responsibilities of American citizens.

"Mr. Ford writes thoughtfully, carefully, impartially, and furnishes one of the best imaginable manuals that could be prepared for circulation on either side of the Atlantic."—*N. Y. World.*

"The book is eminently practicable and the author gives little space to theory."—*Boston Transcript.*

"The work altogether is an admirable carrying out of an original and certainly very wise design to supply the people with pure political information."—*N. Y. School Journal.*

"The work is well and clearly written; shows wise study and sound judgment, and is well adapted to the needs of the times."—*New York The Churchman.*

"It is a very reliable work and will be valuable to the citizen."—*Chicago Advance.*

"The book abounds in practical suggestions and useful hints."—*Brooklyn Times.*

G. P. Putnam's Sons,

27 and 29 West 23d St., New York.

Meditations of a Parish Priest

Thoughts by Joseph Roux. 12mo, cloth, gilt top, $1.25.

"These 'Thoughts' have caused a perfect excitement of enthusiasm in France among thinkers the most various, all of whom, with one accord, have done homage to the little book, whose richness of first-hand thoughts have equally charmed and amazed them."—*Blackwood's Magazine.*

St. John's Eve.

By Nikolai V. Gogol, author of 'Taras Bulba.' 12mo, cloth, $1.25.

A selection of stories from 'Evenings at the Farm' and 'St. Petersburg Stories,' showing the marvellous style and wild grace and flavor of this remarkable author.

Silent Times.

A book to help in reading the Bible into life. By Rev. J. R. Miller, D.D. 12mo, cloth, gilt top, $1.25.

Girls Who Became Famous.

By Sarah K. Bolton, author of 'Poor Boys Who Became Famous.' With portraits of Mrs. Stowe, Helen Hunt, Miss Alcott, and other noted women. 12mo, cloth, $1.50.

The Riverside Museum.

By the author of 'Birchwood' and 'Fitch Club.' 12mo, cloth, $1.25.

University and Collegiate Courses.

The programmes for the next academic year are now ready for distribution.

QUERIES ANSWERED. I HAVE A set of the *Nation*, 43 vols., unbound, clean, perfect. Price, $100. No deviation. A. S. CLARK, 34 Park Row, New York City.

GERMAN SIMPLIFIED. Eminently practical. 12 Numbers, 10 cents each. Prospectus mailed free. Prof. A. Knoflach, 140 Nassau St., New York.

THE "IDEAL" SERIES.

"The volumes appearing under this title deserve the success which they already seem to have achieved. Broadly speaking, they reintroduce us to some masterpieces of literature in a very attractive dress—to be more precise, in all the glory of clear antique printing, handmade paper, and vellum cloth bindings. . . . In some cases, it should be added, additional value is conferred upon the work by new illustrative prefaces and notes."—*Times.*

"Perhaps there is no more agreeable series than 'The Ideal Series.'"—*Athenæum.*

"At once very dainty and very serviceable."—*Academy.*

"Beautifully printed on rough paper."—*Pall Mall Gazette.*

"Nothing more dainty has been issued from the press."—*St. James's Gazette.*

"Perfectly printed, and as fit for the pocket as the drawing-room."—*Spectator.*

"Deserves loving conservation by all who prize the rare arts of excellent typography and paper-making."—*Vanity Fair.*

"Leaves nothing to be desired in the way of typographical perfection."—*Church Times.*

Each volume in Elzevir 8vo, cloth extra, gilt tops. Sold separately at $2.00.

A LIST OF VOLUMES ALREADY PUBLISHED:

LAYS OF A LAZY MINSTREL. By J. Ashby-Sterry, author of 'Boudoir Ballads,' 'Shuttlecock Papers,' etc. Small crown 8vo.

SHAKSPERE'S SONNETS. Edited by Edward Dowden. With a Frontispiece etched by Leopold Lowenstam, after the Death Mask.

EIGHTEENTH CENTURY ESSAYS. Selected and Annotated by Austin Dobson. With a Miniature Frontispiece by R. Caldecott.

ENGLISH LYRICS.

FIRDAUSI IN EXILE. By Edmund Gosse.

AT THE SIGN OF THE LYRE. By Austin Dobson.

OLD WORLD IDYLLS. By Austin Dobson.

BALLADES IN BLUE CHINA. By Andrew Lang.

RHYMES A LA MODE. By Andrew Lang.

DE QUINCEY'S CONFESSIONS of an English Opium-eater. Reprinted from the First Edition. With Notes of De Quincey's Conversations, by Richard Woodhouse, and other Additions. Edited by Richard Garnett.

ENGLISH ODES. Selected by Edmund Gosse. With Frontispiece on India Paper by Hamo Thornycroft, A.R.A.

LETTERS AND JOURNALS OF Jonathan Swift. Selected and Edited, with a Commentary and Notes, by Stanley Lane-Poole.

LONDON LYRICS. By Frederick Locker.

THE LOVE SONNETS OF PROTEUS. By Wilfrid S. Blunt.

ANCIENT BALLADS AND LEGENDS OF HINDUSTAN. By Toru Dutt.

THREE HUNDRED ENGLISH Sonnets. Chosen and Edited by David M. Main.

THE VICAR OF WAKEFIELD. By Oliver Goldsmith. With a Preface and Notes by Austin Dobson.

"The respectable and sometimes excellent translations of Bohn's Library have done for Literature what railroads have done for internal intercourse."—R. W. Emerson.

"I may say in regard to all manner of books, Bohn's Publication Series is the usefullest thing I know."—Thomas Carlyle.

Bohn's Libraries.

Containing Standard Works of European Literature in the English Language, on

History,	Theology,	Natural History,
Biography,	Antiquities,	Poetry,
Topography,	Science,	Art,
Archæology,	Philosophy,	Fiction,

With Dictionaries and other Books of Reference, comprising in all Translations from the

French,	Spanish,	Anglo-Saxon,
German,	Scandinavian,	Latin and Greek.
Italian,		

$1.40 or $2 per volume (with exceptions). Complete sets in 677 volumes. Special prices on application.

The following works are recommended to those who are forming public or private libraries. The volumes are sold separately:

ADDISON'S WORKS. 6 vols	1.40 each.
BACON'S ESSAYS, MORAL AND PHILOSOPHICAL WORKS. 2 vols	$1.40 and 2.00 each.
BOSWELL'S LIFE OF JOHNSON and TOUR IN THE HEBRIDES, &c. (Napier). 6 vols.	$1.40 each.
BURKE'S WORKS AND LIFE. 9 vols	1.40 each.
BURNS'S LIFE. By Lockhart	1.40 each.
CERVANTES' DON QUIXOTE. 2 vols	1.40 each.
CHAUCER'S WORKS (Prof. Skeat). 4 vols	1.40 each.
COLERIDGE'S WORKS. 6 vols	1.40 each.
DEFOE'S WORKS. 7 vols	1.40 each.
GIBBON'S ROMAN EMPIRE. 7 vols	1.40 each.
GOETHE'S WORKS. 14 vols	1.40 each.
GOLDSMITH'S WORKS. 5 vols	1.40 each.
HAZLITT'S WORKS. 6 vols	1.40 each.
LAMARTINE'S WORKS. 8 vols	1.40 each.
LESSING'S LAOKOON, &c	1.40.
LESSING'S DRAMATIC WORKS. 2 vols	1.40 each.
MILTON'S PROSE WORKS. 5 vols	1.40 each.
MOLIÈRE'S DRAMATIC WORKS. 3 vols	1.40 each.
PLUTARCH'S LIVES (new translation by Long and Stewart). 4 vols	1.40 each.
SCHILLER'S WORKS. 6 vols	1.40 each.
VASARI'S LIVES OF PAINTERS (with new appendix by Dr. Richter). 6 vols	1.40 each.
BURNEY'S (Mme. D'Arblay's) CECILIA. 2 vols	1.40 each.
BURNEY'S (Mme. D'Arblay's) EVELINA	1.40.
FIELDING'S NOVELS. 4 vols	$1.40 and 2.00 each.
PETRARCH'S SONNETS	2.00.
MANZONI'S BETROTHED. (I promessi Sposi).	2.00.
PEPYS'S DIARY. 4 vols	2.00 each.
KANT'S CRITIQUE OF PURE REASON	2.00 each.
SPINOZA'S CHIEF WORKS. 2 vols	2.00 each.
HUMBOLDT'S COSMOS AND TRAVELS. 3 vols	$1.40 and 2.00 each.
STAUNTON'S WORKS ON CHESS. 4 vols	$2.00 and 2.40 each.
GILBART ON BANKING. 2 vols	2.00 each.
LOWNDES'S BIBLIOGRAPHER'S MANUAL. 11 parts	$1.40 and 2.00 each.

*** *The above books will be sent upon receipt of advertised price. Catalogues of our regular stock, also of Bohn's Libraries, will be mailed, if desired, to those interested. New Catalogue of Musical Literature ready.*

SCRIBNER & WELFORD, 743-745 BROADWAY, N. Y.

Charles Scribner's Sons

HAVE JUST READY:

STOCKTON'S STORIES.

THE LADY, OR THE TIGER? 1 vol., 12mo, cloth, $1.25.

Contents: The Lady, or the Tiger? The Transferred Ghost, The Spectral Mortgage, Our Archery Club, That Same Old Coon, His Wife's Deceased Sister, Our Story, Mr. Tolman, On the Training of Parents, Our Fire Screen, A Piece of Red Calico, and Every Man His Own Letter-Writer.

THE CHRISTMAS WRECK. 1 vol., 12mo, cloth, $1.25.

Contents: The Christmas Wreck, A Story of Assisted Fate, An Unhistoric Page, A Tale of Negative Gravity, The Cloverfields' Carriage, The Remarkable Wreck of the "Thomas Hyke," My Bull-Calf, The Discourager of Hesitancy (sequel to "The Lady, or the Tiger?"), and a Borrowed Month (East and West).

"Frank R Stockton has the knack—perhaps genius would be a better word—of writing in the easiest of colloquial English without descending to the plane of the vulgar or commonplace. . . . With the added charm of a most delicate humor, his stories become an irresistible attraction."—Philadelphia Times.

A SECRET OF THE SEA, and

Other Stories. By Brander Matthews. Cloth, $1.00; yellow paper series, 50 cents.

Readers of Mr. Matthews's earlier short stories need not be reminded of the ingenuity and cleverness of his writings. This volume, issued in both paper and cloth-bound editions, contains six tales, the longest being "A Secret of the Sea," which records the adventures of a modern ocean steamer set upon by pirates on the high seas.

IN PARTNERSHIP.

By Brander Matthews and H. C. Bunner. New edition, yellow paper series, 50 cents.

AN OUTLINE STUDY OF MAN;

or, The Body and Mind in One System. With illustrative diagrams. Revised edition. By Mark Hopkins, D.D., LL.D. 1 vol., 12mo, $1.75.

"It is, I think, the greatest and most useful of the books of the greatest of our American educators, Rev. Dr. Hopkins, and is destined to do a great work in forming not only the ideas but the character of youth in America and in other parts of the world."—*Gen. S. C. Armstrong, Principal of Hampton Institute.*

FRANCES HODGSON BURNETT'S NOVELS.

In a New and Uniform Edition. 6 vols., 12mo, extra cloth. The set, $7.50.

THAT LASS O' LOWRIE'S,	$1.25
A FAIR BARBARIAN,	1.25
THROUGH ONE ADMINISTRATION,	1,50

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 16, 1886.

The Week.

THE returns from the Maine election are not significant enough to give the partisans of any party large ground for rejoicing, but it seems to us that, aside from the reëlection of all their Congressmen, the Republicans have more cause for gloom than either the Democrats or the Prohibitionists. According to the figures at hand as we write, the Republicans have lost heavily in their total vote as compared with the election of 1884. In 223 towns they have 48,633 against 55,839 in 1884, while the Democrats have 39,071 against 41,809 in 1884, and the Prohibitionists have increased their total from 840 in 1884 to 2,373 now. If the Republicans had not made a most energetic campaign, or if the Democrats had made any campaign at all, these figures might be taken as merely the natural falling off in the first election after a Presidential year. Even then the Democratic loss ought to be proportionate to the Republican. But the Republicans made one of the most vigorous canvasses ever seen in the State under the personal lead of Mr. Blaine, and it is certainly not cheering for them to find that though they have lost 7,206 votes in 223 towns, the Democrats have lost only 2,738, and the Prohibitionists have nearly trebled their vote, while the Republican plurality has fallen off 4,468 votes. These are figures which the most stentorian proclamations by Chairman Manley cannot make encouraging.

When applied to the result in the whole State the showing is even more depressing. According to the estimate sent by the Associated Press, which is friendly to the Republican interest, the total vote in the State is likely to be about 127,000, divided as follows: Republican 68,500, Democratic 55,200, Prohibition 3,300. If this proves to be the case, the total Republican loss since 1884 will be 10,412, the Democratic loss 3,861, while the Prohibition vote will be nearly three times what it was then. If these things are done in a Republican stronghold like Maine, after a vigorous campaign conducted by the party's Presidential candidate in person, what are we to expect of the doubtful States? The loss of 10,000 votes in a total of 78,000 is more than one-eighth, and it needs no calculation to show that no State with anything like a close party vote can be carried by Republicans in face of such a falling off. Then, too, the tripling of the Prohibition vote in Maine means a great deal. The State has a prohibitory law, and there is therefore less ground for an increase in this vote there than in the States in which no prohibitory legislation has yet been secured. Suppose the Prohibition vote in New York, New Jersey, Connecticut were to be doubled in the next election, where would the Republican majority be?

The returns from the Vermont election show that the triumph of Senator Edmunds is much greater than was at first supposed. The Senate is unanimous in his favor, and he will have a majority of 160 in the House. The home of the Blaine candidate was carried by an Edmunds Democrat, so that the defeat of the Blaine disciplinary manœuvre was overwhelming. The Republican majority on the State ticket is estimated as being between 17,000 and 18,000, which is about fair for an off-year, though it is much smaller than the old-time Republican majorities.

There are now three State tickets in the field in Connecticut—Prohibition, Labor, and Republican. The Democrats are yet to select theirs. There will thus be an interesting quadrangular contest in a State where a few hundred votes decide the election. Of the Republican candidate for Governor selected on Thursday, little is known except that he is a rich man. No claims are made that he has any especial fitness for the office, though his honorable and successful business career is presumptive evidence that he would make a capable Governor. He has undoubtedly been selected mainly because of his wealth and of his record as a liberal giver to Republican campaign funds. He has been placed upon one of the weakest platforms of the season, a series of silly partisan declarations unworthy of any serious consideration. It is the hope of the Republicans that the Labor ticket will draw as heavily from the Democrats as the Prohibition ticket will from the Republicans, and that by the aid of their candidate's money they can win by a small plurality. The interest in the campaign will centre on the Senatorial rather than on the Gubernatorial contest. Gen. Hawley is a man of mark, and he may furnish the impetus, other than cash, that is wanting to make a lively campaign.

It now seems quite probable that the Democrats of New York will hold a State Convention, and take the public into their confidence. If they shall do so, the party will stand in a much better light than the Republicans, who have decided not to hold a convention this year in order to avoid a tangle and a misunderstanding with the Prohibitionists. A convention on the Democratic side of the house is especially desirable, in order to inform the party managers how the people of the State stand affected towards President Cleveland's Administration. The managing men are generally sour because they have not been allowed to loot the public offices. The mass of voters, who neither ask nor desire office, and who look only at the general results of Democratic rule at Washington, are satisfied for their own part, and are proud of the approving testimony wrung from their political opponents. It is important that this class should be heard from. It is especially important that they should have an opportunity to say what they think of the figure New York would present in national politics if she should be alone in the sisterhood of States in yielding a reluctant or half-hearted support to the President. According to present appearances, Mr. Cleveland enjoys the confidence of the Democratic party of the nation as completely as did the late Gov. Tilden, whose only troublesome enemies were likewise those of his own household.

The Republican State Convention of Wisconsin was a very notable gathering, and the platform adopted by it is one of the best, if not the very best, of the present year. The decisive tone of its declarations against the anarchical doctrines that led up to the Milwaukee riots leaves nothing to be desired, and contrasts finely with the timid utterances of the Illinois Republicans on the same subject. The same strong language runs through the whole discourse. We note once more the absence of the "bloody shirt," and in place of it the honest statement "that while their devotion to the principles upon which their party was founded, and for which it has so gloriously and successfully contended, is undiminished, they recognize the fact that in the progress of society new conditions and new questions are constantly arising which it is the duty of political parties to meet, and to attempt to settle in the manner most conducive to public welfare." We note also the absence of any plank in favor of the present tariff or of any protective tariff. Nor is there any game of false pretences with the liquor question. The Republicans of Wisconsin say exactly what they mean on this subject, and what they say is so true that we commend it to all politicians, both Republicans and Democrats, who are in trouble about their platforms, viz.:

> "Recognizing the evils of intemperance, the Republican party desires to adopt the most effective means for its suppression. But we recognize the fact that statute regulations which are not supported by public opinion are inoperative and tend to bring all law into disrepute, and we believe that in the present condition of public sentiment the existing laws of this State, which permit communities, according to the sentiment prevailing in them, to prohibit the traffic in intoxicating liquors or to control it by police regulations and to limit it by high license, offer the best and most practical means of dealing with the evils resulting from the liquor traffic."

Gov. Rusk was renominated as a matter of course, and in order that there might be no doubt as to the motives leading to his renomination, the Convention declared their hearty approbation of his vigorous dealing with the Anarchist mob in Milwaukee, and "therefore" commended him to the just-minded, order-loving, and law-abiding citizens of all classes.

The defeat of Gen. Edward S. Bragg for a renomination by the Democrats of the Second Wisconsin District is on some accounts to be regretted. He showed his courage in combatting some of the evil elements of his party when, in the Democratic National Convention of 1884, he declared in favor of Cleveland's nomination "because of the enemies he had made." He has been able, too, having been a Union General, to do good service as Chairman of the House Committee on Military Affairs, in opposing the reckless passage of pension measures of

different kinds. But unfortunately General Bragg, when himself a candidate for Congress in 1884, had not so much light on the evils of the use of patronage as he doubtless has to-day. In order to gain the support of the friends of A. K. Delaney, who has now been nominated over him, Gen. Bragg entered into a written agreement, not only to support Delaney for the Congressional nomination this year, but also "that in case Grover Cleveland is elected President of the United States at the pending election, the said A. K. Delaney and his friends shall control the Government patronage in Dodge County." Bragg secured for Delaney the District-Attorneyship some time later, and then Delaney in writing relinquished his claim to the Congressional nomination. It is unfortunate that the Constitution or the statutes do not render men who thus try to bargain away public offices ineligible to them. Both Bragg and Delaney have disgraced themselves and insulted the voters of their district by their plots, and it is to be hoped that the voters appreciate this sufficiently to defeat Delaney at the polls. The vote of the district in 1884 was: Democratic 16,865, Republican 12,643, Prohibition 563, and Greenbacker 356.

The first attempt of the Republican Machine leaders in this city to get a rich man to accept their nomination for Mayor, in order that they might first get a large campaign contribution from him and then trade him off, has failed. Mr. Levi P. Morton, the proposed victim, has declined with thanks. He has had experience with the O'Briens and Biglins, and knows how expensive their support would be. We renew our advice to those leaders to open communication with J. J. Coogan, the man who was reported to be willing to pay $200,000 for the Labor nomination. It is very doubtful if any rich Republican can be found who will be willing either to accept a nomination or to contribute to the Republican campaign fund, because nearly all of them gave something to that Blaine fund which was raised on the eve of the election in 1884, and which never got beyond O'Brien's pocket. Coogan is not a Republican, but he is a member of ex-Senator Bixby's "Citizens' Association," and has about him the peculiar aspect of reform which that association bears. As a basis for a "deal" he would not be worth much, but $200,000 in cash is a sum not to be despised.

Mr. Albert H. Walker, a member of the Hartford bar, publishes a pretty solid and rather scathing review of the action of the Senate in the Payne bribery case, showing how Senators Logan, Teller, and Evarts misled their colleagues as to the nature of the evidence tending to show bribery—gross, wholesale, and infamous—to secure the election of Mr. Payne as a Senator of the United States. Indeed, one can hardly rise from the perusal of this pamphlet without feeling that the Paynes, father and son, ought to say or do something in answer. They ought not to allow the discussion to terminate without interference. Mr. Walker is very severe on Logan and Teller, but he lets Mr. Evarts off with the following droll commentary:

"Senator Evarts made the last speech against investigation. He inserted in it a large number of complicated remarks, on a considerable variety of interesting subjects. In this way he occupied nearly half a column of the *Congressional Record* with his views of the comedy of 'Pyramus and Thisbe,' as represented in the drama of 'A Midsummer Night's Dream.' In this way, also, he spoke at some length of the nature of laws, and maintained that they do not execute themselves. Indeed, there could be collected from his speech a considerable quantity of just remarks. But his statements of the evidence in the Payne case left nearly everything to be desired. He ignored the Mueller-Payne conversation, and Mueller's statement of what he saw in Paige's room. He ignored the Ramey case, the Fierce case, the White case, the Bruner case, the Welsh case, and the Boyd case; though he did occupy considerable space in showing the weakness of the case against Mooney and Roche, and considerable other space in commenting upon a couple of hearsay stories which were not important enough to be summarized in this pamphlet. His plan of argument was that of a lawyer who selects for review the weakest points suggested by the testimony taken by his opponent, and leaves the real strength of his adversary's case to be dealt with by the gods."

The extent to which religion suffers from the extravagances of some ministers in times of great public excitement cannot of course be accurately measured, but there is no doubt that it is very great. Nothing, for instance, could be more mischievous than the claim of the minister who was on board the train approaching Charleston on the night of the earthquake, that the safety of the passengers was due to some prayers he happened to offer. When people begin to think over this, of course they ask what kind of idea this man must have of the Deity, when he maintains that He would, besides killing people and wrecking houses in Charleston, have also killed people on the train if the Rev. Mr. Smith had not happened to be on hand to pray. And now read this dreadful stuff, produced as "gospel" in the Central Congregational Church in this city last Sunday evening, in a discourse on "Destructive Forces in Nature and the Divine Purpose in Them," by the Rev. William Lloyd. Referring to the destruction at Charleston, he said:

"Already we can see a bright light in the cloud that shadows that fair Southern city in the prospect of increased employment for the poor. Much of the loss falls upon the owners of real estate, who can in a measure bear it, and the demand for new buildings must put into circulation otherwise idle or hoarded capital, and out of the evil good will therefore come. It is not God's purpose that money should be locked up in bonds and stocks. It is His purpose that it should flow out to give the poor an opportunity to live; and if it needs an earthquake to unlock the money, let the earthquake come."

Think of the idea a Christian clergyman must have of his Creator who maintains that, wishing to force capitalists to invest money, instead of putting it into their heads to do so, He assailed a city like a savage conqueror, laid it waste and slaughtered scores of poor people who did not possess a cent of capital or a square yard of real estate; or, in other words, paints Him as a person who, if a man, would be treated either as a criminal of the worst kind, or as a dangerous lunatic.

With few exceptions, the religious press follows the secular in regarding the Charleston earthquake as a thoroughly practical affair, quite within the range of natural laws. The peculiarities of the disturbance are examined by most of the religious editors upon notes furnished by the newspaper reports and by the "scientists" who have taken the trouble to look over the ground before expressing an opinion as to the causes. They are quite unanimous in the opinion that the disaster is pretty hard for the city to bear, and all agree that this is a good opportunity for the rest of the country to extend a helping hand. The secular editors and most of the religious have been slow to blame any one for the wreck and the great fright. The fault-finding element in their nature seems to have gone no further than Major Powell's claim that the earth was, either through ignorance of the real strength of material or from miscalculation of the factor of safety, made with a structural weakness along the Atlantic slope.

The English contributions to the Charleston relief fund are extremely liberal, and, together with the Queen's message of sympathy, will constitute another bond of amity between the two countries. It is a little surprising that any doubt should have been started as to the propriety of accepting the proffered aid. Every large calamity occurring in the civilized world in these days of swift communication opens the purses of the charitable in all countries. American contributions have been sent within recent years in large sums to the sufferers by famines in Ireland, in China, and in Asia Minor, by floods in Germany and in Hungary, and by earthquakes in South America. England, France, and Germany, on the other hand, contributed largely to the relief of the sufferers by the Chicago fire. There is a circulation of charity going on all over the world with scarcely a pause in its healing influence. Its quality is not strained by the boundary-lines of nations. It is a messenger of fraternal love and a proclamation of the brotherhood of man. The moral influence of the contributions to the Charleston sufferers is manifold. It imparts new courage to the sufferers, and it binds the hearts of the giver and receiver together. When it comes from distant lands and foreign peoples, it plants the seeds of amity and plucks out the germs of future misunderstandings and strife. While it would not be becoming in us to solicit alms abroad for the relief of Charleston, it would be churlish indeed to decline any proffered assistance. The question is wholly outside of Governmental control or concern, but if the Government is called upon to give any opinion, it ought to favor everything that makes for peace and concord and human brotherhood. This, it appears, is what has been done in the matter of lending countenance to the offer of English aid to Charleston.

Ferdinand Ward has written a letter to President Cleveland asking him not to grant the pardon requested for James D. Fish until he (Ward) has an opportunity to submit letters and facts in his possession bearing upon Fish's guilt. Ward says: "Mr. Fish was tried and convicted for the management of the Marine Bank, and I did not even appear in the case as a witness, and I feel that in seeking a pardon his friends should confine themselves to the facts as brought out in his case, and not try

to make him out a martyr duped by me." This is all true, and it has always seemed to us that Fish and his friends made a very weak plea in pretending that Fish had been duped by Ward. Fish was no novice in Wall Street when he made the acquaintance of Ward. He had spent a long life there, and had a reputation for knowing the ins and outs of things there as well as any man. To assume that a man of his experience and acknowledged shrewdness could be "taken in" by a mere boy like Ward, is preposterous. He must have known perfectly well what was going on. The only miscalculation which he seems to have made was about the time when the inevitable collapse was to come.

A card from Mr. Robert B. Roosevelt on the enforcement of one section of the State game law, which was printed in the morning papers of this city on September 2, has been severely and deservedly criticised as a remarkable production, coming from a man in Mr. Roosevelt's position. The Legislature of this State last spring passed a law, in conformity with public opinion on the subject, making it unlawful to kill any of our song-birds at any time of the year. This protection is extended over the beautiful bobolink, which, in its dull suit of brown, is known as the reed bird, and is shot in large numbers when it assembles in flocks for its southern migration. Mr. Roosevelt is President of the Association for the Protection of Game, of this city, and of the New York Fishery Commission. But his card, instead of pointing out the merits of the new law and warning offenders of his intention to assist in enforcing it, was simply a kindly warning to the marketmen to look out lest some one else (whose special business it was not) should see that the law was enforced. "While I shall not consider it my official duty to urge the game protector to enforce this law," said Mr. Roosevelt, "I cannot prevent (*sic*) his doing so if he pleases; and although I suppose the Association for the Protection of Game, of which I am President, will ignore it, I cannot speak by authority." The two remarkable things about this declaration are, first, that a public officer should, on receiving the laws of the State, decide for himself which of them he would instruct his subordinates to enforce and which to ignore, and second, that any voluntary association of gentlemen, like the Association for the Protection of Game, should not know that if they acquiesce in the "ignoring" of one part of a game law they make a bid for the ignoring of the whole of it. Fortunately, Mr. J. H. Godwin, jr., the game protector for this district, takes a different view of the matter, and in a card gives notice as follows: "As this is an entirely new statute, which I shall deem it my duty, as one of the State game and fish protectors, to enforce, and as the season is at hand during which these birds have heretofore been sold without interference, I think it proper that I should call the attention of the public to this subject." There are delicacies enough in the world to allow the reed bird to live and return to us in the spring in his gaudy coat and with his wealth of song.

A communication to *The Evening Post*, over the initials "C. K.," some weeks ago, when the Cutting case began to be interesting, supplied a very clear résumé of the state of public law touching what is called extra-territorial jurisdiction, showing that the principles applied by the Mexican court were sustained by high American authority, and were in fact embodied in the statute law of the State of New York, and were liable to be enforced against a citizen of Canada exactly as the Mexican statute was enforced against Cutting. It was discovered about the same time that the State of Texas had a similar statute in force, and would, if her public officers were as prompt to execute the law as her Governor declared himself to be to violate it, punish a forgery committed by a Mexican citizen on Mexican soil against the rights and property of a citizen of Texas, if she could lay her hands on the culprit. The *National Republican* of Washington city now publishes an article citing the opinion of Solicitor Wharton of the State Department to the same effect, viz.: that the claim of extra-territorial jurisdiction is founded on reason, and is common to many civilized nations. The statutes of New York and of Texas are quoted in the article as fully sustaining the contention of Mexico in the Cutting dispute. The law of New York is a part of the Penal Code of 1881, and is as follows:

"Section 676. A person who commits an act without this State which affects persons or property within this State, or the public health, morals, or decency of this State, and which if committed within this State would be a crime, is also punishable as if the act were committed within this State."

"Section 678. An act or omission declared punishable by this code is not less so because it is also punishable under the laws of another State, Government, or country, unless the contrary is expressly declared in this code."

The law of Texas punishes forgeries committed outside the State affecting property within the State, and also conspiracies to commit murder, robbery, arson, burglary, rape, theft, or forgery.

The activity of Consul-General Porch and his "thirty-five Americans," in drawing resolutions and sending despatches from Mexico about Mr. Sedgwick is an excellent illustration of the defects in our diplomatic service. Porch's is one of those appointments which the present Administration ought never to have made. He comes from St. Joseph, Missouri, where he was a lawyer's clerk and an active local politician of a very low order. He had no qualification under the sun for any diplomatic position, and was sent to Mexico in order to satisfy some apparently overwhelming necessity of Missouri politics. If this Cutting complication had not arisen, we should probably never have heard of him until he was turned out to make room for some other man of the same grade and similar antecedents. The Consul-General in Mexico ought unquestionably to be a man competent to furnish the kind of information about the Cutting trial which Mr. Bayard needed; that is, he ought to be a man of education, familiar with the Spanish language, and having some knowledge of international law. But Porch has no such equipment, and consequently, when the State Department wanted the technical facts of the Cutting trial, it had to send a special messenger with special qualifications, such as Mr. Sedgwick happened to have.

One of the odd feats accomplished by Lord Randolph Churchill was getting a little-known lawyer, named Matthews, into the high and important position of Home Secretary. Beyond what may be called his obscurity, there was, however, nothing against Mr. Matthews except his being a Catholic, but this has given umbrage to the Scottish Protestant Alliance, which addressed him a vigorous remonstrance and got one of his insolent answers. To this they in return have made an abusive reply, in which he is accused both of "tomahawking" his way into power, and of being "pitchforked into a high position." No discussion with a society of any kind in Great Britain and Ireland intended to maintain Protestant ascendancy in the State can well help being abusive. For some inscrutable reason, all political Protestants in those countries are in a constant state of seventeenth-century excitement about the Pope and the Catholic Church. Macaulay lost his seat in Parliament for the city of Edinburgh forty years ago for having voted for a very small annual grant to a Catholic college, and though there has been an advance in toleration since then, there are probably not many Scotchmen to whom the appearance of a Catholic in the Home Office is not in some degree repulsive.

Everybody who desires to see scientific men enjoying their just influence with the general public, has been pained during the past year by the heat and even violence with which Professors Huxley and Tyndall have thrown themselves into the home-rule controversy. The latter in particular has shocked thousands of his admirers of all shades of opinion by his furious Jingoism and the virulence of his attacks on Gladstone, whom he on one occasion branded as a "murderer." Mr. Huxley has not gone quite so far as this, but his contribution to the literature of the last canvass was wanting in sobriety, and we are afraid we must say in coherence, to a lamentable degree. It will be almost a relief to Prof. Tyndall's friends to find that his exceeding irritability was doubtless due to the pressure of overwork which culminated recently in an attack of paralysis. From this he is happily recovering. Mr. Huxley has also for some time been suffering from nervous prostration brought on in the same way, which probably accounts for the very sombre view he also takes of Gladstone's career. Mr. Goldwin Smith's diatribes on the same subject are marked by so much horrible anxiety about the influence of the Irish on the future of Western Europe, that his friends might well suspect that he too is suffering from over-application. The persistent good health enjoyed by the historian Froude, in spite of a very prolonged contemplation of the Irish question, is likely to deceive other literary men as to the drain which the study of this subject makes on the vitality. But Mr. Froude is an historian of rather unusual toughness, and there are but few who can imitate him without regretting it.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, September 8, to TUESDAY, September 14, 1886, inclusive.

DOMESTIC.

PRESIDENT CLEVELAND still remains in the Adirondacks. His party had a deer hunt on Thursday.

Secretary Bayard, notwithstanding the release of Cutting, will, it is said, insist upon the abrogation of that article of the Mexican Code which confers upon Mexican courts jurisdiction under certain circumstances over foreigners for offences committed outside of Mexican territory. At least, Mr. Bayard will insist on the renunciation by Mexico of the right to subject American citizens to that code, on the ground that American courts have exclusive criminal jurisdiction over offences committed within the territory of the United States by American citizens.

Mr. A. G. Sedgwick, United States Envoy to Mexico, arrived at Paso del Norte on Friday morning. Mr. Sedgwick has addressed a telegram to the editor of the *Evening Post* absolutely denying the recent charges against him circulated in the United States.

The Acting Secretary of War has given instructions that Geronimo and other hostiles who surrendered with him be imprisoned at San Antonio, Texas, until a determination is reached as to what course of procedure can be undertaken against them. This course will probably be marked out by the President. It is probable that they will be tried by a military commission. It is believed that Geronimo will not receive immunity from murder because he happens to be an Indian.

There was an absurd report sent from Ottawa that the Canadian Government on Friday forwarded a demand to Secretary Bayard, through the English Minister at Washington, for the immediate and unconditional surrender to their owners of the sealing vessels recently captured off the Alaskan coast.

The schooner *Everett Steele* of Gloucester, Mass., put into Shelburne, N. S., on Friday for shelter, with 20,000 pounds of codfish from the George's Banks, and was immediately seized by the Canadian cruiser *Terror* for an alleged offence committed three months ago, when the *Steele* put into Shelburne one night and remained a few hours without reporting at the Custom-house. She got clear that time. The schooner was released on Saturday by orders from Ottawa.

United States Treasurer Jordan is of opinion that the plan of calling in the three per cent. bonds by invitation instead of by compulsion will prove successful. The amount received up to September 8 was about $1,000,000.

A son of Mr. Thompson, Assistant Secretary of the Treasury, passed his civil-service examination successfully a short time ago, and was last week appointed a bookkeeper under Auditor Day of the Treasury Department. When his father heard of this he advised his son to have the appointment revoked. "I am for civil-service reform," said the Assistant Secretary, "and stronger in my advocacy of it since I have been in office than I was before, and I do not wish to afford anybody a chance to suspect my devotion to it."

From the last statement issued by the Mint Bureau it appears that the silver dollars coined under the Bland act have reached a total of $239,000,000, which is about equal in amount to the gold coin and bullion held by the Treasury.

Relief work in Charleston is being rapidly continued. More than $100,000 have already been received. Slight shocks of earthquakes are felt almost every day, but cause little alarm.

A great many of the people of Charleston, S. C., have returned to their houses, but the different encampments are still thronged with the outdoor public, who are afraid to risk their lives in their houses. The Rev. Dr. Porter and other clergy are devoting their energies to the work of inducing earthquake victims to return to their houses, it being feared that longer exposure to the weather will produce sickness. The Relief Committee are trying to improve the sanitary arrangements of the camps, but even the most stringent measures cannot prevent the accumulation of filth and avert danger of an epidemic.

The Congressional Democratic Campaign Committee has issued its campaign book. On account of the scarcity of funds, the book is sold instead of freely distributed, as heretofore.

The Republicans elected their State ticket and all their members of Congress in Maine on Monday. The Republican plurality this year is 13,000, and the majority 10,000, as against 15,291 majority for Robie in 1884. The Prohibition vote is about 3,000. Both houses of the Legislature are Republican by a large majority.

Returns from the Vermont election show that Senator Edmunds will get the solid vote of the State Senate for reëlection, and a majority of about 160 in the House. The Republican majority in the State is about 17,000.

The Wisconsin Republican Convention on Wednesday renominated Gov. Rusk by acclamation amid great enthusiasm. He made a speech warning the Anarchists to make themselves very scarce in the State during his rule. The platform heartily approves of the prompt and effective action of Gov. Rusk in suppressing the Anarchist mobs in the city of Milwaukee and vicinity last May. It also approves of the present high-license law.

The Massachusetts Prohibitionist Convention on Wednesday was remarkably large and enthusiastic. Mr. T. J. Lathrop was nominated for Governor. The Chairman's speech showed a very strong animus against the Republican party. He stated that the Democrats had enacted ten prohibitory laws and repealed four, and the Republicans had enacted nine and repealed seven. He made a vigorous attack on Mr. Blaine's attitude toward the temperance party.

The Connecticut Republicans on Thursday nominated P. C. Lounsbury for Governor on the first ballot. He is a retired merchant of considerable wealth. The platform denounces the attempt of the Democratic party to change the tariff laws as an attack upon American labor, calculated to reduce the wages of the laboring man and degrade his condition; denounces the Administration for indefensible vetoes upon meritorious pension bills; demands an honest and thorough enforcement of the civil-service laws, and favors as far as possible the extension of the principle to municipal and State administrations, and declares in favor of an honest ballot.

The Texas Prohibitionists have put a full State ticket in the field. Their platform charges that the Republican and Democratic parties are in league with the liquor traffic in their national and State organizations and administrations.

The Nevada Democrats have nominated W. Adams for Governor. The platform commends President Cleveland for his patriotic administration of public affairs, except in following the Republican party on the silver question, "in disregard of the cherished principles of the national Democratic party."

George W. Alter, who was the confidential clerk of Alderman Henry W. Jaehne, now in Sing Sing, and who nominally purchased the latter's jewelry store in Broome Street, is now in custody at Police Headquarters. After his indictment for perjury before the Broadway Railroad Committee he fled to Canada, where he lived on funds supplied by Jaehne until the Alderman's conviction. Alter's money gave out, and he returned to New York early last month. He has made a confession, in which he admits that Jaehne was a receiver of stolen goods, and that money used to bribe the Aldermen was deposited in Jaehne's safe. It is believed that he will prove an important witness against the "boodle" Aldermen.

Colonel Gilder started on Thursday evening from Winnipeg for the North Pole. He will proceed to York Factory, where he will leave most of his supplies.

In the second race for the *America's* cup on Thursday both yachts were enveloped for a part of the day in a fog. It was found impossible to finish the race, which was declared postponed until Saturday. The *Mayflower* led as far as the race was sailed. On Saturday the *Mayflower* won the race over the *Galatea* by 29m. 9s., corrected time. The cup, therefore, stays in this country.

The third annual Industrial Exposition was opened at St. Louis on Wednesday; it will continue for two months.

FOREIGN

The Berlin *North German Gazette* (Bismarck's organ) pronounces untrue the statement attributed to Prince Alexander that one of the reasons for his abdication was the fact that all the members of the triple alliance forbade him to carry out the intention he had formed of executing the leaders in the *coup d'état*. The *Gazette* denies that the Prince had resolved upon any executions, and says that the Powers advised him, in the interest of peace, not to allow any executions to be inflicted, for the reason that if he permitted them he would incur the danger of retaliation if a fresh political outbreak, which was imminent, should occur.

Russia has replied to the Bulgarian Notables that she is ready to give guarantees for the independence of Bulgaria as soon as Alexander is gone; that she does not wish to send Russian officers or a Minister of War to Bulgaria, but only a military attaché to exert a moral influence on the army. Great animosity was shown at Sofia against Russian partisans.

It was rumored on Wednesday that Servia and Greece were mobilizing their armies. The Porte has sent a note to the Powers praying them to prevent a foreign military occupation of Bulgaria.

Prince Alexander's journey from Sofia to his home in Germany was a continuous triumph. At every village in Bulgaria through which he passed the peasants greeted him with enthusiasm. He left Sofia on Wednesday after signing a deed of abdication. In his manifesto he said: "We, Alexander, Prince of Bulgaria, being convinced that our departure will contribute to Bulgaria's liberation, have received assurance from the Czar that the independence, liberty, and rights of our country shall remain intact, and that nobody shall interfere with its internal affairs, and we inform our beloved people that we renounce the throne, wishing to prove how dear to us are the interests of Bulgaria, for which we are willing to sacrifice that which is more precious to us than life." Prince Alexander was given a warm reception on his arrival at Vienna. He said he should have to remain quiet for three months; that he would simply keep his lips closed and await the course of events. Germany, Austria, and Russia, he said, had forbidden him to execute the plotters against him, thus depriving him of the very essence of power, and abdication was the only honorable mode of escape from such a position.

Prince Alexander on Friday arrived at his father's residence in Darmstadt. Russia has offered to guarantee a Bulgarian loan of 10,000,000 rubles.

Diplomats in Constantinople believe that the Bulgarian National Assembly will reëlect Prince Alexander. The Prince in one of his farewell speeches said he would be ever ready to assist Bulgaria when she might be in need. "I hope to see you all soon again," he said in conclusion. The St. Petersburg papers generally take the position that the present Regency and Ministry of Bulgaria contain elements of fresh complications. The opinion gains ground that the Czar's action was due more to a personal than to a political motive; that he only wanted to avenge himself on the Prince. Surprise is expressed at St. Petersburg at the state-

ment in Alexander's proclamation that the Czar had promised to respect the independence and liberty of Bulgaria. Such a promise, it is declared, was not made by the Czar.

There are signs that Austria intends to oppose a further extension of Russian influence in Bulgaria. The decision is said to be due to Hungarian agitation in favor of resisting Russia. There is no confirmation of the report that England has protested to the Powers against her isolation in the Bulgarian affair. Turkey, however, is stern, and the inference is that England is behind her. The Liberals would like to see an alliance of the Latin Powers and England against the three empires. There is a rumor that Bismarck and Giers are intriguing to put Peter of Oldenburg on the Bulgarian throne. In the House of Lords on Thursday the Earl of Iddesleigh, Foreign Minister, announced that the Government had advices to the effect that Prince Alexander, having satisfied himself that it was impossible for him to maintain his position as ruler of Bulgaria, had consented to a Regency. All new engagements, said the Earl, must be made in accordance with the Treaty of Berlin. It is asserted that Prince Alexander will go to England.

It is reported that Austria has formally notified Germany that Austria will oppose any attempt by Russia to encroach upon the liberties of the Balkans. A special messenger has started for Strassburg with important despatches for Emperor William. Alexander's fête day was celebrated with great rejoicing in Philippopolis on Sunday. At Sofia six Rumelian regiments were presented with colors bearing the Prince's monogram. Bismarck's organ, the *North German Gazette*, says that there is no prospect of the reënthronement of Prince Alexander; that even if the Sobranje reëlects Alexander, the signers of the Berlin Treaty will hardly consent to his return. It is not likely, the *Gazette* adds, that Russia and England will come to an agreement very soon regarding the throne of Bulgaria. Excitement has been caused at Chatham, England, by the unexpected receipt of urgent orders from the Admiralty to expedite the completion of men-of-war. Relays of workmen are to be employed day and night if necessary. This activity is regarded as indicating possible continental complications.

On Thursday the officers of the Bulgarian Army met at Sofia and adopted resolutions of fervent loyalty to Prince Alexander, asserting their confidence that he would return to Bulgaria.

The Bulgarian National Assembly met on Monday. The Russian agent has received the Czar's reply to Bulgaria's proposals. The Czar says Russia will recognize the Bulgarian regency, and assist the union of Bulgaria and Eastern Rumelia on condition that no acts of violence be committed. Russia advises that public opinion in Bulgaria be allowed to calm down before a new Prince be elected to the Bulgarian throne.

When the Bulgarian National Assembly met on Monday, M. Stambuloff read an address in which he said: "The Government will take immediate measures, according to the Constitution, to summon the great National Assembly to elect a Prince. The Government will submit some important proposals and bills, and will also submit for your consideration the measures that have already been taken during this crisis. Relying upon your patriotism and readiness to sacrifice all for the preservation of our country's greatness, we declare the present session of the Fourth Ordinary Assembly open, and we implore God's blessing on our work. Long live Bulgaria!" A Deputy here arose and exclaimed: "Long live Prince Alexander!" which sentiment elicited prolonged cheering.

The Sobranje elected M. Givkoff President. It also appointed committees to draft a reply to the address of the Government, to devise and submit measures relative to the state of siege which the country is in, and for a settlement of Prince Alexander's property in the country. The State will purchase all this property for $400,000, retaining $200,000 of this sum to liquidate the Prince's indebtedness to the National Bank. This year's budget calls for $10,000,000.

The Porte has informed the Bulgarian Government that Turkey accepts Prince Alexander's abdication, and promises not to occupy Bulgaria so long as the country is quiet and law and order are preserved therein. It is said that Russia has come into accord with the Powers on the Bulgarian question, and will settle it on the basis of the Berlin treaty.

It is said Prince Waldemar of Denmark will be the favored candidate for the Bulgarian throne. He is a brother of the Czarina, and is also a brother of the King of Greece. It is thought his election would bring the Bulgarians and Greeks into better relations.

The Conservative Government have decided to oppose Mr. Parnell's Land Bill in toto. They will do this with the approval of Lord Hartington, who will probably speak against it. Mr. Chamberlain will have nothing to do with the bill. The Irishmen recognize the bill as doomed. Their anxiety now is to make it so moderate that they may have a good case to put before the English constituencies. A stiff fight is expected between Lord Randolph Churchill and the Parnellites. The former, finding that he has the whole Liberal-Unionist body at his back, has decided to let Mr. Parnell do his worst, and to finish the civil-service estimates before carrying out the promise to give a day for Mr. Parnell's bill. The Radicals will support the Irishmen in helping to keep the discussion of the estimates alive. Unless the Irishmen are extremely prudent there will be a repetition of the old trouble. *United Ireland* says that no power in Great Britain can collect the "landlord's tribute" in Ireland "in the face of an organized, united, and level-headed people."

Mr. Parnell and Lord Randolph Churchill agreed that the Tenant Relief Bill, introduced in Parliament early on Saturday morning, should be read a second time on Tuesday. Meantime, the debate on the Supply Bill was suspended. There is no longer doubt that the Relief Bill will be defeated. With or without the aid of the Liberal dissidents, the Government will have an overwhelming number on their side. The fact is, Mr. Gladstone did not see fit, after having the details of the original measure put before him by his friends on the front Opposition bench, to give it his whole support.

The Parnell Land Bill as redrafted suspends evictions on payment into court of half the rent due. Many Gladstonians disapprove of the amount of the reduction. Mr. Parnell, in a conference with Mr. John Morley, urged a reduction of 75 per cent., but on Mr. Morley's advice he limited the reduction to 50 per cent. The Government's response will be that Mr. Parnell's data are inaccurate. Sir Michael Hicks-Beach and Lord Randolph Churchill will deny that the bulk of the Irish tenants will be unable to pay their rents in November, or that a host of evictions are probable. The second reading of the bill will take place on September 17.

The Liberal leaders have, however, not yet given complete adhesion to the measure. The last word is to be spoken by Mr. Gladstone. If favorable, a strong whip will be sent out asking the attendance of his friends in support of the bill. Mr. Gladstone will return in time for the debate. In any case, the Government will have their way. They have been pressed to dish Mr. Gladstone by accepting the principle of a suspension of evictions pending the report of the Government Commission on Agricultural Prices. Lord Randolph Churchill, supported by Mr. Henry Matthews and Mr. W. H. Smith, is rather inclined to take this advice; but he probably will be overruled by a majority of the Cabinet. The Radicals will vote with Mr Parnell.

At a farewell dinner given to Justin McCarthy on Wednesday prior to his departure for America, Mr. Parnell said that the question of England and Ireland was rapidly coming to a solution under the guidance of the illustrious Gladstone. If Bulgaria's right to nationality was admitted, why was Ireland's right not admitted? He believed it was because the people failed to understand the bearings of the question. They seemed to think "Ireland a nation" was a sort of treasonable expression. The fact was, England wanted to make Irishmen Englishmen. But God had made them Irishmen, and it would task all the genius of Churchill and Salisbury to make them anything else.

Gen. Buller had scarcely reported that Kerry, Ireland, was unexpectedly free from crime, when three moonlighter raids took place on Sunday night close to his quarters.

Sir J. E. Gorst, Under Secretary for India, announced in the House of Commons on Friday afternoon that the strategic railway through the Bolan Pass was completed to Quettah, and that surveys have been made for its continuation towards Kandahar. He also stated that another strategic railway was in process of construction.

The French authorities at Havre have seized eleven fishing-boats for infringing the international maritime laws in the Channel.

The French Government denies that it has ordered the forcible seizure of the Tahiti Group of the Leeward Islands.

The state of affairs in Madagascar is not regarded as satisfactory to French interests. The Government is therefore sending reinforcements to Tamatave.

M. Jules Herbette has been appointed French Ambassador at Berlin.

Considerable comment has been occasioned in Washington diplomatic circles by a despatch to the New York *Staats-Zeitung*, which states in substance, and on alleged authority, that Bismarck's patience with France is at an end; that he proposes to inquire by a pertinent note why the press of France continually insults Germany; why France is increasing her army and supplying it with the latest improved breech-loading rifles; and that, strengthened by the support recently won back from Russia, and by the renewal of the alliance with Austria recently made at Gastein, Prince Bismarck will, in clear and unmistakable tones, demand an explanation of France, and, failing to receive it, may take summary measures to terminate a condition of things which is declared to be insupportable. Persons who hold close relations with the German legation in Washington are of opinion that it is not improbable that Germany may soon make some sort of a diplomatic demonstration against France, with which country her relations have been for some time somewhat strained. But there is no apprehension of war.

The Marquis Tseng, Chinese Ambassador to France, has stated that the Russo-Chinese difficulty is at an end.

M. Milsand, the French bibliographer and Member of the Academy of Sciences, is dead, at the age of sixty-eight.

Madame Adam, who is in failing health, is about to retire from the editorship of the Paris *Nouvelle Revue*. She will be succeeded by Dr. Cyou, a Russian physiologist, who is an intimate friend of M. Katkoff.

The Queen of Spain is suffering from pulmonary disease which is making alarming progress. The affection is similar to that which caused the death of King Alfonso.

The Mexican revolutionists, 150 strong, under Mauricio Cruz, have been defeated in Matamoras by Government troops with a heavy loss. It is said that El Coyote has fled to Texas, and that his band have been dispersed.

"THE NEWSPAPER HABIT."

Mr. Augustus Levey has some reflections, in the last number of the *North American Review*, on what he calls "The Newspaper Habit and Its Effects." His theory is, that "the abuse of newspaper reading is in the strictest sense a bad habit; that it is a mild form of mania which needs regulation and control as much as other petty vices of human nature." Most of Mr. Levey's reflections touching the influence of the newspaper habit on the mind are obvious and old. They are to be found in most books on mental culture, and are usually heard from college professors at some period of the course by all undergraduates. As a general rule, every man who cares much about the condition of his mental apparatus avoids making newspapers his exclusive or main reading, and, if he has to read them much, takes an antidote in the shape of some serious course of study. But, luckily for the newspapers, the bulk of mankind do not care what the state of their mental apparatus is as long as it enables them to get a living or make a fortune, and accordingly indulge in newspapers *ad libitum* as a mild and cheap sort of protection against ennui. They read the newspapers for much the same reason that people who cannot read at all, play with beads, or knit, or whittle sticks. The superfluous nervous fluid which accumulates in moments of idleness escapes in this way.

But Mr. Levey has some remarks on the theory which some conductors of newspapers often put forward in defence of the peculiar make-up of their journals—that the newspaper is "a miniature history," or map, or picture of the world for one day. Of this theory Mr. Levey says very truly that, far from getting "a miniature history" or picture of the world from his paper, the reader

> "is, in fact, regaled in a collection of heterogeneous incidents selected by the 'night editor,' as likely to tickle the jaded palates of the great public. Another example of the same fallacy is evident when we consider the false views of morality and of obligations due to society resulting from this continuous daily diet of detailed accounts of all the crimes taking place throughout the land. The inevitable effect on the reader's mind is just what it would be if a newspaper (and this, in fact, has been done) should sedulously devote its columns to minute detailed narrations of every case of hydrophobia occurring anywhere in the world. It would be extremely difficult for its readers to escape the conclusion that this was one of the most frequent of occurrences (and such, as is well known, was the precise effect in the case of a recent popular panic). Now, in fact, hydrophobia is not much more rare than is murder, in any given community. There are seasons of the year, however, when it must be difficult for the average newspaper reader to divest himself of the impression that a majority of the public are engaged in mutual assassination. At these seasons one may anticipate being confronted with head-lines of the fiercest type, with such reassuring titles as 'A Carnival of Crime!' or, in such journals as affect the alliterative: 'Bloody, Brutal Butchery Booming!' Of course, in reality, crime is no more frequent than common, but newspaper space is much cheaper. It may be 'every one is out of town,' and it is consequently of even less than usual importance of what their journalistic pabulum is composed. Of course, any inferences based upon these collections of abnormal and exaggerated instances must naturally tend to involve readers in repeated errors of insufficient generalization; and this is exactly what happens. Of all conventional phrases none is more generally accepted, and, as we have shown, none more false, than that 'a newspaper is the history of the world for a day.'"

This is most true, and, if it were likely to make any impression on "the night editor," would be very important. If he could be got to make up the paper by giving space to news in the order either of its importance to society, or of its significance as a symptom of social conditions or tendencies, it would work what he would call "a revolution in journalism." If the newspaper, for instance, were really a miniature picture of the society in which it is published, the devotion of one column of the news space to the horsewhipping of a faithless lover by a servant girl in Brooklyn, or to the murder of a wife by a drunken husband in a tenement-house up town, would indicate that about ten thousand betrayed servant girls horsewhipped faithless lovers in the cities of New York and Brooklyn every evening, and that about the same number of drunken husbands murdered wives in tenement-houses every night. And not only this, but that the bulk of the population were occupied day by day in getting at the particulars of each case, and wanted explanatory illustrations to enable them to comprehend it, such as diagrams showing where the servant girl stood when she struck the first blow, or where the wife fell when the husband fractured her skull. But in a true picture of society in this city, such incidents would be mentioned in two lines of nonpareil, or only rarely noticed at all. Nobody outside the persons immediately affected gives a thought to them after laying the newspaper down, or remembers anything about them the next day. In other words, they have no social importance at all. They do not fill any space in the public mind, or perceptibly affect in any way the lives of the bulk of the population.

The plan of filling newspapers with them, too, has given an immense stimulus to gossiping mendacity. Some of the most highly paid laborers of our time are lying newspaper reporters and correspondents, men who make no pretence of telling the truth, and would smile if you reproached them with not doing so. Their skill in inventing and embellishing is in fact their capital, and they find in a large proportion of the newspaper offices a ready market for their wares, of which no exposure can deprive them. It is rare indeed to hear of an amusing, brazen correspondent being dropped for lying either about persons, places, or things. As long as the proprietor finds the lies sell well, he holds on to him, while acknowledging the justice of all the harsh things you say about him, or else sets him on to cover you with ridicule and slander. In truth, it might fairly be said that the most singular phenomenon of modern society is the existence of a market for professional mendacity, kept by professional moralists. There was nothing like it in the ancient or mediæval world. The bards and troubadours made no pretence of describing current events. Their stories always began with "once on a time." They never took upon themselves to revile or caricature a contemporary chieftain or baron, knowing well that if they attempted it they would promptly have their throats cut.

HOME MISSIONS AND ANARCHISM.

It is nearly three years since we ventured to suggest to those newspaper apologists who were proving the *florentissimus status ecclesiæ* in the United States by statistics of the wealth and eminent respectability of its membership, that it would be well for them to give attention to the growing alienation from the Church of the mass of the poorer classes. At the time, our statements were met by the religious press for the most part with denial or derision. But a marked change has since taken place. The labor question is discussed no more frequently and anxiously in the secular press and in political gatherings than in the columns of church papers and in the debates of religious conventions. The fact of a great severance between the churches and the workingmen is no longer doubted. Mr. Moody has emphatically declared at Chicago and elsewhere that the Church is neglecting the poor, and has called for gifts to establish chapels throughout the great cities for the use of the people practically excluded from the churches. At the Congress of Churches in May, where Mr. John Jarrett and Mr. Henry George were invited to present the workingman's side of the controversy between himself and the Church, there was no question as to the facts in the case, only as to remedies.

The work of conviction seems to have been thoroughly accomplished, and the cry now is, "Men and brethren, what shall we do?" Indeed, we see in some cases conviction taking the form of hysterical excitement, and leading to extreme statements in regard to the impending evil. A prominent college president solemnly warns the American churches against sending their money to the heathen when they ought to be concentrating it in our cities at home, and he is echoed by a leading divine of the West. The recent book, 'Our Country,' exhausts all the forms of statistical showing to make out a startling picture of the perils which threaten the Church. In fact, it now appears to be the cue for home-mission secretaries to pose as alarmed patriots. One only needs to read the addresses which they made at the various church gatherings in May and June, to see that they are as ready as Mr. Blaine to seize upon the prevalent labor troubles as an argument in favor of the cause they advocate, and that they even excel him in vague descriptions of the remedy for industrial and social disorders. Especially do they find an unfailing theme and inspiration in the Chicago riots. "The Gospel is the only remedy for Anarchism," they declare. "The only way to save this country is to prosecute the work of home missions vigorously. We ask your contributions not simply as Christians, but as patriots."

Now, it is certainly a distinct gain that the authorities and organs of the Church are at last facing the facts more squarely than before, and we would be the last to seem to condemn any sincere effort to relieve our social troubles; yet we must say that all this appears to us to be at once a most vague use of language and a failure to understand the position of the Anarchists. Is the hope cherished of converting the Anarchists themselves? "We must give them the Gospel," is a frequent expression. Is that the hope? It is foredoomed to disappointment. The Anarchists are not strangers to Christianity. They are familiar with it in

many forms, and most of them reject it in all. They are demanding what they fancy to be their rights, and they resent any effort made by the Church in their behalf as a sort of scheme in aid of the police ("black gendarmes" they call the clergy on the Continent), or as a tub thrown to the whale. Moreover, they understand perfectly that the churches look upon their doctrines with abhorrence, and applaud the Chicago verdict. Next to the police and the courts, the churches are, it is probable, the precise objects of their strongest hate and denunciation.

It is more likely, however, that what is hoped for is the prevention of the spread of Anarchistic ideas among those workingmen exposed to, though not now infected, by them. We see small ground for this hope in the measures proposed. One of the premises of the Anarchists is the existence and injustice of social inequality, of caste and rank founded on property. The methods of city missions now in vogue, and whose great extension is advocated, are admirably adapted to intensify the class prejudices upon which Anarchism so largely builds. Will it help a workingman to resist the reasoning of an Anarchist, to find that it is the definite policy of the Church to make room for him and his class only in a mission chapel? We believe, of course, that Anarchism is contending for an equality of a barbarous and impossible sort. Yet the churches ought not to be blind to the fact that the Anarchist propaganda appeals strongly to the consciousness of social inequality, and counts very much upon it, so that it is idle to expect that a scheme which could not fail to foster and perpetuate the idea of fixed social caste, will make any headway against opinions founded so largely upon that very thing.

Then, too, the New Testament scholars who are proposing to combat the extreme forms of Socialism with the Gospel, must be forgetting the fact that there has always been found in the Scriptures, by those who sought for it there, a pronounced tinge of Socialism. A thorough acquaintance with the records of primitive Christianity did not prevent Mr. Maurice or Charles Kingsley from adopting Socialistic views, and the very name of the present "Christian Socialism" of Germany is enough to show that Christianity and Socialism are not mutually exclusive. All Socialism, it is true, does not run into Anarchism, but most Anarchism is the outgrowth of Socialism, and it is not clear how the putting discontented men in the way of better understanding the Scriptural arguments of the Socialists will prevent them from going the whole length of the Anarchist doctrine. That in which most confidence is rested, however, is no doubt the old idea that men can be made contented, or at least quiet, even in the presence of what they feel to be injustice, by the thought of a future world of reward and punishment. We should think it time to agree that, whatever else may be true of this idea, it has ceased to be a practical motive in the lives of the majority of men. Probably it never had the great power which has sometimes been attributed to it; almost certainly it will be vain to appeal to it as a restraint upon the masses of the laboring men of our country. Many of them openly and bitterly resent and repudiate it. More of them dimly feel that it is a whip which can be raised over them in this world, it is true, but whose stroke cannot reach them now and perhaps never can. That is, it has ceased to be a regulative power.

The remedy for Anarchism offered in the name of religion is too off-hand and, at the best, partial. We have no doubt that it is presented in perfect sincerity and from the most excellent motives. These estimable speakers and writers are accustomed to associate Christianity with their own highest morality, with their reverence for law and social order; and they implicitly believe that immoral and turbulent men only need to be Christianized to become even as they. This, as we need not point out, is but the one-sidedness and narrowness of an exclusively religious view.

WORKINGMEN ON MINORITY REPRESENTATION.

For several years past the question of "personal" or "proportional" or "minority" representation, which at one time attracted a good deal of attention, has been tacitly dropped out of sight. The reform of the civil service was more imperative, and the champions of reform in administrative methods wisely concentrated all their efforts for the time upon the one principal issue. Politicians who would always choose the chance of getting everything, rather than the certainty of getting their fair share, of course always sneered at this reform as at every other. But the chief reason for the loss of interest in it was undoubtedly the want of any thoroughly satisfactory scheme of personal representation. Mr. Hare's plan—unquestionably the most complete and equitable in principle—had the fatal defect of being, or at any rate seeming, cumbrous and complicated. It is a sufficient objection to it to remark that, while most people have a first choice for representative, comparatively few have a second, and very few indeed can be expected to take the trouble to make out a list of preferences. The only schemes which could be made to appear practicable were the cumulative vote and the three-cornered constituencies; and these were so very inadequate expressions of the principle, and worked so very little actual improvement where they were adopted, that their adoption served rather to discredit than to advance the cause. Last year the English Apportionment Bill deliberately rejected the entire principle, and went over to the American method of single constituencies.

And yet the objections to this latter method, easy and simple as it is, lie upon the surface. It serves a purpose in the transition from the representation of corporate bodies or favored classes or localities, to an equitable representation of the entire community. But it is so grossly unjust, and attended with so many practical disadvantages, that it cannot be expected to survive as the permanent and final method. It is, therefore, with a good deal of gratification that we find this reform taken up in an entirely new quarter. When it was advocated before, it was chiefly by men who were regarded as unpractical theorists—"them literary fellers"—the same class whose revolt from Blaine gave the election to Cleveland, and whose persistency in carrying through civil-service reform called down upon them the just wrath of the practical politician. It is now taken up by the working class, who begin to see that their wrongs, so far as they have any wrongs as a class, are largely due to the politicians.

We do not know how far the *Workingmen's Advocate*, published at Worcester, Mass., by John M. Berry, is a mouthpiece of actual workingmen; nor do we know what is its attitude on distinctively "workingmen's" questions. As it is in its seventh year, it may be assumed to have found readers; and the number before us (Volume vii., No. 6) shows good sense and good temper as well as earnestness of conviction. This number is entirely devoted to urging a reform in representation, and it presents a scheme which seems to us the most complete and practical that we have seen. More than half the paper is occupied in showing up the inequalities of the present system, as exemplified in the Massachusetts Senate. A few of the facts here given will show the abuses of the present system. The total vote cast for Senators was 208,433; but twenty-one Senators, a majority of the body, were elected by 52,974 votes—a little more than one-fourth of the whole. Mr. J. C. Joyner was elected by 1,852 votes, Mr. C. S. Lilley by 4,483; while "34 out of the 40 Senators were elected by a smaller number of votes than were thrown away on candidates not elected." In Essex County 14,075 Democrats got two Senators, while 14,855 Republicans got four Senators. Fifty-five thousand four hundred and fifty-four Republicans elected 21 Senators, a majority, while 56,550 Democratic voters have no representatives in the Senate. Again, while 52,974 voters elected 21 Senators, and 65,619 elected 19, there were 89,840 votes thrown away.

The scheme of representation proposed is presented in the form of fourteen amendments to the Constitution. This we think a mistake, one of a kind that is too often made. The Constitution should contain only the general principles, the details should be left to statute legislation. As the plan applies only to the Senate, it would require another series of amendments to reform the House of Representatives, and there is no knowing how many to apply the principle to municipal and other bodies. There is, we believe, nothing in the scheme which is absolutely new, but it is worked out in detail with great care and elaboration, so as, we should think, to leave no loophole for blunder or fraud. The fundamental principle is that of Mr. Hare's plan—the transference of surplus votes to other candidates, by which every representative has an equal constituency, and every voter has a representative for whom he voted. But while Mr. Hare allows each voter to designate his second and third choice, and so on, and distributes the surplus in accordance with this designation by a most complicated and perplexing method, the plan before us requires each *candidate*, before the election, to say to whom his unnecessary votes shall be transferred. Each voter therefore votes for a single name, but with the knowledge that his vote for A may count for B, C, or D;

and the transference of the surplus votes is made by a simple, rapid process, always to a candidate or candidates in general agreement with the one voted for. In the case, for example, of the forty Massachusetts Senators, it would be known, as soon as the returns came in, that a certain number were elected. Then it would be the work of only a few hours to find in the case of each successful candidate how many votes he had over and above what was necessary to elect, and to assign them to the persons whom he had previously designated, until the whole forty were elected.

It will be a thing to rejoice at if the workingmen will unite to secure solid and practicable reforms such as this would be, for they are the ones who suffer most from bad administration and bad government.

THE CONSULAR SERVICE AND TRADE.

When trade is languishing and exports are decreasing, producers and merchants are very apt to look to the Government for assistance, demanding not merely protection of their interests, but also intervention with a view to opening up new markets or to discouraging the efforts of their competitors. The consular service, as the commercial representative of the nation in foreign lands, is blamed for being remiss in its duties, for neglecting to advance trade and securing markets; and so seriously have these complaints been urged in Great Britain that a radical change in the methods of the Foreign Office is under consideration. Mr. James Bryce proposes, and his propositions apply with equal force to the corresponding department in the American Government, that both the consular and diplomatic service should become a kind of bureau of information for English merchants and manufacturers; that commercial museums be opened, and special agents, with roving commissions, be sent to the Continent and the United States to report upon matters of commerce and industry.

The change is a radical one because the Foreign Office is conservative and little prone to modify its methods. Like our own Department of State, it works in secrecy, giving out only what it pleases, and not courting publicity. But trade competition has become so intense, and the consular service offers so ready an instrument, though a very imperfect one, for securing commercial information, that the change is deemed expedient. The experience of the United States, France, Belgium, and Germany is pointed to in justification of the innovation, and at least the experiment can do no harm, and may accomplish some good.

Too much, however, is expected from the consular service in this matter. Of this the consular reports issued by the United States offer constant evidence, though they compare very favorably with the reports issued by other governments. The duties of a consul are so multifarious, and in an industrial centre so engrossing, that he has little time to examine processes and methods, and often has not the technical knowledge which such an examination demands. Take the three bulky volumes of reports on labor issued by the Department in 1884; no doubt they contain much information that is of value, but it is put in such a crude form that time and labor must be given to its study. The fault was in making the inquiry cover so much ground; but even when limited to a specific subject the results obtained are unsatisfactory and uneven, though it is readily seen that the consul has done his best. It is the same with the occasional reports. Some are valuable, but more are merely perfunctory, intended to give the appearance of activity.

The preparation of reports, however, is not the popular conception of the duties of a consul, and, among the commercial community at least, he is regarded as an agent who is to push trade when applied to. Whether it would comport with the position of a consul to advance trade by personal effort, by becoming a "drummer," is hardly a subject for doubt. He may be of service in replying to questions respecting the conditions of his district; he may keep in his consulate samples of American wares, circulars of American firms, and the like. But he can go no further, and to ask him to perform the functions of an agent is to place upon him an office which he cannot perform in justice to himself or to the Government he represents.

In like manner the belief that the diplomatic service can also be reduced to a commercial instrument, shows a curious misconception of the limitations of that service. The advance of Germany in the export trade is attributed by some to the active intervention of her ministers in securing trade privileges and trade concessions. Where the absurd tariff policy of the day can be broken down and privileges obtained by treaty or convention, a praiseworthy act has been done, and one that properly falls within the province of a minister. But imagine a minister soliciting a trade contract, as is said to have recently occurred in China when a heavy contract for rails was secured by German manufacturers. The experience we had in Peru, when Mr. Blaine was Secretary of State, is sufficient to show the dangers attending such a course.

In truth, trade is not to be advanced directly by the efforts of consuls, but only by the enterprise of merchants themselves. Government can only protect traders, insuring to them that which they have legitimately gained. It cannot drum up trade, and it ought not to be expected to play the agent. The English office may adopt all the propositions of Mr. Bryce, but it will be no nearer to extending its trade interests; just as the publication of the consular reports in this country has not built up a foreign trade, though it may have shown new opportunities. The success of Germany in extending her foreign commerce has been due to improved processes of manufacture, and to the painstaking, plodding efforts of her merchants, and not to the efforts of Government. Belgium has in fifteen years enlarged her trade with Asia from $308 to more than $2,000,000 a year; yet the Government did nothing but give an assurance of protection while pursuing legitimate operations. The time may come when this will be recognized, and the whole system of artificial restrictions or aids, such as tariffs and bounties, will be abolished. But it is absurd to blame the consular service for depression of trade, or to look for relief in that direction.

THE ENGLISH INTERNATIONAL COPYRIGHT ACT, 1886.

The text of the "Act to amend the law respecting international and colonial copyright," as passed by Parliament on June 25, 1886, is printed in the 'Law Reports' (*Statutes*, vol. xxii., part 1, for August 2, 1886, pages 78-84). This act was passed principally to enable Great Britain to become a party to the literary-property treaty which has just been negotiated at Berne; but, as may be inferred from its title, it is also a general act framed so as to be applicable to possible treaties with countries outside of the Union—the United States for instance—and legislates, as well, in behalf of the British colonies. The proposed convention for the creation of an International Union for the protection of literary and artistic works contained stipulations which England could not subscribe to until the international copyright statutes hitherto in force had been amended. Thus, the fifth article of the convention grants to authors or their legal representatives the exclusive right of making or authorizing the translation of their works, until the expiration of ten years from the last day of the year in which the original work was first published in one of the countries of the Union. The ninth article extends this ten years' term of protection to dramatic compositions, prohibiting the unauthorized publication and public representation of translations of dramas or operas; whereas, by the existing law (the Act of 1852, as modified by the Act of 1875), authorized translations of foreign books or dramas were secured to the authors from piracy in the United Kingdom for no longer than five years. Furthermore, the five years' protection was secured only after the accomplishment of burdensome stipulations as to registration and deposit of copies; while by the eleventh article of the proposed convention it is held sufficient, in order to secure protection for any original work or translation, that the name of the author appears upon it in the accustomed manner, the respective tribunals being authorized, however, to require, should they deem it necessary, the production of a certificate from the competent authority, to the effect that the formalities prescribed by law in order to secure protection in the country of origin have been carried out. It is necessary to construe the new act in connection with the former international copyright statutes of 1844, 1852, and 1875; sections 14, 17, and 18 of the first of these acts, and sections 1 to 5, 8, and 11 of the act of 1852 being repealed, while the unrepealed parts of these two acts and the Act of 1875 (which simply modifies section 6 of the law of 1852) remain in force.

The most important provision of this act is that relating to translations, it being enacted that the author or publisher of a book or dramatic piece, first produced in a foreign country, to which an Order in Council granting international copyright applies, shall have the same right of preventing the production in and importation into the United Kingdom of any translation not authorized by him of the said work as he has of preventing the production and importation of the original work. But if, at the expiration of ten years

(or any term prescribed in the order) from the beginning of the year next after that in which the original work was first produced, an authorized translation in the English language has not been issued, the prohibiting right shall cease. The law relating to copyright, including this act, shall apply to a lawful translation in like manner as if it were an original work. And when an order is made under the international copyright acts, the provisions with respect to registry and delivery of copies shall not apply except so far as provided by the order, before making which the Queen shall be satisfied that the foreign country has made such provisions as appear expedient to be required for the protection of authors of works first published in the United Kingdom. Further, section 7 of the act provides that where it is necessary to prove the proprietorship of the copyright, an abstract from a register, or a certificate or other document, stating the existence of the copyright, if authenticated by the official seal of a minister of state of the foreign country, or by the official seal or the signature of a diplomatic or consular officer, acting in such country, shall be admitted in evidence without proof. And to meet the requirements of the proposed convention, it is enacted that the Order in Council may provide for determining the country in which a literary or artistic work, produced simultaneously in two or more countries, is to be deemed, for the purposes of copyright, to have been first produced; and that when a work produced simultaneously in England and one or more foreign countries is deemed to be first produced in one of the foreign countries, the copyright in the United Kingdom shall be "such only as exists by virtue of protection in the said foreign country, and shall not be such as would have been acquired if the work had been first produced in the United Kingdom."

As regards simultaneous publication in several countries, the articles of convention propose that the one in which the shortest term of protection is granted by law, is to be considered the country of origin. The order may extend to several foreign countries, instead of to one as usual, and it may exclude or limit the rights conferred by the international copyright acts in the case of authors who are not subjects or citizens of the foreign country named in the order. If any such author is not a citizen of Great Britain, the publisher is to be deemed entitled to such copyright as if he were the author (to agree with article 3 of the proposed convention), though this enactment is not to prejudice the rights of author and publisher as between themselves. The sixth section of the present act provides (in agreement with article 14 and stipulation 4 of the final protocol of the proposed convention), that works first produced before the date at which the order comes into operation are also to be entitled to copyrights and remedies: "Provided that when any person has, before the date of the publication of an Order in Council, lawfully produced any work in the United Kingdom, nothing in this section shall diminish or prejudice any rights or interests arising from or in connection with such production which are subsisting and valuable at the said date."

The provisions of this act as regards the colonies are important. The copyright acts as modified by the present act are made applicable to works first produced in a British possession in like manner as to works first produced in the United Kingdom. That is to say, whereas, heretofore, first publication in one of the British colonies only entitled the work to copyright in that colony, this enactment secures for it copyright protection throughout the British Empire, and, upon upon the taking effect of the Berne treaty, in all the countries of the International Copyright Union as well. The sections respecting the registry of copyright are however, not to apply if the law of such possession provides for registration, and no delivery of copies is required "to any persons or body of persons." Moreover, when a register of copyright in books is kept under the authority of the Government of a British possession, an extract from that register, certified as a true copy by the officer keeping it, and authenticated by the public seal of the British possession, or the seal or signature of the Governor, or a colonial secretary or secretary or minister administering a department of the Government of a British possession, shall be admitted in evidence without further proof. And in case of conflict with acts now in force in British possessions, the Queen, by an Order in Council, may modify the copyright acts and the present act as seems expedient; and nothing in the copyright acts shall prevent the passing in a British possession of any act or ordinance respecting the copyright, within such possession, of works first produced there.

We may add that the correspondence respecting the new copyright legislation has been printed as a Parliamentary document under the heading "Switzerland No. 2 (1886)." The letter from the President of the Swiss Confederation inviting Great Britain to be represented at the conference in Berne, the favorable reply to this request, and the letter to Mr. Adams, Minister at Berne, appointing him, together with Mr. Bergne, of the Foreign Office, delegates, with full powers to sign the convention, are all that especially relate to the conference in Switzerland. The greater part of the thin folio pamphlet is occupied with the correspondence relating to the Copyright Act as affecting the colonies. The following questions were propounded to each of the colonies: (1) Whether it desired to enter the International Copyright Union; (2) whether it approved of the provisions of the proposed act giving to books first published in a colony copyright throughout the Empire; (3) if it desired the retention of the section providing for legislation by a colony on copyright within its own limits; (4) if it desired to have added to the act a section providing, in substance, that any colony might be exempted from the provisions of the act and thus remain outside of the Union. The time being limited for securing the passage of the act before the adjournment of Parliament, these questions were telegraphed to the colonial governments, and the messages received in reply were invariably affirmative as regards the first three questions, and negative as regards the last one. It is, therefore, to be understood that the signature of Great Britain to the convention brings within its provisions all her colonial possessions and India.

PROFESSOR GURNEY.

Prof. Ephraim Whitman Gurney, who died very quietly on Sunday, after a long and wasting illness, was better known to collegiate circles than to the world at large. Probably no one except President Eliot has had so much influence in bringing about the revolution in college discipline and curriculum which has taken place in Harvard College within the last sixteen years. During all that period he has been President Eliot's principal adviser, and his authority on all university matters was increasing steadily in weight all over the country down to his fatal illness, which was indeed probably in some degree due to the strain of a prolonged and exciting controversy over university policy at Harvard last winter. He was by temperament a strong conservative, and this gave additional weight to the influence he exerted on the side both of the extension of the elective system and of the relaxation of the old college discipline, which have marked President Eliot's administration. No one was listened to in the Faculty meetings with more attention, and the steady increase in the respect for his judgment and character was shown in his election within a year or two to a seat in the Corporation of the College—a distinction, if we are not mistaken, not previously bestowed on a professor.

Mr. Gurney was, when President Eliot took office in 1870, Assistant Professor of History, but had made so marked an impression as the friend and adviser of the undergraduates, not more in their studies than in their sports, that at President Eliot's earnest request he assumed the office of Dean, which covers all the penal side of college discipline, and held it for five years. No man in that place can long retain the popularity acquired in any other, but we believe the parents of many a youth who during that period found the straight and narrow way of industry and economy hard to follow in college life, can bear testimony to the consideration, the tenderness, and the wisdom with which the stern duties of the Dean were discharged. No man whose own career had been, as Mr. Gurney's had, one of rigid self-denial and untiring labor, ever had more sympathy and generosity in dealing with the errors and shortcomings of wayward youngsters, or knew better how to make words of warning words of hope and encouragement. He resigned the Deanship in 1875, for a two-years' tour in Europe with his wife, and in England saw a great deal of nearly every Englishman of intellectual eminence, and left behind him a host of admiring friends. After his return he resumed his professorial duties, first in the chair of Roman Law, and then in that of University Professor of History, which he occupied at the time of his death.

Although possessing great ability as a teacher, the calling for which he trained himself from the time of his entering college, he was really perhaps even better fitted for the life of a scholar and literary man. A scholar he was in the old and best sense. He was never so happy as "in the still air of delightful studies." His knowledge of the ancient classics was very thorough and his reading in the fields of philosophy, law, and politics, in French and German, as well as in English, was extraordinarily wide. It was really in the quiet of his library that his mind worked to best advantage. To him all necessity for haste, all noise, or tumult, or controversy, not only was distasteful, but made thinking a difficult and unfruitful process.

His English style was charming, polished, subtle, and correct, but lucid and strong. Some specimens of it in the earlier numbers of the *Nation* cannot be read without deep regret that he had not made literature his pursuit. But his love of perfection and finish was really too great to allow of his ever being a useful or ready contributor to any periodical, and the same devotion to high standards made his editorship of the *North American Review* for a year or two, after Mr. Lowell and Mr. Norton gave it up, a piece of somewhat painful drudgery, which he soon relinquished.

Mr. Gurney's life was so retired, in spite of the important part he played in the history of education in this country during the past fifteen years, that even a word of tribute to his private virtues over his grave from sorrowing friends seems like an unwarrantable intrusion on the privacy which he loved. No adequate idea of the pleasures of familiar intercourse with him could be given to any stranger by any eulogy, however full. His almost invincible modesty made it difficult to learn, except under his own roof and beside his own delightful fireside, how sound his judgments were, how full and varied his knowledge was, how much worldly wisdom lay behind his scholarship, and with what feeling and devotion he could enter into the joys and sorrows of all who had any claim on his affection. He is a great loss to Harvard College and to the cause of sound learning, but even a greater to those who knew him well in private life.

RUSSIAN FAMILY NAMES.

A CURIOUS and interesting book among recent St. Petersburg publications possesses considerable importance as a special historical study. 'Family Names in Russia and the Mingling of Foreigners with Russians,' by the late E. P. Karnovitch, is a posthumous collection of articles which well deserve their present form. After a preliminary sketch of the origin and character of family appellations among the various European peoples as well as among the Slavs, the writer enters upon the consideration of Russian names. Their history furnishes peculiarly characteristic traits, which aid in defining the position of the nobility and of the aristocratic classes. Properly speaking, there never has been anything like the aristocracy of Western Europe in Russia, although there have been numerous attempts to imitate it. The difference is apparent from the fact that in Russia family appellations have never followed the estates. Even the petty princes of the pre-Moscow days did not assume the titles of their principalities, and for the good reason that they were migratory rulers, who might be called upon, either by reason of election or the right of conquest, to reign over several in turn. Such appellations existed only in a few instances, and that only after the annihilation of the system of petty principalities. Not one of the noble Russian families who are inscribed in the "Velvet Book" (so called from the character of its binding), that is to say, of the families belonging to the most ancient nobility, is called after its estates. So foreign to the Russian idea was this practice, which was so extensively applied and so highly prized among the feudal nobility of the West, that even in 1785, when the right to add the names of estates to their family names was accorded to the nobility by official patent, it did not take root. Before the establishment of the supremacy of Moscow, the personal name or surname was converted into a family name by the addition of "itch" (more correctly "vitch"). It was thus that the princely races of the Olgovitches, the Monomakhovitches, and the Mstislavitches were designated. This form of family name is also borne by the "bogatuiri" (heroes) of the "builini" (epic poems), by the ancient boyars, and by all distinguished persons.

This custom still prevails among the people, with whom it is considered a mark of respect to address a man by his family name, even without the addition of the Christian name. All this was changed when the Moscow sovereignty was set up. During the reign of Ivan III. prominent people signed their full names: Vasily, Alexei, Feodor; less prominent persons employed the abbreviated forms Vasiuk, Alexyeetz, Feodoretz; and persons of still less consequence used the humiliating diminutives Vaska, Alyoshka, Feodka. Under Ivan IV. (the Terrible), even persons of distinction, in the quality of vassals of the Czar, began to sign their names not only in the diminutive form, but in the diminutive expressive of humiliation. Under the rule of Moscow, the termination "vitch" suffered the same degradation. Monomakhoff is a specimen of the form of appellation which is characteristic of the Moscow rule. The ancient form of "vitch" was converted into a special reward, and the Czar himself designated the persons who were to be allowed to bear it. This state of things continued even under Peter, who, in 1697, ordered Prince Yakov Dolgoruky, and in 1700 Grigory Strogonoff, to write their names with "vitch." Family appellations abbreviated in the style of Moscow are still used in official life, with the exception only of the most exalted functionaries, who sign their names in full, that is to say, with the ancient "vitch."

Our author communicates many curious particulars concerning the highest titles of nobility, prince and count. Up to the time of Peter the Great there was no such thing as rewarding by means of exalted titles, except with the title of "distinguished man," which was conferred on the Strogonoffs; and this was but a small title, since it only ranked above "guest" (merchant), and did not introduce the bearer into the classes of the nobility or public officials. On the other hand, the title of prince abounded. There were three classes of princes: (1) the descendants of Prince Rurik; (2) the descendants of the Lithuanian Prince, Gedimin; (3) persons belonging to various foreign nationalities, chiefly Mordvinians and Tatars. Many of the princely titles which had descended from the times of the petty princes had become extinct in 1700, but forty-seven still existed, some of which were very numerous; the Gagarins counting twenty-seven, and the Volkonskys thirty, representatives at one time. Eleven more of these princely lines have now become extinct. The rest of the tolerably numerous descendants of Rurik do not bear the title. Of the posterity of Gedimin there were extant in 1700 four branches, one of which, the Galitzins, have become extremely numerous. The great mass of princes, however, are not of Russian origin at all, but are of Tatar, Mordvinian, and Georgian extraction. This swarm of foreign princes is explained by the fact that the Czars of the sixteenth and seventeenth centuries, and Alexei Mikhailovitch in particular, in their zeal for the diffusion of the Greek faith among the Tatars and Mordvinians, commanded all belonging to those nationalities who accepted that belief to assume the title of prince. There are at least eighty of these Mordvinian families who are entitled to bear the title of prince, but most of them live like simple peasants, and occupy themselves, among other professions, with cab-driving in St. Petersburg.

"Prince" is the popular designation among the common people for all Tatars, and these princes cling to their title and consider it perfectly appropriate, though they may be dealers in old dresses and coats. The number of these Tatar and Mordvinian princes had so lowered the title that an imperial ukase of 1675 decreed that addressing a man as "Prince" without the addition of his name was to be regarded as an insult and not an honor. The descendants of Rurik, in the seventeenth century, gladly accepted the humblest places at court; the Vyazemskys served for generations as village popes and deacons on the estates of landed proprietors of the middle class, and the Princes Byeloselsky were hangers-on and protégés of certain persons named Travin. The princely Russian families have sunk so low that the Borovskys are reckoned among the ordinary lower-class citizens of the town of Boroff, in the Kaluga Government. In the forties of the present century, the Princess Borovsky, the last representative of a line descended from Rurik, was distinguished in no way from the class among which she had grown up, except by her ancient historic title. She married a petty citizen of the town. When the Emperor, Nikolai Pavlovitch, heard of the marriage, he ordered that 10,000 rubles in paper money should be given to the Princess, with which to set up housekeeping.

The princely title only acquired credit when, during the last century, some of those who bore it (many of them were new men) distinguished themselves for something besides the bare title. The conclusion arrived at by Karnovitch is that the bearers of this title not only do not represent the aristocracy in the West-European sense—in which sense it has, as a matter of fact, never existed—but they do not even constitute, necessarily, the upper circles of purely official life, with the exception of certain families which have acquired historical importance at different epochs, and which are now for the most part extinct. The author has some very curious details on the subject of the intermixture of foreign races with the Russians. A reference to the "Velvet Book," which is preserved in the Herald's Office, shows that nearly all the ancient nobility were descended from foreign immigrants. The genealogical form, which was issued in 1785, provided for this by indicating the place where it was to be inserted that the founder of the family "came to Russia from —— during the reign of Prince ——." This formula exactly met the conditions of the case. Many of Karnovitch's facts and conclusions are quite fresh and unexpected, and take us into many departments of Russian life.

THE LOTTERY IN AUSTRIA.

VIENNA, August, 1886.

To an American the sight of innumerable advertisements and placards announcing the sale of lottery tickets, the days for drawing the chances, etc., is a strange one. Practically every cigar store he sees here is also an office for the sale of chances; the exchange rooms also carry on this branch of business; there are little offices for the sale of lotto tickets; and the great lotteries are an important factor in the transactions on the Bourse. All classes of society, practically the whole population, are interested in investments whose returns depend on chance, and the unit of which ranges from five kreuzers (two cents) to 1,000 florins ($400). As to the large investments of the prosperous classes, the stranger sees nothing; but he may hourly see (and it is a sorry sight) women, bent with work and age, standing before boards covered with the numbers of yet unsold lotto tickets, making mysterious calculations on their fingers to find the lucky number, and then going in to invest their few hard-earned kreuzers, from which they will probably get no return, while at the same time they have not decently nourishing food to eat.

As to public opinion on the subject among the Austrians themselves, the State Lotto is almost universally condemned. So long ago as 1855 a legal writer (Dessáry) wrote: "Just as little does

the Austrian Government deny that, from the moral standpoint, the lotto prerogative cannot be justified." While stating that its abolition was contemplated, he declared it impossible at that time, because of the needs of the Government. Since that date thirty-one years have come and gone, but the answer of the authorities is ever the same. For the last twenty-three of those years a member of the Reichsrath, named Roser, has in each session of that body moved for the abolishing of the State Lotto, but without any further effect than to make his name prominent as the principal hater of a bad system. The *Deutsche Zeitung* of June 24, in a rather sharp article, demanded at least that the system be not further extended. In striking contrast to this was a recent flaring advertisement in another Vienna daily paper, containing in large letters, "Loss entirely impossible" (*Verlust gänzlich ausgeschlossen*), with the promise of 5,000 gold ducats reward if the advertiser's system of mathematical calculation failed to bring the user of it a prize in the lotto. There are three varieties of gaming established and encouraged by the laws of Austria, of which we shall proceed to take a nearer view.

The game of lotto was imported into Austria from Genoa in 1752, and has steadily grown in popularity, especially among the poorer classes. From the first it was a state institution, but the state has from time to time changed its method of control. In the beginning the privilege of running the game was sold as a monopoly. As a means of gaining public favor, the names of marriageable girls were placed with the numbers to be drawn, and to the five fortunate individuals a marriage dower was given by the farmer of the lotto-privilege. This plan was abandoned in 1778 in favor of an annual appropriation of 12,000 florins for charitable objects. After ten years the Government took the control of the game into its own hands, and now has for it a special department of the Ministry of Finance. The director of this department has "the title and rank of an imperio-royal actual court councillor," and has a number of long-titled individuals under him. The management of the game is regulated by two imperial patents bearing the dates respectively of March 13, 1813, and August 9, 1854. The drawings take place in the ten leading cities of the empire—every two weeks in a couple of the largest centres of population, triweekly in Innsbruck, and at intervals of six weeks in the smallest places. In 1878 (the latest statement I could find) the number of collection offices was 3,874. Over those, where the annual income exceeds 1,000 florins, the Ministry of Finance has direct control; over the others, the "lotto directory." Winnings under 1,000 florins are paid from the office where the winning ticket was sold; for that amount and over, the holder of the ticket must apply directly to the authorities in Vienna. To the holder of the fortunate ticket the prize is paid without asking how he came by it, nor will any complaint against his possession be heard.

There are several varieties of the game, and the buyer of a ticket has the choice of risking his money in the proportion of 1 to 18, 90, 400, or 11,748; if he wins, it will be respectively 14, 67, 240, or 4,800 times the amount staked. The poor people, who are the principal patrons of the game, generally take the smallest risk. On the other hand, a gentleman told me that his uncle had, in the course of his life, lost 100,000 florins playing for large returns.

The earliest statistics I can find are those of 1828, when the Government received from this source fl. 4,815,960, and paid out fl. 3,229,759, leaving a net surplus of fl. 1,586,201. In 1883 the gross income had increased to fl. 21,814,463, and the payments to fl. 14,349,587, leaving a balance of fl. 7,464,876. The game reached its maximum in 1877, when the balance between income and payments was over ten million florins. From this something must be subtracted for the cost of administration, but it is not made public. Calculations made from the returns of various years show that the Government nets from 35 to 55 per cent. on its investment or payments in prize money. In 1877 for every one hundred inhabitants of Austria there were 537 chances taken, for which 101 florins were paid. Out of this, eight won prizes amounting to 54 florins, thus leaving to the Government 47 florins, which it would have been exceedingly difficult to raise by direct taxation, but which the deluded people gladly pay out on this enticing game. About half of this money comes from one-tenth of the population, *i. e.*, the people of the province of Lower Austria, with Vienna as the centre of gaming. That the insidious game is working its way more and more deeply into the lives of the people is shown by its tremendous increase—from 29,669,203 chances in 1828 to 100,136,650 in 1874, or over 337 per cent., while from 1830 to 1880 the population increased only 41 per cent. That the Government may reap the result of this love of gaming, all investments in foreign lotto and all private gambling with lotto are forbidden under severe penalties. In case of conviction for either offence, one-third of the fine goes to the informer, "whose name will for ever remain concealed," one-third to the poor fund, and a third to the general lotto income. Though no one defends the game on moral or politico-economical grounds, there is no serious effort made to stop it, and the last published legal work on the subject I have seen (Blónski's edition of Koponásek and Von Mor, 1880) says it will be impossible to do so till another way of providing the same amount for the revenue is found, and till neighboring states also put an end to games of chance.

It is only to be expected that a state which encourages the game of lotto to get the money of its poorer citizens, will adopt a similar method of attracting the investments of the wealthy. Accordingly, we find most of the public loans of Austria assuming the form of lottery, or at least introducing some element of chance in the time or amount of the return. Some idea of the method adopted can be gained from a knowledge of one. The principal Austrian loan of this nature now on the Bourse is that of March 5, 1860, for 200,000,000 florins. Theoretically it draws 5 per cent. interest; but as that is subject to a state tax of 20 per cent., it reduces the interest to 4 per cent. The bonds are issued in 20,000 series at a face value of 10,000 florins the series, the unit being 500 florins. However, for the convenience of purchasers, there are also forms for one-fifth and for double bonds, with interest coupons respectively at 2.50 and 25 florins. These funds are popular and have risen in value from 103.25 in 1871 to 140.25 in 1884, and stand now (August 9, 1886) at 142.25. A fair idea of the value of the element of chance can be gained from a comparison of this loan with that called "Papier rente," which also draws 5 per cent. interest, both payable in currency. The latter stood at the close of 1884 at 97, and stands now at 85.95, thus showing, as does the increase in lotto gaming, the growing passion of the Austrians for gambling. Even the gold loan stands only at 121.25, notwithstanding the high premium that metal now commands in Austria. From the day on which the number of a bond is drawn, interest ceases. On the 1st of last May was due the drawing of 2,500 numbers, with prizes ranging from 300,000 to 600 florins. It can only be the hope of drawing a large prize that induces investors to pay 142.25 florins for the fifth of such a bond, when one of the same face value, bearing the same interest, but without the hope of a prize attached, brings only 85.95 florins.

Besides such state lotteries, there are similar ones on the Bourse, the loans of cities and also of wealthy members of the aristocracy. Vienna, for instance, made a loan in 1874 of 30,000,000 florins, without interest, but to be paid off in fifty years, in the order of drawing the chances. Each year 5½ per cent. of the capital is devoted to this purpose. The bonds have a face value of 100 florins each, and may draw a sum of 200,000 or 110 florins. The amount drawn is subject to a tax of 15 per cent., so that there exists the certainty that after an investment of fifty years many bondholders will actually receive less than the original investment. Notwithstanding this fact, these funds have stood as high as 124.75, and possibly higher. Industrial corporations are also permitted to issue loans of the same kind; naturally the railroads do the same; while two loans for charitable objects, respectively for 2,000,000 and 6,000,000 florins, are also on the market. One of these, the Red Cross Lottery, offers the additional attraction of giving the drawer of the lowest prize by one drawing, a chance in the next.

There is another class of lotteries which occupy a prominent place in Austrian life, viz.: the private. The right to issue such is secured by special permission of the finance authorities, with the necessary condition attached that 10 per cent. of the proposed income must first be paid as a tax into the national treasury. The objects for which such lotteries are held are exceedingly numerous, as for the benefit of hospitals, asylums, and soldiers' homes; for the promotion of the various branches of agriculture, etc., as horse-breeding; for the erection or repair of public buildings, especially churches; for general charities, as the maintenance of the city poor; or, lastly, for any general purpose, as industrial expositions, etc. The number of legalized private lotteries varies from 400 to 700 yearly, and the number of chances from 90 to 2,000,000 (the latter being the number of the Trieste exposition lottery a few years since—said to have been the greatest lottery in the history of Austria). The cost of chances varies, but is rarely more than a florin. The value of the prizes is of great range, as also the objects offered. The use of money, real estate, or subjects of state monopoly as prizes is strictly forbidden by law. However, as the worth of the prize is often paid the winner, instead of the thing itself, the law loses its force. As to the rules regulating the more immediate traffic in private lotteries, it is not possible to obtain definite information. They are issued on occasion in the form of cabinet orders (*Hofkammer- und Dicasterialverordnungen*) and are not published.

The sale of petty lottery chances is allowed only to the projector thereof. The important ones are a factor of legitimate banking business. The projector makes a contract for putting all the chances on the market at a fixed sum; the banker then makes sub-contracts with the proprietors of exchange offices, stores, and especially with tobacco dealers. These press the tickets on their customers; in the case of certain lotteries, circular notes with the tickets enclosed are sent by mail to public officers, who are virtually compelled by virtue of their position to accept and pay for them. The method of drawing is an honest one. The numbers are placed in a hollow wheel, which is revolved, and the drawing is usually done by a poor orphan, who in return receives a present from the projector of the lottery and the principal winner. Where the tickets are issued in series, two wheels are used at the same time, one containing the series numbers, the other the single-ticket numbers. All drawings must be in the presence of a notary and of an of-

ficer of finance—the latter to watch that forbidden articles are not given as prizes. To prevent the possibility of cheating in petty lotteries, the number of tickets is fixed at ninety—the number used in the public lotto drawings—and a fixed date of the lotto drawing is taken as that which will settle the winning of the small lottery prize offered. The time of drawing must be within the same calendar year in which the permission is given. If the drawing does not occur, the prizes become subject to confiscation by the Government, though in certain circumstances the authorities will waive the right and allow a later drawing. The drawings for important lotteries are public. If for any reason a prize is not claimed within a year, it goes to a charitable object to be named by the Emperor; and the same thing happens if money paid in for a lottery which does not come to a drawing, is not in the same period demanded back. An officer of the lotto direction says he is convinced that hundreds of petty lotteries take place yearly of which the authorities never hear. W. B. S.

Correspondence.

AN ERROR CORRECTED.

To the Editor of The Nation:

Sir: President C. K. Adams of Cornell University will probably regard it as a favor to him if I call attention to a case of mistaken identity in your editorial of this week entitled "Coquetting with Anarchy." You ascribe to him the authorship of an essay upon "Sphere of State Interference in Industry." I think you must have referred to an address of mine read before the "Constitution Club" of the city of New York, entitled "Principles that should Control the Interference of the States in Industries." My reason for this opinion is that in your comments you struck one thing pretty nearly right. The address did suggest the classification of industries of which you speak, although I confess to a preference for my own nomenclature. My hesitation, on the other hand, in claiming to be the author of the essay arises from the fact that you ascribe to it views upon taxation of which there is no mention in my address. If I am mistaken, there can, of course, be no necessity for giving this letter to your readers.—Truly yours,

Henry C. Adams.

University of Michigan, Ann Arbor, Mich., September 10, 1886.

[We had already put in type an expression of our sincere regret for the confusion into which we had fallen, when the above came to hand. That the mistake in identity was one which others have committed, does not diminish that regret. The object of Prof. H. C. Adams's classification was, we understood, to suggest what industries could with expediency be interfered with by the State in a manner to reduce their profits. It appears that he did not mean that such interference should take the form of taxation.—Ed. Nation.]

HIS OWN MEDICINE FOR THE ANARCHIST.

To the Editor of The Nation:

Sir: Would it not be a short way out of trouble to give any man who announces himself an anarchist the benefit of his creed to a limited extent? Let the Government cease to exist, so far as he is concerned. Let it no longer enforce his contracts or collect his debts or protect his property or guard his life. Let him be an outlaw, for law is a part of government, and let no coroner sit on his body if it is found dead. Would there not be a real as well as a poetic justice in placing him outside the care of what he despises and seeks to destroy? B.

THE MINTING OF GOLD AND SILVER.

To the Editor of The Nation:

Sir: Kindly inform me whether any person may take gold bullion to the United States Mint and have the same coined or made into bars of standard fineness?

What charge is made?

Has it been so since the establishment of the mint?

How about silver?

Respectfully, B.

Pittsburg, Pa., August 24, 1886.

[To the first and third questions, yes. The melting charge is one-fifth of 1 per cent., or thereabouts. Silver is returnable in bars only, not in coin.—Ed. Nation.]

MR. TILDEN'S BEQUEST.

To the Editor of The Nation:

Sir: To my letter of the 27th ultimo, referring to a plan for the Tilden library, let me add, a circulating library *was* meant, but one that would send to individuals in distant towns as many as ten or twenty books or more at a time, which could be retained, if desired, for three or six months, possibly.

This might be done in various ways: the express could be paid by the subscriber; credit could be secured by a cash deposit, by a membership based on proper limitations, by annual subscriptions, or through a local library. Similar facilities are offered by some European libraries, but I believe by none in this country.

The librarian could furnish a list of accessible books on any subject either for purchase or loan, and in other ways give most valuable aid for the thorough investigation of any subject. Many writers and speakers have not the means to purchase books. Others do not know what or where to buy. Again, as it is said "glittering generalities must go," this might be a practical recognition of a complaint, which is becoming more and more general, that the current discussions of our political and social problems contain too many inaccuracies of fact, too many hasty or narrow generalizations, too much ignorance of what has been written.—Respectfully,

Thos. P. Ballard.

Columbus, Ohio, September 6, 1886.

AGITATION AGAINST MURDER.

To the Editor of The Nation:

Sir: During the present lull in the political world, when the old issues are dead, and the people have not yet fully warmed up to the new ones, those great social reforms about which the people are not and cannot be divided into parties, might be taken up profitably and made the subject of thorough and intelligent agitation.

Among these questions one of the foremost is the criminal law as applied to offences against the person, with the view of assuring greater certainty and swiftness in the punishment of manslaying. Although the control of this subject rests altogether with the States (at least outside of the District of Columbia and of the Territories), yet a national agitation might be useful; for it would strengthen the friends of reform in every State, and help to concentrate their efforts, and to put the adversaries of criminal-law reform in each State in the unenviable light of championing the cause of murder.

I have for a long time observed and maintained that the practical impunity of genteel criminals throughout the country, and more especially in the Southwest, does not flow so much from an unhealthy public sentiment, from a mawkish sentiment in favor of the unhappy prisoner, or from a barbarous sympathy with his crime, as it does from the pernicious influence of a class, which class is none other than the criminal bar—the lawyers practising in the criminal courts.

You know how, in the discussion of the tariff or of subsidies, one man largely interested on the side of protection or "encouragement" wields more influence than ten or a hundred men who are simply consumers or taxpayers; because the interest of each of these is so small that they cannot afford to waste time, effort, or money for an object which is common to them with all the rest of the community. It is so with laws governing the punishment of crime. The man who makes his living by defending murderers and other enemies of society has a keen professional and pecuniary interest in so shaping legislation as to give him the advantage in the fight—at least in rendering the conviction of guilty men slow enough to give plenty of time for the payment of fees. The great public, on the other side, has only a languid interest in the maintenance of justice and the resulting security of human life and limb. What is everybody's business is nobody's business.

The worst miscarriages of justice in murder cases, within my observation, have been brought about, not by juries, but by judges, appellate courts, and pardoning governors. These are more amenable to an improved statute law than juries drawn from the people; hence the remedy of reforms in the statute law is not desperate or futile.

There should be a national association for criminal-law reform, holding yearly conventions, spreading information, and directing discussion on the subject; and from it projects of reform should proceed, to be laid before the State Legislatures and before Congress as the lawmaker for the District of Columbia.

The subjects to be discussed, and as to which reform is needful, are in my opinion the following:

The mode of empanelling juries, and particularly the admission of "bystanders," and the challenge for having "formed or expressed an opinion."

The continuance of causes on the mere demand of the accused, based on his own affidavit.

The definition of insanity, as an excuse for crime; the proof of such provocations as adultery, seduction, etc.

The definition of self-defence in cases of homicide.

The allowance of new trials and of writs of errors or appeals.

The pardoning power: its restriction or regulation.

In saying that the practitioners at the criminal bar occupy about the same position in the State Legislature, when a code of criminal procedure comes up, as a protected manufacturer or subsidized steamship-owner does in Congress, I did not state the full force of the fact; for the latter have generally access to the lobby only, and count but few of their number among the Senators and Representatives, while the "criminal lawyers" often make up the majority of one or of even both houses at the State capitols. Hence, a remedy for the defective laws under which society now suffers can only be brought about under the pressure of a fierce agitation from outside. Mr. Editor, could not your paper begin such an agitation? L. N. D.

Louisville, Ky., September 9, 1886.

Notes.

TICKNOR & Co.'s fall and winter announcements include holiday editions of Byron's 'Childe Harold' and Scott's 'Lay of the Last Minstrel,' and of Mrs. Browning's 'Sonnets from the Portuguese,' with decorative designs by L. S. Ipsen; 'Persia and the Persians,' by S. G. W. Benjamin, with numerous illustrations; 'The Virginia Campaign of General Pope in 1862,' being the second volume of papers read before the Military Historical Society of Massachusetts; 'Recollections of Eminent Men; and Other Papers,' by the late Edwin P. Whipple, with a new portrait, and a memorial address by the Rev. C. A. Bartol; 'Self-Consciousness of Noted Persons,' by Senator Morrill of Vermont; 'Genius in Sunshine and in Shadow,' by M. M. Ballou; 'Confessions and Criticisms,' by Julian Hawthorne; 'Stories of Art and Artists,' by Clara Erskine Clement; 'Mural Painting,' by Frederic Crowninshield; 'Safe Building,' by Louis De Coppet Berg; 'Stories and Sketches,' by John Boyle O'Reilly; 'The Minister's Charge,' by W. D. Howells; 'Rankell's Remains,' by Barrett Wendell; 'A Romantic Young Lady,' by Robert Grant; 'Steadfast,' by Rose Terry Cooke; 'A Muramasa Blade,' by Louis Wertheimer; 'Agnes Surriage,' by Edwin L Bynner; 'Songs and Satires,' by James Jeffrey Roche; and a new volume of poems by Nora Perry.

George Routledge & Sons will begin during the present month a new illustrated edition of Victor Hugo's 'Les Misérables' in five large octavo volumes. The translation is that of Sir Lascelles Wraxall, but the expurgated chapters have been restored. Four hundred engravings after designs by leading French artists (Hugo among them) will be interspersed with the text. The De Vinne Press will have the manufacture of this work, which promises to be of great typographical beauty. "Fantine," of course, leads the series.

The Life of Abraham Lincoln which has been in preparation for sixteen years by John George Nicolay and John Hay, the President's confidential secretaries, will form a leading feature in the *Century* for 1886-87. It will be freely illustrated—in the main, realistically. The interest excited by the *Century's* war papers promises to be thus long continued, and in the very section where a just knowledge of the author of the Emancipation Proclamation is so desirable.

W. S. Gottsberger has in press a new translation of Feuillet's 'Romance of a Poor Young Man,' now virtually out of print in this country. It has been made by J. Henry Hager, translator of 'La Morte' ('Aliette').

'Lyrical Poems,' by Emily Thornton Charles, and 'Red Beauty,' by W. O. Stoddard, are in the press of J. B. Lippincott Co.

Dodd, Mead & Co. will publish 'The Bow of Orange Ribbon,' by Mrs. Amelia E. Barr; 'He Fell in Love with his Wife,' by E. P. Roe; and 'Blue Jackets of '61,' a history of the navy in the civil war, by a grandson of J. S. C. Abbot.

Houghton, Mifflin & Co. will publish 'A Century of Electricity,' by Prof. T. C. Mendenhall.

"Of important measures of legislation, the last two years have been singularly barren. Only the Presidential Succession Bill and the Oleomargarine Bill have ripened into laws." With this statement Mr. Edward McPherson introduces the new volume of his indispensable 'Handbook of Politics' for 1886 (Washington: J. J. Chapman). Nevertheless, the chronicler must take account of proceedings as well as of results, and hence he tells what was done about "the Electoral Count Bill, pending since 1872; the Interstate Commerce Bill, pending since 1880; the Common School Bill, pending since 1884; the Supplementary Anti-Mormon Bill; the Supplementary Anti-Chinese Bill; the repeal of the Preemption, Timber-Culture, and Desert-Lands Acts; the Dakota and Washington Territory Bill; the Mexican War-Pension Bill; the Alcoholic Liquor Traffic Commission Bill; the Northern Pacific 'Land-Grant' forfeiture"—matters as to which inaction is not equally culpable. The silver question, the tariff bills, the Fitz-John Porter Bill, the toothless attacks on the Civil-Service Act, the labor votes, the Morrison surplus resolution, the President's vetoes, sundry judicial decisions (as in the Virginia coupon cases)—these topics also are appropriately followed up and recorded.

'The Medical and Surgical Directory and Register of the United States,' published in Detroit, Mich., by R. L. Polk & Co., gives every evidence of the care and labor, truly to be called stupendous, which the editors declare they have bestowed upon it. Such a work has never before been compiled, and the undertaking involved every species of obstacle and discouragement. To verify the statements of the physicians who answered the appeal for information; to supply facts which were withheld; to prevent duplication from the fact of more than one address in the case of males, from exchanging the single state for the married in the case of females; and, finally, to overcome the typographical liability to error, certainly called for an extraordinary degree of conscientiousness and patience. Nearly 80,000 persons are enumerated—once under the State and town in which they practise, and once in a bare alphabetical finding-list. The school to which they belong is indicated, with their educational training, and a real service is done to those who wish to discriminate, by showing that such a one returned no report concerning graduation, or attended lectures but did not graduate, or "claims to have graduated, but the records do not show that a diploma was granted to any one bearing the name." We have no doubt that the medical profession will see that the publishers of this important work receive such support as to warrant its constant revision and reissue from year to year.

We have received a second edition of Mr. W. M. Griswold's 'Directory of Writers for the Literary Press in the United States' (New York: J. W. Christopher). Though it contains all the names of the first edition, with additions and corrections, nevertheless it does not repeat particulars which called for no change, so that the first edition is a necessity in connection with the second, which might therefore rather be called a supplement. The slight change of form is a disadvantage, but has been adopted, we fancy, to bring the work into uniformity with the Q. P. Indexes. The useful index to post-office addresses, topics, etc., is not repeated, but we have in its place a handy list of authors recently dead. We observe that the number of authors recorded has grown from 350 to 596. Mr. Griswold, whose editorial address is 206 Delaware Avenue, Washington, D. C., desires to be notified of errors or omissions.

Mr. Griswold, by the way, has changed the name of his monthly *Index* to that of *Continuous Index*, "in order to call attention to its most distinctive feature, viz.: its *cross-reference* system, which is *continuous*, in that each number, while complete in itself, is also an index (to a large extent) to all previous numbers; and *cumulative*, in that, under every subject-entry, there is a reference to all other *allied* subjects."

The 'Systematic Catalogue of the Public Library of the City of the Milwaukee' is a work which goes counter to the best teaching and example of the progressive body to which Mr. Klas August Linderfelt belongs. The main excuse offered for the system adopted—the convenience of adding supplements—is to our mind no excuse at all; and the six volumes of the Wisconsin State Historical Society's catalogue offer a convincing argument to the contrary. The late S. B. Noyes's 'Catalogue of the Brooklyn Library' is immeasurably superior to Mr. Linderfelt's—the one combining the dictionary and classification schemes, the other discarding the dictionary (and frequently the alphabetical) arrangement altogether. The numerous indexes increase rather than mitigate the defectiveness of the plan, for as there are no double entries the classes are liable to be misleadingly incomplete. The table of contents shows only the main divisions—a fatal error. In short, this Catalogue, though well printed and, so far as we have tested it, carefully and accurately executed, is, like the 'Classified Catalogue of the St. Louis Mercantile Library,' a monument of misdirected labor.

The "Bosphorus Edition" of Edmondo de Amicis's 'Constantinople' (G. P. Putnam's Sons) has not quite an Oriental splendor, yet is distinguished from earlier issues of this translation by a large number of woodcut and process illustrations taken over from the French and printed on separate leaves. They are not always pertinent to the text, and the best of them make one feel how much more valuable a single photograph from the life would be. In short, while the book is to a certain extent embellished by them, the delightful text could have spared them.

In the reprint of Miss Jewett's 'Deephaven' for the "Riverside Pocket Series" (Houghton, Mifflin & Co.) we are introduced to a very taking form of book, with stiff cloth covers of a pale green. A series will follow, from Hawthorne, James, Warner, Bishop, Bret Harte, Bishop, Lathrop, Deming, etc.

The "Merchant of Venice," 'Religio Medici,' and 'Voyages in Search of the Northwest Passage' (from Hakluyt), and Pepys's Diary (a first part, the whole being promised, following Lord Braybrooke's edition, of course), are the four latest numbers in "Cassell's National Library," which is well sustained by Prof. Morley.

The *Forum* has rounded out its first volume of 615 pages. As if to be in keeping with the name of this magazine, the titles of the several articles are frequently given an interrogative form, quite after the manner of debating societies. Thus, the reader is asked—"Shall We Muzzle the Anarchists?" "Are We in Danger of Revolution?" "Is Labor a Commodity?" "What Rights Have Laborers?" "Shall an Eight-Hour System be Adopted?" "Is Romanism a Baptized Paganism?" "From Puritanism—Whither?" "Should the State Teach Religion?" "Shall Our Laws be Enforced?" "Would We Do It Again?" "Vulcan, or Mother Earth?" "Do We Need a Metallic Currency?" As will be seen, some of these questions have all the piquancy and mystery of conundrums. Five authors contribute to the series, "How I Was Educated." There is no lack of prominent names among the writers for this volume.

The fifth volume (new series) of the *Critic* calls for no special mention. Its leading articles, if they may be so designated, have had the usual diversity, and a few additions have been made to the series called "Authors at Home"—Lowell, Parkman, Leland, and J. A. Harrison being thus described.

Science of September 10 produces promptly a map of the Charleston earthquake, with "coseismal lines" for the even minutes after 9 P. M. of August 31. The resulting ellipses suggest the concentric circles of the pebble flung into still water. The central ellipse stretches from the Georgia boundary of South Carolina to the Virginia border of North Carolina, and its main axis is measurably parallel with the coast.

Timely articles in the *Journal* of the Military Service Institution for September are "The Apache Problem," by Gen. George Crooke, and "Apa-

che Campaign Notes," by Lieut. J. S. Pettit, who adds pen-and-ink sketches, among which one remarks the difficult "belt of Indian country looking across Guadalupe Cañon into Mexico."

Apropos of our recent note on a paper favoring the enactment of flogging in Pennsylvania for wife-beaters, the editor of the Philadelphia *Polyclinic* calls our attention to a paper describing scenes at the whipping-post in Newcastle, Del., which appeared in that journal for July. He adds to the conclusions reached by the writers (two physicians) adverse to the practice, this remark: "It is, I think, necessary to bear in mind that the cessation of charges for wife-beating, which was said to follow the enactment of the law punishing the crime by whipping, may be and probably is due to the fact that wives are unwilling to subject their husbands to the extreme disgrace which whipping brings with it."

M. Eugène Müntz, Taine's successor as a lecturer in the Paris School of Fine Arts, writes thus to an American friend: "The publisher of my 'Raphael,' M. Hachette, declares himself satisfied with the reception which the new edition has met with both at home and abroad. I am now at work on a new edition of my 'Renaissance in the Time of Charles VIII. (1483-1498).' My purpose is to expand one volume to two, though not passing beyond the limits of the fifteenth century. It is no small task, and will cost me a good deal of time. You will also learn with interest that our École des Beaux Arts has gained an important enlargement by adding to itself the adjoining Hôtel de Chimay. The space at command for the display of our models and collections will now be doubled. The institution has also received from an aged lady a legacy of three million francs 'pour encouragements aux élèves.' I have given up all idea of visiting Italy this year, and, aside from a September excursion to Germany, shall abide in Paris."

Mr. F. Marion Crawford's 'Roman Singer' has just been published in a French translation under the title, 'Un Chanteur romain' (Paris: Dentu). The form into which the author has thrown the story seems especially to charm the critic of the *Débats*, who writes of the book with much praise.

The King of Italy has recently caused an edition of the 'Divina Commedia' to be published which will have great interest for students of Dante. The text is accompanied by a hitherto unpublished Latin commentary by Stefano Talice, a scholar of the fifteenth century. The manuscript was completed by the author himself in the autumn of 1474, and not far from this date he used the commentary in reading and explaining the poem at the court of Saluzzo before the Marquis Ludovico II. and probably Joanna, the daughter of William VIII., of Montferrat, and before the beautiful and charming Margaret, the sister of that Gaston de Foix who was slain at the battle of Ravenna. The manuscript is preserved in the library of the King at Turin, and the present publication has been made under the direction of Signor Vincenzo Promis, librarian of the King, and Signor Carlo Negroni, of the commission of ancient texts. The King has caused the following dedication to his son to be placed at the beginning of the volume: "S. M. Umberto I.—Re d'Italia—Nell'ordinare la pubblicazione—Di questo antico commento dantesco—Lo volle dedicato—Al suo figlio diletto—Vittorio Emanuele—In premio del suo amore agli studi—E perchè nel divino poema—Fortifichi la mente—Ed educhi il cuore—Al culto della patria letteratura."

The second part of the 'Allgemeiner Handatlas' of Richard Andrees (Leipzig: Velhagen & Klasing; New York: Westermann) contains beautiful maps of Silesia, Pomerania, Western Germany, Southwestern and Northeastern France, Spain, and Portugal, the Atlantic States of North America as far south as Georgia, South America (with numerous side-maps), and the West Indies in detail. The scale is generous, and the lettering, though small, very distinct.

N. V. Mushketoff has just published, in St. Petersburg, a large and important volume entitled 'Turkestan: a Geological and Orographical Description.' It contains a very minute description of this region, which has so recently come into the possession of Russia, and is founded upon data obtained by the author during a period of six years which he spent in travelling over it, from 1874 to 1880. The first part is devoted to a review of the literature of the subject, from the most ancient times to the present day, including the most recent researches, which are so well set forth in the great work of Élisée Reclus. The second part is devoted to a description of the Turkestan or Aral basin. The author begins by an explanation of the road from Orenburg to Samarcand, to which he devotes one chapter; this is followed by the western hill country of Tan-Shani, the valleys of Ferghana, the mountain districts of Pamir, and the Amu-Darya to Petro-Alexandrovsk. The present volume includes a description of the twelve-days' march through the Kyzyl-kum, from Petro-Alexandrovsk to Kazalinsk, on the full-flowing Syr-Darya. The work is illustrated with forty-two drawings, plates, and maps.

—The September *Century* has a timely article upon Liszt, with two good portraits, and well-illustrated papers upon the Aquarium at Naples, Ballooning, and the Arts of Persia. In the last, Mr. Benjamin succeeds with a very difficult subject for a popular audience. "Chancellorsville" is the central subject of the war papers, and the campaign is illustrated by personal reminiscences from officers who held important commands in the national army. Gen. Pleasanton tells of the manner in which Hooker's strong strategy in the preliminary movements changed to doubt and weakness when his army was in contact with the enemy. The article may also be regarded as a vindication of the claim of the author to a leading and decisive part in the brilliant episode of the great battle which made Hazel Hill a famous name in military story. Gen. Howard recounts the attack of Stonewall Jackson upon the Eleventh Corps, and repels the accusations of cowardice which were once so freely cast upon that organization. He circumstantially details the preparations made for resisting the flank attack, and the depletion of the reserves by Hooker's orders just before the storm burst upon them. He contends that he and his subordinates did all that was practicable, and impliedly argues that, more being allotted to them to do than was reasonably possible for their numbers, the responsibility must rest with the commander of the whole army, whose total forces were largely superior to those of his adversary. Mr. Bates gives us reminiscences of Gen. Hooker's revisiting the field in 1876, and the defence of his conduct which Hooker then made in the presence of the companions who followed him over the historic ground. Col. Jackson contributes an account of Gen. Sedgwick's successful assault on the heights above Fredericksburg while the battle at Chancellorsville was raging. This whole series of papers may perhaps be properly considered as vindicatory of personal reputations more than contributory to the general history of the war.

—The English Dialect Society's latest issues are Dr. A. J. Ellis's 'Report on Dialectical Work from May, 1885, to May, 1886,' and Part 2 (G to Z) of a 'Glossary of Words used in the County of Chester' (London: Trübner). Dr. Ellis exhibits with much particularity the method by which he has collected material for the dialectic mapping of England on a phonetic classification. By next year the map and the accompanying discussion in a popular form will, it is hoped, be laid before the public. The Chester Glossary is full and readable, and offers many points of curious interest. Our slang phrase "a game leg" is recalled by *gammy*, 'imperfect, diseased' ("He's very bad; he's getten a gammy leg"). *Gradely*, 'proper, decent,' as, "a gradely woman," might well have survived in literary usage. *Guess* is defined, 'to form an opinion,' and we are told that "the idiom, 'I leave you to guess,' meaning 'You can form your own opinion,' is in very constant use." A racy idiom is *hang choice*, 'no difference, one as bad as the other.' A child's first lesson-book, called 'Reading Made Easy,' becomes in the mouths of the users *Reedimadazy*. Reynard the fox "is frequently spoken of as *Mister Reynolds*." "We have," says the compiler, Mr. Robert Holland, "a saying that 'a *green winter* makes a fat churchyard,' on the supposition that warm winters are unseasonable, and therefore unhealthy. The statistics of the Registrars of Deaths, however, show conclusively that this popular idea is without foundation." Another expressive proverb, "Its aizy howdin deawn t' *latch* when nobody poos at string," means that "anything is easy of accomplishment when no opposition is offered; but it is more generally applied to a woman who, never having had an offer of marriage, boasts about remaining single." It may not be superfluous to quote further: "The latch, on the inside of the door, has a leather thong or piece of string fastened to it; the string is then passed through a hole in the door, so that the latch can be lifted from the outside by pulling at the string." A fast vanishing custom of *lifting* is described—a mode of household begging on Easter Monday and Tuesday, when the mistress and master of the house respectively find a garlanded chair at the foot of the staircase or in the breakfast-room, in which they must sit and be "heaved" slightly from the ground by the domestics, and pay largesse therefor. Not unknown on this side of the Atlantic is the "custom in country places for old women to comfort themselves in church by sucking *mint-drops*. In years gone by, the smell of peppermint in Mobberley Church on Sunday afternoon used to be quite overpowering."

—*Les Lettres et les Arts* for August (Charles Scribner's Sons) is the most seriously valuable number of the *revue* that has yet appeared. The principal artistic attraction is undoubtedly in the original drawings of Prudhon, reproduced with such excellent effect to accompany the article of M. Henri Bouchot, "Marie-Louise et Prudhon," in which, with many digressions, the writer tells the story of the magnificent wedding gift of the city of Paris to the young Empress; the complete *toilette*, as it was called, or furniture for her dressing-room, in silver gilt, executed from the designs of the artist. M. José-Maria de Heredia tells something about the life and works of the sculptor Ernest Christophe, in a very sympathetic and attractive manner. The article is illustrated by a fine full-page etching by Boilvin of Christophe's bronze group, "La Fatalité," exhibited last year. But the most important article in the *revue* is the long and very interesting paper of M. Eugène Müntz, "La Tapisserie à l'époque de Louis XII.," which, with its photogravures of tapestries from private collections not open to the public, is a most valuable contribution to the history both of art and of literature, as well as an exquisitely finished piece of literary work in itself. "Le Cavalier polonais au XVIIe siècle," which is signed Capitaine Kudelka, is said in a note to have been communicated to the *revue* by Prince Czartoryski, together with the designs which accompany it, and

which represent arms and armor of the period preserved in the Czartoryski collection at Cracow. It is a very vivid sketch of the Polish army two hundred years ago, or rather of that part of the army composed of the nobles, and it begins and ends with a characteristic historic scene related in such a way as to bring out all the picturesque and barbaric details in the most striking manner. The paper of Dr. J. Renaut, "L'Hypnotisme," is a very serious and sober study of the subject, without any attempt to penetrate to its inner nature, but giving a certain number of facts by means of which he tries to show the connection between the hypnotic state and ordinary sleep. The most interesting part of the paper, indeed, is what the author has to say of sleep and dreams, which will probably be entirely new and surprising to most readers. It is illustrated by a fine portrait of Dr. Charcot, the famous director of the Salpêtrière, and by several photogravures of patients under hypnotic influence. M. Leconte de Lisle has a long and powerful poem, "La Mort du moine," and M. Émile Pouvillon a charming but sad little sketch, "Dans les feuilles." The customary lightness and gayety of the *revue* is this time all in the article of M. Francisque Sarcey, who evidently holds his dignity very cheap, or he would not have written "Le Divan rouge," in which he gayly treats his readers to a version of his very unideal proposal to Sarah Bernhardt—a proposal which, as he kindly informs us, had no result. A captivating full-page portrait of the great actress accompanies the article.

—Edgar Bauer, the brother of the ultra-radical Bible critic and erratic historico-political philosopher, Bruno Bauer, died last month at Hanover, at the age of sixty-five. Nearly half a century ago the two brothers were favorite apostles of revolutionary ideas in state and church. They were persecuted by the Prussian Government, and some of their writings suppressed. Edgar boldly defended his brother's cause, and his 'Der Streit der Kritik mit Kirche und Staat' caused him to be imprisoned for four years in the fortress of Magdeburg, where he continued to labor with his pen, writing radical history. The amnesty proclaimed by Frederick William IV. on the outbreak of the Revolution of 1848 restored him to freedom, but the victory of their own ideas soon drove the restlessly combative Bauers into the opposite camp, Edgar surpassing Bruno in thoroughness of facing around. For a time he took up the defence of the Schleswig-Holstein cause against Denmark, and subsequently defended the right of the Danish crown against the Duchies. His Neo-Hegelianism did not prevent him from editing, jointly with a strictly orthodox bishop, the *Kirchliche Blätter* and the *Christlich-politische Jahrbücher*. After the war of 1870-71 he edited at Hanover several journals issued in the separatistic Guelph interest. As an author he was much less successful than his brother, who maintained his position as a leader of thought till his death in 1882.

THE ARCHÆOLOGIST OF ARTISTS.

Lorenz Alma Tadema: His Life and Works, by George Ebers. From the German by Mary J. Safford. W. S. Gottsberger.

If the first requisite of good biographical writing is sympathy with the subject of the biography, then Ebers had a very strong point in his favor in undertaking to write the biography of Alma Tadema. But the biographer's equipment does not stop here. One thing more is required—a mind that judges; that judges lovingly, perhaps, but that judges nevertheless. There exist, to be sure, admirable people, in the story of whose lives the line of demarcation between biography and eulogy would be very faint. But these people are so rare that the world persistently prefers in biographical writing at least the outward semblance of dispassionateness.

Dispassionateness, however, Ebers frankly disclaims. He writes of a hero, and warns us at the outset that we are to hear of nothing else. Now if Ebers were a literary man, no matter how great, and were nothing more, our interest in his eulogy of a given painter would be great only in proportion to our confidence in his artistic perception, and his power of telling us what he sees. But the conjuncture in the present case is a far more striking one. What gives Ebers his especial position is not his literary ability, but his repute as an archæologist possessed of a literary gift. What gives Tadema his especial position is not his ability to paint, great as that is, but his repute as a painter who knows the ancient and the mediæval world through and through. It might not be important for us to know what the literary man thinks of the painter, but it is extremely interesting to know what the archæologist thinks of the archæologist.

A few sentences will tell us very clearly what he thinks:

"His scientific perception carried him into the very heart of family life. Every garment, every ornament which had been worn by men and women, nay, even the way that the children had been clothed and educated, became familiar to him. He soon understood the arrangement of the houses so thoroughly that he could assign each utensil to its proper place—there is not a piece of furniture, not a vessel possessed by the ancients of which he does not own specimens or copies. The same remark may be made of musical instruments, and no living man knows better how they were used by the ancients. He collected every scrap of information that has reached our day about social pleasures in Egypt, Rome, and Hellas" (pp. 31, 32).

"There is no bronze or marble monument, no wall-painting, no vase-picture, no mosaic, no work of the ancient potter's, stone-cutter's, or goldsmith's which he has not studied and placed in the treasury of his knowledge. So at last he could not help feeling as much at home in ancient as in modern times" (pp. 32, 33).

"Tadema has often been called the archæologist of artists, and not unjustly, for he is more familiar with the scenes of ancient life he depicts than many a scientist [surely Ebers should have written *than any scientist*]; but his knowledge is as free from the dust of books as the astronomy of the desert Arab who has learned to find his way by the firmament over his head, because the mute, eternal wanderers of the sky point out his path through the darkness and adorn the cool, gracious night, which is far dearer to him than the scorching glare of day" (pp. 33, 34).

"Gay and untrammelled as his ancients themselves, he stands before the easel, and if the picture he creates, both in detail and as a whole, is as thoroughly and faultlessly antique as though he had summoned to his aid a whole arsenal of learned paraphernalia, he has done nothing except recall to mind the costume, house, utensils, garden, and room of a dear friend, to whose home he has often invited himself as a guest, and where he has looked around him with open eyes" (p. 34).

"He has obtained an intellectual citizenship among the ancients, and it is by virtue of having become one of them that he can represent their life with such peerless reality and truth" (p. 35).

"The viewer of his paintings may be sure that everything they show him accurately represents a past reality" (p. 40).

This is extremely interesting; for it stamps with the sanction of a professed archæologist the popular estimate of Tadema's archæology. That "the picture he creates is, both in detail and as a whole, thoroughly and faultlessly antique" is precisely what the public thinks; and nothing else in Ebers's biography is of so much importance to it as this repeated and emphasized voucher. The gist of the book lies here, and the reviewer must therefore address himself to this point. The limits of space will make it necessary to omit all discussion of Tadema's Egyptian and mediæval archæology, and to confine the examination (even here brief) to three of the best-known paintings of classical subjects, the "Sculpture Gallery in Ancient Rome" (given in a woodcut opposite p. 68), the "Picture Gallery in Ancient Rome" (given opposite p. 70), and the "Sappho" (not here given).

The first is useful as showing us Tadema's method. A group of people—one or two of them (including the sculptor's slave-attendant) with typical Roman features, one other certainly with a face such as no Roman had—are admiring a new vase. The accessories of the studio are copies of existing remains, *e. g.*, the Infant Hercules of the Naples Museum, with the pedestal there supporting him, the whole being raised above the bystanders' heads upon the sculptured drum of a column from Ephesus, now in the British Museum; a table from Pompeii; the Pericles bust, of the Vatican; the head, foreshoulders, and forelegs of the horse of the bronze Alexander of Naples; the seated Agrippina of the Capitoline Museum, etc. There is in all this a promise of care. In the Picture Gallery the accessories are again taken from existing remains. The Medea from Pompeii appears in a panel, and makes a stately figure on the wall. Under her, however, the name reads, not ΜΗΔΕΙΑ, but ΜΕΔΕΑ, a combination of Latin spelling and Greek letters such as Greek and Roman never saw. The names upon the folding panels of a Pompeian painting of the sacrifice of Iphigenia go still further than this, and exhibit the astounding spellings ΙΦΙGENIA for ΙΦΙΓΕΝΕΙΑ, and CALKAS for the Greek ΚΑΛΧΑΣ or the Latin CALCHAS. But one spelling more naïve than these has fallen under the reviewer's eye—the spelling by which, at the foot of a bronze relief offered for sale some years ago by a well-known firm in New York, a French man of art had displayed his Greek by Frenchifying what we know as Odysseus into the delicious form ΥΔΔΥΣΣΕ. So much for the trustworthiness of Tadema's archæology in so simple a matter as the spelling of Greek names. As regards matters Roman, it will suffice to say that the two prominent men among the visitors have their togas put on for them by an order of arrangement the exact reverse of that which was in vogue in ancient Italy, and much as if one should paint a Londoner of to-day with his frock-coat buttoned up behind. And this is one of the pictures of which Ebers says (p. 70) that "each new study of their rich details bestows a fresh pleasure."

Let us pass to the "Sappho," a work full of taking points: marble of which, if of any, Ebers's general eulogy of Tadema's marble might be accepted—"he penetrated all the mysteries of this wonderful stone, and learned to represent it new and weather-beaten, in monotone and variegated, in the brightest sunlight and the deepest shadow, with such fidelity to nature that the critic's searching gaze cannot distinguish the painted marble in his pictures from the genuine" (a statement which caps the familiar anecdote that real horses in antiquity were deceived into neighing by the painted horse of Apelles); far reaches of sea and sky, cut by the gnarled branches of an olive tree; fair maidens (of the modern Greek type) listening, and a fair youth singing to the accompaniment of his cithara. This picture, charming in composition, and faithfully rendering the character of an Ægean seacoast—in all, a piece of exquisite work—deserved a little care to make its archæology unobtrusively right. And we are at once struck by an evident intention to do this. The painting with which the cithara is decorated is archaic, as befits the time. Nevertheless, in front of the reading-desk on which Sappho leans, stands, poised upon a sphere, a winged and wreath-bearing Victory that could not possibly have been found till centuries after Sappho sang her last lyric. The inscriptions upon the marble

seats, bearing the names of the maidens of Sappho's *salon*, promise, however, something exceptionally accurate. Tadema has evidently been getting up Greek epigraphy. The extraordinary spellings which we have seen above are left far behind, and what we now find would easily pass itself off as the painstaking spelling of a dusty book. The letters are clearly archaic, and the digamma, which here begins the name of Anactoria of Miletus, does not grow on every bush, and is always an imposing sight. Still, we must venture to test this new learning.

As Tadema's scene is laid upon the island of Lesbos, we may naturally expect to find the strong Lesbic individuality shining out in the language and in the form of the inscriptions. We remark, therefore, with some degree of amazement the scope which our artist has assigned to the Panhellenic influence of Athens at so early a period as the close of the seventh century B. C. In regard to the forms of the letters, we might have expected him, as the Lesbic inscriptions do not carry us back to so remote an age, either to reproduce the oldest known type of the alphabet in use on the Asiatic coast, or to have recourse to something like the original Greek type as it is fairly represented in the oldest inscriptions of Thera and Melos. Instead of this it is perfectly evident that he has simply copied the oldest form of the *Attic* alphabet—not alone because the forms are uniformly those found in the Old Attic inscriptions, but because the shapes of the letter *lambda* (V, with the angle below, instead of above, Λ) and of *rho* (R, with the appended line) are decisive in removing the alphabet from all connection with the Asiatic coast. A reconstruction of the old Lesbic or the original Greek alphabet would furthermore have given *theta* the form of a circle with a point in the centre, as in the oldest known Asiatic-Æolic inscription, or at most a circle with the St. Andrew's cross within, surely not a circle with the Greek or upright cross, as Tadema has it. The digamma in ϝANAKTOPIA is, however, an inconsistency even from the Attic point of view, as this letter does not occur in Attic inscriptions of any period; neither does it, for that matter, in any Lesbic inscription. The artist brought it over, probably, from a related word in a Laconian inscription, and played it in here as a pleasant archaism. Finally, as regards the language itself, the word MILESIA (= Μιλησία) alone would prove that no attempt was made to use word-forms of the Æolic dialect. The Æolic form of the city name Μίλητος is Μίλλατος, as the grammarians amply attest and as we might expect, and the corresponding adjective form would be, not MIAESIA, but MIAAASIA.

Now a poetical treatment of archæology is wholly reasonable, and may, as in the work of Albert Moore, give greater charm and satisfaction than any accurate archæology has yet attained to. But an archæology that gives us monstrous spellings and ludicrous costumes—an archæology that presents us a Victory of the decadence as synchronous with an archaic painting of the year 600 or earlier, is no more pleasing and no more defensible than an archæology that should offer to us a Frenchman of the sixteenth century arrayed in doublet, jerkin, and trunk hose, surmounting reversed trousers of the year 1886, and capped with a silk hat. Such archæology has no *raison d'être;* and one cannot help suspecting that our English cousins who tell us that Tadema has all antiquity put away in pigeon-holes in his studio, and can produce you anything at a moment's notice, are unexacting in such matters, and that if Tadema had set up his studio in New York instead of London, he would have had either less reputation as an archæologist, or more archæology.

So much for Tadema's "faultlessness in details." But there is something else lacking, something more vital than the position, so to speak, of the buttons on the coat—the spirit of ancient life. Something is indeed caught, and admirably caught, of the spirit which reached its fullest expression under a Nero or a Domitian. But there was another Rome which Tadema either has not felt or does not care to study. If by a single work of art one wished to give a young student a conception of Roman life under the Empire, one would send him, not to Tadema, but to Walter Pater's 'Marius the Epicurean.' Nothing that Tadema feels is there lacking—not clear air, not far horizons, not blue water, not the splendor of marbles and jewels, not brilliant men and women; but there is something there, as there was at Rome, upon which our painter, despite his "loving appreciation of every emotion of the beautiful and natural lives" of "his kindred" the Greek and the Roman, has never opened his eyes.

And now, to return from the eulogized to the eulogizer, it would be impossible, even if one had begun with no opinion in the matter, to close Ebers's book without a deep conviction that the work of one who can so unreservedly guarantee the work of another as having the very qualities which it lacks, cannot itself be trustworthy. It does not, however, fall within the province of the present review to do more than suggest the importance of such a question to any one who is in the habit of getting his impressions of Egyptian, Greek, and Roman life and society from Prof. Ebers.

PACKARD'S FIRST LESSONS IN ZOÖLOGY.

First Lessons in Zoölogy. Adapted for use in schools. By A. S. Packard, M.D., Ph.D., Professor of Zoölogy and Geology in Brown University. Pp. 290; 266 figures. (American Science Series, Elementary Course.) Henry Holt & Co. 1886.

LIKE the other volumes of the series, this is handsomely printed and profusely illustrated, most of the figures being not only correct but clear and artistically attractive. The Introduction discusses briefly some general questions (the Differences between Animals and Plants, Classification, etc.) which would perhaps have been more fully comprehended at the end of the volume; certainly the beginner is not capable of modifying the statement on page 9 that "a family is composed of a genus, and varieties are composed of individuals." The physiological chemist will learn with surprise that "gluten is a sticky substance . . . like macaroni," that animal and vegetable protoplasm are "fundamentally alike for [because] when strongly heated or allowed to decay they both smell badly" (p. 2), and that (p.6) only "under certain circumstances do plants exhale carbonic acid"—the presumably essential concomitant process of oxygen-absorption being wholly ignored. Admitting the substantial correctness of the page on "Geographical Distribution," the opening sentence is not only without significance, but positively misleading, unless some such word as *natural* is understood before *assemblages;* yet the way in which a natural assemblage is formed is not obvious to the unlearned reader and is nowhere explained in this work.

The body of the volume takes up, approximately according to rank, various animals from amœba to man. The author recognizes the practical difficulties of beginning the study of either the animal kingdom or the vertebrate branch with the very lowest groups, but advises that a fish (perch or minnow) be first examined, "so that the student may have before him a standard by which to compare the lower forms"; yet, at the bottom of page 8, where this advice is first offered, there is at least room for the inference that the fish is not to be examined until *after* the "jellyfish, starfish, clam, lobster, and insect." Now a standard, to be most useful, should be either an intermediate, generalized form like the salamander, or low and simple like the lamprey (the lancelet being out of the question for beginners), or familiar, like the frog, fowl, or some small quadruped. The ordinary teleost is none of these, but a highly specialized creature, with many, complex, and peculiar parts; the catfish would be far easier for the beginner, and, indeed, the devotion of an entire page to the figure of the perch's skeleton, with its sixty-three components, nearly all unfamiliar and having technical names, is a good example of the many ways in which the present work contravenes the practice of successful modern teachers, and the principles set forth (though perhaps not clearly enough to be followed) in the preface.

Contrary to the opening paragraph, an "epitome collection" usually contains examples of *all* the classes, and the most elementary book for systematic study should figure the squid as a class-representative, and ordinal types like the manatee, hyrax, sphenodon, ray, alligator, white ant, dragon-fly, centipede, and spider. There are fully five vacant pages at the ends of chapters, and still more space might have been found for the missing forms by omitting, for example, one dipnoan, the young or adult angler, and most of the kangaroos. Something, too, is needed on viviparous sharks and on the interesting ray-eggs, so common at the seashore. There is, of course, room for difference of opinion as to general method, the selection of forms for fuller treatment, the arrangement of matter, and the choice of language, yet even in these respects an elementary work should set an example rather than be open to objection. It may at least be fairly demanded that it shall be preëminently intelligible, accurate, and free of contradictions; are these requirements met by the present volume?

Definitions of groups are confessedly difficult to frame, and perhaps have no place in an elementary work. If admitted, they ought to be fairly instructive; yet the characterization of the sub-class Ornithodelphia, as "with long, toothless jaws, like a duck's bill," could not be more unsatisfactory unless it were more extended. It is true that one genus has long, toothless jaws, but they are not in the least like a duck's bill; while in the other, although aptly named "duck-bill," the jaws are short and provided with teeth. To give such incompatible definitions in a 'First Lessons,' is like expecting a child to recognize sugar and quinine as composing a natural group of substances because they are *bitter, sweet, and pleasant to the taste.* The enumeration of the "distinguishing marks of vertebrates" omits two which are absolutely peculiar; ignores the fact that several species have but one pair of limbs and some none at all; implies that the cranium contains not only the brain, but the mouth, pharynx, eyes, ears, and nose; and affirms that the "forearms in man correspond to the forelegs of the dog." It is of no avail to reply that the author himself, if questioned categorically, would stigmatize the statements as defective, or absolutely untrue; he has undertaken to instruct those who are ignorant, or at least liable to be misled. He may have the right to call all the placental mammals "docile or teachable," notwithstanding the likelihood of a troublesome inquiry respecting the "docility" of the tiger and zebra; but there is certainly a chance of confusion from the fact that another American zoölogist long ago proposed a subdivision of the same group into "Educabilia and

Ineducabilia." While the naturalist and advanced student may know that *Amphibia* and *Batrachia* are commonly used as synonyms, the beginner will be puzzled by the expressions on pages 172 and 175; likewise by the unexplained use of *blind-worm* and *blind-snake* for the same forms, especially since they are neither worms nor snakes. In the Glossary, the Tunicates are defined as "the class of worms called Ascidians," but they are considered under vertebrates, and not even mentioned in connection with the worms. The lamprey is rightly credited with seven gill-openings on each side, but the figure shows only six. Other inconsistent statements refer to the skeletons of the ganoids, the habitats of the marsupials, and the numbers of the rodents and "hoofed quadrupeds."

Some of the teleological expositions are far from satisfactory. For all that is here stated, the fact that the horse should "nibble," while the cow merely nips, is quite as logically the *effect* as the *cause* of the difference in the teeth of the two grazing quadrupeds. Again, from what is said on pages 225–226, the uninformed but rational student would logically, yet incorrectly, infer that not even a rudimentary "collar-bone" exists in the squirrel, which "springs and jumps" better than the cat; or in man and monkeys, which "strike" even more efficiently with the pectoral limb. If, finally, the horse "affords a marked example of that process of intelligent, beneficent selection of favored, useful types which has gone on from early geological times" (p. 254), how shall the student of Sunday-school natural history account for the perpetuation of the mosquito which disturbs his rest, the shark which makes sea-bathing perilous, and the cobra which destroys not only the obdurate heathen, but the missionary in the very midst of his labors?

There are repeated comparisons with forms not yet presented, and so much defective arrangement and misleading description that the following must serve as examples: The egg of the crocodile is said to be "cylindrical"; the hypothetical ancestors of the vertebrates, though as yet limbless, are said to have "held on to their tails"; various infelicities are to be found on pages 231, 250, 171, and 121, and the concluding paragraph of chapter xviii is truly Browningian in its impressive obscurity. As an offset to so much that is faulty in style, the paragraph at the foot of page 268 had been marked for unqualified commendation as to matter and manner, when a collation with the concluding passages of the account of the anthropoid apes in Huxley's 'Vertebrates' showed that, although wholly unacknowledged, the paragraph in question has been borrowed, with but slight verbal changes and the omission of some technical terms.

The following important corrections are made for the benefit of those who may have committed themselves to the use of the present work: P. 139 and fig. 145, the caudal fin of the lancelet extends far forward *beyond* the vent, a peculiarity of this form; p. 151, the skeleton of the garpike does *not* resemble that of the perch; p. 152, the amia does *not* resemble the bass; p. 168, the polypterus is *not* a dipnoan, although this blunder has been perpetuated from the first of the present series; p. 180, the frog's intestine is *not* "nearly straight"; p. 171, eyelids do *not* occur in all amphibia; p. 183, lizards *may* lift the body well from the earth in walking; p. 263, the complete clavicle does *not* appear for the first time in the primates; *not all* primate brains are larger than those of other mammals; p. 265, some primate brains are much less convoluted than those of many other mammals; p. 270, it is not true that the hinder part of the hemispheres is unconvoluted in all the monkeys; p. 277, the human hyoid bone is *not* peculiar in being U-shaped. Finally, so far from having always five toes, as stated on p. 183, lizards vary greatly in this respect, as the author might have learned from the 'Essay on Classification,' by the great teacher to whom he owes so much.

Ordinary typographical errors are creditably infrequent, but "the fuller pronouncing Glossary," which is called a distinguishing feature of the work, is very incomplete, and teems with mistakes for which there is not a shadow of excuse. We look in vain for *amphibia*, *batrachia*, *anura*, *anadromous*, *whorl*, and *fauna*; *distal* occurs only under *proximal*; *ventricle* is a cavity of the heart only; *brain* is in neither Glossary nor Index; *lamboidal* is defined as *V-shaped*: *myriapoda* is misspelled, and wrong accents are given to *imago*, *vacuole*, *zoöphyte*, and *perennibranchiata*. That "the American Science Series" already comprises three editions of the 'Larger Zoölogy,' two of the 'Briefer Course,' and now an 'Elementary,' should be sufficient evidence of their merits. Nevertheless, a careful examination and a fair trial in the class-room have led to the belief that this commercial success is due rather to the enterprise of publishers, the lack of competition, the carelessness of critics, the ignorance and overcrowding of teachers, and the prevalent belief that, since natural history is not an "exact science," therefore its text-books need be neither clear, correct, nor even consistent.

The Last Days of the Consulate. From the French of M. Fauriel, member of the Academy of Inscriptions and Professor of Foreign Literature at the Sorbonne. Edited, with an introduction, by M. L. Lalanne. A. C. Armstrong & Son. 1886. 8vo, pp. 328.

A FEW years ago M. Lalanne, in the course of examining some papers of Condorcet, came upon a manuscript account of the events connected with the overthrow of the French Republic in 1804, in a hand unknown to him. Again in 1883, having to examine and arrange the papers of the distinguished Academician, Claude Fauriel, he found that the handwriting of his early years was identical with that of the anonymous manuscript. That Fauriel's manuscript had become mixed up with Condorcet's papers was easily explained from the fact of his intimacy with Mme. de Condorcet, and their residing in the same house at the time of her death in 1822.

The manuscript proved to be of extreme interest and value. It contains a contemporary account by an ardent republican of the most important events of a period very little known; the history of the Consulate, a sort of link between the Republic and the Empire, having generally attracted less attention than either the period which preceded or that which followed. The picture presented here of the character and government of Napoleon, and the means which he employed to establish his imperial power, is all in the line of other recent developments—the life by Lanfrey, the memoirs of Mme. de Rémusat, etc. The Emperor appears here as an unscrupulous adventurer, a man of an essentially vulgar and self-seeking personality. The picture is very likely one-sided; more is implied than is actually proved; and the apologists for Napoleon would say that, granting all that is alleged, the change of government was nevertheless a necessity of order and civilization. With all this we have nothing to do. It is, at any rate, worth while to know how the man and the events impressed a contemporary, a patriot, and a man of character and ability.

The book is in four chapters. The first, which treats of the general character of the Government of the Consulate, and the events which prepared for its overthrow, is of the most interest to general readers of history. The second describes the intrigues which prepared for the conspiracy of Pichegru and George Cadoudal, down to the arrest of Moreau. The fourth is a continuation of the second, describing the trial of the conspirators, but unfinished—breaking off abruptly in the middle of Moreau's speech. The third chapter was never written by the author, but would have been of extreme interest, treating of the death of the Duc d'Enghien, the arrest of Moreau and Pichegru, etc. For this chapter only a few memoranda existed, in connection with which the editor has drawn up a brief summary of events to connect the second and fourth chapters. The fourth chapter, by the way, comprises more than half of the entire work.

We have said that more is implied than actually proved in this book: that is, against Napoleon. The cruelty, injustice, and perfidy of the treatment of Moreau especially are by no means exaggerated. But two things should be borne in mind. First, what shocks us, who have the traditions and practices of English liberty, may in many instances be only the regular course of the administration of justice in France. The harshness of treatment was that of French law, not of the Consulate or the Empire in especial. A second point is, that it is not always possible to tell what was the work of Napoleon himself and what was that of his ministers. Rightly, however, the master is held responsible for the acts of his agents; and there was enough in these proceedings that was exceptional, even in French justice, to stamp them with infamy. The conduct of the trial, as narrated in chap. iv, was bad enough, but may have been only what was lawful in France, and at any rate is no worse than even the annals of English justice, as administered by Jeffreys, will afford a parallel to. But the trickery by which the conspiracy was engineered by the agents of the Government itself, and the innocent Moreau was entrapped, can find no justification; and it is impossible to acquit Napoleon himself of complicity in this. Moreau does not appear as a great man in these pages. While he commands our sympathetic interest, and appears to be an amiable and really patriotic person, there is a certain weakness in him; "A conscious indecision in his opinions and in his political feelings probably contributed to make them [the real conspirators] look upon him as a possible conquest to their cause, and to lead them to think that, after having won so many battles for the republic, he might at last resolve to try and win one for the restoration of the Bourbons, and thus expiate the others" (p. 73).

There is an earnest dignity in Fauriel's style, and a certain sententiousness, which has occasioned very fairly a comparison with that of Tacitus. The expression (p. 61), "that apathy in which the evils of servitude are still felt, but not its shame," is quite worthy of Tacitus. Of his power of personal characterization, we have a good example (p. 113) in Fouché, to whom Fauriel had once been secretary:

> "This man, who was to accumulate upon his head every sort of scandal, and to distinguish himself in the most opposite excesses of the Revolution; he who, as a proconsul in the departments, had committed so many ferocious deeds, and had applauded those which he had only witnessed with almost delirious enthusiasm; who declared that the smoking ruins of Lyons furnished the kind of spectacle that republics need, will perhaps furnish posterity with the most striking example of the facility with which the ministers of a liberty that is cruel and extravagant can become the servile agents of degrading despotism."

The work of the editor is done with great fidelity and thoroughness. Numerous foot-notes are added, which explain the antecedents and fortunes of every person mentioned, and an appendix, containing two or three documents of importance. The translation is good and idiomatic.

We note the following misprints: On page 33, in the foot-note, the death of Admiral Bruix should be 1805 instead of 1802: this date fixes the composition of the book as having been before March 18, 1805 (see Preface, p. vi). On page 127, line 11, we should read "6th Pluviose." On page 141, line 4, "Moreau's" should evidently be "Bonaparte's" —a change of some importance.

Lectures on the Physiology of Plants. By Sydney Howard Vines, M.A. Cambridge, England: University Press; New York: Macmillan. 1886. Pp. 710. 8vo.

THE physiology of plants has made great progress of late years, and has, like other special studies, become not a little recondite and technical. Yet it would seem that what is known of the subject might be so expounded as to be fairly intelligible and generally interesting to those not of the craft. Dr. Vines, the Reader of Botany in the University of Cambridge and the Lecturer in his own college, has undertaken this desirable exposition in lectures to his classes; and the University Press, by printing these twenty-three lectures as worked over into book form, in a handsome and handy volume, has now given the general scientific or scientifically-minded reader easy access to the principles of vegetable physiology in their present aspect. The arrangement and the presentation are admirable, the style clear and good, and the book, unlike some translations from the German into English, may be read with satisfaction. It may be commended even to the higher order of our botanical teachers, not only as an excellent model, but also for fulness of information and clear indication of the actual lines of research. Each lecture, moreover, is supplemented by a select bibliography of the topic.

In his preface the author calls attention to a point in terminology about which he seems uncertain—as well he may—whether he has taken the right course, viz.: "the use of the terms dorsal and ventral in speaking of the positions taken up by dorsi-ventral organs. It is the general custom of those who have written on this subject to speak of the normally lower surface of the organ as the ventral, and of the upper as the dorsal. Morphologists, however, term the normally upper surface of dorsi-ventral leaves the ventral, and the lower the dorsal. I have adopted the former use of these terms," etc. Now, in the first place, we see no need or propriety in this new-fashioned term dorsi-ventral as applied to leaves and other horizontally expanded parts. For plants and their parts have neither back nor belly, front nor rear, their appendicular organs being disposed circularly round a central axis. And when erect or ascending instead of horizontal, the normally upper face of the leaf looks inward toward the common axis. It is to this inner (upper) surface, which (as above stated) all morphologists from the beginning of morphological botany till now have applied the term of ventral, and this use of dorsal and ventral is well fixed in botanical terminology. We know not who the writers are whom Dr. Vines follows in this literally *preposterous* view; nor do we apprehend the reason of it. A dog, indeed, or other quadruped presents its ventral aspect to the ground and its back to the sky; but a leaf is not a dog that it should do this thing rather than the contrary. If a leaf has any back, it is natural to call by that name the part which is external when the leaf closes, and which has a midrib for backbone. But, after all, the author gives away his case on p. 321, where he speaks of the "upper (ventral) surface of the leaf of Dionœa." Here, where the upper surface acts physiologically as stomach, it were too absurd to call it anything but ventral.

Krakatau. Par R. D. M. Verbeek, Ingénieur-en-chef des mines, Chevalier du Lion Néerlandais. Publié par ordre de Son Excellence le Gouverneur-Général des Indes Néerlandaises. Batavia: Imprimerie de l'État. 1886. 2 volumes, 8vo, pp. 104 and 567, with atlas of forty-three maps and diagrams and twenty-five large plates in color.

THIS admirable memoir treats of the island of Krakatoa, a volcano lying in the strait between the islands of Sumatra and Java. It was the last eruption of this volcano which, in August, 1883, made it memorable in the history of the Indies and an object of peculiar interest to geologists and physicists; for it not only ravaged the shores of the neighboring islands, destroying the lives of nearly forty thousand people, but the shocks which it gave to the air and sea swept around the earth, and the vapors darkened the air of every land.

The first volume of M. Verbeek's great work treats of the island as it existed before August, 1883, and of the phenomena of a local kind attending the eruption. The second volume is devoted to a careful discussion of the scientific facts concerning the eruption, gathered from the whole field. Lying in the path of a great commerce, this island had been during three centuries one of the most constantly observed of volcanoes. Until 1883 it showed little signs of activity. Vogel, in 1680, probably saw a slight eruption from it, though of this there is some doubt. On the 20th of May, 1883, a vigorous but brief eruption began: it threw the column of cinders to the height of about thirty-three thousand feet, and covered the sea with floating pomice, but by the 23d the discharge appears to have become relatively slight. Eruptions not sufficient to prevent an exploration and survey of the little island occurred from day to day until August 26, on which date the great eruption began. This explosion lasted for about forty-eight hours, and was the most violent ever known. The sound of the outbursting gases was distinctly heard over a circle about three thousand six hundred miles in diameter, and was audible even at points which are separated from Krakatoa by one-sixth the circumference of the earth. This is about as if the explosions at Vesuvius should be heard in Boston. The great atmospheric waves caused by the successive explosions rolled at least three times around the earth, marking their passage by sensible movements of the barometer. The vapor ejected, mingled perhaps with the fine dust from the volcano, was swept by the winds of the upper air to all parts of the earth, and for more than two years caused at sunset and sunrise the red skies which were so much remarked. The great wave of the sea produced during the explosion, which rose to a height of more than one hundred feet near the volcano, was felt along the shores of the Atlantic and Pacific Oceans. As to the amount of solid matter ejected during this eruption, the author, after a most laborious study of the problem, comes to the conclusion that it did not exceed about twenty cubic kilometres; while, according to the calculations of Junghun, the explosion of Tomboro, in the island of Sumbawa, in 1815, threw out 318 cubic kilometres. Our author, on recalculation, reduces this estimate to 150 cubic kilometres; still, it remains clear that the Tomboro explosion produced about ten times as much ashes as that of Krakatoa, though it was far less violent.

We can but touch upon the conclusions of this masterpiece of scientific labor. It is not too much to say that it contains more, and more important, facts concerning the phenomena of volcanic explosions than have hitherto found place in the literature of the subject. The maps are well adapted to their purpose; the colored pictures, though not in the highest state of the art, are satisfactory. We venture to commend these purely scientific volumes to the members of Congress and others who think that the United States is doing exceptional work in publishing treatises of no economic value. It is doubtful if our Government ever put forth a more costly monograph than this, or one less likely to help in bread-winning; yet this great gift to science comes to us from the Government of a far-away dependency of the thriftiest nation in Europe.

BOOKS OF THE WEEK.

A First Reader. Boston: Ginn & Co. 30 cents.
Bercy, P. La Langue Française. Méthode Pratique pour L'Étude de cette Langue. W. R. Jenkins. $1 25.
Bornier, H. de. La Fille de Roland. W. R. Jenkins. 25 cents.
Bowen, C. W. Woodstock: An Historical Sketch. G. P. Putnam's Sons.
Branch, O. E. The National Advanced Speaker. Baker & Taylor. $1.25.
Brooks, H. M. Some Strange and Curious Punishments. [Olden Time Series. Vol. v.] Boston: Ticknor & Co. 50 cents.
Champeaux, A. de. Dictionnaire des Fondeurs, Ciseleurs, Modeleurs en bronze, et Doreurs. A—C. Paris: J. Rouam; New York: Macmillan.
Checkmated, and Other Stories. Cassell & Co. 15 cents.
Cleveland, R. J. Voyages of a Merchant Navigator of the Days that are Past. Edited by H. W. S. Cleveland. Harper & Bros.
Collins, Mabel. The Prettiest Woman in Warsaw. Geo. Munro. 20 cents.
Cournault, C. Jean Lamour, Serrurier. Paris: J. Rouam; New York: Macmillan.
Dal Vero, M. Francis: A Socialistic Romance. Harper & Bros. 25 cents.
D'Ennery, A. Love's Martyr; or, The Wife's Sacrifice. Rand, McNally & Co. 25 cents.
Dick, W. B. Dick's Commercial Letter Writer. Dick & Fitzgerald. 50 cents.
Dreyspring, A. Easy Lessons in French. D. Appleton & Co. 70 cents.
Duplessis, G., and Bouchot, H. Dictionnaire des Marques et Monogrammes de Gravures. Part 2. G—O. Paris: J. Rouam; New York: Macmillan.
Dyer, H. Records of an Active Life. Thomas Whittaker. $2.
Gogol, N. V. St. John's Eve, and Other Stories. Englished by Isabel F. Hapgood. T. Y. Crowell & Co. $1.25.
Grimm, H. The Destruction of Rome. Boston: Cupples, Upham & Co.
Gruyer, G. Fra Bartolommeo della Porta et Mariotto Albertinelli. Paris: J. Rouam; New York: Macmillan.
Hannay, D. Admiral Blake. (English Worthies Series.) D. Appleton & Co. 75 cents.
Haskins, Rev. D. G. Ralph Waldo Emerson: His Maternal Ancestors. Boston: Cupples, Upham & Co. 25 cents.
Hay, Mary C. A Wicked Girl. George Munro. 20 cents.
Jewett, Sarah O. A White Heron, and Other Stories. Houghton, Mifflin & Co. $1.25.
Keep, R. P. Greek Lessons, Prepared to Accompany the Grammar of Hadley and Allen. D. Appleton & Co. $1.40.
Ker, D. Into Unknown Seas. Harper & Bros. $1.
Kingsley, C. True Words for Brave Men. Thomas Whittaker. 75 cents.
Lee, Vernon. Ottilie: An Eighteenth Century Idyl. The Prince of 100 Soups. Harper & Bros. 20 cents.
Lee, Vernon. A Phantom Lover: A Fantastic Story. Boston: Roberts Bros. 50 cents.
Lossing, B. J. Mary and Martha, the Mother and the Wife of George Washington. Harper & Bros.
Luska, Sidney. As it Was Written. New ed. Cassell & Co. 25 cents.
Marx, R. Henri Regnault. Paris: J. Rouam; New York: Macmillan.
Matthews, B. The Secret of the Sea, etc. Chas. Scribner's Sons. $1.00.
Molinier, E. Les Plaquettes. [Les Bronzes de la Renaissance.] Vol. 1. Paris: J. Rouam; New York: Macmillan.
Moscheles, Charlotte. Tales of Early German History. Franco-American Book Co.
Panton, J. E. Dear Life: A Novel. D. Appleton & Co. 25 cents.
Paris, Comte de. The Battle of Gettysburg. From the History of the Civil War in America. Philadelphia: Porter & Coates.
Payne, W. H. Contributions to the Science of Education. Harper & Bros.
Poore, B. P. Perley's Reminiscences of Sixty Years in the National Metropolis. Vol. 1. Philadelphia: Hubbard Bros.
Porter, Admiral D. D. Naval History of the Civil War. The Sherman Publishing Company.
Rouaix, P. Les Styles: 700 gravures classées par époques. Paris: J. Rouam; New York: Macmillan.
Roux, J. Meditations of a Parish Priest. Englished by Isabel F. Hapgood. T. Y. Crowell & Co. $1.25.
Selections from Schiller's Lyrical Poems. Edited by E. J. Turner and E. D. A. Morshead. Macmillan & Co. 65 cents.
Shooting. 2 vols. Moor and Marsh, Field and Covert. By Lord Walsingham and Sir Ralph Payne-Gallwey. [The Badminton Library.] Boston: Little, Brown & Co.; New York: Duprat & Co., 5 East Seventeenth Street.
Sinclair, T. Humanitätsstudien. Strassburg: K. J. Trübner.
Stockton, F. R. The Christmas Wreck, and Other Stories. The Lady, or the Tiger? and Other Stories. Chas. Scribner's Sons. 2 vols. $2.50.
Stubbs, W. Seventeen Lectures on the Study of Mediæval and Modern History, and Kindred Subjects. Macmillan & Co. $2.60.
Tabor, M. The Three Systems of Life Insurance. Chicago: C. J. Johnson.
The Forum. Vol. I. The Forum Publishing Company.
The Sanitary Engineer. Vol. xiii. December, 1885, to May, 1886.
Tighe, A. The Development of the Roman Constitution. D. Appleton & Co. 45 cents.
Trouessart, E. L. Microbes, Ferments, and Moulds. D. Appleton & Co.
Truan, H. Les Grands Ecrivains Français. W. R. Jenkins.
Tyler, H. W. Entertainments in Chemistry. Chicago and Boston: Interstate Publishing Company. 60 cents.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 23, 1886.

The Week.

THE complete futility of the surplus resolution, which excited so much bitterness in Congress, is disclosed by the rapidity with which, in the absence of any law on the subject, the outstanding national bonds are being called in. The opponents of the surplus resolution said that if the public revenues should warrant large disbursements for the redemption of the public debt, large disbursements would be made without any compulsory statute. If the receipts of revenue should be small, the law would embarrass the Treasury, and might even lead to the borrowing of money with one hand while paying it out with the other. Such a thing as the hoarding of money in the Treasury merely for the pleasure of sitting on it, is unheard of and impossible. No Secretary who would do such a thing could hold his place a month. The revenues have mounted up to high figures since the adjournment of Congress, coincidently with the improvement in general business, and the bond calls have been issued with corresponding frequency, exceeding in amount the requirements of the surplus resolution even as passed by the House and before it was toned down by the Senate.

But an unexpected difficulty has been met by the Department in its endeavors to get the called bonds in for redemption. About 60 per cent. of those called are held by national banks as security for their circulating notes. These are in the custody of the Treasurer of the United States, in trust for the specific purpose of redeeming the notes. The banks say that it is no concern of theirs to gather up their notes and send them to Washington in order to take up the bonds and hand them over for redemption and cancellation. Nor is there any law requiring them to buy new bonds to take the place of old ones. A partial deadlock is the result, and the Secretary has sought to get rid of his surplus funds by offering to redeem other bonds not called. The temporary tightness in the money market has helped him to do this, since some investors, finding that they can get 6 per cent. on undoubted security, are glad to surrender a security which yields only 3 per cent. and is liable to be called in at any moment. But this relief is not sufficient to carry off the surplus left in the Treasury by the non-action of the banks. There is a *casus omissus* in the national banking law which Congress will have to meet early in the next session, but which will not be so easy to meet as might be supposed at first glance. The problem is how to get the called bonds held for bank circulation out of the hands of the Treasurer as trustee into the hands of the Treasurer as a redeeming and cancelling officer. If the banks are willing to forego for the time being the interest on the bonds, which of course stops at the expiration of the call, the limits of compulsory legislation are already reached. The circulating notes do not belong to the banks. They are in the pockets of the people. A law might be passed directing the Secretary of the Treasury to take up and cancel these bonds, and deposit in place of them the money he would have paid over to the holders if they had responded to the call; but this operation would not get the money out of the Treasury—that is, it would not accomplish the end sought to be reached through the bond call. The problem is something of a Chinese puzzle. It contains the germs of a good deal of mischief, especially if the Knights of Labor attempt the solution of it as they attacked the problem of the surplus with their machine-made petitions a few weeks ago.

The official figures from the Maine election convict Mr. Chairman Manley of several flagrant Blaineisms. He telegraphed to the country on Friday night last that "official returns from every city, town, and plantation in the State give Bodwell 14,000 majority over Edwards." The official returns which have since come to hand tell a different story. Instead of a Republican majority of 14,000, they show a majority of only 8,978, and a plurality of only 12,850. In 1884 the Republican plurality on Governor in September was nearly 20,000, and the Republican majority over all exceeded 15,000. In 1882 the Republican plurality was 8,872, and the majority over all 6,881. Mr. Manley also said in his bulletin that "our victory, taking it all in all, is the greatest Republican triumph ever achieved in Maine." He gave no figures as a basis for this claim, and we can now understand why he did not. The total Republican vote this year is less than 69,000, against nearly 79,000 in September, 1884, and nearly 73,000 in 1882. There is a Republican loss of 10,000 votes since 1884, and of 4,000 on the last "off year" vote in 1882. The Democratic total this year is less than 56,000, against 59,000 in 1884, and nearly 64,000 in 1882, showing the Democratic loss to be 3,000 since 1884, and 8,000 since 1882. The total vote of all parties this year is, in round numbers, 129,000, against 142,000 in 1884, and 137,000 in 1882.

Senator Edmunds must have suffered greatly while he was thinking over what he should say to the Vermont farmers, and it is not exactly surprising that he should have settled down upon the tariff, as the one thing which now connects the farmer as a producer of wealth with political life. We must say that the Senator was not at his best in this branch of dialectics, for all that he did say about the tariff ran to the conclusion that the farmer wants a home market for his products—the danger of anybody else supplanting him in the home market being so great—and that the way to attain agricultural prosperity is to curtail foreign trade. Judiciously of course: we should have some foreign trade, but not too much—we should have just enough. This being a political question, Congress will decide when we have had enough, if the farmers will be judicious on their part in electing the right men. In anything except foreign trade Mr. Edmunds favors the amplest freedom. The wisest thing in his speech is the following paragraph on the rights of labor:

> "The liberty of the laboring man is not only the liberty to 'strike,' as the phrase is, but it is the equal liberty not to strike if he does not wish to, and the liberty to work on in peace and safety if he thinks it for his interest so to do, while others may choose, as they have the perfect right to do, not to work upon the terms proposed. He will learn that violence against the administration of law, or unlawful coercion of any kind exerted toward other workingmen or towards employers, are crimes of the gravest character against all labor and the welfare of laboring men, upon whom the consequences of such things always finally fall more heavily than on any other classes of society."

Gov. Hill has earned the distinction of talking more and saying less on the Labor Question than any other public man of the present day. Neither Mr. Powderly, nor Prof. Ely, nor any of our clerical-labor reformers has put so many attractive commonplaces in small compass as the Governor strung together in his speech at Dunkirk on Saturday afternoon. He first laid down the general rule that it is the duty of the State to encourage and aid every man in his honest efforts to gain a living for himself and his family. This did not mean that it was the duty of the Government to furnish work for everybody, but it did mean that the Government should furnish "every reasonable facility" to all who are willing to work. The contrary of this proposition, that the Government should interpose every possible obstacle in order to prevent men from earning an honest living, may be held by some, but not by the Governor of our noble State. That something akin to this doctrine has gained the ascendancy in our public councils, may be inferred from the fact that although we have a country abounding in natural resources sufficient to make everybody prosperous and contented, many are eking out a miserable existence, although willing to work. This is taken to be proof that "there is something wrong in our system of government or in the administration of public affairs." What this is, the Governor forbore to mention, although his hearers must have been eager, after listening to so pathetic a discourse, to cast their votes so as to right those public wrongs which prevent men from earning an honest living.

For an apt illustration of the sad condition of the laboring classes, the Governor took up the case of the street car employees, who have to work twelve hours a day, and sometimes fourteen, and who never see their own children awake except on Sunday, and perhaps only one Sunday out of three or four. After reflecting upon this in moving terms, the Governor says: "It would *seem* as though eight hours of hard labor, four in the forenoon and four in the afternoon, followed up the year round, ought to be sufficient to enable any workingman to live, and are all that he ought ordinarily to be required to perform." But if the case is different from what it

"seems"—that is, if eight hours' labor will *not* suffice to enable a man to live as he ought to—the Governor can think of no remedy except to make Saturday a legal holiday. In other words, if you cannot earn enough money by working six days in the week, try the experiment of working five under a sanction of the Legislature. The wages earned or the goods produced by working on Saturday are to be made good, under the new holiday system, "by insisting that they [the laborers] shall be paid sufficient wages for their work to enable them to live comfortably." The Governor dismissed his audience with something like a benediction in these words, than which we have seldom seen anything finer:

"An abundance of work—work at reasonable wages and reasonable hours—followed by a holiday for all the people and then a day for religious worship, to be conscientiously observed, would seem to go far towards solving the labor problem and restoring the friendly relations which ought to exist between capital and labor."

The "declaration of principles" of the United Labor party at St. Louis declares that "its aim is to secure for laborers the full enjoyment of the wealth they create, and to make industrial and moral worth, not wealth, the true standard of individual and national greatness." These are excellent designs, but the latter is also that of the Christian Church, of the Free Masons, and of all the religious and philanthropic societies in the world. Not only the Buddhists but even the Mohammedans think highly of "industrial and moral worth." It is the means proposed by the United Labor party of attaining these ends which strike us as odd, for they consist entirely in Congressional legislation of a very complicated character, which really seems to be unnecessary. We cannot help thinking that, if the work can be done by legislation at all, a short amendment to the United States Constitution would answer the purpose, providing simply that "on and after the — day of —, 188–, industrial nd moral worth shall be deemed and considered the *only* true standard of individual and national greatness. Congress shall enforce this provision by appropriate legislation." The word "only," which we have italicized, would render all mention of "wealth" unnecessary. On the adoption of this amendment a short act, making the use of any standard of greatness except industrial or moral worth, a misdemeanor, punishable with fine and imprisonment, would soon settle the whole business.

The prosecution of claims before the departments in Washington, which, like many other evils that now afflict us, grew out of the late war, has lately assumed such vast proportions as to deserve serious attention. Washington contains a horde of "claim agents" who infest the departments, hovering over clerks at their desks, arguing before comptrollers, besieging auditors, and even consuming the little time spared to the secretaries by the office-seekers. These men present not simply claims which from their nature need the skilful preparation and argument of attorneys, but they press to a final settlement the accounts of officers of the Government, which require nothing but an ordinary statement, vouched for by receipts or affidavits, to insure their passage. In order to secure prompt settlement of their accounts, marshals, clerks, and other officers of the United States all over the country are solicited to employ these "claim agents," who personally supervise their adjustment, spurring an auditor's clerk here, hastening a comptroller's clerk there, praying that the secretary's clerk will make the case "special," and rushing with the messenger, who has charge of it in its last stage, to the Register, and thence to the Treasurer for the draft. This practice leads the public to believe that no little "greasing" of clerks is attempted, and sometimes successfully attempted. It delays the adjustment of the accounts of all those officers who have no claim agents employed, though their accounts have been properly and promptly rendered, and though they can ill afford to wait for their money. Add the disgraceful wranglings of these attorneys in cases where two or more pretend to have been retained (as in the awards of the Court of Commissioners of *Alabama* Claims, which have lately attracted so much attention), and the complaints of clients from whom exorbitant fees are exacted before drafts in their favor will be surrendered, in defiance of the plain terms of an existing agreement; and it will be admitted that the time has come either for some very strict regulations to be applied to "claim agents," or the driving of them altogether from the departments.

Mr. Chauncey M. Depew, who returned from Europe on Sunday, says of his observations abroad:

"An odd feature of Continental journalism, or so it seemed to me, is the manner in which American news is treated. The political and serious occurrences in this country are never noticed at all. The only American item I saw was a very full account of how President Cleveland caught a trout in the Adirondacks, and how Mrs. Cleveland stood on the hotel veranda and smiled when he brought it up. The fight on the floor of the House of Representatives between Congressmen Laird and Cobb was very fully treated in the Russian papers, so a friend of mine from St. Petersburg told me. He said that was the only American item printed in the St. Petersburg papers for three months. I noticed the European papers all gave that affair in detail, generally adding something like this: 'This affair clearly shows the trend of republican institutions.'"

Why should not foreign editors get that idea? They judge of American affairs from what they see in American newspapers, and these things which Mr. Depew mentions were all given the most prominent positions in our great morning journals. When a foreign editor takes up one of these great American newspapers he finds the first page given up almost entirely to scandal, crime, and tittle-tattle, while "all the political and serious occurrences" of the day are hidden away in small type on the inside pages. He naturally concludes that the latter are of secondary importance in the minds of Americans readers, and that the "trend of republican institutions" is correctly shown by the first page.

The *Herald* has made a rigid examination of its "exiles," the two nieces of the late Mr. Tilden, to see if it could not obtain from them some proof, however small, of their "expulsion" from their home at Greystone; but all the reporter could get was an admission that they were leaving a week or two sooner than they had expected. One of the ladies said with much simplicity, not being apparently a reader of the *Herald*, "that she did not know how the impression had gone abroad that they were driven out of Greystone." We can explain the matter in a very few words. There is no mystery about it. The "impression" was sent abroad simply to "make copy" and "sell the paper." Possibly it is unpleasant for these ladies to have it abroad, and it is apparently wholly false. But they must remember that a false impression brings as much in the market as a true one, and that nobody will be out of pocket by their feeling hurt. An attempt to get the ladies to say they were dissatisfied with their uncle's will, in lieu of their being dissatisfied at being "exiled," also ended in failure, though, journalistically considered, it deserved success. Our contemporary's reporters have since been roving about in search of a lawyer who will say that it is "a great shame," and that the ladies ought to be very much aggrieved. Such is "journalism"!

Neal Dow is usually an accurate man, but he fell into a curious error in his letter to the *Tribune* on Tuesday in speaking of "a lack of candor not often seen in the *Tribune*." The fact is that there has not been any candor seen in the *Tribune* for many years. It has been, as the technical phrase is, "ruled out of the paper," doubtless for the simple and we think sufficient reason, that a party organ cannot be candid consistently with its duty to its employers. Its duty is to conceal, magnify, deny, and pervert; and to show candor and yet draw its pay would be a piece of dishonesty of which no respectable journal would be guilty.

The interest which is being manifested in the question of the next Mayoralty is most encouraging. It shows that the people are realizing what an important influence the election this fall will have upon the welfare of the city. Thanks to the intelligent and fearless exertions of Mayor Grace, the public plunderers are more completely routed than they have been in a long time. The aqueduct ring, which was the greatest scheme for robbing the city that has been planned for many years, is overthrown. The Excise Commission has been wrested from the control of the liquor interest. The Department of Public Works is in the hands of an honest and able man. All these reforms can be maintained, and others scarcely less valuable can be secured, by the election of a Mayor who will carry forward Mr. Grace's work; but if he be succeeded by an incompetent, or weak, or dishonest man, there is no telling how soon it would be before the thieves would regain possession.

It seems that a good many people have visited Niagara Falls this season under the wrong impression that they would be at no expense except their car fare. The freedom of the falls, which this State purchased at an expense of a million and a quarter of dollars, has evidently been understood by many to include the freedom of every accommodation, convenience, and amusement about the falls, hardly excepting board and lodging at the hotels. Com-

plaint is made that hackmen are as numerous as ever, and as anxious as ever to crowd as much business as possible into each day of their lives. If those who go to the falls thinking that everything will be free to them when they get there, will stop a moment to consider, they will have no difficulty in discovering their mistake. The State, by its purchases, cut only one item from the expense of visiting and viewing Niagara Falls. That was, the provoking tolls for admission to the falls. A penny-grabbing policy on the part of the owners of the real estate along the American border had shut out the public from every eligible point from which to view the great cataract. All the State has done for the public has been to remove the barriers to free access to the sight-seeing points. It is possessed of a strip of land along the river-front past the American fall wide enough to afford ample room for the visiting public from the importunities of hack drivers and the impertinence of other sorts of solicitors. If the Commissioners for the State use properly the power they possess, no visitor ought to have reason for complaint about being annoyed at the State ground. Away from the dividing line between the State ground and private property, the visitor is left to his own tact and common sense. If he is overcharged for service or swindled in his bargains, he cannot blame the State or its management of the State reservation. Free Niagara never meant, nor will it ever mean, free hacks, free hotels, and free "Indian curiosities."

At the trial of a minister before an ecclesiastical court in Brooklyn on Monday, one of the parties resented the application of the term "woman" to one of the witnesses as in some sense disrespectful. He was promptly met by citations from the Bible, showing that it was there used as a perfectly inoffensive name. But it was not necessary to go nearly so far back as that for a defence of the term. The truth is, that the word "lady," except when distinctly used as a term of classification—that is, to distinguish a particular woman—has now become in the best circles, both in this country and England, an appellation with a little burlesque in it, owing to its general adoption by women in humble positions in life. The cooks, laundresses, scrubbing women, especially among the colored people, have all adopted it as a generic term describing a person of the female sex, without reference to her manners or position. In other words, they use it instead of "woman," and consequently, to those who remember its original signification, it is a little ludicrous, because it used invariably to connote refinement of person and manners. "Woman" has, therefore, come once more into vogue as the ordinary designation of the women who used to be called "ladies," without, however, driving "lady" out of use as a term of classification. In this the English-speaking usage has simply been assimilated to that of the French, who have always kept "femme" as a perfectly proper and perfectly respectful term. In fact, great particularity in speaking of every man and woman of one's acquaintance as a "gentleman" and a "lady," has now become almost a mark of rusticity, and, in grave cases, of what is called "caddishness."

The *Evening Post* publishes the sad story that the English lawyers who defended Cunningham and Burton, the dynamiters in London, never received a cent for their services. Mr. Stephen J. Meany now further confirms and elucidates the tale. He says he helped the prisoners in their defence, and got counsel for them, but all the money he was able to raise in this country for expenses was ten pounds sterling, and this was contributed by three men. He thinks this an awful and shameful fact, but most people will consider it very gratifying. There never was any doubt about Cunningham and Burton's guilt. They went to England on an infernal errand, and got their deserts, and perhaps nothing will do so much to discourage similar attempts as Mr. Meany's revelation of the small amount of substantial sympathy with which they are regarded in this country. Mr. Meany has the usual story to tell of "packed juries," partial judges, and "drilled witnesses," owing to the desire of accursed England to secure a conviction. The truth is, the villains have a morbid dislike to being blown up and having their buildings wrecked, and are perfectly unscrupulous in protecting themselves against the poor fellows who do it. The more widely known this is, however, the better.

It is becoming more and more apparent that Bulgaria must be Russian or not be at all. This the Bulgarians have been made to understand and keenly to feel. One may read, in such Russian journals as the *Novoye Vremya* and Katkoff's *Viedomosti*, the outpourings of revengeful exultation at St. Petersburg and Moscow on the announcement of Alexander's first dethronement. He was derided as a cowardly German intruder, who had stolen into the Slavic fold in order to betray it, and had been disgracefully kicked out as soon as recognized in his true colors. Ths Bulgarians knew who were their deliverers and natural guides and protectors, and would not allow the pure Slavic escutcheon of their young State to be dishonored by non-Slavic interference. This Panslavist illusion has been rudely disturbed by subsequent events. The work of the Sofia conspiracy was speedily undone by the spontaneous action of all classes of the Bulgarian people, military and civil. The Russian party, which, in the eyes of the Russian journalists, was identical with the bulk of the nation, appeared too weak even to attempt resistance to the general rising in favor of the Prince. And when he meekly laid down his crown at the feet of the Czar and left the country, no reaction, in a pro-Russian sense, showed itself in any quarter. Regency, Sobranye, and people have remained stanchly faithful to the cause of the Prince, who, by leading the first military struggle of the emancipated nation, became the representative of its independence and unity. His fête day, which is also that of the Czar, elicited immense demonstrations throughout the country, while the Russian Consulate at Sofia, where a Te Deum was sung in honor of the Emperor, had to be guarded by troops from insult. The Sobranye assembling two days after, two hundred deputies sent a message to Battenberg expressive of their desire to see among them their "hero Prince, the defender of Bulgarian liberty and independence." The officers of all the garrisons did the same. In the draft of a telegram to Alexander III., which the Sobranye voted after much opposition, an allusion to the Czar's expected future protection of Bulgaria had to be modified so that "defence" was substituted for "protection."

It is clear, the Bulgarian view of the relations of the Principality to the Empire is widely different from the Russian. The Bulgarians want no Russian protectorate, which Russia means to impose upon them. They aspire to be a nation, self-governing and conquering, as their ancestors were a thousand years ago and earlier, and not merely the southernmost appendage of the Russian Empire. A Czar of Russia delivered them from the yoke of Turkey, another Czar endeavors to force upon them the yoke of Muscovy. Their national ambition is stronger than their national gratitude. The passions of the present obliterate the impressions of the past, however near. What was deemed generous aid bestowed by mighty kindred, appears now the work of a selfish, grasping, and overbearing policy of expansion and annexation. Bulgaria fears Russia, and may soon intensely hate her. This change of feeling might be indifferent to the great Slav Power if it had only moral bearings; but it mightily strengthens the hand of Austria, the vanguard of Germany, in the affairs of the Balkan Peninsula, especially as the methods employed by the friends and tools of Russia in dethroning Alexander are radically estranging the Kings of Rumania and Servia from Russian guidance and influence. Russia has, perhaps, little to lose in Servia, for King Milan is even now almost a vassal of Austria-Hungary; but Rumania is wavering between opposite policies, and the fate which has overtaken a Battenberg will weigh heavily in the decisions of the Hohenzollern. Whether the attempted assassination of the Rumanian Premier, Bratiano, has also sprung from pro-Russian revolutionary motives or not, must soon appear.

There is nothing mysterious or, for that matter, alarming about the military rising in Spain. The army has been "inside politics" in Spain for seventy years, and has conducted all the revolutions that have occurred. Nearly all the leading soldiers of the past half century have been also leading politicians. The consequence is that every ambitious officer, even among the subalterns, dreams more or less vividly of hastening his rise by some sort of political upturning, and a considerable number are constantly preparing for it by corrupting the men in the ranks. General Prim's career, short as it was, probably did more to demoralize the Spanish Army than any other incident of the present century, because he not only overturned a dynasty, but set up a government of his own in its stead, and, in fact, when he died was a sort of Lord Protector of the Commonwealth. That the Regency has lasted so long without a military *émeute* is on the whole surprising.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, September 15, to TUESDAY, September 21, 1886, inclusive.

DOMESTIC.

PRESIDENT CLEVELAND on Tuesday left the Adirondacks for Washington, thus ending his vacation, which began on August 16.

A call for $15,000,000 3 per cent. bonds was issued by the Treasury Department on Wednesday.

Word has been received at the Treasury Department from the revenue cutter *Corwin* in regard to the seizure of the British sealers. The *Corwin* captured the schooner *San Diego* on July 17, a few miles from the Aleutian chain of islands, with 500 sealskins in cargo. On the 27th and 28th she caught two others, with full crews, salt boats, and a large supply of breech-loading arms and ammunition, for which no permits had been obtained. On August 1 two more vessels, the British schooners *Thornton* and *Carolina*, were taken in the act of seal catching, and on August 2 the British schooner *Onward* was overhauled. The vessels were taken to Unalashka, and the 2,100 sealskins captured were left in charge of the Deputy Marshal. Guttormsen, master of the *Thornton*, was found guilty, and sentenced to pay a fine of $500 and be imprisoned for thirty days. Norman, the mate of the *Thornton*, was fined $300. The captain and mate of the American schooner *San Diego* were found guilty. Capt. Raymond was sentenced to imprisonment for two months, and Mate Johnson to imprisonment for thirty days. It is assumed that the fines and sentences of imprisonment in other cases were similar to those given.

The annual report of Indian Commissioner Atkins, now in course of preparation, estimates for the expenses of all the Indian agencies for the coming fiscal year (including an increase of over $175,000 for Indian schools) $5,564,733. This is a decrease of $1,763,316 upon the estimates of Indian Commissioner Price for the fiscal year 1886.

Recent information received at the Interior Department indicates that the work of inducing the Chippewa, Sioux, and Ute Indians in the Territories of Dakota, Idaho, New Mexico, Washington, and Arizona, and the States of Michigan, Wisconsin, and Nebraska, to divide up in severalty the lands now held by them in common, is making most satisfactory progress.

A plan of promotion has been prepared by the Civil Service Commissioners for submission to the President. It contemplates the formation of boards of promotion in each department in Washington, to be assisted by an auxiliary number from each bureau, to whom applications and candidates for promotion are to be presented. Applicants are to be subjected to practical examinations, and are to be rated and marked after examination and certified for promotion four at a time, just like successful candidates in the primary examinations before the Commission. The heads of bureaus or divisions are to have the privilege of marking the papers of candidates as to efficiency.

In the United States Court at Cincinnati on Monday the great telephone case was opened.

The official vote of Maine for Governor, except a few small towns, returns from which have not been received, gives the following result: Bodwell (Rep.), 68,837; Edwards (Dem.), 55,987; Clark (Pro.), 3,872; scattering, 20. Bodwell's plurality, 12,850.

The Wisconsin Democrats on Wednesday nominated Gilbert M. Woodford, a lawyer of La Crosse, for Governor. Charles Jonas, the Racine Socialist who was selected by President Cleveland as Consul to Prague, but whom Austria declined to receive because he was a political exile, had been the second choice of most of the delegates for gubernatorial honors, but early in the morning the Convention hall was flooded with a circular from a committee of Milwaukee Socialists, absolutely demanding that the Convention nominate Jonas on account of his pronounced Socialistic tendencies. This destroyed his chances. The platform commends Congress for restoring land granted to railroads to the public domain, condemns the leasing of convict labor to contractors, favors a revenue tariff, opposes "lawlessness or mob violence," and says: "We send cordial greeting to President Cleveland and his Cabinet, and our hearty commendation of their wise and patriotic administration of public affairs, in accordance with the principles and pledges of the Democratic party; an Administration which, by its purity, fidelity, and ability, has commanded the respect of all parties and classes of men in the United States, and revived the faith of all in the principles of free government; and we especially commend Postmaster-General Vilas for his economic management of his department, and for his successful opposition to the so-called Pacific Mail subsidy, wherein he faithfully adhered to Democratic principles, and triumphantly vindicated the pledges of the party to oppose the tyranny and greed of monopoly."

The People's party in Wisconsin (Socialist) nominated a full State ticket on Thursday, with John Cochrane for Governor.

The Pennsylvania Greenbackers on Thursday nominated R. J. Houston for Governor with a full ticket.

The first National Convention of Anti-Saloon Republicans met in Chicago on Thursday. About 300 delegates were present. Ex-Senator William Windom was made permanent Chairman. In his address he said: "We are here under the call of true and loyal Republicans, desiring, through that party, to accomplish what we believe will be a great good for the American people. For myself, I never had the slightest thought of attempting to organize a new political party. I think that such a thought does not enter the minds of any other delegate here present. The party that freed the slave, that dignified human labor, that enacted homestead laws, that suppressed the great rebellion, that defended its honor in peace, and advanced it to the front rank of the nations of the earth, is good enough for me now." A platform was adopted declaring war against the saloon, and holding that the Government should restrict and control its influence; asserting that the national Government should absolutely prohibit the manufacture and sale of liquor in the Territories; approving as the best means for dealing with the traffic local-option laws and the submission of constitutional amendments; making the saloons responsible for all public and private injury resulting from the traffic; and in conclusion saying: "We demand that the Republican party, to which we belong, and whose welfare we cherish, shall take a firm and decided stand as the friend of the home and the enemy of the saloon, in favor of this policy and these measures. We pledge ourselves to do our utmost to cause the party to take such a stand. And we call upon all temperance men and all friends of humanity, of whatever party or name, to join with us in securing these objects and in support of the Republican party, so far as it shall adopt them." The National Committee decided to present memorials to the State Republican conventions, and to do everything possible to get the party to commit itself to temperance everywhere.

The New York Democratic State Committee met in Saratoga on Tuesday. John O'Brien resigned the Chairmanship, and ex-Congressman Walker of Steuben was elected in his place. He is a supporter of Gov. Hill. It was voted not to hold a State Convention, and the motion to appoint a Committee to confer with the Republican Committee in regard to a nominee for a Judge of the Court of Appeals was defeated. An adjournment was taken to September 29.

At a meeting of the Sub-Executive Committee of the County Democracy on Wednesday evening, with Senator Michael C. Murphy in the chair, a resolution was unanimously adopted "that the Chairman appoint 100 members of the organization, of which the Chairman shall be one, to wait upon the Hon. Edward Cooper upon his return from Europe, for the purpose of cordially welcoming him home, and of expressing to him the unanimous desire of the County Democracy that he will consent to again take an active and foremost part in the conduct of its affairs."

Martin Irons, the leader of the Knights of Labor strike on the Missouri Pacific Railroad last spring, was arrested in Kansas City on Sunday night, and taken to St. Louis to answer to the charges found against him in the indictment for complicity in tapping the private telegraph wires running into Vice-President Hoxie's residence.

A hurricane passed through parts of Illinois, Indiana, Wisconsin, and Michigan on Thursday, doing considerable damage. In Terre Haute many large buildings were unroofed. At Howell, Mich., a man was killed. A large number of small towns suffered severely. Montezuma, a small town in Indiana, is said to have been wiped out of existence.

FOREIGN.

In an interview with Prince Bismarck, M. de Giers, the Russian Foreign Minister, distinctly promised that Russia would not occupy Bulgaria. The British Government has decided to rely on European concert and refrain from any special or isolated action. The probable result of Russian aggression in Bulgaria will be Great Britain's permanent hold on Egypt.

The Bulgarian Sobranye has resolved to prolong the state of siege in Bulgaria; also to court-martial eighteen officers inculpated in the kidnapping of Prince Alexander, in order to restore the discipline and morale of the army. The Sobranye's reply to M. Stambuloff's speech at the opening of the session denounces the "infamous *coup de main* of August 21, which was organized by a handful of miscreants, and which caused a feeling of deep revolt among the Bulgarians, obliging them with their valorous army to rise like one man to defend the honor and independence of the Crown." It demands that the authors of the revolt receive exemplary punishment; says that Bulgarians cannot find words to express their admiration for the unprecedented self-abnegation and patriotism shown by Prince Alexander, and assures the Regency that the Deputies will do their utmost to assist the Government in preserving order and saving the country from imminent peril. England, Austria, and Italy have recognized the Bulgarian Regency. The Sobranye also adopted an address to the Czar praying for his protection over the liberty and independence of the country.

The Committee of the Sobranye appointed to examine into and report upon the circumstances of the recent *coup d'état* in Bulgaria have concluded their investigations. They pronounce MM. Karaveloff, Nikiforoff, and Zankoff jointly criminally responsible for the affair, and recommend that all three be suspended from Parliamentary immunity.

Cols. Motkuroff and Nicolaieff, the latter of whom is Bulgarian Minister of War, both declare that unless Alexander's kidnappers be punished, a revolution may break out at any moment. The trial of the revolutionists by court-martial is proceeding in spite of Russian prohibition, and is considered a direct act of rebellion against Russia. The Sobranye has voted a grant of $500,000 to purchase all of Prince Alexander's property in Bulgaria, retaining from the whole sum $185,000 with which to liquidate the Prince's indebtedness to the National Bank. The Russian agent has informed the Bulgarian Government that Russia has not only resolved to maintain the independence of Bulgaria, but has reserved for

herself the right of defending it. It is stated in Constantinople that England, Austria, and Germany have invited Turkey to occupy Rumelia if Russia invades Bulgaria.

M. Bratiano, Rumanian Prime Minister, was shot at on Thursday evening by an assassin. M. Bratiano perceived the man's intention in time to avoid his aim. The bullet struck M. Robesco, a member of the Chamber of Deputies, and wounded him. The assassin was arrested and locked up. He confessed that for political reasons he intended to kill M. Bratiano. The weapon used was a pistol. The attempt produced great excitement among the people.

The German Reichstag was opened on Thursday. The speech from the throne was confined to an explanation of the objects of the commercial treaty with Spain. The Socialists adopted obstruction tactics.

The German Bundesrath has agreed to prolong the minor state of siege of the city of Berlin.

France has given Germany satisfactory assurances recently, and the tension between the two countries caused by the actions of Gen. Boulanger and French Chauvinists has largely vanished. The relations between the Paris and Berlin Governments are now better than they have been for a long time.

A revolution was attempted on Sunday evening by a regiment of Spanish infantry in Madrid. They rushed through the streets crying, "Live the Republic!" The insurgents attempted among their first exploits to secure possession of the arsenals, docks, and barracks, which they attacked with open fire, but all these places were well and successfully defended, and the rebels were repulsed. Finally, their reverses drawing them together, the insurgents attacked and got possession of the Southern Railway. By this time the authorities had fully prepared to master the situation. The loyal troops were marched to the railway, and after a short fight they completely dislodged the revolutionists, who dispersed into the country, Gen. Favia pursuing. During the fighting in the city one of the officers leading the insurgents was shot and killed. The rebels shot Gen. Velarde in a skirmish. They also mortally wounded Count Mirasol and killed a colonel of artillery. The rebel leader was Brig.-Gen. Villacampa. Perfect quiet prevails in Madrid and the provinces. Only about 300 soldiers rebelled, and only about forty rebel cavalrymen are now at large. They will probably soon be captured. Arrests of Republicans continue. All the officers implicated have been condemned to death.

The Pope's course in favoring the Jesuits has caused general dismay in Italy. Public meetings will be held to pray the Government to enforce inexorably the laws against them.

The state entry of the Marquis of Londonderry into Dublin on Saturday was made with the usual official demonstration, but was devoid of incident. The Marquis was accompanied by his wife, Lady Londonderry. They were received in Westland Row by a crowd which cheered them. Both the Marquis and Lady Londonderry rode thither from the station on horseback. When the couple departed from the railroad station they were greeted with cheers, followed by groans. The entire route from the railway station to Dublin Castle was lined with troops. Most of the buildings were decorated. The Hibernian Bank building was conspicuous by its total lack of flags, bunting, or decoration. All along the route the cheers were mingled with groans, the former predominating.

There was a desperate riot in Belfast on Sunday. Policemen arrested two drunken men who were fighting. A mob gathered and attacked the barracks where the prisoners were confined. There were only four constables within. They fired eleven rounds, killing one man and wounding several others. The mob was scattered by reinforcements of police. Rioting was renewed between the Catholics and Orangemen on Monday and Tuesday.

Two serious riots occurred in Liverpool on Sunday. One resulted from an encounter between Orangemen and Nationalists; the other had its origin in inflammatory speeches made at a Socialist meeting in Toxteth Park. The police had the greatest difficulty in suppressing the outbreak. Many of the rioters were arrested.

During the debate in the House of Commons on Wednesday night a Parnellite charged that the Government refused to pay any attention to remedies for local grievances of the Irish people. Lord Randolph Churchill replied that the accusation was unfounded. The Government, he said, would make proposals to Parliament at the earliest moment possible for placing all questions of local government and public works in Ireland in the hands of the Irish people, and therefore he thought it would be no more than fair to give the Government time to develop these intended measures, instead of protracting the business before the House by enforcing the discussion of details, with a constant repetition of every imaginable grievance which Irishmen might have. It is now understood that, after further talk on the Irish constabulary appropriations, the Parnellites will cease their obstructive tactics, and the appropriations will be rapidly passed. Parliament will probably be prorogued on September 25.

Mr. Gladstone reappeared in the House of Commons on Monday night, and was warmly received. Lord Randolph Churchill announced that the Government would at the next session introduce a bill to facilitate the transfer of land, reducing the legal costs. Mr. Parnell, in moving the second reading of his Land Bill, said that the recent elections conveyed a mandate to the House of Commons that it should show itself willing and able to provide for the wants of Ireland equally as if it were an Irish Parliament. If the Government, he said, armed with this bill, should stay evictions in Kerry, it would do more to restore peace than all the Gen. Bullers put together. He claimed that the bill was essentially moderate, and calculated to pull matters smoothly through the winter. Mr. Parnell spoke for one hour and twenty minutes. Mr. Gladstone was loudly cheered on rising to speak. In the course of his address he said in substance: It was too late now to argue that it was impossible to distinguish between those who were unable and those who were disinclined to pay rent, because Parliament had more than once recognized that it was possible to draw an act with such distinction. Mr. Gladstone said he had never committed himself as to the rents of leaseholders, and therefore could hold himself open to consider what was said on the subject by both Nationalists and Conservatives, retaining full liberty to adopt the best form in which the measure should ultimately appear. He felt bound in honor and justice to vote for the second reading of the bill, which, apart from general policy, he believed was absolutely necessary, in consequence of an important proceeding of the Government by which they were committed to propositions of the deepest importance—propositions involving the country in consequences the magnitude of which perhaps none of them was fully capable of realizing.

The Land Bill was defeated on Tuesday night by a vote of 202 to 297. All the Gladstonians supported the Parnellites. 31 Unionists voted with the Government. Sir Michael Hicks-Beach intimated that the Government might call an early session of Parliament to pass a coercion bill.

Sir Charles Dilke has returned to London. It is already announced that he will reënter public life as proprietor and editor of a London daily newspaper.

John Liphot Hatton, the British composer, is dead at the age of seventy-seven. He was the author of many popular songs and a number of operettas.

The Duc Decazes died in France on Friday. He was the eldest son of a French statesman and was born in 1819. He entered the diplomatic service, but retired during the revolution of 1848. Subsequently he was elected a member of the Conseil-Général of the Gironde. In 1871 he was returned to the National Assembly by the Department of the Gironde. He resisted all attacks on the Government of Thiers, and was in September, 1873, sent as ambassador to England. Two months afterwards he took the portfolio of Foreign Affairs, and held it through a number of Cabinet changes till October, 1877. He was a commander of the Legion of Honor.

Abbé Liszt's will makes Caroline Wittgenstein his sole heiress.

Advices from Merv state that warfare is being waged between the Afghans and the inhabitants of Badakhshan. Fighting has been going on for a fortnight. An attempt on the part of the Afghans to annex Badakhshan has led to the struggle. The British troops remain neutral.

The total number of cholera cases throughout Japan since its first appearance this year is, according to the *Japan Gazette*, 59,000, of which 37,000 resulted fatally. The indications are that the epidemic is now abating. Intelligence from Seoul, Corea, says cholera is still raging in that city. According to official returns the fatal cases for July this year were 38,600 out of a population of 250,000.

The Hawaiian Government has authorized the placing of a loan of $2,000,000 on the London market, the bonds to bear 6 per cent. interest, redeemable in twenty years.

Exciting reports have been received at Melbourne of arbitrary French action in the New Hebrides. The Rev. Mr. McDonald, a Presbyterian missionary at Havanna Harbor, says that the French Hebrides Company have seized the lands of the native Christian mission, alleging prior title, and that the French commandant threatened the natives with armed force if they resisted. The company also claims lands of other British subjects. Mr. McDonald asserts that the French practically exercise sovereignty over the islands. A collision between the natives and the French is imminent. The Premiers of the Australian colonies are about to hold a conference to consider the situation.

In his annual message to the Mexican Congress on Thursday, President Diaz said in regard to the Cutting incident: "We must congratulate ourselves that in such an emergency the dignity of the Government and the good name of the country could be saved without a serious conflict, thanks to the prudent and strictly legal conduct of the courts and authorities of the State of Chihuahua, as well as to the good sense of our own people and of the Government of the United States, which, when better informed, did not insist on its demand which gave rise to this transient difficulty. Texas papers have on this account alluded to other cases of alleged outrage on citizens of that country by officials of our own. In their eagerness to accumulate charges against Mexico they have referred mistakingly to the case of an individual named Francisco Arresures, the author of various crimes committed on our territory. It will suffice to observe that Arresures was of Mexican nationality, and was voluntarily delivered by the Texan authorities to a force of the State of Coahuila without any previous demand for his extradition, so that in this case it will be seen that, as regards this supposed citizen of the United States, there is no occasion for controversy between the two Governments."

BAD NEWS FOR PROTECTIONISTS.

THERE was a distinct protectionist reaction in Europe, seven or eight years ago, which gave great comfort to the high-tariff men in this country, and started the "fair trade" movement in England. We do not think free-traders were anywhere much troubled by it, knowing it must soon run its course. Well, it has run its course, or very nearly so. Germany, France, and Austria all went back in a headlong way to the old system. They are now all getting sorry or doubtful. In France the attempt to put up the duty on foreign grain has failed, and the protection of the sugar industry has been prolonged with great difficulty. In Belgium, also, the effort recently made to secure protection for agriculture did not succeed. In Austria a circular of the new Minister of Commerce, the Marquis de Bacquehem, to the chambers of commerce is full of significance, and has, the correspondent of the *Journal des Débats* says, produced the effect of a *coup d'état* at Vienna. The treaties of commerce with Germany and Italy expire next year. The Austrian Government is occupied now with the question of their renewal. If the protectionist policy is to prevail, they ought not to be renewed. But the Marquis de Bacquehem says: "It is important to maintain intact the outlets offered to the commerce, agriculture, and manufactures of the country. Nay, it is desirable to increase these outlets in various directions. But the only way to do this is to have with the other Powers treaties of commerce based on stipulated tariffs. The conclusion of such treaties is now the work before the Government."

In Spain, a commercial treaty giving England the treatment of the most favored nation has been carried by a heavy majority, in spite of the opposition of the Catalonians. But it is in Germany that the progress of the anti-protectionist reaction is most significant and interesting. It is described at some length by a correspondent of the *Journal des Économistes*, writing from Frankfort. We select from his letter, which is too long for translation, some of the most striking points. In the first place, he says, the reports of the chambers of commerce, which are revised by the Government before publication, used to be divided in sentiment touching Prince Bismarck's policy. Those of the great manufacturing centres were always highly laudatory; those of the commercial ports much less so. Now they are all agreed that it has not borne the fruits which were expected of it, and that the industrial crisis which has arisen under it, is extremely severe. For instance, the Germans have been selling steel rails abroad at extremely low prices, while getting very good ones at home. Recently, however, one of the combinations of the manufacturers was broken up, and an English company promptly stepped in, and, in spite of the tariff, beat Krupp and the other native steel works in competition for the delivery at Stettin of 600 tons of steel rails. Then some of the frontier towns are suffering very severely. Koenigsberg used to live on the Russian grain trade, but the German grain is now so well protected that only 20,000 tons of Russian wheat came into Koenigsberg this year, in place of nearly 61,000 in 1884. The same place used also to do a good business with Russia in tea, but the Russian tariff has killed this, so that the city appears almost in a state of decay. Danzig is suffering in the same way, from the same causes, aggravated by the expulsion of the Poles and Russian Jews, who played an important part in the local trade.

The correspondent goes on to add: "The conclusions to be drawn from the economical facts with which the condition of Germany presents us to-day, are these: First, that it is impossible to foresee the exact effect of customs duties, or in what manner they will affect those branches of industry which are not protected; secondly, every duty on raw materials or on a partially manufactured article weighs heavily on all producers who use it, and does more harm on the whole than good to those who are protected; third, the country is beginning to suffer from excessive production, and the practical difficulties in the way of clearing the ground are very great."

The duties on grain, he says, seem to have had the result of making bread cheaper for the free-trade countries. It has fallen in London and risen in Paris since the duties were put on, so that the industrial competitors of France and Germany can to-day live more cheaply than the French and Germans, as a consequence of the French and German tariffs. The distillation of alcohol has also received great encouragement from the Bismarck tariff. The result is, that the price has fallen from 51 marks per hectolitre in 1884 to 35 marks in 1886, owing to the enormous production, for which there is no longer any sufficient outlet. So the distillers are calling for more protection and for bimetallism, in the fashion with which we are so familiar here. The Government, having called them into existence, is, they think, bound to provide for them somehow.

PLUMBERS AND APPRENTICES.

THE Journeymen Plumbers' Society have published an answer to some recent strictures of ours on their opposition to apprentices. We are sorry the answer was not more specific. The journeymen's side of this class of questions is seldom presented to the general public in this country with clearness and sobriety—a point in which American workingmen are far behind their brethren in England. It would be interesting to know *exactly* what it is the journeymen plumbers have to say to the charges brought by the master plumbers which have led to the present strike. Just now, the prejudices of the public are all on the side of the masters. Nearly everybody who owns or rents a house has suffered from bad plumbing; and as it is the journeymen who actually do the work, the blame, whether justly or unjustly, is generally cast on them, although it may in many cases be the fault of the poor materials furnished by the masters. When one finds, for instance, as has been our own experience, a concealed joint simply plastered together with putty, one finds it hard to believe that the master ordered the journeyman to do the work in this way. One is, on the contrary, irresistibly driven to the conclusion that the journeyman did it in that way to save himself trouble, and that the master knew nothing about it.

It has long been charged, too, and we dare say with much truth, that at the bottom of the trouble about the apprentices is the readiness of the masters to make half-taught boys do work at low wages for which they charge customers full price. We do not know to what extent this practice has prevailed, or is by the journeymen plumbers alleged to prevail, or, in other words, to what extent they consider the masters' eagerness for apprentices a mere cover for eagerness for bad cheap labor. A little fuller explanation on this point would be very desirable.

But we think we do know why it is that the public doubts the sincerity of all professions, made by trades unions, of interest in the thorough training of the young in the mechanical arts. It is that they see that nearly every trades union has rules intended to prevent any of its members reaping the benefit of any sort of superiority, whether it lies in diligence or industry, or skill, or inventiveness. Their regulations, in fact, generally aim at keeping every member down in the practice of his calling to the level of the laziest, or most stupid, or least ambitious. As man has made his way out of the woods and caves largely by the extra exertions of the more favored individuals of the race, people are generally naturally disposed to look on such regulations as hostile to civilization itself. What would be thought of the doctors, for instance, if they were to draw up rules forbidding any member of the profession from making more than a specified number of visits a day, or attempting any new operation, or any operation in a new way, or introducing any remedy which seemed likely to diminish practice? Or what would be thought of the lawyers if they not only fixed the fees which a member of the profession was to charge clients, but the number of hours per day which he could devote to his cases, and were to forbid his seeing clients in the evening, or arguing any cause more than half an hour? People, of course, find it hard to believe that a body is deeply interested in the manual training of young men which, after they are ready for their trade, inflicts penalties for extra exertions, and discourages every display of extraordinary talent or ingenuity.

Nothing is more necessary, particularly in the United States, in all callings than thorough preparatory training, in plumbing perhaps more than in any other mechanical trade; but boys will never be got to take it patiently as long as, after they have acquired it, they have to take on the present depressing trade-union yoke. They will learn just enough to get them into a union, and then rely on it to save them from the natural consequences of negligence, stupidity, and incapacity. It is the poor workmen who most love the unions as now organized, and the reason is obvious.

One thing more: One of the leading grievances of the masters is that the Union has taken, or tried to take, the management of their shops entirely out of their hands by seeking to enforce regulations of their own making. Now a shop and plant mean savings, and when you try to regulate a man's shop for him you really try to take out of his hands the management of

his savings. It seems to us, and we think to the vast majority of the American people, that the proper course for workingmen who do not like the way employers manage their savings, is to let them alone and go to work and accumulate savings of their own. We see but little sign of this, however, in any of the recent labor movements. In spite of all the talk, we do not hear of the opening of one coöperative shop carried on with workingmen's own savings. Instead of this the air is full of denunciations of everybody who has saved money, and is trying in any business to make a profit out of it. People who spend less than they receive are reprobated as tyrants, extortioners, leeches, and what not, as if saving was the curse of modern society, and the only true man was the man who from year to year only barely made ends meet. And yet, unless we are to go back to breech-clouts and wigwams, somebody must save something every year; and nobody will save if it be once established that any man he hires by the day becomes his partner, with a controlling interest in his business.

"SALOONS."

No matter what a man's opinion may be about the feasibility of prohibition or the physical or moral effects of alcoholic drinks, he cannot deny that "saloons" are the curse of American politics and society; that none of them, whether Democratic or Republican, are entitled to any "protection" whatever; that if they could be all shut up, it would be a great thing for the country; and that even if they cannot be all shut up, they can be at least diminished in number and made less mischievous. For passing judgment on them no particular views on the liquor question are necessary. The teetotaler, the moderate drinker, the high-license man, and the prohibitionist can all unite in a crusade against them. If, therefore, the Republican movement against them were genuine and sincere, all good men would rejoice over it. The greatest objection to it, and in fact one may say the only one, is that it is not sincere; that it means simply "planks," or, in other words, that it is simply a sop thrown to the ardent Prohibitionist to keep him in the Republican ranks in 1888; and one of the greatest objections to the prohibition movement is, that it has but few terrors for the saloon-keepers, so well do they know that its volleys are sure to pass over their heads. The high license, in the hands of good Excise Commissioners, they dread; but about prohibition they feel very much as they feel about punishment in a future life—that it is something so remote that a practical man can hardly be expected to take it into serious consideration.

To say that the saloons are, all over the country, nurseries of vice and crime, is to repeat a commonplace. In this respect they receive plenty of denunciation from reformers and philanthropists of all shades of opinion. But their effect on politics does not receive half enough attention. It is they, more than any other single agency, which make the problem of municipal government in America so formidable. They give political power and importance in all cities to probably the worst class of men in America. All party managers are almost compelled to accept the services of liquor-dealers as captains of fifties and captains of hundreds, and, having accepted them, the party becomes dependent on the liquor interest and bound to conciliate it. The saloon is not simply a place to which men resort for society and exhilaration. It is almost invariably a political club, of which the liquor-dealer is the head, and he goes into politics for precisely the same reason for which he sells liquor. All his political influence is corrupting. Everything that he tells his customers of what is going on in politics, confirms them in the belief that it is simply a means of robbing the taxpayer. When they put him in office, it is for the avowed purpose of plundering and sharing with them. Whatever he may be in politics, too, whether alderman or school trustee, his voice is always raised on the side of corruption and disorder. We have had innumerable liquor-dealers in office in this city during the past forty years, but we doubt if anybody can recall a single case in which one of them raised a finger or said a word on the side of good government, and did not stand as far as he could in the way of every attempt at purification and improvement, or failed to fill his pockets with public money whenever he got a chance.

There never has been, in fact, in any age or country, a trade so distinctly marked out for legal reprobation and discouragement as liquor-dealing in the United States in our time. Whatever be the merits or demerits of alcoholic drinks, the man who sells them seems always prone to become a social nuisance, and his shop a fountain of evil. Whatever cuts down the numbers of the class, or diminishes its power and importance, is good legislation, whether it diminishes the actual consumption of liquor or not. And, fully convinced as we are of the folly of prohibition as a political movement, we admit freely that wherever prohibition diminishes the number of liquor-dealers and makes them hide their heads, it does not wholly fail. Something is gained when the liquor-dealer is driven into obscurity and the saloon closed, even if the drinking does go on as badly as ever.

GUIDES FOR WOMEN.

One of Howells's novels, we forget just now which, has a woman who exclaims enthusiastically to her hero, "Tell me things to do." This strong feminine desire for guidance in life has, as we all know, long furnished the stock explanation of the influence of priests over women, and of the large part played in family life in Catholic countries by "The Spiritual Director." It is maintained, in fact, by numerous sociologists and psychologists, in opposition to the friends of the "emancipation of women," that there is nothing which the sex, as a whole, less desires than emancipation; that what most women really in their inmost souls most long for, is somebody to "tell them things to do"—that is, to mark out a path for them in all those fields of life in which circumstances leave them free, and to solve for them questions of casuistry. That a man is usually selected to do this work of guidance is due, they say, simply to the fact that men are just as anxious to control other people's wills as women are to surrender their wills; or, in other words, that when a woman is looking about for a director of her conscience or of her acts, she is apt to take a man simply because he comes handiest, and that a domineering woman would do just as well.

A good deal of support for this view is to be found in a curious little book to which the London *Daily News* has recently called attention, called 'The Directory of Girls' Societies.' It contains all needful information about the numerous clubs, unions, and associations which, it appears, now exist in England, for the purpose of telling the immense body of idle and half-idle women all over the United Kingdom "things to do." We know of nothing of this kind in the United States except the "Society for Home Study," which has its headquarters in Boston, and sends courses of study to women all over the country, and examines them in these courses afterwards, all by letter. Of course the amount of benefit derived from the instruction depends absolutely on the honesty of the student. If she answers the questions in the examination, as bad boys sometimes do in college, by the help of "cribs," she simply imposes useless labor on the examiner and on herself.

The English societies are conducted on the same trustful plan. There are some for the reading of good books; others for the production of magazines, for the cultivation of drawing, of needlework, of music, of painting, for the promotion of early rising and of outdoor exercise. The rules prescribe the precise manner in which the work is to be done, and even levy fines for violations, the offender, of course, informing against herself before the penalty can be inflicted. The members of the early-rising clubs, for instance, have to enter in a book the precise hour at which they go to bed at night and get up in the morning, and at which dressing is finished, and the excuse, if any, for delinquencies. So minute are the directions that the members of the musical society are warned against putting their pianos against their neighbors' walls, against "pounding the notes," and against singing or playing when there is a death in an adjoining house, until after the funeral has taken place. The members of the "Outdoor" club have in like manner to take one hour's healthful exercise between eight A. M. and six P. M., and report themselves for punishment, in case of default, and have in their report book to state the exact nature of the exercise taken.

We doubt very much, however, whether these societies furnish as strong proof of the feminine love of guidance as the *Daily News* seems to imagine. What they show most clearly is the frightful vacuity of the lives led in England by an enormous number of middle-class women. If the men were condemned, by exclusion from the trades and professions, from sporting and from club lounging, to the same endless idleness in dull houses, they would probably be glad to invent light yokes for their own shoulders, and find agreeable occupation even in recording and reporting their petty breaches of discipline. The multiplication of paid callings for women in England during

the past twenty years has been very great, but the number whom social prejudice, want of training, the opposition of relatives, or the possession of small annuities, condemns to absolute idleness in dreary suburbs, in dull country towns, and in lonely country houses, is still very great. To them the thought that there is anywhere in the world an unseen authority, not only ready to tell them things to do, but to insist on their doing them, must be a great relief merely as occupation. They probably feel, too, that an extra nap in the morning is made all the sweeter by the fact that it is unlawful, and must be reported and suffered for; or find luxury in remorse over the shirking of a walk, or over a weak resort to a novel or a newspaper in the hours appropriated to serious literature, simply because these are all new sensations.

ACADIA.

THE road from Halifax to the Evangeline country lies for the first eight miles along the shores of Bedford Basin, and then plunges into a sterile region where the stunted pine forests are broken only by dreary-looking ponds, with here and there a small settlement. This barren wilderness, which extends over the greater part of the peninsula, is only left behind when the Ardoise Mountain, at the western end of the range which forms the watershed of the eastern counties, is crossed. It is also a barrier to the Atlantic fogs, and the train suddenly emerges from the desolate woods, shrouded in mist, into a land of cultivated fields, orchards, and meadows, smiling in the sunlight. But there is not time enough to catch, from the summit of the pass, more than a glimpse of the garden of Nova Scotia before the descent is made into the valley of the Avon, on whose right bank, ten miles from its mouth, is the town of Windsor. The river at this point is about a quarter of a mile wide, and, at high tide, is a noble stream, whose red waters are nearly even with the top of the dikes which prevent them from flooding the adjacent meadows. A few hours later the stream has disappeared, with the exception of a little water flowing sluggishly in the middle of the river-bed, which, below the Falmouth bridge, consists of a red clay so hard that it is sometimes used as a race-course. The schooner which lay at the wharf in deep water is now lying high and dry on a clay shelf, just broad enough to hold it, raised some thirty feet above the channel.

Windsor is the university town of the province —King's College, a Church-of-England institution, being placed picturesquely in the edge of some noble woods on the crest of a hill overlooking the town, about a mile from the river. The Commencement, or Encœnia, as it is called here, is held in June; and the procession, when we saw it, headed by the Bishop of Nova Scotia in his robes, and the professors and graduates clad in richly colored gowns, with hoods of scarlet, purple, ermine, and green, as it wound down the road to the chapel, now in the deep shade of the trees, now in the broad light of day, was strikingly beautiful. The exercises themselves were very simple. After a service in the chapel, with a sermon from the Rector of the College, the degrees were given in the hall, the candidates being first presented to the governing body in the order of their respective faculties, and, having been accepted, retired to return immediately in the gown and hood of the color appropriate to their particular degree. This ceremony, which was accompanied by an amusing demonstration of the undergraduates, in humble imitation of the uproar in Oxford on similar occasions, was followed by an address from the Rector, with a response by the Bishop.

From the ramparts of Fort Edward on the hill just above the station there is a fine view of the valley. Little is left of the fort itself except a block-house in excellent preservation, and probably one of the best existing specimens of the block-houses which played so important a part in the early history of our country. Although this particular military post has no historical interest, the fort having been built about the time of the settlement of Halifax simply to overawe the mutinous French of Grand Pré and its neighboring villages, yet in a country where historic monuments are so few, it is certainly to be hoped that it will never suffer the fate of the far more interesting Annapolis block-house, which, some years ago, was ruthlessly pulled down because it showed symptoms of decay.

It is but a short ride from Windsor to the Basin of Minas, on whose southwestern shore are the rich meadows and orchard-clad hills known as the Evangeline country, after the mythical heroine of Longfellow's poem. On the sites of the old French settlements which were destroyed at the time of the removal of the Acadians in 1755, there are now pretty villages, whose white houses, half hidden by the trees, present a very attractive appearance. In the summer months they are thronged with people who have come, chiefly from the towns on the Atlantic coast, to enjoy this wealth of verdure and almost tropical sunshine. It would be difficult, indeed, to find pleasanter places in which to pass a few weeks than these villages—Wolfville or Kentville, for instance—which apparently have not yet lost that freshness and simplicity which formerly characterized all our New England villages, but now are so rarely to be found in them. In whatever direction one may go, the bright waters of the Basin, nearly encircled by mountains, among which the noble mass of Blomidon is preëminent, give an ever-changing beauty to the landscape. From the top of this mountain, a long but not difficult drive, there is a superb view of the Basin and the surrounding country. But the foot of its great precipice, which rises abruptly from the water's edge nearly 600 feet, can only be reached by boat, as is also the case with numerous places on the Basin which are noted for striking geological phenomena and are rich in minerals and precious stones. These excursions, however, are always attended with more or less risk on account of the tides and the extreme uncertainty of the winds. Then, on the other side of the hills, to the south, lies the wilderness with its numberless opportunities for hunting and fishing. Within easy driving distance from Kentville is the picturesque Gaspereaux Lake, and, if one is so inclined, the drive may be prolonged past its shores through the wild Blue Mountain region, across the peninsula to Chester, at the head of Mahone Bay, the most beautiful on the Atlantic coast.

To the passing traveller the people appear very like their New England neighbors. Those subtle differences in life and thought which constitute for the American one of the peculiar charms of Halifax society, one would, of course, not expect to find here. There, too, nearly every one has close family ties with England, or "home," as they invariably call it; but the further one gets from Halifax the closer is the connection with the States, for the same reason. Probably a prolonged stay would enable one to discover the distinctive characteristics of the Acadian which do not lie on the surface; still, the charm of his country lies in its beautiful scenery and the simplicity of its life, rather than in any foreign impression that it gives. Base-ball, however, has not yet supplanted cricket, and occasionally the garrison or naval cricket team comes to play a match with the village club, and, as it brings a band, the game is followed in the evening by a ball. Possibly during the season there may also be a visit from one of the men-of-war of the Halifax station, with a busy round of afternoon teas, dances on shipboard, and balls on shore.

It is hardly necessary to remind the intending visitor that this is not a land crowded with associations of the past and filled with interesting ruins. The tragic fate of the Acadians is the single incident which stands out distinct from their monotonous existence of a century and a half. All traces of the Acadian habitations even have disappeared, save a ruined cellar or two, and the names of the streams and prominent physical features of the country are almost the only things to remind one that Evangeline and Gabriel once dwelt on these shores. Close to the station of Grand Pré there are the remains of a building said to be the church in which the men of the village were imprisoned by Winslow after he had told them of their intended removal. While it is useless to attempt to show who should bear the greater part of the responsibility for their removal, it may be well to say a few words as to their condition at the time. The popular impression, derived chiefly from Longfellow's poem, is that they were a peaceful, contented people, happy in the possession of homes in which their every simple want was supplied. The truth is almost the reverse of this picture. Between their desire to be loyal to the French King and at the same time obedient to their English Governor, their situation was too intolerable to admit of happiness or contentment. They were always professing to be willing under certain conditions to remove to Cape Breton or Canada, and were always dreading lest they should be compelled to do so. Their lands, as they made no new settlements, cleared no forests, built no roads after the English conquest, had become so subdivided with the increase of population as to be unable to support them, and they were at times dependent on the charity of the English for the very means of subsistence. They were, without a single exception, so far as the contemporary records permit us to judge, poor, ignorant, and superstitious peasants of the lowest grade, without energy enough to struggle against the fate which for half a century had been constantly hanging over them. The imagination of the poet alone has given a few of them an individuality which they did not possess in real life.

The Windsor and Annapolis Railway, after skirting the shore of the Basin of Minas for a short distance, turns to the southwest and runs for some sixty miles through a narrow valley, separated on the one hand by the South Mountain from the wilderness, and on the other hand from the Bay of Fundy by the North Mountain. This range begins at Blomidon, and with almost undiminished height forms the Bay shore, interrupted only by Digby Gut, nearly to the Atlantic. There are a few small towns in the valley thus enclosed, but none of special interest, nor does the scenery justify the extravagant language which some writers have used in regard to it. There are very pretty spots here and there, but in beauty it is not to be compared to many far less vaunted valleys in New England. The Annapolis River, which the road has followed nearly from its source, makes a sharp turn just before it empties into the Annapolis Basin, and on the tongue of land thus formed the town of the same name has been built. In itself, with a single exception, the place offers little to attract the visitor. Its small white houses are mostly huddled confusedly about the water's edge, though a few more substantial mansions, the homesteads of some of the oldest Nova Scotian families, are to be found on the road leading

back into the country. The exception is the old fort on a bluff at the mouth of the river. Besides an archway, a magazine, and a bomb-proof, there is nothing left but the grass-grown ramparts, over which the cows now quietly graze. The view from the outer bastion over the beautiful basin, more like an inland lake than an arm of the sea, with its encircling hills, on the north rising steep from the water's edge, but on the south receding so as to permit of villages with their orchards and cultivated fields along the shore, will linger long in the memory.

To one familiar with its eventful history, this spot has an interest far surpassing that of the more widely known Grand Pré. It is doubtful, indeed, whether any military post in the country has had such varied fortunes as this, from the time of its first occupation in 1605 down to its dismantling in our own days. In the struggle for this place, it may be said, began the fierce contest between France and England for the possession of North America. Here, after the "hornets' nest," as the New Englanders called it, at last fell into their hands, for forty years, from 1710 to 1750, a little garrison, often reduced by want and neglect to a few score men, held in check the thousands of French, hostile to a man, not of this valley only, but of all Acadia. The last of its many captures was in August, 1781, when a small band of American "rebels" landed by night from two schooners of ten and twelve guns, manned by eighty men, and surprised the garrison, who surrendered without resistance. In the morning the men and boys of the place also were imprisoned in the block-house by the rebels, who plundered the town and reëmbarked by noon of that day. With this inglorious episode its military history ended, though for many years afterwards it was garrisoned by the English. The Imperial Government still owns the fort grounds, and it is probable that they will always be preserved in their present undisturbed condition.

The excursions about Annapolis are very similar to those from the villages in the Evangeline country, though those upon the water lack the interest as well as the danger of those on the Basin of Minas. There is one, however, which is peculiar to this place. Crossing the river and passing through the little town of Granville, a steep climb of an hour brings one to the top of the North Mountain, whence there are extensive views—on one side, of the valley; on the other, of the Bay of Fundy. The two seasons when the Annapolis valley is seen at its best are the spring, when it is like a flower garden from the apple and cherry blossoms, and the fall, when the orchards are golden with fruit. The homeward-bound traveller has a choice of several ways of returning to the States from Annapolis. If he is in haste, he can take a steamer direct to Boston or St. John. Should time be no object, he can drive to Digby by a road going through the beautiful country lying between the South Mountain and the Basin. At this place he can take the steamer or the cars to Yarmouth, and there the steamer to Boston.

JOMINI'S CAMPAIGNS OF 1812.

PARIS, September 7, 1886.

IT is interesting, after having read Tolstoi's 'War and Peace,' to read the two volumes just published under the title 'Political and Military Account of the Campaigns of 1812-1814,' extracted from the inedited papers of the famous Gen. Jomini. Tolstoi denies the very existence of what historians call military art, strategy, even tactics. Jomini is the great theorist who looks upon war as a science and an art. Men appear to him as they would to a Moltke—as mere atoms and molecules: he knows nothing but great masses conducted by a will. He decomposes an army into great units—divisions, brigades, regiments—and plays with these units as people play chess. Tolstoi knows only the soldier; Jomini knows only the general, the commander-in-chief.

The two new volumes have been edited by Col. Lecomte, of the Swiss army, a well-known writer on military matters. The Swiss have always shown a remarkable love of war. They have furnished Spain, France, Rome, Naples, with regiments; even as mere mercenaries they have forced the world to admire their prowess, their discipline, their high sentiment of the peculiar sort of honor which is symbolized by the flag. In modern times, though Switzerland is protected by its neutrality, the art of war is highly thought of in the Confederation, and the staff of the Federal army has officers who are well versed in all the improvements of warfare. Col. Lecomte is perhaps the most conspicuous of these officers, and his works are read in many countries. He is one of those dilettanti who, like Jomini, love the art of war in itself; who judge a great strategical operation as an artist judges a picture or a statue. He was eminently competent to pass a judgment on Jomini:

"The great merit of Jomini," he says, "was not in having written the thirty precious volumes which he left behind him, but a small chapter called 'Fundamental Principles of the Art of War,' which, at the time when it was written (1804), and printed at Glogau (1807), was no less than a sort of revelation. He gave in it the formulæ of rules which were then unknown, as they existed only in the brain of the great captains, who were more anxious to conceal than to demonstrate them. In this domain, where he was followed by numerous disciples, among whom were the brilliant Archduke Charles of Austria, the learned Clausewitz, without reckoning many others, Jomini played the part of the initiator. He really was a great discoverer, as much as Fulton, Franklin, Harvey, etc. . . . All his volumes on the war of Frederick the Great, of the Revolution, of the Empire, his opuscules on contemporary wars, are mere developments of this little chapter."

Jomini was born in 1779 (March 6), at Payerne, then a free town of the Pays de Vaud. He tried in vain to enter the military school of the Prince of Würtemberg at Montbéliard, or the regiment Watteville in France, (the Swiss regiments took their names from the colonels). He entered a commercial establishment in Bâle, and afterwards, in 1796, became a clerk in a broker's house in Paris. He went back to Switzerland in 1799, and took part in the organization of the Swiss army. At the age of twenty-one he was the principal man in the Ministry of War, as well as one of the leaders of the popular party in their struggle against the patrician families of Berne. The reaction of 1801, fatal to the Swiss Unitarians, forced him to return to Paris, and he began there his 'Treatise on Great Military Operations.' He offered his services and his manuscripts to Gen. Von der Weid, to Murat, to the Russian Ambassador, D'Oubril. Nobody paid any attention to him; but finally Ney took him as honorary aide-de-camp to the camp at Boulogne, where Napoleon was forming the "grande Armée." He remained attached to Ney during the campaign which ended in the capitulation of Ulm. Napoleon read the two volumes of his 'Treatise' after Austerlitz and was almost angry. "Don't tell me," said he to Maret (Duc de Bassano), "that the age does not progress; there is a young major, and a Swiss major, who teaches us what my professors did not teach me, and what few generals understand. . . . How could Fouché allow the printing of such a book? Why, this man will let my enemies know all my military system."

Jomini was allowed to make the campaign of 1806 with the general staff, and he entered into personal communications with the Emperor Napoleon. He gave many valuable details concerning the Prussian army, and understood at once the combinations which conducted the French army to Jena. These combinations were Napoleon's secret. When Jomini was called to Mayence, at the opening of the campaign, he did not know that he should be asked to remain near the Emperor; he had not brought his horses and his equipage, and he was forced to ask permission to return for a few days to his corps. He said quietly to the Emperor, "I will join you in four days at Bamberg." The Emperor answered with an angry look, "And who told you that I would go to Bamberg?" "The map, Sire." "The map! but there are hundreds of roads in Germany." "Yes, Sire, but there is but one which will conduct your army to the Prussian line of communication, and I am sure your Majesty will take it." Napoleon, confounded by this judgment, said to the young officer, "Well, be in four days at Bamberg, but don't say a word of it to anybody, not even to Berthier, as he does not suspect that I am going to Bamberg." Berthier was the head of the general staff, and Jomini relates this anecdote in order to show that Napoleon concealed his plans from everybody; he gave his instructions to Berthier only for the following day.

Jomini was near the Emperor at Jena, and afterwards at Friedland. He quarrelled with Berthier, and was sent to Glogau, in Silesia, where he published in 1807 his famous chapter on the 'Fundamental Principles.' He was sent afterwards to Spain, and there fell into disgrace with Ney, who probably was dissatisfied with the Peninsular campaign, and tried to throw the responsibility of his own failure on Jomini's shoulders. Disgusted with the French service, he was thinking of entering the service of Russia (the two empires were then at peace), when Napoleon, hearing of it, sent word to the Duc de Feltre that either Jomini must be imprisoned at Vincennes or accept the grade of brigadier-general. He followed Napoleon to Russia in 1812, but, as the Emperor of Russia had made him very flattering offers, he asked to be made Governor of Wilna, and he only joined the army when it was already in retreat. At the critical moment, he was able to mark the best line of retreat. He almost lost his life in the Beresina, and was several times in great danger in the march from Wilna to Kovno, Danzig, and Stettin. He was so ill on his return that for three months he was unable to answer the call of Napoleon, who wanted him to help him in the reorganization of the army. He was hardly well when he joined the French troops in Saxony, and on the battle-field of Lützen he was again appointed chief of staff of Marshal Ney, who commanded four corps. He joined him in time to take part in the battle of Bautzen. Ney asked for him the grade of division general, but Berthier refused to give it to him, and even punished him with "les arrêts" for having disobeyed his orders, though this had helped to give the victory to Ney.

Jomini was exasperated this time. He resigned, and as there was for the moment a truce between Napoleon and Alexander, he entered the Russian service. He was violently attacked. Napoleon was very angry at first. He wrote to Cambacérès on August 11, 1813: "Moreau has joined the Russian ranks. Jomini, Chief-of-Staff of the Prince of the Moskva, has deserted. He is the man who has written on war, and he has long been sought after by the Russians. He has yielded to corruption. He is a poor soldier, but a writer who has sound notions on war. He is a Swiss. . . ." At St. Helena Napoleon spoke more calmly of him: "It is wrong to accuse Jomini, as a writer has done, of having carried to the Allies the secret of the operations of the campaign and

the *situation* [we should now say the *dislocation*] of Ney's corps. This officer did not know the Emperor's plan; the order for a general movement, which was always sent to all the marshals, had not been communicated to him, and if he had known it the Emperor would not accuse him of the crime of treason. He was the victim of a great injustice; he was blinded by an honorable sentiment. He was not French; the love of country could not keep him." The truth probably lies between these two opinions. Jomini was not exactly a mercenary; he joined finally the side where he felt better appreciated. He entered at once on his new functions in a dilettante and cosmopolitan spirit; he did not show an indecent ardor against France, and took no part in the operations of the French campaign of 1814 and 1815. At Vienna in 1815, at Aix-la-Chapelle in 1818, at Verona in 1823, he appeared as military adviser on the staff of Alexander. He afterwards joined the Emperor Nicholas in 1828 in the campaign against Turkey, and his good advice had much to do with the issue of the war.

We need not speak here of his efforts for the reorganization of the military institutions and establishments of Russia. In 1837 he was intrusted with the military education of the son of the Emperor, and on this occasion he wrote his 'Précis de l'art de la guerre,' a dogmatic résumé of his first works. He also wrote several memoirs on the defence of Russia and the 'Military Policy of Russia.' He was favorable to an alliance between France and Russia, seeing in this alliance a safeguard against the naval predominance of England and the Continental supremacy of Germany. Jomini ended his days in Paris on March 28, 1869.

The two volumes now published by Col. Lecomte are a masterly account of the Russian invasion. They are perfectly impartial. The faults of Napoleon are indicated, as well as the faults of the Russian generals. The somewhat dry and cold narrative of the strategical movements assumes after a while a dramatic and tragic interest. All the science of Napoleon was baffled by the resolution of the Russian Emperor not to treat with him. In vain did Napoleon sacrifice thousands and thousands of lives, in vain did he outgeneral his adversaries, he could not get the price of his victories, he could not obtain a peace. Russia did not behave as Austria and Prussia had done; the "Grand Army" was engulfed in her solitude and her snow. It is very interesting to see how Jomini, though he is chiefly interested in strategical and tactical efforts, understands what may be called the moral side of war. He renders full justice to the French army, but he also does justice to the heroic character of the Russian soldiers and generals. The scenes of desolation and horror which he describes are all the more powerful in that they are very accurate and technical. The literary man is never felt; the soldier writes, so to speak, with his sword. Jomini proves very clearly that the cold was not the great cause of the French disaster, and he gives as many as fifteen reasons for it. The last might perhaps suffice: "Finally," he says, "the Russian nation distinguished itself by unexpected efforts, and the Emperor Alexander showed a character which nullified all prevision."

THE NEW GERMAN ARCHITECTURE.

PRUSSIA, August 25, 1886.

THOSE who remember the Germany of twenty years ago may recall with a little effort the image of the newer streets of that time in the large towns. We refer to a certain well-defined class, not to be found everywhere, for the Germany of the days before 1870 had, to an extraordinary degree, the habit of doing up her old things and making them as good as new, and there were many cities, not the least known either, where a new house was scarcely to be found. The old gable fronts, disguised by plaster and gray paint, were quite fine enough and new enough for the homely lives that found shelter behind them. Nor do we mean such a royal creation as Munich, where the modern part resembled an atlas of architecture filled with coarse and lifeless reproductions of all the recognized styles; we mean the rows of houses that might be seen anywhere where a prosperous town had naturally spread beyond its ancient borders. We need mention no names: a few words will serve to refresh the memory of whosoever has known the originals.

There were two or three general types determined by local causes. In some places the traditions of good brick building had been more or less preserved; in others, where either ground or money was more abundant than usual, the houses, surrounded by gardens, were of a suburban-villa character; but on the Rhine or on the Spree, on the shores of the Baltic or at the sources of the Danube, there was everywhere to be found a third type, the true representative of domestic architecture in Germany for the greater part of the nineteenth century. The street lines were unbroken by gables, turrets, or steep roofs; the flat brick walls were covered with stucco painted whity-gray, on which all ornaments were moulded—pilasters, architraves, panels, friezes with masks and garlands. It was the method of the confectioner, who dribbles his meaningless figures over the icing of a cake, and the effect was equally enlivening; the decoration, clumsy and at the same time pinched, gave no variety to the dead uniformity of these fronts. Nothing could be more depressing to the spirits than to have to walk, day after day, between such houses on the one hand, and on the other a gutter where Coleridge might at any time have refound his "two and seventy stenches." There was, to be sure, a grim sort of consolation in knowing that the inside of the houses was even worse for the eye than the outside. There were, very likely, on the walls paintings of the various German schools of the period, and we will not say that they were all bad, but they were invariably surrounded by furniture whose only virtue was that there was seldom much of it; in such as there was, the ugly and the tawdry were so nearly balanced that one could never tell which predominated.

Well, they have bravely changed all that. The traveller who returns to Germany after a long absence finds an endless series of surprises awaiting him. A better system of drainage has banished the smells from many towns of ancient bad odor, and the stranger, whose nose is not outraged, can give himself unreservedly to the pleasures of the eye. He recognizes, with a shudder, some of the old familiar streets, but he also finds that new wealth has created entire new quarters, and that a new spirit has directed their construction. At first glance it might seem as if the recent architecture here were cousin-german to that under the invocation of Queen Anne in England. Both unite brick and stone in their façades, both affect gables and high roofs; but it is soon seen that the relationship goes no further. The demure, slightly old-maidenly graces of the Queen Anne style, with its thin mechanical decoration, would ill serve the impetuosity, the exuberance of the present æsthetic feeling in Germany, which has a sensuous delight in richness, in the display of force, and does not shrink even from the theatrical. The new architecture is in every respect, with a reserve or two to be mentioned hereafter, the exact opposite of that which preceded it. That favored an unbroken sky-line, this lifts into the air contours as varied as those of an Alpine range; that allowed no color save that of dust, this wears motley; that gave you flat surfaces with projections so insignificant that a strong shadow was never seen, this pushes relief even to exaggeration. We need not say that the gain in character, in richness, in picturesqueness is immense.

The architects of to-day have, almost without exception, taken their motives from the works of the German renaissance. Mr. Fergusson would have had his readers believe that the portico of the town hall at Cologne is the only monument of renaissance art in Germany worth mention. We fancy that Mr. Fergusson was simply repeating here a well-worn trick, and sought to hide his want of knowledge under an air of contemptuous superiority. Had he lived to see the beautiful work of Fritsch ('Denkmäler der deutschen Renaissance'), he might not have liked the architecture of the period, but he would scarcely have ventured to ignore it. In fact, the sixteenth and seventeenth centuries endowed Germany with many buildings that are none the less worth studying because they are utterly unlike anything produced in those centuries in France or Italy. There were points of contact, it is true. That which a Primaticcio built for Francis I., or that which a Giacomo Bolognese built for a Duke of Brunswick, would equally belong to Italian work of the time; but as for the native architects, they seem to have drawn from Italy little more than a renewed impulse and a host of details that they treated after their own fashion. They welded their reminiscences of foreign art with the traditions of their own Gothic, with the requirements of a northern climate and northern ways of living, and, finally, with their own sense of what was fit and seemly. The result was that they transformed renaissance art, as they had Gothic art before it; more so, in fact, as the Gothic had been borrowed from a land where the conditions more nearly resembled their own than did those of Italy. In each case the race character impressed upon the style the same peculiarities: an immense amount of ingenuity in the invention and complication of details, an always limited sentiment of beauty, of grace, and proportion, often giving place to the grotesque, the clumsy, the absurd, but, by way of compensation, a certain raciness and picturesqueness that sometimes lent a distinction even to ugliness.

As a whole, the style was, along with the Romanesque of the Rhine provinces, the best thing that the art of building has ever produced in Germany. Who has not admired, in the old streets of Brunswick, of Hildesheim, of Cologne, of Nuremberg, the noble roofs, the richly sculptured façades, with their gables, their oriels, their pinnacles, their turrets crowned with fantastic belfry-like tops, the nameless air of poetic feeling that betrays in their architects the countrymen of the poets who sung the legends of their rivers and forests? The architects of to-day have drawn from the right source, and some of the new streets they have given us may vie with any of the old ones in the play of light and shade, in the variety and vigor of their features, in the wealth and quality of the ornamentation, and in their thoroughly Teutonic character. Their details may have been borrowed from right and left, but they have become acclimated; the whole has nothing of the exotic about it. One sees nowhere any attempt at transplanting a Roman, a Greek, a Byzantine, or a Venetian building; whatever may be their faults, the architects of to-day are at least cured of that folly.

This efflorescence of building simply means that the country, after having for long decades practised perforce a régime of plain living and high thinking, has suddenly begun to grow wealthy. It has got money, and it spends it with the delight in lavishness of a *nouveau riche*. It is amusing, when one recalls the excessive homeliness of the life of these people in the days

before the last war, to see them now in the most dashing equipages, the finest clothes, the most sumptuous houses. It is no longer the American, but the German, who sets the champagne corks a popping at the tables d'hôte on the great lines of travel. The French *milliards*, along with the rapid development of commerce, have affected the Government and the municipalities as well as the people. Court-houses and post-offices, theatres, railway stations, town-halls, all reveal the same relish for splendor that marks the private houses. The architects have been intoxicated by their opportunities. They seem to dream of such impossible architecture as many Italian painters of the last century loved to paint, and to try to realize their dreams when, on waking, they find themselves surrounded by orders to spend money. No wonder that their elevations so often err on the side of richness. One would be puzzled to think of an architectural feature which is not to be found on certain façades. Caryatides, pilasters, columns, panels, pictured friezes, balconies, *loggie*, turrets, oriels, gables, pinnacles, and we know not what beside, are all there. What is more, these details are designed with a vigor and relief that testify as to the force of the artistic impulse. Here, also, there is exaggeration. One sees rusticated basements like those of the Pitti or Strozzi palaces to sustain only a single modest story of thirty feet in length. Still, in general, the bold relief of ornamental details is one of the most pleasing features in the architecture of the present.

In one class of buildings the impulse seems thus far to have secured but insignificant results. We have not seen a single new church that could be called a success. Neither in the Rhineland, where the beautiful Romanesque churches of the eleventh and twelfth centuries offer incomparable models, nor in the north, where the brick architecture of a somewhat later date affords examples of easy adaptation to modern wants, are the new ecclesiastical structures—though in the style natural to each district—other than artistic failures. We leave it to others to seek for the causes of this exception; we simply state the fact.

If a public building here do not practically answer the purpose for which it was intended, it is certainly not through want of precautions. The Prussian paternal rule extends its solicitude to many matters that an American would think better left to the care of the parties interested. A large town decides that its growth demands a new general railway station in place of, and at a distance from, existing stations that impede the traffic of its central parts. The plan, which includes a network of new streets, with open places and other embellishments, cannot be acted on till it has been approved by the central Government at Berlin. The same would be true in the case of any public building. The erection of private houses is everywhere in Germany controlled by the municipality, as far as regards certain principles of construction; in some places, at least in the case of streets and sites that figure prominently in the general aspect, the design for every new house must be submitted to the town authorities. We fancy, however, that these content themselves, as a rule, with ascertaining that the proposed building will not be a disgrace to its neighbors. At any rate, the supervision is not of a character to remove the responsibility of the new architecture from the architects and their patrons any more here than in less favored lands.

Perhaps, however, it would be more just to charge the excesses of design which we have signalled against the Teutonic race as a whole than against any individuals in it, for they have distinguished every period of architecture that Germany has ever known, with the single exception of the Romanesque, and even then only in the regions about the Rhine. Everywhere east of that river *tours de force* and over-ingenuity, with bad taste and spoiled Gothic work, were the besetting sins of the renaissance times. Another defect of the present architecture, the pinchbeck character of a good deal of its splendor, is equally to be reproached to the people at large. Many a basement story that looks almost fortress-like in its layers of huge blocks, cut in facets or left rough-hewn, is in reality more ridiculous than terrible—those blocks are only plaster. There are plenty of sculptured columns in artificial stone, many a wall whose mock bricks may peel off in large flakes with the first hard frost. It is not easy to change the Teutonic nature: it loves finery, but it loves it cheap. Now, as always, the *Nachgemacht* is the deadly enemy of beauty here; in fact, the growth of luxury seems to have developed the hideous parasite to proportions unknown before. Never were houses and shops so full of coarse, clumsy, tawdry copies, or, worse yet, downright imitations of every conceivable sort of art industry—sham tapestries, bronzes, Oriental stuffs, and so on. It is evident that the eye of these people never will be so educated that the imitator will not know how to satisfy its demands.

It will readily be inferred that in most of the architecture of which we have written, the greater number of the ornamental details must not be looked at too closely. The builder and the house-owner have both aimed at securing a general effect, and with that they are content. Exceptions in the way of really delicate artistic work may, of course, be found here and there. We noticed over the entrance door of a house at Düsseldorf a head of Mercury in full relief, with a smile that reminded us of a certain lovely group by Carpeaux that adorns the Pavillon de Flore at Paris. It may be doubtful whether such details are strictly architectural or not, but they will hardly hurt a good building, and they make a bad one interesting.

Correspondence.

A GIFT OF DANTE.

To the Editor of The Nation:

Sir: The late George John, Lord Vernon, whose important contributions to the knowledge of the 'Divine Comedy' are well known to all its students, published in 1858, in a large folio volume, a textual reprint of the first four editions of the poem. These editions are of such rarity that it is probable that hardly more than two or three libraries contain them all, and a copy of any one very seldom occurs for sale. To the student of the text of the poem this volume, which was most carefully edited by the late Mr. Panizzi, is of very great value. The four texts, printed side by side, represent four manuscripts, and supply most important material for judgment in regard to the various readings that are found in every canto.

Lord Vernon's last labor in the field to the cultivation of which he had given himself, was the compilation and arrangement of an edition of the 'Inferno,' with elaborate commentary and illustration. It was brought out two or three years after his death by his son, Augustus Henry, Lord Vernon, in three magnificent folio volumes. The copies were very limited in number; they were not offered for sale, but were distributed, by the liberality of Lord Vernon, to public libraries and to a few private persons.

Some copies of both of these works still remain undistributed, and the Dowager Lady Vernon proposes to offer them to the libraries of certain selected public institutions.

The copies of the three volumes of the folio 'Inferno' are in sheets, and, to make vol. iii complete, impressions of some of the plates must be printed.

The conditions on which the copies are offered are, that the recipients in each case shall undertake the expense of binding the sheets, of printing the impressions from the plates necessary to complete vol. iii, and of packing and carriage. "The total expense involved in the above conditions (exclusive of the *carriage*, which will, of course, vary in each case) is estimated at £2.10 if the four volumes are sent out in sheets, and at £3.10 if they are sent bound in the same manner as those originally distributed by Lord Vernon."

This liberal offer has been or will be made by circular to various public libraries in the United States. It is hardly possible that it should not be gratefully accepted in every case; but as there is a chance that the worth of these books may not be known to the custodians of all the institutions to which the offer may be made, I venture to ask you to allow me, as one who has profited greatly by them, to bear my testimony to their importance to the scholar of Dante, and to express my hope that this opportunity of obtaining works of such essential value may not be lost by any library that is favored with it.—Very truly yours,

Charles Eliot Norton.

Cambridge, September 20, 1886.

LAND RECORDS IN INDIA.

To the Editor of The Nation:

Sir: As a member of the Civil Service of India permit me to correct a slight mistake in your review of Dr. Hunter's History of the Indian Empire.

You state (p. 180), "By the English system of legal titles the rights of each cultivator are recorded in a language he does not understand." This is not the case. In districts where Kanarese is spoken the accounts and records are kept in Kanarese; where Maráthi is spoken they are kept in that language, and so on. Members of my service are required to be perfectly familiar with the vernacular of their division, in order, primarily, that they may be able to overhaul the accounts and records of the villages in their charge.

As to their being "virtually inaccessible" to the cultivator's inspection (as you say they are, two lines lower down), why, they are as accessible as the British Government can possibly make them—that is, the accountants are compelled to keep them in the "chávdi" (which may be translated very roughly as the *mairie*) of the village, to give each cultivator a detailed account of the rent payable by him to Government long before it is due, and to give him a proper receipt after he has paid it. The cultivator is slow to exercise his rights in many cases; the accountant is almost always a Brahman, and often the only one in the village; and then, too, the cultivators are particularly shy of challenging authorities of any kind. Still, much is being done to alter all this by the system of making European revenue officials examine the accounts and receipt books themselves, and in the presence of the cultivators. Rome was not built in a day, and it should be recollected that the peoples of India have first to be given rights, and then to be educated into appreciating and exercising them.—Respectfully yours,

Walter F. Lord.

London, September 7, 1886.

THE NO-RENT PANACEA.

To the Editor of The Nation:

Sir: Seeing that Mr. Henry George's theories in regard to land are liable to receive political endorsement from 30,000 in New York city, and

that these 30,000 people and many thousands more hold the "no-rent" theory to be a panacea for all the ills from which humanity suffers, permit me, through your columns, to call the attention of these "no-rent" and no-private-property theorists to the remarks of a great ante-Christian political philosopher on the same subject:

"Such legislation may have a specious appearance of benevolence. Men readily listen to it, and are easily induced to believe that in some wonderful manner everybody will become everybody's friend, especially when some one is heard denouncing the evils now existing in states—suits about contracts, convictions for perjury, flatteries of rich men, and the like—which are said to arise out of the possession of private property. *These evils, however, are due to a very different cause—the wickedness of human nature*" (Aristotle's 'Politics,' ii, 5, 11, Jowett's tr., p. 35).

Y.

A NEW WAY TO PAY OLD DEBTS.

To the Editor of The Nation:

Sir: Here is an example of governmental barrenness for the next issue of Mr. McPherson's 'Handbook of Politics,' if he sees proper to make use of it.

During the war the quartermaster at one of the forts on the Canadian frontier bought some iron work from a blacksmith to the amount of $64, and paid for it with a duly certified voucher, the only means of payment that the Government had at that time. Failing to get the voucher redeemed at the station where issued, the owner in 1837 forwarded it to the Department at Washington. There it lay till the present year, when, being "reached," it was taken up and scaled some twenty per cent., and a warrant issued for the reduced amount, without interest. The payee of the warrant having died many years ago, unhappily in ignorance that the Government was going to pay four-fifths of his account by and by, it became necessary to expend nearly a quarter of the allowance to have an administrator appointed who could endorse the warrant, draw the money, and make distribution among the heirs.

C. F. B.

Washington, September 17, 1886.

MR. TILDEN'S BEQUEST.

To the Editor of The Nation:

Sir: The suggestion offered by Mr. Thomas P. Ballard in regard to the Tilden library fund is of great value. At present, and for years to come, scholars who live out of reach of the great libraries must do without most books which their own collections and the libraries at hand fail to furnish. For several reasons (but chiefly for one), it is impossible for individual students and literary men to purchase every book which they desire to consult. And frequently the book is needed for only a few days.

I can think of nothing more to be desired by such workers than the establishment of a library from which, "with proper limitations and credit," books could be sent to them by mail or express for temporary use. It would, in a certain sense, be a circulating library, but different in purpose and patronage from any now in existence.—Yours truly,

E. Alexander.

Chapel Hill, N. C., September 13, 1886.

Notes.

The publishers' fall announcements continue. *Macmillan & Co.*:—'Letters and Reminiscences of Thomas Carlyle,' by Prof. Charles Eliot Norton; 'Chief Periods of European History,' lectures by Prof. E. A. Freeman; a new and cheaper edition, in four volumes, of Lanfrey's 'Napoleon I.'; 'Casamassima,' by Henry James; 'Sir Percival,' by J. Henry Shorthouse; 'A Modern Telemachus,' by Miss C. M. Yonge; and the following illustrated works: 'Greenland,' by Baron Nordenskiöld; 'Days with Sir Roger de Coverley,' with designs by Hugh Thomson; an édition de luxe of Irving's 'Old Christmas' and 'Bracebridge Hall,' with the late Randolph Caldecott's designs; and 'Four Winds Farm,' by Mrs. Molesworthy, with designs by Walter Crane. *Lee & Shepard*:—Four illustrated works: 'Nature's Hallelujah,' from designs by Irene E. Jerome; Tennyson's 'Dora,' from designs by W. L. Taylor; 'The Three Gems of the Bible,' versified by Prof. W. C. Richards; and 'Plastic Sketches of J. G. and J. F. Low,' an album of Albertype prints of forty-seven bas-relief tiles designed by these well-known manufacturers. *Houghton, Mifflin & Co.*:—'Democracy, and Other Addresses,' by James Russell Lowell; 'The Emancipation of Massachusetts,' by Brooks Adams—emancipation, namely, from the original ecclesiastical and political narrowness; 'Life of William Henry Channing,' by Octavius B. Frothingham; 'Benjamin Franklin,' by J. B. McMaster, in the "American Men of Letters" Series; 'George Washington,' by Henry Cabot Lodge, 'Patrick Henry,' by Moses Coit Tyler, 'Henry Clay,' by Carl Schurz, 'Thomas H. Benton,' by Theodore Roosevelt, and 'Martin Van Buren,' by William Dorsheimer, in the "American Statesmen" Series; 'New York,' by Ellis H. Roberts, in the "American Commonwealths" Series; a 'Memoir of Prof. J. Lewis Diman,' by Caroline Hazard; 'Henry H. Richardson and his Works,' by Mrs. Schuyler van Rensselaer, illustrated with thirty-two full-page views of that architect's principal buildings, and some fifty smaller sketches; 'History of Woodstock, Vermont,' by Henry S. Dana; 'Well-Worn Roads in Spain, Holland, and Italy,' by F. Hopkinson Smith, freely illustrated; 'The Book of the Tile Club,' illustrated with full-page phototypes; 'The Far Interior,' by Malcolm Kerr, who journeyed northward from Cape Town, Africa; 'Ancient Cities, from the Dawn to the Daylight,' by the Rev. Wm. Burnet Wright; 'Orient,' the tenth volume of Joseph Cook's Boston Monday lectures; 'The Silver Bridge, and Other Poems," by Elizabeth Akers; 'Ariel and Caliban,' poems by Christopher Pearse Cranch; 'The Cruise of the Mystery, and Other Poems,' by Celia Thaxter; 'The Round Year,' poems by Edith M. Thomas; 'Holy Times,' poems by Mrs. A. D. T. Whitney, and 'Seed-Down,' a collection of her short stories; 'The Story of Sordello, told in Prose,' by Annie Wall; 'Roland Blake,' a novel, by S. Weir Mitchell, M.D.; 'A Step Aside,' by Charlotte Dunning; 'In the Clouds,' by Miss Murfree; 'The Madonna of the Tubs,' by Elizabeth Stuart Phelps; 'Thirteen Weeks of Prayers for the Family,' by Benjamin B. Comegys; 'Applied Christianity,' by Washington Gladden; 'Talks about the Law,' by E. P. Dole; 'Ten Dollars Enough,' by Catherine Owen; 'The Works of Edward Fitzgerald'—his translations of the 'Rubáiyát,' the "Agamemnon," etc.—edited by M. Kenney; and a large number of new editions, including a cheaper 'Rubáiyát,' with Vedder's designs reduced, and the complete works of Tennyson. *Ginn & Co.*:—'Courses and Methods,' a hand-book for teachers in elementary schools, by John T. Prince. *Thomas Whittaker*:—'Religion: a Revelation and a Rule of Life,' discourses and essays by the Rev. Wm. Kirkus.

Goldsmith's "She Stoops to Conquer," with an introduction by Austin Dobson, and with the illustrations by Mr. E. A. Abbey, of which the public have had a foretaste in *Harper's Monthly;* and 'Home Fairies and Heart Flowers,' poems by Mrs. Margaret E. Sangster, embellished by twenty engravings of children's heads, executed by Mr. Frank French, and partly known admirably to the readers of *Harper's Young People*—will be published directly by Harper & Bros.

D. Lothrop & Co. announce 'For a Girl's Room'; 'The Story-book of Science,' by Lydia Hoyt Farmer; and 'How to Cook Well,' by Mrs. J. R. Benton.

A complete collection of the poetical works of Benjamin F. Taylor, prepared by himself, with a portrait, will be published next month by S. C. Griggs & Co., Chicago.

Mr. George J. Coombes will shortly publish a new anonymous novel, 'Roger Camerden, a Strange Story.' He will also hereafter be the New York publisher of Mr. Wheatley's "Book-Lover's Library." The second volume to appear is 'Old Cookery Books and Ancient Cuisine,' by Mr. W. Carew Hazlitt. Here is a fine opportunity to apply the dictum that the book would have been better if the author had taken more pains. But at this late date it is hopeless to expect that Mr. Hazlitt will be anything but careless and inconsequent. In the present case he has chosen a most interesting subject, and he has collected many interesting details, anecdotes, and quotations. It is pleasant to learn how *To make a Ragoo of Pigs-Ears*, and how *To make a Spread-Eagle Pudding;* and it is delightful to be told that Mrs. Hannah Glasse's 'Art of Cookery,' published in 1747, does not contain the famous direction, "First catch your hare," by which alone it is now snatched back from oblivion. These are but brief samples of the store of strange learning in the records of cookery to be found in Mr. Hazlitt's little volume, which is provided with an index.

'The Merry Men, and Other Fables,' is the title of the collection of short stories which Mr. Robert Louis Stevenson is preparing for publication late in the fall, and which will be issued in this country by Charles Scribner's Sons. Mr. Stevenson is engaged on a sequel to 'Kidnapped,' and he has also agreed to write the life of the Duke of Wellington for Mr. Andrew Lang's series of "English Worthies."

Mr. Percy Fitzgerald, a most industrious bookmaker, with a sharp eye on the topic of the hour, testifies to the increasing interest of the public in books as books by preparing 'The Book-Fancier; or, The Romance of Book-Collecting.'

Mr. J. Ashby-Sterry, the author of 'Boudoir Ballads,' has collected the 'Lays of a Lazy Minstrel,' which he has been contributing to *Punch*. They will be published in London by T. Fisher Unwin; and in New York, Scribner & Welford will include them in their pretty "Ideal Series," in which the poems of Mr. Locker, Mr. Austin Dobson, and Mr. Lang already appear.

Mr. George Redway of London is about to publish, in a limited edition of 500 copies, a collection of the odds and ends of Thackeray's writing, not included even in the latest two volumes of the authorized editions of the novelist's works. The book will be called 'Sultan Stork, and Other Stories, Sketches, and Ballads.' There are ten bits of prose written between 1833 and 1844, and three bits of verse. The book will also contain an enlarged revision of the 'Bibliography of Thackeray' published a few years ago; and as this was prepared by Mr. R. H. Shepherd, a well-known literary resurrectionist, it is perhaps not unfair to conjecture that he is the editor of the book.

At last we have from Houghton, Mifflin & Co. the beginnings of the complete Longfellow, in prose and verse. This edition may well be thought final, the scheme of arrangement and annotation being commendable and the mechanical execution suitable to the author's rank and the reputation of the publishers. The duodecimo form chosen is for the hand, as the size of type is for the eye; the binding, a dark green cloth, is elegantly simple. The first volume contains

'Outre-Mer' and 'Drift-Wood'; the second, 'Hyperion' and 'Kavanagh.' Everything is told that need be (especially since the poet's Life has appeared) of the conception and chronologic progression and publication of these prose works. In the case of the poems, which are to follow, the earliest and the latest readings will be compared in footnotes. The translations will be grouped together, but otherwise the poet's preferred order (which was not that of composition) will be observed. It has "been decided to print, in the appendices of certain volumes, discarded work which was contemporaneous with the contents of those volumes" (*e. g.*, in vol. i, "The Blank Book of a Country Schoolmaster," which was contributed to the *Knickerbocker* two years after "The Schoolmaster"—the forerunner and quarry of 'Outre-Mer'—had appeared in the *New England Magazine*). Finally, a complete bibliography will be attempted, within the limits of the possible. Or not finally, since we must speak of the portrait in vol. i, a steel-plate engraving after a painting of the Bowdoin professor—a most characteristic likeness. We presume there will be others.

The nineteenth number of the Riverside Literature Series (Houghton, Mifflin & Co.) contains the first portion of Franklin's 'Autobiography,' expurgated, and very properly, since this series is intended as an aid to literary study in schools.

Scott's 'Lay of the Last Minstrel,' edited for the Clarendon Press Series by Prof. W. Minto, with very copious notes, a map of Scotland, etc.; and Byron's 'Childe Harold,' edited by W. J. Rolfe, with good and pertinent illustrations (Boston: Ticknor & Co.), will recommend themselves to teachers. From Macmillan & Co. we have also a handy and clearly printed little volume of 'Selections from Schiller's Lyrical Poems,' edited by E. J. Turner and E. D. A. Morshead. It contains "Die Schlacht," "Der Ring des Polykrates," "Die Kraniche des Ibykus," "Der Handschuh," "Das Lied von der Glocke," "Der Pilgrim," "Der Taucher," and many another favorite of the shorter poems.

Roberts Bros., Boston, add to their uniform series of George Meredith's works his 'Sandra Belloni,' which still retains in its running title the original name given to this novel, 'Emilia in England.'

Mr. Brooks's "Olden-Time Series" is continued in a fifth volume by 'Some Strange and Curious Punishments' (Boston: Ticknor & Co.). While it does not contain much that is unfamiliar, it will interest the curious. Thus, the first instance is given of the burning in 1695 of an American book, which a Salem Quaker bookseller was guilty of publishing, and which bore the title, 'Truth Held Forth and Maintained.' Again: "On the 15th of January, 1801, one Hawkins stood an hour in the pillory in Court St., . . . Salem, and had his ear cropped for the crime of forgery, pursuant to the sentence of the Supreme Court." Here it is the date which surprises us. Mr. Brooks produces some instances, not much more ancient, of flogging, to show how much less this was dreaded than confinement with hard labor, and to offset the present demand in some quarters for a revival of the whipping-post. Long after slavery was judicially abolished in Massachusetts, criminals were sold by the courts for a limited term of years. The imprisonment of Prudence Crandall for teaching colored girls in Connecticut is noted. The only instance cited of burning a negro alive is one that occurred in Georgia in 1820. This is both near-fetched (in time) and far-fetched (in space). Paige's 'History of Cambridge (Mass.)' would have furnished Mr. Brooks with a case in that town in 1755. In fact, there was hardly any slave State, North or South, that did not exhibit this form of savagery in the generation that revolted against the "tyranny" of the mother country.

Two of the latest American books published in Paris are Mr. Carnegie's 'Triomphe de la Démocratie, ou l'Amérique depuis cinquante ans,' and Mr. Marion Crawford's 'Le Chanteur Romain,' issued with a preface by M. Henri Lavoix—a curious coincidence of name.

It is pleasant news that the Librairie des Bibliophiles is preparing for its excellent "Nouvelle Bibliothèque Classique" a selection from Voltaire, to be contained in about twelve volumes. It will be edited by Bengesco, author of a Voltaire bibliography.

A late addition to the collection of "Classiques Populaires" (Paris: Lecène & Oudin: Boston: Schoenhof) is 'Fénelon éducateur,' by M. Gaston Bizos. Like the other works of the series, this is a very elementary exposition of the author studied. The 'Télémaque' is analyzed, and numerous extracts are given from it, as well as several of the Fables and Dialogues of the Dead written by Fénelon for the young Duke of Burgundy, grandson of Louis XIV. The other works written by him for his royal pupil at a later age are carefully summarized. The book opens with an interesting account of the now wholly antiquated and unsatisfactory 'Traité de l'éducation des filles.' But if Fénelon did not claim more for the education of women, the fault is rather to be laid to his time than to himself. It was not many years before this that Mlle. de Scudéry had written: "A woman who can dance with propriety only during a few years of her life, spends ten or twelve in learning constantly what she is to do only during five or six; . . . but she is obliged to speak until her last breath, and yet she is taught nothing which can make her speak more agreeably." The volume is illustrated with ten reproductions of old pictures, very appropriately selected, but printed from worn-out plates.

The annual report of the President of Brown University is noteworthy as recommending an experimental provision for the education of young women at that institution. His plan is to give them the same instruction as their brothers receive, but separately for the first year, owing to the want of adequate Freshman recitation-rooms.

Teachers and others will be interested in a long article on the higher education in the United States, by Prof. Eugène Stropeno, in the *Revue Internationale de l'Enseignement* for August 15 (Paris: Armand Colin et Cie.). It is based on the Report of the Commissioner of Education for 1883–84. The reviewer has a sly remark on the worldly reasons (among others) furnished by the Rev. Carroll Cutler, D.D., President of Adelbert College, for overriding the vote of the Faculty for the future exclusion of women. "Ce mélange de sentiments élevés et de préoccupations temporelles a une saveur spéciale et tout américaine," he says. But he might have made a very different remark had he known the early opposition of the clergy in this country to the equality of the sexes in intellectual training and pursuits. Touching on the debate over the elective system, the Professor is disposed to side with Drs. McCosh and Porter against President Eliot, saying that Dr. Porter's arguments seem to him to rack that system seriously. Meanwhile, however, President Porter has abandoned his post of resistance, while President Eliot tranquilly maintains his seat and his course.

The most striking contribution to the (Syracuse) *Academy* for September is a letter from a well-known classical instructor, Mr. W. C. Collar, to Prof. Lane of Harvard, on College Entrance Examinations. It is a plea for greater latitude in preparatory instruction in Latin, both in the interest of good teaching and of the mental freshness of the preceptors. "The reading of the first four books of the Gallic War and the Orations against Catiline with twenty or thirty successive classes has not proved exhilarating to any classical teacher of my acquaintance." And again: "It is said, I don't know with how much truth, that a very large proportion of teachers fitting boys for college read little, if any, Latin and Greek beyond what they are required to teach." There can be no doubt of this, in our opinion, since all motive is lacking for a different practice. Mr. Collar wisely concludes that "when any portion of an author has been required for three or four successive years, it should be dropped, and not restored until after an interval of several years."

As we called attention to an introductory article on the French language in Canada by Prof. A. M. Elliott, in the *American Journal of Philology*, we must mention a second in No. 26 of the same periodical, on "Speech-Mixture in French Canada: External Influence." It is virtually a review of Canadian colonization and history before the final domination of the English. In a footnote the opinion is advanced that the Acadian French, the original sources of which were the Langue d'Oc dialects, is not so strongly separated from the current Canadian idiom as to be deemed an independent order of linguistic growth. Prof. Elliott promises to show hereafter that both the phonetics and morphology are nearer the model of the North French than the language of the Province of Quebec, whose sources were nevertheless in the Langue d'Oïl dialects.

The Report of the Council of the American Antiquarian Society, printed in the Proceedings (vol. iv, part 2) derives its permanent value from its historical illustration of the thesis that "both Pilgrims and Puritans supported their ministers by voluntary contributions for several years after coming to America." In Boston this plan of maintenance "was never given up, and has been in use during the entire period covered by its history."

An interesting conspectus of buildings designed by the late H. H. Richardson is given on several sheets in the *American Architect* for September 11. A novel and effective "heliochrome" process is used to represent a block of stores by the same architect in Boston.

Though the question of the destruction of the Charterhouse has been temporarily settled in the negative, the *Magazine of Art* for October does well to continue its articles on that precious London landmark. An article on Paul Baudry is illustrated by a spirited bust of the dead painter, after Paul Dubois, and by several unfamiliar specimens of his work, including his portrait of About.

M. Paul Leroi has the floor in *L'Art* for August 15 (Macmillan), concluding his discourse on the Salon of 1886. Some strong charcoal life studies by Mlle. Camille Claudel, and a bas-relief profile of the younger Dumas, are among the more striking accompaniments of the text.

A bibliographical account of Bewick's 'History of Quadrupeds' is given in *Book-Lore* for September (New York: David G. Francis).

Daudet's 'Siege of Berlin,' in German; Julius Stinde's 'Die Dumme Frau'; Heyse's 'Die Reise nach dem Glück'; and Jensen's 'Der Wille des Herzens,' are among the short stories in Nos. 14-16 of the "Collection Schick" (Chicago). The same publisher has started a "Humoristische Bibliothek," with illustrations, including selections from Gerstäcker, Brentano, Stinde ('Die Familie Buchholz'), the comic poets, etc.

'Das Jahr 1885'—the nineteenth year of Prof. Wilhelm Müller's 'Politische Geschichte der Gegenwart' (Berlin, 1886)—forms the smallest volume in the collection, excepting the three pub-

lished before the war of 1870. It is especially small compared with its next predecessor, and chiefly meagre on foreign (that is, non-German) events. Yet it finds room not only duly to record the entrance of President Cleveland into the White House and the formation of his Cabinet, as well as the deaths of Generals Grant and McClellan and of Vice-President Hendricks, but also for reflections on the careers of the two generals. Referring to McClellan, the story is told that Fieldmarshal Moltke, having listened to the remark of an American that the Union commander in the "Seven Days' Battle before Richmond" was less highly esteemed as a strategist in his country than some other generals, said: "That may be so, but allow me to observe that if your Government had supported that general as it ought to have done, your war would have come to a close two years earlier." Of this saying both the authenticity and correctness may be doubted. Müller has eighteen pages on the Balkan Peninsula, and the chances are that he will have twice as many in the volume on 1886.

A less valuable, though far from useless, record of the events of 1885 is the first "Jahrgang" of 'Der Chronist,' edited by Dr. Karl Siegen as "a running alphabetical supplement to every Conversations-Lexicon," and issued in quarterly parts (Leipzig). It, too, has obituary notices of Gen. Grant ("born at Mount *Peasant*"), Gen. McClellan (under "Clellan"), and Hendricks (of Indi*ania*"), but it has no reference in the proper place to President Cleveland, and the reader must find out by dint of search that it is not under "Vereinigte Staaten," but under "Nordamerika," that he has to look for events in the United States. Neither Milan of Servia nor Alexander of Bulgaria is separately referred to, and the Serbo-Bulgarian war is spoken of only under "Bulgarien." The literary notices, however, are very numerous—Lindau, for instance, figuring in three quarterly parts.

Volume 14 of 'Brockhaus's Conversations-Lexikon' (New York: L. W. Schmidt) brings this work to *Spahis*, the principal articles being on Russia, Saxony, Schleswig-Holstein, Servia (to the treaty of March 3, 1886), Shakspere, Sweden, and Switzerland. There is an interesting historical map, so colored as to show the growth of the Russian Empire since the accession of Peter the Great in 1689. From this it appears that the period when the acquisitions have been greatest was that of the reigns of Catharine II. and Paul, 1762-1801, and least during the reign of Nicholas, 1825-1855. The other especially noteworthy maps are of the western Russian provinces, Prussian Silesia, Norway and Sweden, and Saxony and the Thuringian States. In the statistics of population given in the article on Switzerland, the number of expatriated Swiss who are living in America is given as 107,780 out of a total of 234,045, against only 66,281 in France. The opening number of the new volume is largely devoted to Spain, the history being brought down to the birth of the King in May of this year. Among American celebrities, Gens. Sheridan and Sherman receive fair and appreciative notices. The American portion of the article on Slavery is not written with a full intelligence of the growth of the Slave Power or of the opposition to it. Two more volumes will complete the work.

The École Libre des Sciences Politiques has commenced, the present year, the publication of a *Recueil Trimestriel*, entitled *Annales de l'École*, etc., under the editorship of M. Émile Boutmy, Director of the School, and others. The articles do not appear to be confined to the regular work of the School, but to be contributed also by former students and others. The third number, for July 15, contains five articles: (1.) France in the Orient at the Commencement of the Eighteenth Century, by Albert Vandal; the diplomatic relations of France with Turkey in modern history are explained in a striking manner. (2.) The Separation of the Administrative and Judicial Powers in Belgium, by Jean Romieu—a subject illustrating some of the most interesting portions of Mr. Dicey's lectures on the law of the Constitution. (3.) Bibliography of the Finances in the Eighteenth Century, by René Stourm. (4.) The French Policy at the Congress of Rastadt, by Raymond Koechlin; this is the second paper, and a third is to be printed in the fall. (5.) The Land-tax in Belgium and Holland, by Marcel Trelat. This number also contains a summary of the year's work. There are three "groups"—History and Diplomacy (Albert Sorel, President); Political Economy and Finances (Léon Say, President); Public and Private Law (Alexandre Ribot, President). In what relation these "groups" stand to the "sections" (Administrative, Diplomatic, Economical and Financial, General—to which a Colonial is to be added), we cannot make out. The examinations of the School took place June 15 to 26: of thirty-five candidates twenty-four obtained diplomas, seven of them with distinction.

—It is curious to find animal spirits the *raison d'être* of a literary immortality, but this is certainly the case in the resuscitation of Christopher North. The tribute to him (one can hardly call it criticism) in the current *Atlantic* suffers greatly by comparison with Mr. George Saintsbury's late article, which was an admirable study, and, in a sympathetic way, said the last light word about the heavy slugger of the Reviewers. The *Atlantic* writer takes the physical prowess of his hero too seriously, almost as a literary instead of a merely personal quality. It is true he belonged to what seems a prehistoric age of criticism, when the giants of literary Edinburgh "tare each other in the slime" if they chanced to meet; but wrestling and pedestrianism and unlimited punch, the brawn and the stomach, were but a part of Christopher, as of other men. The literary analyst must take other than gymnastic measurements, and Mr. Saintsbury will show how the thing is done, if any literary student desires to learn, and at the same time would appreciate a man whose remains are too vast to be more than scanned. The remainder of the number is enlivened somewhat by a folk-lore sketch of Venetian witches, interesting for the mildness and rationality of the Venetian temperament in religious polity, which it illustrates; and Prof. Shaler contributes an inquiry, of a scientific cast, in respect to the probability of a permanent instinctive race-hatred being developed in the Southern social system, in the course of which he treats the negro and slavery from other than the humanitarian point of view, with unusual liberty. The doctrine of Divine Right, as one might call it, in the negro's status seems to yield wholly, in his mind, to considerations of simple state policy.

—The bi-centennial celebration at Woodstock was very noteworthy as the first bi-centennial of Northeastern Connecticut, and from some especial characteristics of the town. An offshoot from Old Roxbury, Mass., fostered by the Apostle Eliot, bringing with it into the Nipmuck wilderness the strictest Puritanic ideas and traditions, with little influence from without to check their development, it furnishes a rare specimen of the genuine New England township. Mr. Clarence Bowen's address ('Woodstock: an Historical Sketch,' Putnams) gives a very comprehensive summary of the settlement and growth of the town, from the first "notable meeting," two hundred years ago, when some forty Roxbury emigrants drew lots on Plaine Hill for their respective homesteads—"every man being satisfied and contented with God's disposing"—to modern meetings more widely known and not less memorable. The spirit of local independence inherited from Anglo-Saxon ancestry has been conspicuously manifested throughout the town's history. When forbidden by the General Court of Massachusetts to levy a meeting-house tax upon non-resident land-holders, it refrained from sending a representative. It revolted from the jurisdiction of Massachusetts to that of Connecticut, and then fought to the death in defence of Cambridge Platform. It gave men and money without stint "in behalf of American liberties," but refused to instruct its delegates to vote the adoption of the Federal Constitution. Many distinguished men claim descent from Woodstock parentage. It gave Commodore Morris to the Navy; Generals Eaton, McClellan, and Lyon to the Army; William L. Marcy to the Cabinet; the descendants of Jedidiah Morse and Abiel Holmes to the world. Mr. Bowen's spirited sketch gives an outline of the most prominent events, and will be followed in a few months by a comprehensive town history.

—Though Instinct is a great matter, it is allowed only one and a half pages in the seventh volume of the magnificent Index Catalogue of the Library of the Surgeon-General's Office (Washington). The special form of the primal curse of the human race, Labor, on the other hand, fills 150. The Intestines come next, with 62 pages; then the Larynx, 52, the Kidneys, 44, the Jaws, 42, the Knee, 32, the Joints, 22, the Leg, 13, the Jaundice, 11, the Iris, 8. Lead-poisoning has a little library of 9 pages. Of remedies, Iodine and Iron occupy 6 and 7 pages respectively; Instruments, 8. Jurisprudence (medical) has a literature indexed in 24 pages. A mere list of periodicals called "Journal" requires 9 pages; but a far more impressive testimony to the enormous scope of Dr. Billings's *magnum opus* is the 100 pages of titles of periodicals referred to in the first seven volumes of this Catalogue, with their abbreviations, reprinted for convenience of reference. The volume ends with Leghorn; and, by the way, there is no little interest in the geographical classifications—of countries, like Ireland, Italy, Japan; or of towns and cities. More intimate study will repay the bibliophile. One might go far to see, though we do not know that it is a rare book, Dr. Edward Jenner's 'An Inquiry into the Causes and Effects of the Variolæ Vaccinæ, a disease discovered in some of the western counties of England, particularly Gloucestershire, and known by the name of the Cow-Pox' (iv, 75 pp., 4 pl. 4to. London, S. Low, 1798). Jenner's portrait was inserted in the third edition in 1801. A German translation was promptly published at Hanover in 1799, a Latin at Vienna in the same year, a French at Lyons in 1800, a Portuguese at Lisbon in 1803, an Italian at Modena in 1853. Keats, in his medical capacity, is entered by way of two magazine articles. In general, the biographical features of this Catalogue are of great value, and more pains than can be appreciated have been taken to give the dates of the physicians recorded.

—In a "Plan for the extension of astronomical research" (privately printed), Professor Pickering of the Harvard Observatory calls attention to the waste arising from the expenditure of money in astronomical observatories and instruments which there is no way of making good use of. Donations for the promotion of science are generally made by men not well acquainted with the nature of scientific research. Their ideal astronomer is a keen-eyed man, looking at the heavenly bodies through a big telescope to see what new thing he can discover. From such a point of view, the largest possible telescope is naturally regarded as the only important requirement of an institution for astronomical re-

search, and thus we have countless telescopes scattered over the country, few of which are in regular use, and still fewer employed in work which is likely to be published. In order that an instrument may serve a really useful scientific purpose, there must be a trained man whose principal business it shall be to use the instrument, and who shall have the aid of one or more assistants, together with the means of publishing his observations. Perhaps we might add that he should also have some incentive for doing good work; but this is a requirement which a donor of money would necessarily leave to his trustees. Professor Pickering points out to the patrons of astronomical science that their objects can best be attained, not by founding new institutions or purchasing new instruments, but by giving existing institutions the means of utilizing the appliances they already possess. For example, the observatory of Harvard College has an ample outfit both in the way of instruments and observers, but is much cramped by the want of an income to meet the current expenses of its work. A few years ago a subscription of $5,000 a year was secured for the term of five years, and the results obtained, as seen in the published volumes of the annals, far exceeded any that could have been realized by expending the same amount in founding a new institution or presenting new instruments. Finally, lest donors might fear that in taking such a step as he proposes they would merely be supporting the Harvard Observatory, Professor Pickering shows that if the patron has any special investigation in view, there will be no difficulty in having the proceeds of his donation devoted entirely to it.

—The curious earthquake theories that spring up just now in the newspapers must be taken as indirect effects of the Carolina disturbance, along with the sand and clay eruptions in the shaken district. The latter, which the reporters delight to call "geysers" and "volcanic phenomena," seem to be very generally misapprehended. They are, in the first place, not at all uncommon in violent earthquakes, and have been described in detail in Austria and India. Oldham's account of the Cachar earthquake, published in the memoirs of the Indian Geological Survey, is of particular interest at present by reason of the excellent photographs that it gives of these pseudo-eruptions. Further, they are in no way volcanic, being of shallow origin and of low temperature; they do not depend on the movement of molten rock, or on the expansive force of hot steam, but on the incompressibility and mobility of cold water. They are, without doubt, produced by the bursting out of water from saturated layers of sand or clay a little below the surface, at the moments when the passing earth-waves exert a compressive force. They are therefore not to be regarded as at all indicative of the cause of an earthquake, which is deep seated; they are not even the immediate effects of the initial disturbance; they should be recognized, together with shaking houses and tumbling walls, as effects of the earth-waves that travel radially away from the subterranean source of the earthquake, and therefore as only secondary effects of the first cause.

—The newspapers, as a rule, seem to feel no responsibility for the nonsensical theories that they publish. It is sufficient if a correspondent, whose mental furnishings are in unstable equilibrium, has an untested hypothesis dislodged from his brain by the news of the earthquake: it is printed, and serves as material for public edification, even though resounding from beginning to end with ignorance, inconsequence, and absurdity. The New York *Tribune* one day gives space to a letter suggesting that the Carolina earthquake was generated beneath Vesuvius, then carried *under* the ocean by a passage that brings away from the Mediterranean the surplus of its inflow from the Atlantic, and thus led into the Gulf Stream, which discharged the shock on Charleston and its vicinity; and the next day opens its columns to a correspondent who thinks the shock was dispersed as an electric wave, and quotes vague evidence from "a gentleman who has resided much in South America." The Philadelphia *American* knows of no use for the time-records of the shock, and editorially likens them to "material for a sort of scientific coroner's inquest" It thinks the altogether questionable "shower of pebbles" reported in Charleston a "most significant fact," which, taken in connection with the "geysers," points to a volcanic origin of the earthquake. The Philadelphia *Inquirer* prints several long letters from a modern martyr, who anticipates the neglect with which a sceptical world may treat his hypothesis connecting earthquakes and the attitude of the planets, by pointing out that Kepler, Galileo, and Newton also had a hard time of it to convince their incredulous hearers of laws that have since given them a very good reputation. Such reading tempts one to wonder what are the duties of a newspaper editor.

A PUBLIC DOCUMENT ON ART.

Industrial and High Art Education in the United States. By I. Edwards Clarke, A.M. Part I, Drawing in Public Schools. Washington: Government Printing Office. [Bureau of Education.]

THE only form of intellectual activity produced by the attempt to wade through the morass of incompetent conclusions and ill-selected quotations contained in this fearful volume of 842 pages, printed at the expense of the people of the United States, is that of resentment. If there was planned a Part ii, on some higher development in art education, it is patriotic to hope that something may interfere with any further such absolute waste of paper and printing. Page after page of the most commonplace and trite dissertation on art is followed by a mass of quotations from all kinds of writers on art, of whom the compiler was evidently unable to measure the relative authority. Mixed with all this are puffs of art manufacturers, and absurd and unmerited eulogiums of the author's colaborers.

An introduction of 258 pages furnishes, if one only knew how to find it, the supposed plan of the report; and, as nearly as we can judge, it is contained in the following passage:

"The subject naturally separates into two main divisions: on the one hand, that embracing all matters relating to the technical industrial producing arts and artistic industries; on the other those relating mostly to the Fine Arts: this last division properly includes three distinct subdivisions, relating, separately, to the theory and history, to the study and practice, and to the enjoyment and patronage of art. The first of these minor divisions includes such a knowledge of the historical development of art as must hereafter be implied in the term 'liberal education,' such as, within the past few years, has been taught in some of the classical colleges and universities; the second includes the special art schools, and academies for the technical training of artists—architects, sculptors, painters, and engravers, preparatory to the actual production of works of high art; the third comprises the various means for promoting that general information and art culture of the public which is derived largely from the opportunities of seeing choice works of art, in the collections of art museums and art loan exhibitions; the latter having perhaps as important, if not as manifest, an influence upon the development of the industries and arts of a people as the former, for the industries and arts of a people are determined by their needs, their desires, and their intelligence.

"So long as individuals and communities have never seen the added attractions given to buildings, furniture, clothing, and household implements by the application of art to such articles of prime necessity, so long there is no demand for the production of similar artistic articles; but let once their eyes be opened by a sight of the wonders of a 'world's fair,' or an 'art-loan collection,' and immediately the demand is created. There is at first no ability, owing to lack of knowledge and skill on the part of the home workmen, to produce similar articles, consequently this demand must be met by importation. An increase of imports, with no corresponding increase of exports, is an evident disadvantage for the importing country. It is therefore of importance to any community or country to ascertain by what methods other countries have trained skilled artists and artificers, in order to adopt similar means; hence, an account of the experiments, expenditures, and systems adopted by foreign countries for these purposes is directly demanded in such a report as this."

Platitudes of this kind innumerable may be found in corners of country papers and in sophomorical essays *passim*, but probably in no enlightened country except our own has it ever been thought worth while to collect them for official publication.

A chapter is devoted to crude speculation on "the Democracy of Art"; an adulatory address to Demos assuring him that he is the true and fitting patron of art, witness Athens in the age of Phidias—in sublime ignorance of the fact that the Athens of Phidias was the work of an intelligent despot, and that the people had no more part in it than they had in the Florence of the Medici. The only thing the people did for Phidias was to throw him into prison (where he died), on various charges, of which we know that one of the chief—that of putting his portrait into the ornaments of the Athena—proved clearly enough that it was not the artistic but the theological side of his work which filled the popular mind. The Demos will be a patron of high and true art when it is a friend of high morals and true philosophy; when the workmen will gather after their work and discuss Plato and the 'Novum Organum,' read Dante in the original, and be able to controvert the fallacies in Ruskin's 'Modern Painters'—in other words, when it is educated to the point which individuals must reach in order to become intelligent patrons and students of art. The "Democracy of Art" is a thing which may be in the far-distant future, but never has been except in the fables of history; and as education in art is the most backward and the most difficult of all forms of education, it will be the last to which any people will attain. Individuals, and possibly races, of extraordinary gifts and a narrow and special education may be brought to the *production* of special forms of art in high perfection, but this does not imply, and is rarely accompanied by, that general education in art which is aimed at in modern schemes of official activity. The art education of a people has never gone further than dress and the simpler forms of technical decoration; for anything beyond, and the forms of ideal art, we have always been dependent on the select few—an aristocracy of birth, education, or wealth, or all three combined.

Even in abstract conceptions of art our reporter has no preparation for his undertaking. What can one say to this as philosophy?

"Man may be defined as a thinking, talking, and constructing animal. That other animals may partake in some degree of this faculty of thought, which was long denied, is becoming somewhat generally admitted since the evidence has accumulated of actions by animals—as the horse, the dog, the elephant—apparently based upon memory, and the results of cogitation upon former experiences. Nevertheless, not even the most enthusiastic evolutionist will deny that as yet the development of man, as a creature capable of ratiocination, is far in advance of that of all other beings known to the naturalist.

"In articulate speech, with all that it implies, man stands confessedly superior. Although he shares the constructive faculty with insects, the bee, the wasp, the ant, as well as with some of

the animals, as the beaver, and with the birds as a class, and although some of each of these classes of animated beings, by the exquisite perfection of their constructions, challenge the superiority of human skill, yet in the versatility of his wide-embracing powers man still holds the place accorded to him in that sublime history of the creation recorded in Genesis, as the ruler and governor of all created beings.

"It is, however, in his capacity for Art that man is most completely differentiated from the rest of the animated creation."

The author might have added that man is also distinguished in his capacity for art by standing erect, and therefore being able to work at the easel.

"It is, of course, only of works of art which claim to belong to High Art that these words are written. In the realm of Decorative Art other laws have rule; for the decorative artist has no special message of his own to deliver. His art is an end in itself. Its results are attained by the use of pleasing forms and harmonies of color. Its purpose is to add to the sum of human happiness by thus producing pleasurable sensations. It is a charming and delightful phase of art akin to the dance and the song, in which rhythmic harmonies appeal to eye and ear. It is not of that high order of inspiration of which we have been speaking."

This is another of the clap-trap pseudo-truisms which are continually being asserted by the would-be philosophers of art, and which make their education hopeless. There are really two forms of pictorial delineation or representation to the eye, by any technical means, of natural objects or conceptions: one is decorative and the other is scientific. The latter may be drawing or painting or sculpture, but it is not Art. There is no distinction whatever between Decorative Art and what is known as "High Art," but which is really *high* just in proportion as it is *pure* art The frescoes of the Sistine Chapel are simply its decorations: the pediments of the Parthenon were no more—if bad art; they might have been less.

A great part of the volume before us is devoted to the eulogy of Walter Smith, of South Kensington, late State Director of the Massachusetts Art Schools, and author of the introduction to the educational system of the United States of the worst recorded method of teaching art, or even drawing, which the world has yet developed—a method born of ignorance, and carried out in misapprehension of the lowest as well as the highest qualities of true art; wrong in its methods and mistaken in its ends. That Prof. Smith should be the model of the reporter's commendations, and his glorification the drift of the report, is the best evidence that could be given of his incompetence to undertake a work which must stand as the highest official expression of American knowledge of art, and go abroad as such. An author printing his ideas at his own cost and risk has a claim to the charity of silence we may afford to the ignorant; but the fashion, if it is to be one, of flooding the country with unintelligent lucubrations like these, at public expense and with the official stamp, cannot be too soon or too severely visited with the reprobation it deserves. And all the more earnestly are those to be protested against that enter a province in which popular education is still to be begun, and where so much depends on the eminent fitness of the reporter, not to collect facts and statistics, but to express opinions. The English Government, with its superior advantages, has never done anything but muddle in art education; and ours, with its standards of ethics or æsthetics, cannot do better than let art education alone. If a demonstration of this is wanted, a brief examination of this volume will furnish it. We protest in advance against the second volume and all after. If our Government wants to know what the best system of art education is, let it delegate some competent person to visit the various schools of art in the Old World, and describe with a comprehensible and useful precision the methods followed and the relative results obtained in them. Having published the result of this commission, let Congress solemnly bind itself never to appropriate a dollar to the patronage of art under any pretext whatever.

THE MELANESIAN LANGUAGES.

The Melanesian Languages. By R. H. Codrington, D.D., of the Melanesian Mission, Fellow of Wadham College, Oxford. Oxford: Clarendon Press; New York: Macmillan. 8vo, pp. viii, 572.

SOMEWHAT more than thirty years ago a young man of New York city, who had employed most of his spare time since his graduation, some eight or nine years previously, in the study of comparative philology and general linguistics, came to the conclusion that, in order to solve certain problems which had presented themselves to his mind in the course of his studies, it would be necessary to investigate some of the languages of barbarous peoples who had no written literature of their own. The only practicable method of doing this was through the works of missionaries, more especially the translations of portions of the Scriptures published by Bible and missionary societies. He accordingly called at the office of the book department of the American Bible Society, stated his object to the gentleman in charge, and offered to pay any price that gentleman might deem reasonable for copies of books published by the Society, in languages which had been first reduced to writing by missionaries for the instruction and conversion of the barbarians to whom they had been sent. The gentleman of the Bible-house raised various objections to the young man's request, and finally closed the conversation by saying with some asperity, "Well, you must understand that the object of this Society is to propagate the Gospel, and not to assist philological students," and turning away to attend to other matters. The young man then determined to attempt to procure the books he wanted, through an English agent, from the British and Foreign Bible Society; but he found, on inquiry, that such an attempt would be as fruitless as his application to the American Society. A few years afterwards the German philologist, H. C. von der Gabelentz, published a work on the Melanesian languages, in the preface to which he said:

"It cannot be enough lamented that the missionary and Bible societies seek for the most part almost anxiously to render their publications unobtainable for any secular purpose, without considering that they thereby deprive themselves, even for their own purposes, of the assistance which linguistic investigation would afford them."

The learned linguist further felicitates himself on having found two gentlemen—Mr. E. Norris of London, who had formerly been attached to the Melanesian Mission, and Mr. R. Rost of Canterbury, who, with a liberality at that time unusual, had furnished him with books from which he had been able to construct outline grammars of ten Melanesian languages. The world, however, does move, and the noble octavo before us is a proof that this jealousy of scientific investigation is fast dying out, if not already dead. Its author, Dr. Codrington, a man furnished with all that intellectual equipment which is implied in his being a fellow of an Oxford college, was for many years attached to the Melanesian Mission. His book, though the production of a missionary, is not intended exclusively, or even principally, for the use of missionaries. It is a most important contribution to linguistic science, and, made in the best style of the Clarendon Press, is offered to all who may desire to buy.

Under the general name of "Melanesia" Dr. Codrington includes the following islands and groups of islands: (1) furthest to the north and west, the great island of New Guinea or Papua, about five times the size of the State of New York, its most northern point being about twenty-two miles south of the equator; (2) the two large islands of New Britain and New Ireland, separated by St. George's Channel, in which lies the little island Duke of York, about three miles long by two and a half broad, insignificant in size but important in a linguistic point of view, because the language spoken by its inhabitants is taken as the representative of those spoken on its neighbors, of which little is known; (3) thence, in a generally southeast direction, successively, the Solomon Islands, the Santa Cruz group, the Torres Islands, Banks Islands, the New Hebrides (about which we have heard so much in the last few months), the Loyalty Islands, New Caledonia, and the Fiji Islands The natives of all these islands are black and have curly hair, but in all other respects they are entirely different from the African negroes in ethnological works they are generally called Papuans.

For many years Dr. Codrington resided on the island of *Mota*, or, as it is generally called by the English, Sugar-Loaf Island, one of the smallest of the Banks' Islands, and the headquarters of the Melanesian Mission. Much of his time, however, was spent at the Mission School on Norfolk Island, about a thousand miles south of *Mota*. Boys and young men, natives of different Melanesian islands, attended this school, and from them he gathered the larger part of the materials of his book. All these scholars learned *Mota*, which Dr. Codrington spoke and wrote with perfect facility, and through the medium of the *Mota* he acquired most of his information in regard to the other languages. He was also assisted by a native convert named Wogale, a man of great intelligence and a deacon in the church, who spoke several Melanesian languages. Dr. Codrington's book is thus almost entirely the result of original investigations of the different languages as spoken by the natives themselves.

The patience, the care, the acuteness, above all the good sense manifested throughout the work cannot be too highly praised, and the value of the book will increase with time. In a recent review of Judge Fornander's work on the Polynesian languages it was remarked that the natives of the islands of the Pacific were fast becoming extinct. A striking proof of this is found in the fact, mentioned by Dr. Codrington, that Vanua Lava, the largest of the Banks' Islands, has been "depopulated by the labor trade." On that island there were formerly spoken fifteen dialects recognized as distinct by the natives themselves. Dr. Codrington gives us grammars of five of these dialects, and it is very improbable that any further knowledge of them, based upon personal intercourse with the natives, will ever be given to the scientific world. Another influence, equally destructive, and against which the preservation of the race affords no defence, is also at work. Intercourse with Europeans is fast corrupting the native tongues and destroying their characteristic features. This destructive influence does not arise from commercial intercourse only, but from a quarter whence it would be least expected. For our knowledge of barbarous languages we are, and for some time must be, indebted chiefly to the labors of missionaries. Yet Dr. Codrington, himself a missionary, and apparently a very devoted one, does not hesitate to say: "Missionary translations, sermons, and speaking are the ruin of native languages" (p. 100). All this enhances the

value of a work which so evidently strives to present a truthful and accurate account of Melanesian speech.

Dr. Codrington divides his book into six parts: First is a general introduction, in which he endeavors to show not only that the Melanesian languages are "homogeneous" and have a common origin, but that they are a branch of one great family which includes the Malayan and Polynesian languages also. Although the facts and arguments brought forward by Dr. Codrington in support of his theory seem to us altogether insufficient to establish it, yet it is precisely this part of his work, which may perhaps be called the polemical part, that is most calculated to inspire confidence in his subsequent investigations. The tendency to make his facts fit his theory nowhere appears. He does not seek to conceal the differences or exaggerate the similarities of the various languages, and his introduction is full of illustrations, suggestions, and warnings of the highest interest and value to the comparative philologist. (2.) Vocabularies. These contain seventy English words in common use and their equivalents in signification in forty Melanesian languages and in Malay, Malagasy, and Polynesian. They are accompanied by elaborate notes, and it is principally upon their supposed relationship that Dr. Codrington bases his argument for the common origin of all these tongues. We have no space for detailed criticism, but some general objections to his argument will be found below. (3.) Short Comparative Grammar of the Melanesian Languages. (4.) Phonology. (5.) Numeration and Numerals. Parts iv and v are in reality only subdivisions of part iii. (6.) Grammars of the different languages. These special grammars occupy more than one-half the book in bulk and still more in matter, the larger portion of each being printed in a smaller type.

Dr. Codrington gives us grammars of thirty-five Melanesian languages, almost all of them based upon his own personal observation and research. An idea of the zeal and enthusiasm with which he pursued his labors may be formed from the following statement, which he makes (p. 100) for an entirely different purpose:

"After some twelve years' acquaintance with the [*Mota*] language, talking, teaching, and translating, and after having acquired more or less correctly a considerable vocabulary of *Mota* words, I began to buy words that I did not know at the rate of a shilling a hundred from the scholars at Norfolk Island. I left off when lists of three thousand words unknown to me had come in."

As this did not, in his opinion, exhaust the stock of his scholars, who had left their native island as boys to attend the school on Norfolk Island, and as they were no doubt ignorant of many words familiar to their elders who had resided continuously on their native island, he estimates that a full vocabulary would contain at least six thousand words; and this "on a small island with less than a thousand inhabitants, and with whom European intercourse began within the memory of living men." We may add that it has been estimated that, excluding scientific and technical terms, an average Englishman of good education does not use over five thousand words; hence it will be seen that the Melanesians do not lack the means of expression. Dr. Codrington gives us no grammars of the languages of New Guinea because hardly anything is known about them. For the same reason he furnishes no grammars of the languages of New Britain and New Ireland, except so far as they may be supposed to be represented by the language of the Duke of York Island, of which he gives a grammar based on materials furnished him by the Rev. George Brown, a Wesleyan missionary stationed there. He also gives no grammar of the language of the Fiji islands, because good grammars and dictionaries are already obtainable; but the points of agreement and difference between the Fiji and the other Melanesian languages are very fully pointed out.

The language of the island of *Mota* is very elaborately treated, that island having been Dr. Codrington's place of residence, and its language the one with which he was most familiar. His intercourse with his pupils from other islands was also generally through the medium of the *Mota* tongue, they being either already acquainted with it or learning it very quickly and easily after coming to the school on Norfolk Island. The *Mota* tongue thus naturally became a sort of standard of comparison for the other languages, although the author is careful to state that he considers it in no respect entitled to any superiority over the others.

We had marked for notice many curious and interesting peculiarities of the Melanesian languages, but want of space compels us to omit the most of them. Two or three phenomena, however, seem to demand attention. The chain of islands which constitutes Melanesia is about 3,500 miles in length, yet within these limits geographical nearness or remoteness seems to afford no clue whatever to the nearness or remoteness of linguistic relationship. Thus the Fiji Islands are about a thousand miles from *Mota*, and about six hundred miles from the nearest of the other Melanesian islands; *Motlav*, a district of Saddle Island, is only seven miles north of *Mota*, yet "a *Mota* man finds it easier to learn to speak Fiji than the language of *Motlav*." Again, the island of Ambrym is nearly in the middle of the New Hebrides. To the north is Arag (Pentecost Island), to the west Malikolo, to the south Api, each within twenty miles of Ambrym. Yet the language of Ambrym is so different from the languages of the other islands that the natives of the latter can only learn it with extreme difficulty. The natives of any one of the smaller islands are generally mutually intelligible, but often speak dialects recognized by themselves as distinct. Thus the little island of *Mota*, with less than a thousand inhabitants, has two well-marked and distinct dialects, while Vanua Lava had fifteen, as many as it is miles in length. Another remarkable feature—at least of the Banks' Islands, and probably of the others—is that each dialect or language possesses a poetical language or "song-dialect" differing in many respects from the ordinary spoken tongue. The peculiarities of the song-dialects, as enumerated by Dr. Codrington, are (1) "the casting out of vowels, and consequent contraction of words"; (2) "the occasional addition of a final vowel"; (3) "the use of words that are not used at all or are used differently in ordinary speech"; (4) "the imitation of foreign forms." The song-dialect of *Mota* resembles that of *Motlav* on the north and of Gaua on the southwest, but at the same time it is quite different from either the song-dialect or the spoken language of either. "To compose a song is to 'measure' a song." The measure, however, does not depend upon the quantity or number of syllables, but upon their adaptation to a "sort of tune." As to the nature of this "sort of tune" Dr. Codrington gives us no information, except that each song commences with a string of vowels which "sets in some way the tune or the character of it." If, in the course of the song, the character of the tune changes, the change is indicated by the introduction of a new string of vowels.

To establish his theory of the common origin and kinship of the Malayan, Polynesian, and Melanesian languages, Dr. Codrington relies chiefly upon the similarity in form and meaning of a comparatively few words picked up here and there from one and another of these tongues almost infinite in number. Although he is very circumspect and sober in his treatment of these sporadic resemblances, he yet thinks their cumulative force sufficient to justify the inference that they belong to a common stock. But even if we make no allowance for chance coincidences, there are so many possible and even probable ways of accounting for these resemblances, that they seem to us to go but a little way towards establishing his theory. Neither is the existence of similar grammatical forms and identical psychological processes in two languages very strong evidence of kinship. In Nengone (formerly called Britannia Island, now usually Mare), the most southern of the Melanesian islands, the system of numeration, not only in its general structure, but in many of its details, is identical with that of the Greenlanders who dwell far to the northeast, amid the snow and ice of the frigid zone, separated from Melanesia by an ocean and a continent. This is undoubtedly due to the fact that the natives of Nengone and Greenland alike use both fingers and toes in counting.

But we will give another example, far more striking, of a purely intellectual character, not connected with any physical process. All the Melanesian languages agree in having two forms of first person plural of the personal pronoun, the one exclusive, the other inclusive. The *exclusive* form is used when the speaker includes himself and those he speaks for, but excludes those whom he addresses; the inclusive form is used when the speaker includes in his proposition not only those for whom but those to whom he speaks. Thus, supposing a canoe containing a party of men from the east of *Mota* meets another from the west containing another party. The leader of the party from the east might address the other party: "We are from the east of *Mota*, where are you from?" He would employ the exclusive form of the *we*. The leader of the other party might answer: "We are from the west of *Mota*," also using the exclusive form. The first one might then say: "Then we are friends," and he would now employ the inclusive form. So far as we know, no grammatical form of this sort exists in any language of Europe, Asia, or Africa. Now, taking our stand on the island of *Mota*, let us make a long leap a little to the north of east over the broad Pacific, the Polynesian islands, the peaks of the Andes, and drop down in Cuzco, the ancient capital of the Incas. We are now thousands of miles from *Mota*, 11,000 feet above it, and on a continent instead of a mere dot on the surface, just above the level, of the sea. Climate, race, laws, customs, everything is different. The ancient language, the Kechua, like the ancient people, is not yet wholly extinct. It is as unlike any one of the Melanesian tongues as the people are unlike the black, curly-haired cannibals of Melanesia. But the Kechua has two forms of the first person plural of the personal pronoun, an exclusive and an inclusive, identical in meaning and use with the Melanesian forms, though phonetically there is no similarity. From Cuzco let us now make another leap a little to the west of north, not quite so long as but perhaps more difficult than the first, over a third in length of the South American continent, with its mountains and valleys and mighty rivers, over the Caribbean Sea and the Gulf of Mexico, over the United States and the broad expanse of Lake Superior, upon whose northern shore we drop among the Chippewa Indians. Again everything is different—climate, race, language; but here, too, we find the same two forms, exclusive and inclusive, of the first person plural of the personal pronoun. Neither is the phonetic form so radically different from *Mota* as in the case of the Kechua; but any similarity that may be traced is evidently a mere matter of chance.

The want of an index is the most serious defect of the book before us, and greatly impairs its

usefulness as a work of reference, though in part remedied by a very good table of contents and an extremely systematic arrangement.

An Investor's Notes on American Railroads. By John Swann. G. P. Putnam's Sons. 1886.

Mr. Swann is an English lawyer who has had practical experience in American railroad management. He has embodied the results of this experience in a little book of less than two hundred pages, dealing with railroads and railroad legislation from the standpoint of the investor. This is not the first time that the subject has been so treated. W. M. Grosvenor's recent work on 'American Securities'—of whose existence our author is apparently unaware—deals with some of these matters with great ability. But the two books, though looking at the subject from the same side, are altogether unlike in their character. Grosvenor's work is chiefly historical, presenting and explaining the facts as they occurred. Swann gives the explanations without the history—describing methods and principles, rather than specific facts. The two supplement one another extremely well.

The substance of Mr. Swann's book is almost all good. Not so much can be said for the arrangement, which is often very confused. A little more care in this respect would have greatly increased the effectiveness of the book. Three distinct topics are treated: first, the social conditions which affect American investments; second, the financial methods employed in controlling or manipulating them; third, the legal disabilities to which they are (or may be) subjected. The first of these points is treated in such a manner as to be of more interest to foreigners than to Americans. What Mr. Swann says with regard to the feeling in favor of protection, or the geographical direction of railroads, is all true enough, but not particularly new to readers on this side of the Atlantic. Of much greater interest is the part which describes the financial methods of railroad rings. These ought to be well known to the public, but unfortunately they are not. Mr. Swann gives clear illustrations of the means used to affect the prices of stock; of special contracts with inside rings; of the ways of issuing fictitious capital, or "reorganizing" real capital out of existence. We have but two criticisms to make on this part of the work. In the first place, it would have been more forcible if the author had used real cases for illustration instead of hypothetical ones. He doubtless shrank from mentioning names; but it would have added greatly to the usefulness and force of the book if he had dared to do so. In the second place, he does not always realize the extent to which the traffic department of a railroad is and must be independent of the financial department. Railroad managers do not base their rates upon capital: they base them upon operating expenses and volume of traffic to be secured. But our author, in his speculations as to the probable policy of a trunk line with no water in its stock (p. 133), falls into the fallacy of thinking that rates are naturally based upon capital. If his experience as a railroad manager did not show him his error, he might at least have noticed the fact that the Baltimore and Ohio, capitalized at less than $100,000 per mile, charges higher average rates than the Erie, capitalized at over $300,000 per mile.

That part of the book which relates to the legal position of railroad property is of great value. Nowhere else have we seen so good a summary of the lines on which the rights of railroad owners are limited, or at least threatened:

"(1.) The institution of boards of railroad commissioners with unprecedentedly large powers, involving the assumption of important directorial functions. The cost of their maintenance to be paid by the railroads subject to their jurisdiction. (2.) The formal incorporation into the statute-book of the several States of the proposition that 'a railroad is a public highway, the property of the people.' As incidents thereof: (3) The right of the people by their commissioners to fix rates, settle tariffs, and revise special contracts. (4.) The right to limit dividends in advance. (5.) The right to direct from time to time additional expenditures by corporations, in order to furnish such improved accommodations as may be deemed suitable for the public *convenience* outside the requirements of public *safety*."

Each of these points is discussed with vigor; and whether we agree with Mr. Swann or not, what he says has an interest as representing the views of a well-informed Englishman on subjects about which he is perhaps more impartial than an American is likely to be. One of his arguments under the third head is characteristic and worth quoting:

"The Supreme Court of the State of New York has recently decided that corporations can be compelled by mandamus to handle *promptly* all freight offered for transportation in the face of a strike of the freight-handlers. . . . Now, where a corporation can control its own tariff, the obligation to handle promptly all freight offered by the public is a measurable commercial risk. But if a State *which does not actively discourage labor combinations* neither permits corporations to protect themselves by raising rates to meet the fluctuations of the labor market, nor itself bears any portion of the loss arising from its official adjustment of the tariff during the existence of the strike, it creates a divorce between management and responsibility. It disarms corporations by legal intervention, and then leaves them solely liable for the losses incident to their disarmed condition."

This is a hypothetical case; but it shows how several principles which have been applied separately could not with any fairness be applied all together.

Mr. Swann is, as a rule, remarkably correct in his facts and figures. His estimate of thirteen hundred millions sterling (about $50,000 per mile) as the *actual* capital invested in American railroads will strike most well-informed readers as rather high; but since he makes it with many reservations, it would be unfair to hold him too closely responsible. There is a curiously misleading statement that, "with one or two exceptions, railroad commissions in the South have, on the whole, exercised their powers with greater judgment and moderation than elsewhere." This is perhaps verbally correct, if we consider only those States whose commissions have been allowed by the courts to exercise their powers. But since there are only *four* such States in the South, the "one or two exceptions" rather detracts from the force of the remark. As a matter of fact, railroad commissions in the South probably average neither better nor worse than in the Northwest.

The Life of Charles I. (1600–1625). By E. Beresford Chancellor. London: George Bell & Sons; New York: Scribner & Welford. 8vo, pp. 180.

Mr. Chancellor has industriously collected all that could be learned of the personal history of Charles I. up to his accession to the throne, and has narrated his life in a clear and appropriate style, with abundant references to authorities. There are few sovereigns of modern times whose personality has so much historical importance as that of Charles I., considering how largely his contest with the Parliament was affected by his character and habits of thought. But it is a good illustration how little the historians have dealt with the most fundamental points, that we learn here almost nothing as to the formation of his character. It would be worth a good deal, as a study in psychology, to know exactly how his inherent want of good faith, joined to a general uprightness of disposition, was created. There are a number of excellent portraits, and we suppose that it was in order to make suitable accommodation for them that the rather awkward shape and size of the book were selected.

BOOKS OF THE WEEK.

Ballou, M. M. Genius in Sunshine and Shadow. Boston: Ticknor & Co.
Bates, Arlo. Berries of the Brier. Boston: Roberts Bros. $1.
Beale, Anne. Simplicity and Fascination: A Novel. Boston: Lee & Shepard.
Benjamin, Park. The Age of Electricity, from Amber-Soul to Telephone. Charles Scribner's Sons. $2.
Blaisdell, A. F. Study of the English Classics. Boston: Lee & Shepard.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 30, 1886.

The Week.

THE Washington *Star* makes the suggestion that if the national banks are willing to let their called bonds lie in the Treasury uncancelled and not drawing interest, nobody, not even the most excited Greenbacker, can object to that arrangement or deny them that privilege. Quite true, but meanwhile what is to be done with the money collected at the custom-houses and the tax offices to pay off the bonds? Can this be allowed to accumulate to any extent while the banks are making up their minds what they will do? We must either disburse the money or reduce the taxes. The latter expedient has not been much talked about, and is looked upon with absolute dismay by the high-tariff people. At the rate that money is coming into the Treasury, we shall need a surplus resolution soon of a very different kind from that of the last session—a resolution not for paying out money, but to prevent it from coming in. It is probable that all the outstanding bonds redeemable at call will be paid off before the end of the year 1887. What is to be done with the surplus in the interval until 1891?

Mr. Hewitt talks in a very despondent tone about the prospects for sensible legislation on the tariff. He says in a *Tribune* interview that he does not know whether he will consent to be a candidate for reëlection to Congress or not, and then adds this statement of the failure of one of his efforts to secure useful legislation last winter:

> "Finding it to be impossible to secure action upon any bill which undertook to regulate duties, I finally prepared a measure dealing simply with the administration of the customs laws. This bill was unanimously approved by the Committee of Ways and Means, but Mr. Morrison, the Chairman, insisted upon attaching it to his bill involving a change of duties, and Mr. Randall did precisely the same thing in his bill. The result was that it never reached the House and never had consideration as a separate measure. I was powerless to secure such action; but I think that the Speaker might, if he had been so disposed, have done much to insure action. He is a man of eminent intelligence and judicial fairness, but he seems averse to taking a positive part in shaping legislation. So far as I am concerned, I had to confess that I lacked the influence and energy necessary to force action upon a measure which all parties agreed ought to have passed."

That is a perfectly true picture of the way in which not only tariff but much other really desirable legislation is defeated at Washington. Still, we trust that Mr. Hewitt will consent to make at least one more trial before he abandons the fight. There are many evidences that the Democratic members of Congress will reassemble in December with more enlightened views upon public questions than they had when they adjourned.

The nomination of a pronounced anti-protectionist for Congressman by the Republicans of the Detroit district is a notable evidence of the growth of sound ideas regarding tariff reform in the West. Four Republican Congressmen from Minnesota took their stand on the right side when the question of considering the Morrison bill came up in the House at the last session, and it required the exercise of all the power of party discipline to restrain several other Republican members from following the example and voting in accordance with their convictions. That the Minnesota Congressmen correctly represented the sentiments of their constituents, is demonstrated by the fact that either they have been renominated upon their revenue-reform record, or candidates have been nominated in their places who stand upon the same platform. The choice of a Republican of the same school as the candidate in the chief city of Michigan is a proof that the leaven is working in other States.

The protection organs tried for a while to comfort themselves for the independence of the Minnesota Congressmen with the theory that these Representatives misrepresented their constituents; that, as Mr. Blaine put it in his speech, "these exceptional votes were adverse to the wishes of a large majority of those who elected the dissenting members." But it is no longer possible to impose upon anybody with this assumption. The St. Paul *Pioneer-Press*, the leading Republican newspaper of the State, recently published an editorial reviewing the situation in each of the districts, which showed that "it is within the bounds of certainty and truth to affirm as indisputable, not only that a vote for tariff reduction has not tended to the defeat of any man in this State, but that these votes, commended as they were by the Republican voters of the four districts concerned, were the principal foundation of such popular strength as those to whom they were credited possessed among their constituency." Since this article was published the Republican State Convention has been held, and has shown that the *Pioneer-Press* told the exact truth. The Convention, which was the largest ever held in the State, adopted this plain-spoken resolution:

> "The producers of the great Northwest demand a lower rate of taxation upon the necessaries of life than that of the war period. We favor, therefore, as a just and necessary lightening of their burdens and an aid to their prosperity, an early and judicious revision of the tariff, with a simplification and reduction of customs duties."

Nor did it stop here. As a reply to charges like that made by Mr. Blaine, it adopted amid hearty applause the following additional resolution:

> "That this Convention approves of the action of the majority of the Minnesota delegation in the House of Representatives of the United States, in voting to consider the bill for the revision of the tariff.

A singular thing has happened in Missouri. The Republicans in Mr. Bland's district have nominated L. F. Parker of Rolla for Congress and adopted an anti-silver platform. They say flatly, "We are opposed to the present further coinage of depreciated silver dollars." Then they express their opinion of Mr. Bland as an individual and a representative in Congress in these words:

> "Resolved, That we denounce the Democratic party of this district for continuing in Congress a man who, while having drawn over $70,000 from the Treasury, and while pretending to be the friend of the farmer and laboring man, has spent his time in advancing the interests of the bonanza silver kings, to the utter neglect of industries important to this district, and we invite the coöperation of all who have the best interests of the district at heart to aid in his defeat."

Bland's majority two years ago was 2,700. It is hardly to be expected that this will be overcome, but the Republicans of the district have deserved success by the boldness of their attack upon the very citadel of the Bland bill.

It turns out that the fishery treaty telegraphed from Ottawa the other day was a pure fabrication, having been made "out of whole cloth." The inventor of this sensation took the reciprocity treaty of 1854, and added to it what he supposed would be added to a new treaty if one should be made, and then sold it to the newspapers. The truth is, that the fishery dispute is not yet ripe for a treaty. Public opinion is not yet settled as to the points that should be embraced in it. The fishermen have made a great many claims and demands, some of which are supposed to be founded upon law and others upon patriotism and protection to American labor. It would be interesting to know how far these are well founded. It was stated in a telegram from Halifax the other day that the entire crew of one of the American fishing vessels seized for infraction of the law were Nova Scotians, shipped at their own homes and employed simply because they would work for less pay than American fishermen. It is claimed that the fisheries are the nursery of American seamen, and that they train a hardy and adventurous race to defend the flag on the ocean in time of war. But if the fact is that three-fourths of these hardy men are the subjects of her Britannic Majesty, the question may be asked how we are benefited, and how our fighting strength is augmented by the training they get on board our fishing vessels. It is also affirmed that these fish-boat owners who are so zealous for protection to American industry, buy their coal principally at Pictou, and, in fact, purchase all their supplies of every kind in Canadian ports, so far as the Dominion authorities will allow the natives to sell. In short, the insinuation is made in many quarters that the fishermen are "on the make" just like other people; that they buy in the cheapest market and sell in the dearest, just like ordinary British free-traders.

Among the objectors to any treaty of reciprocity we expect to find Judge Woodbury of Boston, because he was employed by the fishermen to go to Washington for them. We note his opposition only to mark the discovery of a new objection to free trade in anything. Because the Canadians have long and hard winters, says Mr. Woodbury in a *Herald* interview, it would be impossible to trade with them on equal terms, because, you see, they are shut up in their houses seven months in the year with nothing to do. They can put in this spare time making shoes, and thus undersell us in our own market. The insertion of boots and shoes in the free list of the supposed new treaty is, therefore, an insidious

attack upon American industry. "The whole thing is ridiculous," he adds. So it seems to us, for if the Canadians had no summer at all, but were shut up in their houses twelve months in the year, nobody could compete with them in any indoor occupation. The whole world would be flooded with the products of sedentary life, and nobody could earn a living without the highest kind of a tariff and the most rigid custom-house regulations.

The quarterly statement of the Union Pacific Railway for September 15 has a table showing the operation of the Thurman Sinking Fund Act for three-quarters of the present year. In 1884 the company paid $527,175 for three per cent. bonds upon the requirement of the Government. Two years later the Government called in the bonds, and compelled the company to relinquish this purchase for $510,000, at a loss of $17,175. This $510,000, with an additional sum from the surplus, was invested in 4 per cents to the amount of $671,000 at 25½ per cent. premium, making the whole amount cost $842,180, upon which interest to the amount of $26,840 is received annually. If the same amount were invested in the company's first-mortgage bonds, it would yield $45,000 interest, and would protect the Government as perfectly, since the Treasury would hold securities paramount to its own lien on the property. It has always been a mystery why the Union Pacific Company was required to buy United States bonds with the sinking-fund money, when a much more advantageous investment to itself could have been made with equal advantage to the Government.

The Charter Oak Life Insurance Company appears to be a remarkable collection of men. They reorganized their company eight years ago, and put its affairs absolutely in charge of the President, Mr. Bartholomew. They required no report from him whatever. A fortnight ago Mr. Bartholomew told the Secretary of the company that he was "short" $105,000 in the company's cash. The Secretary consulted the attorneys of the company about it, and the attorneys told the Secretary that the directors must be informed of the fact. Before telling the directors, the attorneys and the Secretary allowed the President two days in which to make good the deficiency. On Saturday week the directors held a meeting, and, the President having failed to make up the shortage, and knowing that the Secretary would not keep back the information any longer, made a confession to the directors that he had stolen $105,000 of the company's funds. The directors were "staggered," and some of them took the bold ground that the President's resignation should be demanded. They concluded, however, to let the matter rest till Monday. When they met on Monday they found two notes, one for $12,000 and the other for $10,000, the proceeds of which the President had also stolen. This "staggered" them some more, and they at once sent for Mr. Bartholomew and demanded his resignation. He gave it to them, and then left town for New York, without any effort being made on their part to have him arrested, and is now in Canada. The directors, on advice of their counsel, have applied to the courts for the appointment of a receiver for the company, but they are still too much "staggered" to make any efforts to have the thieving President arrested.

The Treasurer of the Florida Construction Company is inclined to take what the Hartford *Courant* calls a "philosophical" view of the loss which his company has sustained through the defalcation and flight of the President of the Charter Oak Insurance Company. The total loss, he says, will not exceed $40,000, and "the valuable services which Mr. Bartholomew rendered to the Florida Company in the past more than balances the present loss. I am willing to set the one off against the other." That is an easy moral view to take of the matter, but it would be an unfortunate thing for business affairs if the view were to become a common one among presidents and other officers of responsibility in insurance and other organizations. If it were to become an understood thing that every such officer who had rendered valuable service in the past, should be permitted to help himself to the company's funds without danger of punishment of any kind, we imagine that the investing public would be very shy of putting its money where he could get at it.

The Boston *Commercial Bulletin* having called the Massachusetts State Board of Arbitration to account for its failure to take action in some of the labor disputes now going on, Mr. Weston Lewis, the Chairman of the Board, has been moved to say that he and his colleagues would be happy to act upon any cases brought before them; but that, not being invested with tyrannical powers, they have no authority to drag the Knights of Labor and their antagonist employers before them and "sit on them" without their consent. Mr. Lewis said "that he had received assurances from many manufacturers that they were in sympathy with the principle of arbitration, and wished the Board success in the field for which it was created, and he had yet to hear from a manufacturer who did not express confidence in arbitration as a means of settling differences between employers and their workmen. On the other hand, the Knights of Labor demanded an arbitration law. "They did not ask for it," said Mr. Lewis; they *demanded* it. "They have got it. Why have they not availed themselves of it? It is not for me to suggest reasons why they do not, *though it is natural that the officers of the organization should be slow to allow any power they possess to pass out of their hands.* However, the fact exists that they do not avail themselves of the law which they demanded as a right and a necessity." Mr. Lewis's diagnosis of the malady at Peabody, where a riot took place last week, and a man was shot, is the correct one. If the Peabody tanners had called for an arbitration under the law, the employers would not have dared to refuse it, but what would have become of the Walking Delegate? Who would have cared anything about him? His puffy importance would have evaporated on the threshold of the board-room.

There are two leading foreign Socialists here now, Herr Liebknecht, the German and Mr. Aveling, the Englishman, and they have been talking a good deal, but neither of them gives the least sign of revealing what s really the great secret of Socialism, namely, who is to manage the great Socialistic organization when it is set up—that is, keep the books and accounts, get from every man what he owes, give every man his due, prevent waste, assign work, divide products, and, in fact, as the phrase is, "run the concern." The number of men who can do such little jobs of administration under the present régime as managing a railroad or a great store, or commanding an army division, is very small, and they get enormous salaries. But where are we to find people to take charge of the huge industries which the Socialists have in contemplation? The only good reason we can think of for concealing them is, that if they were known the capitalists would snap them up at any price.

The political campaign in Tennessee is a rather touching episode. The Taylor brothers, one the Republican and the other the Democratic candidate for Governor, are making a joint canvass of the State. "Bob," the Democrat, introduces "Alf," the Republican, as a true knight and a Christian gentleman, for whom he has such personal regard and affection that he would immediately sacrifice life, property, and everything except principle, to promote his interests. "Alf" returns these compliments, and wishes "Bob" every success in this world except political success, and then they fall to the discussion of national and State concerns. It is to be hoped that this ideal state of affairs may continue to the end of the tournament. Indeed, it is something of a pity that they cannot both be elected, like a pair of joint Cæsars in the golden days of Rome. It has been reported that Mr. Blaine would go to Tennessee and make a few speeches for "Alf" before the close of the campaign. If he does so, he must perceive the necessity of leaving the "bloody shirt" in Maine. They have no use for that garment in Tennessee.

The composite character of the population in the newer States of the West is strikingly illustrated by the biographies of the candidates for State offices nominated by the Republicans of Minnesota last week, which may be thus briefly summarized: Governor, native of Pennsylvania, removed to Minnesota in 1861; Lieutenant-Governor, native of Norway, came to America when thirteen years old, and settled in Wisconsin, removed to Minnesota in 1865; Secretary of State, native of Sweden, came to America when nineteen years old, settled in the East, and removed to Minnesota in 1853; Auditor, native of Ohio, removed to Minnesota in 1854; Treasurer, native of Austria, came to this country when twelve years old and settled in Minnesota in 1858; Attorney-General, native of Indiana, settled in Wisconsin in 1873, removed to Minnesota in 1881; judges of Supreme Court, two natives of New York and the third of Canada; Clerk of the Supreme Court, a native of Pennsylvania. The disposition to select young men for office is also shown by this ticket, the oldest candidate be-

ing but fifty-seven years of age, while the youngest is only thirty-five.

The doctrinal quarrel in the Congregational Church, known as the Andover controversy, will soon be brought to short range in the annual meeting of the Commissioners of Foreign Missions in Des Moines, Iowa. The discussion having reached a point where material interests are affected by it, it is felt by the leading spirits and cooler heads among the Congregationalists that a settlement should be speedily had. The missionary work of the Church has been the first interest to feel the malign effect of the controversy. This is natural enough from the nature of the dispute, for the whole trouble has risen over an attempt on the part of certain members of the Congregational clergy to overturn the doctrine, that those who have never known the teachings of Christ are as badly off after death as those who, having known them here, neglected or refused to order their lives in accordance with them. The new doctrine, as we understand it, is to the effect that there is after death a probationary existence during which all who have not in life been made acquainted with Christ's atonement may receive the benefit of it. If this is a correct statement as far as it goes of the new doctrine, it can readily be seen how it might affect the missionary work of the Church. It might be said as an excuse for not contributing to the work of converting the heathen, that it is useless to spend money and labor on a work that can and will be done hereafter. That is, it can be said that when the heathen reach the probationary state, as set up by the new Congregational doctrine, it will be time enough to convert them from the darkness of their ways. Whether this let-alone policy has already taken root, or whether the protracted controversy has diverted attention from missionary work, it is claimed that zeal for missionary labor has grown greatly less, that contributions have fallen off, and that some agreement should be reached as early as possible if the field which the Congregationalists have occupied among foreign missions is to be retained by them.

The first page of our enterprising contemporary the *Sun* on Tuesday was an interesting picture of American society. The first column was devoted to the trial of a minister for immorality, to differences between a man and his wife, to a rape in a vacant lot, and to a suicide. The second was half given to a fire and the death of a blind newsdealer, the other half to politics. The third was given up to foreign news and politics, but half the fourth was taken up with murder in a buggy and the escape of two convicts. The fifth was wholly devoted to a very paying scandal about Lord Lonsdale and Miss Violet Cameron, and a small item about another Lonsdale and twenty-four chorus girls. In the remaining two, we find the disappearance of one Sniffen, a divorce, two pugilistic items, half a column of the horsewhipping of a reporter by a girl, the discovery of her lover in jail by Miss Miller, the arrest of a small swindler, and a few other trifles. As a microcosm the page is not often surpassed, and must interest foreign students of American manners.

A newspaper reporter in Jersey City has been horsewhipped twice within a brief space of time for writing scurrilous matter for his editor to publish. The second whipping was inflicted by a woman in the room of the Board of Public Works, where the reporter was plying his vocation. A number of ardent sympathizers with the woman were present encouraging the assault. They were all of the opinion, apparently, that the editor had no responsibility in the premises, and that he was powerless to prevent the publication of any piece of blackguardism that the reporter might bring to him. Equally it seems to have been agreed among them that if this reporter could be flogged and jeered and humiliated sufficiently to make him desist from his bad ways, the writing of neighborhood gossip in Jersey City would cease, whereas the poor devil would be discharged and another employed in his place with a particular view to his scent for the same kind of tittle-tattle and his skill in "working it up," that is, lacerating the nerves of his victims. Horsewhipping the reporter as a corrective of "journalism" is as illogical as horsewhipping the proof-reader, the type-setter, or the newsboy.

Ever since the *Times* fitted out an expedition for the exploration of Alaska, we felt sure it would cause trouble in journalistic circles. That our fears were well founded is proved by the controversy now raging between it and the *Sun* over the alleged discoveries made by its correspondents. The *Times* announces that, although it has not, as proposed, succeeded in ascending Mount St. Elias, it has discovered one (1) great river, one (1) lake, and three (3) large glaciers; but the river is unfortunately not only shallow, but "loaded with mud," and "its muddy waters discolor all the water of Icy Bay for many miles out to sea." It was not judicious for the leader of the expedition to call a river of this kind "the Jones River," after Mr. George Jones, the editor of the *Times*, for it of course furnished materials for fun to his envious and carping journalistic rivals, who were watching his expedition with greedy and cruel eyes. The *Sun* accordingly makes two propositions, which it defends in its accustomed style: First, that if the expedition has discovered such a river, the name given to it, "the Jones River," owing to the character of its waters, is singularly appropriate; secondly, that there is such a river, but it was discovered twenty years ago by Mr. W. H. Dall and marked in his map. To which the *Times* replies that the mark in Dall's map was that of a "purely hypothetical river"— that is, we suppose, of a river which, it seemed to him, it would have been well to place just about there. It supports this view with the observation that in the columns of the *Sun* "the calculated malice of splenetic age has been succeeded by the extempore lying of bumptious youth"—a state of things which, if accurately described, everybody, in and out of journalistic circles, will deeply deplore. When such differences as this occur on the discovery of the very first river and lake, one asks with a shudder, Where shall we be when the *Times* has filled up its map with other geographical finds?

The Congregation of the Inquisition at Rome has just issued a decree that has created a great sensation in Belgium, forbidding Catholic judges to grant divorces to Catholic suitors. There has been a divorce law in force in Belgium since 1803, and it has been administered under six different Popes without interference. Moreover, Leo XIII. passed three years at Brussels as Papal Nuncio, and witnessed its operation. His allowing the issue of this decree by the Inquisition is, therefore, looked on now as signifying in some degree the triumph of the Jesuit reactionists at the Vatican, and it promises a renewal of the bitter war between the Liberals and the clergy in Belgium. It probably means that the declining health of the Pope creates increased difficulty in resisting what our Presidents know so much about—"pressure." The pressure of the reactionists is constant, while the power of resistance varies greatly in different men and at different periods of life.

The persons whom the decree will most perplex, however, are the Catholic judges. They have sworn already to administer the law, and have been administering it without scruple or hindrance from ecclesiastical authorities. They must administer it still or resign. It will be interesting to see how many will do so; that is, how many will risk eternal damnation in order to keep their places. It seems rather hard on them, too, to be singled out for restrictions which are not imposed on their French, or English, or American brethren. The English or American judges could escape by leaving divorce cases to the Protestant brethren, but in Belgium the judges are all Catholic and generally pious.

The social troubles of Belgium are, however, far more serious than the religious troubles, because they apparently admit of no solution. The Commission of Inquiry appointed by the Government after the late labor riots have finished their investigation, but they have reached no conclusion of much value. The truth is, that a large number of Belgium industries have ceased wholly to be profitable, and the wages against which the workingmen struck and began rioting were in many cases all that the enterprises would allow, although no profits whatever were made by the owners. Some of those against which the fury of the laborers was greatest had not paid a dividend for several years. All this simply shows that the trouble in Belgium is one to which there is a constant tendency in every manufacturing country, namely, the increase of laborers beyond the limits of comfortable subsistence at particular points. As long as this limit is some distance off, there are no labor troubles at all. As soon as the mass of population begins to get near it, the "labor question" makes its appearance, and with it the labor doctors and agitators, and the owners of savings begin to "catch it" in all the "halls." Of course masses of ignorant men reach this limit much sooner than intelligent men, but they all reach it sooner or later, if they do not look ahead.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, September 22, to TUESDAY, September 28, 1886, inclusive.

DOMESTIC.

THE President will not issue invitations on behalf of this Government to French citizens, asking their attendance at the inaugural ceremonies of the Statue of Liberty to take place in New York in October. The invitations to citizens of France will be extended in the name and by the direction of the American Committee, under whose control the pedestal has been erected and the statue placed in position. These invitations will be presented in France through United States Minister McLane. The President will give the American Committee all the aid possible to make the inauguration impressive and successful, but will keep within the law upon the subject as passed by Congress, which makes no mention of invitations to any one.

There is now little doubt that it is the purpose of Secretary Manning to return soon to Washington, and to attempt, for a time at least, to resume his duties at the Treasury Department. This attempt will be experimental. Some of the Treasury officers are of opinion that Mr. Manning does not expect to remain in office longer than will be necessary to finish the next annual report, while some fix the date of his retirement as early as the week after the fall elections.

The Treasury Department is using every effort to secure a speedy distribution of the new silver certificates, and to that end orders have been issued for the force employed on that work at the Bureau of Engraving and Printing to work extra hours at night, until a supply of the small notes is secured sufficient to meet the present heavy demand. The one-dollar certificates will be ready for distribution by the first of October, the twos about three weeks later, and the fives about the middle of November.

Fifteen million dollars of 3 per cent. bonds were called on Monday afternoon, interest to cease on November 1.

Chief-Justice McDonald of Halifax has decided that a commission may examine the crew of the *David J. Adams* in the United States, but the captain must give his testimony before the Admiralty Court in person.

The draft of an elaborate treaty between Great Britain and the United States, which, it was alleged, had been made at the British Foreign Office, and submitted to the Canadian Cabinet, was published in this country on Friday. It provides for a free interchange of fishing privileges within the three-mile limit of Canadian waters and United States waters above thirty-eight degrees latitude. Free navigation of the St. Lawrence and all canals in Canada is to be granted to American vessels in exchange for the free navigation of Lake Michigan. A long list of articles, to be admitted free of duty into either country from the other, is designated. The treaty is for twenty years, terminable after that on one year's notice by either contracting party. It has turned out to be a hoax. Initiatory steps have been taken in Ottawa looking to the prosecution of the parties who invented it. Their offence is indictable.

Commissioner of Pensions Black has filed with the Secretary of the Interior his report of the operations of the Pension Bureau for the fiscal year ended June 30, 1886. From the report it appears that on June 30 last there were 365,783 pensioners on the rolls, composed of 265,854 army invalids, 80,162 army widows, minor children, and dependent relatives, 2,953 navy invalids, 1,877 navy widows, minor children, etc., 1,539 survivors of the war of 1812, showing a loss during the year of 1,406 of this class. There were 13,397 widows of soldiers of the war of 1812, showing a loss during the year in this class of 3,815. The annual average value of each pension was $122.23, a gain of $11.88 over the average value of the preceding year. The aggregate annual value was $44,708,027.44, being an increase in annual value of $6 617,041.51. The amount paid for pensions during the year was $63,797,831.61, the difference in the amount paid and the annual value representing the accrued and the arrearage pensions paid during the year.

The new Public Printer, Mr. Benedict, on Saturday dismissed the entire night force in the press-room, 80 employees in the bindery, and 6 clerks, making about 150 all told. Each employee dropped was informed by circular or letter of the reasons of dismissal in the following language: "On account of the insufficiency of the appropriation to meet the expenses of this office up to December 31 next, upon the scale of expenditure required by the present force, and believing that I can dispense with your services without serious interruption to the necessary work in hand, you are hereby informed that your services will not be required in your present positions after this date. The cashier will pay you any balance due on account of your salary at your convenience." It was complained by those of Democratic sympathies that the discharges affected almost altogether persons of that political faith. Mr. Benedict, the Public Printer, when asked as to this, said he knew nothing whatever of the politics of those discharged, and of course no such question as that was considered in the matter. He said the discharges were made not only because the force was much greater than the needs of the office demanded, but because of the meagre balance of appropriations yet unexpended. Although Mr. Benedict, since his incumbency, has had hundreds of applications for places, he has not yet made a single appointment or promotion.

The Minnesota Republicans on Wednesday nominated Andrew R. McGill for Governor. He is forty-six years of age and has been Insurance Commissioner for a number of terms. A. E. Rice was nominated for Lieutenant-Governor. The platform favors a revision of the tariff so that taxation on the necessaries of life may be reduced, and is strong for civil-service reform.

The Prohibition State Committee of New York met at Albany on Friday and nominated ex-Judge William J. Groo of Orange County for Judge of the Court of Appeals, and decided to run candidates for Supervisors in all the towns of the State next spring, and to run full county and city tickets at all spring elections.

The workingmen's political convention in this city on Thursday evening was attended by 409 delegates from trade and labor unions. A motion to nominate Henry George for Mayor was received with great applause, and a ballot to select the candidate resulted in 360 votes for Mr. George, 31 for James J. Coogan, and 18 for W. S. Thorn. An executive committee was appointed to take charge of Mr. George's canvass, and it was decided to hold a ratification meeting in Cooper Union on October 5.

The Chicago (Cook County) Labor Convention on Saturday split into two sections, composed of Socialists and anti-Socialists. Nominations were made by the main body (Socialist) on Monday evening.

The Democratic State Convention of Connecticut met on Tuesday. The platform contained the following endorsement of the President: "In the election of 1884 the people demanded a change of administration and cleaner methods in the various departments of the Government, and President Cleveland is bringing the Executive Department back to constitutional principles, economy, and honest service. We will render to him our united support in carrying out his policy of conducting a pure administration in the offices of public trust, in the economy which he requires, and the principles which he has enunciated as the safeguards of the public welfare." It approves of the National Democratic platform of 1884, including the demand for a revision of the revenue laws. Edward Spicer Cleveland was nominated for Governor on the first ballot. The ticket was then completed.

The New Jersey Democrats on Tuesday nominated Robert S. Green for Governor. President Cleveland's administration was endorsed.

George M. Bartholomew, President of the Charter Oak Life Insurance Company of Hartford, Conn., is a defaulter in the sum of $127,000. Since the reorganization of the Charter Oak, in April, 1878, Mr. Bartholomew has had sole charge of the affairs of the company, never being obliged to make any report to the Directors. A receiver for the company has been appointed.

Col. Charles Gordon Greene, formerly editor of the Boston *Post*, died in that city on Monday, at the age of eighty-two.

John Esten Cooke, the Virginia author, died suddenly of typhoid fever on Monday at his home, "The Briars," near Boyce, Va. He was born in Winchester in 1830, his father being a lawyer of distinction and his mother one of the Virginia Pendletons. His grandmother was a daughter of Gov. John Esten of Bermuda. Mr. Cooke practised law for about four years, and then abandoned it for literature. He served throughout the war in the Confederate Army, and was on the staff of Gen. J. E. B. Stuart. His experiences have been worked into many of his literary volumes. All of them treat of the history, traditions, and romance of Virginia His novels are faithful portraitures of old Virginia customs and domestic life. Some of them, like his quaint tale of 'Pokahontas,' mingle history and romance. He was a constant contributor to the leading magazines. In the "American Commonwealth Series" he wrote the history of 'Virginia,' which has been adopted in the public schools of that State. Among his works in book form are: 'Leather Stocking and Silk' (1854), 'The Virginia Comedians' (1854), 'The Youth of Jefferson' (1854), 'Henry St. John, Gentleman' (1859), 'A Life of Stonewall Jackson' (1863), 'Wearing of the Gray' (1867), 'Hilt to Hilt' (1869), 'Fairfax' (1869), 'The Heir of Gaymount' (1870), 'A Life of Gen. R. E. Lee' (1871), 'Pretty Mrs. Gaston, and Other Stories' (1874), 'Canolles' (1877), 'Mr. Grantley's Idea' (1879), 'Stories of the Old Dominion' (1879), 'Virginia Bohemians' (1879), and several recent novels.

FOREIGN.

M. Stambuloff, President of the Regency, is negotiating with M. Zankoff, the leader of the Russian party in Bulgaria, with a view to arranging for a cessation of internal strife. M. Zankoff promises to recognize the Regency on condition that some of the foreign portfolios are allotted to the Zankoff party. Semi official journals in Athens, commenting on the statement that Lord Iddesleigh has been endeavoring to bring about a *rapprochement* between Servia, Bulgaria, Greece, and Turkey, say that his efforts are too late. The breach between those States, they say, has become so wide that no diplomatic skill can close it.

Gen. Kaulbars, the Russian agent, in thanking M. Zankoff and his friends for their kindly welcome to Sofia, asked them to announce throughout the country that the Czar would give protection to Bulgaria on condition that full confidence be placed in him. The ills of Bulgaria, Gen. Kaulbars said, arose from dissension between the different parties, and it was, therefore, necessary to release the political prisoners, to raise the state of siege, and to allow all parties to vote freely and independently in the Great Sobranye. Gen. Kaulbars intimated that unless Russia's demands were obeyed he would leave Bulgaria, and the occupation of the country would follow. The credentials of Gen. Kaulbars are addressed simply to "Monsieur Natchevitz," as an indication that Russia does not recognize the Bulgarian Government.

It is stated that the Russian ultimatum of which Gen. Kaulbars is the bearer to Sofia demands, besides the raising of the state of siege in Bulgaria and the liberation of political prisoners, the indefinite postponement of

the elections for members of the National Assembly. However, there are no signs of flinching on the part of the Regency. The Government has been informed that a hostile demonstration at the Russian agency in Sofia against Gen. Kaulbars will furnish an excuse for Russian interference.

Premier Kálnoky of Austria wishes to resign. The Emperor expresses continued confidence in him and declines to accept his resignation.

In the Hungarian Chamber of Deputies on Thursday, Count Apponyi interpellated the Government concerning the attitude of Austro-Hungary on the Bulgarian question. He declared that Austrian interests did not admit of any one-sided extension of the influence of any particular Power in the Balkans, and said he wished to know whether Austrian interests permitted Russia, through a special commissioner (Gen. Kaulbars), to interfere in the internal, or even in the judicial, affairs of Bulgaria. Count Kálnoky will go to Pesth to prepare the budget for the Delegations and to confer with Premier Tisza in regard to Hungarian interpellations on the Balkan question. It is reported that in deference to Hungarian opinion Prince Bismarck is modifying his attitude towards Russia.

There is grave trouble in Egypt, and apprehensions of still more serious difficulties. Blue-books just published reveal utter confusion in the financial affairs of that country. France is giving serious anxiety, as her hand appears to be supported by Germany and Russia. M. de Freycinet's object is to loosen British hold on Egypt by creating trouble in the New Hebrides. It is possible that a joint note will be presented by Germany, France, and Russia, demanding that a definite term be put to the British occupation of Egypt.

Nubar Pasha and Lord Salisbury have been conferring on a basis of settlement for the Egyptian question. It will probably be: The continuation of the *de facto* British protectorate over Egypt by the normal British army of occupation, or even a draft upon British troops abroad; order to be provisionally maintained by specially raised Egyptian troops with British officers; the British position and obligations towards Turkey to be upheld in accordance with the Cyprus treaty of alliance.

Mr. Stanhope, Colonial Secretary, has announced in the House of Commons that France has offered to cease deporting criminals to the South Pacific, provided she be allowed to annex the New Hebrides Islands. To this he said Australia would not agree. There were no negotiations proceeding between England and France, but England was urging France to abandon the deportation of criminals.

The *République Française* insists that the French should remain in the New Hebrides Islands. It says: "The presence of German gunboats in the New Hebrides shelling native villages renders it impossible for us to evacuate without dishonor to the French flag.' M. de Freycinet, at a meeting of the French Cabinet on Thursday, confirmed the report that the relations between M. de Viliers, the French Resident at Tamatave, and the Malagasy Government were growing more strained. In addition, M. de Freycinet stated that in Anam and Tonquin affairs were much improved.

The French Resident at Tamatave has presented to the Malagasy Government an ultimatum demanding the withdrawal of the appendix to the treaty of December 17, the nullification of the bank charter, and the concession of unlimited territory for French installations at Diego Suarez Bay. The Hovas have resolved to maintain the appendix, and it is reported that the Resident is about to depart for France. Trade in Madagascar is much depressed.

Señor Zorilla, the leader of the Spanish revolutionists, in an interview published in the Paris *Figaro*, says that the late uprising in Spain was premature, and declares that in the revolt which will take place at the proper time many of the generals in the Spanish Army will support the revolutionists. Spain has demanded from France the expulsion of Zorilla from French territory. The French Cabinet on Friday discussed the demand, and separated without being able to agree as to the proper answer to make to Spain. It was resolved to submit the matter to President Grévy.

General Villacampa, the leader of the insurrection in Madrid, has been arrested.

Forty-three Unionists, including Messrs. Bright, Chamberlain, Collings, and Caine, were absent when the division was taken on Mr. Parnell's bill. None of them had paired. The Government will propose procedure reform in accordance with the advice offered by the recent committee on that subject.

Mr. Parnell has written the following letter to Mr. Fitzgerald, President of the Irish National League in America: "The rejection of the Tenants' Relief Bill, the scarcely veiled threat of the Irish Secretary, and the alarming increase in the number of evictions, clearly indicate the commencement of a combined movement of extermination against the tenant farmers of Ireland by the English Government and the Irish landlords. I lose no time in advising you of the imminence of a crisis and of a peril which have seldom been equalled even in the troubled history of Ireland. I know that it will be the highest duty and the most honorable task which can engage the attention of my countrymen in free America, to do what in them lies to frustrate the attempt of those who would assassinate our nation, and to alleviate the sufferings of those who unhappily must be the numerous victims of the social war which has been preached by the rich and powerful Government of England against our people. In sending us that moral and material assistance which has never been wanting, has never been stinted, from your side of the Atlantic, you will perform two most important and valuable functions: you will encourage the weak to resist and bear oppression, and you will also lessen and alleviate those feelings of despair in the minds of the evicted which have so often and so unhappily stimulated those victims to have recourse to the wild spirit of revenge. In doing so you will assist in preserving for our movement that peaceable character which has enabled it to win its most recent and almost crowning triumph, while you will strengthen it to bear oppression, and encourage our people until the final goal of legislative independence has been won."

The London *Standard* interprets Mr. Parnell's letter as a declaration of war. It describes the letter as an inflammatory invective, and cannot understand how Mr. Parnell put his name to such a document. It says: "This eleemosynary manifesto tears away the veil which was woven for the purpose of the general election around the real temper and tendency of the Separatist party. The appetite of his American paymasters must be coarse indeed, if it needs seasoning of this fiery kind."

Lord Randolph Churchill gave notice in the House of Commons on Wednesday afternoon of the intention of the Government to introduce early next session measures for considerable modifications in the present method of conducting public business in the House of Commons. The announcement is accepted as portending further repressive measures against the Parnellites.

The House of Commons passed the Appropriation Bill on Wednesday night and adjourned till Saturday, when it was prorogued till November 11. The Queen's speech was colorless.

Lord Salisbury made a speech on Wednesday before the County Conservative Club of Hertfordshire. Referring to Irish obstruction, he said: "It is an instrument of torture to compel a majority Government, by mere physical suffering, to concede this or that, whatever the obstructionists set their hearts on. If a representative government is to continue, this instrument of torture cannot be permitted to survive. It will paralyze all legislation and bring discredit upon the oldest instrument of freedom in the world." Referring to Mr. Gladstone's statements in the Land Bill debate, he said: "Mr. Gladstone charged me with stating that there were cases where judicial rents could not be paid. Mr. Gladstone based his arguments and justified his course thereon, but the charge is absolutely unfounded. I said nothing of the kind. I never said that the exchequer should pay the difference between judicial and just rents. Courtesy alone prevents me from contradicting those statements in sufficiently strong language. I regret to note that Messrs. Gladstone's and Morley's speeches had a tendency to ridicule and oppose the Government proposals in the direction of creating a peasant proprietary in Ireland. Mr. Gladstone indicated that he would strongly oppose the policy to substitute a small for a large proprietary, which, of course, would be made with perfect justice and proper compensation all round. The proposal to multiply small freeholds in Ireland originated with Mr. John Bright, who parted from Mr. Gladstone this year, but the proposal was never a party question. I myself and many other Conservatives have supported it for twenty years. It is the true policy of statesmen. In a sound system of peasant proprietary lies the future social salvation of Ireland."

The police on Thursday night ran down and surprised a party of moonlighters at Feale Bridge, County Kerry, Ireland. A fight ensued, in which one of the moonlighters was shot dead and six were taken prisoners. The affair has caused much excitement throughout Kerry

Rioting was renewed in Belfast on Sunday morning. The officers fired on the mob and fatally wounded one man. Twelve constables were seriously wounded with stones.

A syndicate of Paris and Berlin bankers has subscribed 600,000,000 francs to carry out a scheme, sanctioned by the Sultan, for a network of railways to connect the Black Sea with the Persian Gulf, under the direction of the Austrian engineer, Pressel.

A riot took place on Tuesday during the unveiling and dedication of the statue of Armand Barbès, the Red Republican colleague of Blanqui, at Carcassonne, in the Department of Aude, France. The committee having the ceremonies in charge were nearly all Moderatists. The revolutionists became provoked at their predominance and attempted to control the demonstration themselves. In this they were resisted by the committee, assisted by the police. The revolutionists gathered reinforcements and made an open fight for control of the situation. With red flags flying they assaulted the enclosed site, breaking down the barriers, trampling over the women and children, and driving the Moderatists and their police allies away from the place.

Four hundred Socialists made a demonstration in Leipsic on Tuesday. A conflict with the police took place. Seven Socialists were arrested.

The condition of King Otto of Bavaria is becoming worse. He is more eccentric than ever, and insists on remaining in solitude.

Thomas Webster, the well-known English painter and Academician, is dead at the age of eighty-six. He was the son of the musician of the Chapel Royal at Windsor. On the lad showing a preference for painting he was permitted in 1820 to enter the Royal Academy as a student. In 1823 he exhibited a portrait group, and two years later obtained the first medal in the school of painting. He painted a great many pictures of homely domestic life, which have become very popular. In 1846 he was elected a full member of the Royal Academy, and in 1876 was placed on the list of honorary retired Academicians.

The Mexican Congress has appointed a commission to study the silver question.

THE CUSTOM-HOUSE AGAIN.

THE New York Custom-house, as all our readers know, has been the very citadel of the spoils system. The possession of it has been for fifty years, in the eyes of spoilsmen all over the country, both the sign and the reward of victory. No triumph was of much value as long as the enemy held the Custom-house, and could garrison it with his janissaries. To be able to "name the Collector," when a new administration came in, seemed in the eyes of the workers almost the pinnacle of human greatness. This interest in the Custom-house was not due in the least to the fact that it was a vast financial institution, through which there flowed a large proportion of the annual revenues of the Government; nor was it due to the fact that it furnished, more than any similar establishment in the world, an opportunity of showing the foreigners who used it a great illustration of the promptness, efficiency, purity, and skill which Americans brought to the management of public business. It was looked on as the place in which the largest number of small party politicians could be quartered on the public treasury.

It is no exaggeration to say, that for two generations at least the New York Custom-house attracted the attention of political men only in a subordinate degree as a great financial institution — that its main function was in their eyes the supply of bread and butter to electioneering agents. The successive collectors who took charge of it during nearly half a century found themselves invariably, on taking office, confronted not with the problem of improving and simplifying methods of collecting money, but with the problem of providing salaries for a swarm of men whom no private employers would hire. Their daily business was not the supervision of inspectors, appraisers, and weighers, but the division of the places among the workers, one stream of whom was constantly pouring out of one door and another pouring in at another door, on the principle that each man was entitled to "his turn" at the public crib. Nearly all the men employed under each Administration in this city to look after the party vote were quartered in the Custom-house as a matter of course, as if it were a public lodging-house. In the bad times some of them never went there except to draw their salaries. In the best times numbers were always absent canvassing or stumping. In fact, there was nothing quite like it out of Turkey. It was a national shame and disgrace, and its rescue, until President Cleveland came in, seemed almost hopeless. Mr. Hayes was something of a reformer, but he could not touch the Custom-house. Mr. Arthur was something of a reformer, but some of his worst betrayals of reform were perpetrated in the Custom-house. In fact, when Mr. Hedden was appointed, and began his activities by substituting a dog-fighting, prize-fighting liquor-dealer for a gallant soldier and experienced officer in an important place, reformers were almost disposed to despair about the Custom-house. The outworks were in their hands, but the citadel seemed impregnable.

We think, however, we are not rash in saying that the place has at last been captured, and is now for the first time in hands of those who believe, with the President, that public office is a public trust, and that Government offices are meant for the transaction of public business, and not as lodging-houses for party tramps. The new Collector, Mr. Magone, is the first since Jackson's day who has not only expressed entire devotion to the principles of civil service reform, as reformers understand them, but carries them out rigidly in the conduct of his office. Any one who goes into the Custom-house today will see a great Government establishment employed simply in the collection and safe-keeping of Government funds, and the politicians who are still on the premises, are either preparing to go, or expecting any day to have to go. The huggermuggering and the winking and nudging about offices and claims among the workers have ceased. The practical men have stopped shaking their heads and smiling over the theorists. They are grave, and full of care, and the world seems very dull to them, for to them there is no place on earth so like home as an old-fashioned custom-house or post-office.

That President Cleveland, who began his administration by giving back the New York Post-office to the nation, should not have been equally prompt in letting it have the Custom-house, is, we admit, regrettable, but it is not surprising. He has had to feel his way in a novel work, in which the difficulties were great and the assistants few. But we have ourselves never doubted that in hewing a path through the spoils system he would at last reach the Custom-house and make a wholesome clearing round it also. Hedden was probably most useful as an experiment. He was probably the best that could be done on the old plan. When he failed, as he did very promptly, it was plain that nothing would do but a new principle of selection, and that somebody would have to be put in charge, like Mr. Magone, who believed in reform, not officially, as a doctrine held by his superiors, but personally, as the only doctrine on which an honest and patriotic man could administer a public office.

THE REAL OBJECTION TO THE CANDIDACY OF HENRY GEORGE.

THERE are a good many intelligent people in this city, not manual laborers, disposed to look on Henry George's candidacy either with contempt or with amiable indulgence. There are some, even, who are proposing to vote for him because they happen to agree with him about the nationalization of land, about free trade, or about taxation. They know that his election is hardly possible, and that even if he were elected, he could do nothing directly in the Mayoralty to promote his peculiar opinions. But they think that a strong vote in his favor would be a striking demonstration in support of them. So that, even if they do not vote for him themselves, they are not sorry to see others do so in considerable numbers.

Now, we would call the attention of all who are disposed to look at the matter in this way to a view of it which has thus far been forgotten, but which we think will seem obvious enough when we state it. The labor organizations which have nominated Henry George know as well as anybody that his election, even if they could elect him, would contribute nothing to the realization of the aims set out in their platform. They know the Mayor of New York cannot nationalize land, or compel people to build on vacant lots, or impose a progressive income tax, or hand the railroads and telegraphs over to the Government, or restrict the hours of labor. In fact, there are probably none but the most ignorant of them who consider these things so near realization as to be within the domain of practical politics at all, and the interest the great majority take in them is undoubtedly very feeble. What they are all most keenly interested in, from Powderly down, in all parts of the country, as the experience of the last six months has shown, is the legalization of the "boycott," or, in other words, the securing of impunity for the use of violence or coercion in support of strikes. They have found by experiment that in the present condition of the labor market in this country, it is only in the more highly skilled trades that a strike, pure and simple, that is, a refusal to work for a particular employer, is sure of success. They have nearly all admitted, from Powderly down, that nothing but the boycott, and the use of physical force to drive away competitors, is certainly "effective," to use Powderly's word, in bringing an employer to terms. The object nearest their hearts, therefore, especially in the large cities, is full liberty, without interference from the police, to back up strikes, either by conspiracies to ruin the business of employers or of persons who in any way make themselves obnoxious to Labor, or by open violence directed against non-union men and the property of those who employ them.

Up to last April they thought they had this liberty. During the previous year they had been exercising it with a vigor and boldness which increased as the organization of the Knights of Labor was extended, and the cowardice or apathy of the press became more apparent. The general opinion in this State was that the law put no hindrance in their way, and the newspapers encouraged the view that, even if it did, it was vain to expect its enforcement. They went so fast, however, and were so reckless, both in the choice of their victims, the penalties they inflicted, and in the disturbances they caused—going so far in this city as to barricade the streets under the eyes of the police—that public indignation was at last aroused. When American patience was exhausted, it was soon found that the Penal Code had provided for just this form of lawlessness; and the police, the magistrates, and the grand juries became so energetic in the work of suppression that boycotting with violence, and conspiracies to boycott, soon came to an end. The right of "Labor" to blackmail and to assault and burn was sternly denied, and Labor was sent to jail for so doing in considerable quantities.

Now, the aim and expectation of Henry George's supporters is by a large vote to undo what has been done for law and order. They know, as every one who has lived more than a

year in New York knows, what the effect of "politics" is on most city officials. They know of what base and corrupt compliances they are apt to be guilty in order to placate anybody who can command votes; they know with what difficulty governors, mayors, police magistrates, police commissioners, and district attorneys are screwed up to the point of enforcing the law against anybody who is likely to be able to avenge himself at the polls. They know that in this fact has lain for forty years the secret of the strength of the liquor-dealers, and gamblers, and hackmen, not only in New York, but in every city in the State, in evading or defying the law. They hope, therefore, by polling a large "labor vote," no matter for whom, and no matter on what kind of platform, to carry sufficient demoralization into the Governor's office, and the Mayor's office, the District Attorney's office, and into the police courts and the police stations to secure them a free boycott, or, in other words, to secure the non-enforcement of the law against violence and outrage committed by members of the labor organizations in the supposed interest of labor.

We are casting no imputation on people now in office in this city—for they have done their duty well—in saying that these expectations of Labor are very shrewd and well founded. A large vote for George will undoubtedly diminish the value of the law as a protection for non-union men and for employers in all parts of the country. It will be taken in every labor caucus as a sign that they may make strikes effective by the use of the bludgeon, the pistol, and the torch. It will increase the disposition, even of candidates for high offices, to shut their eyes to violence and disorder which they are told is intended to elevate the workingman. We are at this moment treated to the shameful spectacle of a candidate for the Governorship in Pennsylvania, denouncing the laws which protect citizens of that State from combinations to ruin their property and reputation in order to compel them to hire people whom they do not want, at wages they do not choose to pay, as "but a slight modification of the infamous conspiracy laws"; and denouncing the police which checks rioting, as "representing the employer instead of the public authority." And this license would continue until American patience was again exhausted, and the "fooling with anarchy" was stopped with the strong hand of an awakened majority; but it could not be stopped until enormous mischief had been done.

A MODERN INSTANCE.

THE report made by the Civil-Service Reform Association of Indiana, a few days since, on the Indiana Hospital for the Insane, sets forth a state of things which ought to delight the souls of Old-Fashioned Democrats in all parts of the country. We are much surprised that none of them have taken any notice of it. When we read that this institution employs 336 persons in various capacities, and that all of them are selected for political reasons, and that no one is ever examined in order to ascertain his fitness for the duties, and that changes are made as often as the State Senators desire, and that one Senator has secured the appointment of "a daughter, a nephew, three nieces, and a number of attendants," etc., we have before us a concrete example which ought to warm every Jeffersonian heart in the land. We wonder that the champions of the system have not had a public dinner somewhere to celebrate the triumph of their principles in this great institution. It would be hard to find a more flourishing specimen of the spoils system. We would fain believe that there are not many left, but of this we are not entirely sure. We only know that here is one of the Old-Fashioned sort, and that no new-fangled, unrepublican rules, which prohibit American citizens from exercising their political rights, are allowed entrance into the Indiana Hospital for the Insane. On the contrary, the politics of Indianapolis and of Marion County is largely controlled by the employees of the hospital. They took such an interest in the Bynum-Bailey controversy that on the day of the recent Congressional Convention the hospital was almost deserted of attendants.

The hospital is under the charge of three trustees. One of these, Mr. P. M. Gapen, acts as treasurer. Mr. Gapen, however, resides most of the time in Arkansas, where he manages a sawmill. A residence in Arkansas does not disable him from the performance of the political duties for which he was selected, but it prevents him from promptly turning over all the funds that come into his hands as treasurer. A missing check for $64.77, a rebate on upholstery goods purchased in New York for the hospital, was traced to Treasurer Gapen and then lost sight of, the books showing no corresponding entry. A letter to Gapen calling for an explanation brought the response that the next time he came to Indiana he would have the matter looked up. This is really one of the smallest grievances that the civil-service fanatics complain of. It is only mentioned by way of showing how inconvenient it is for people conducting an investigation to arrive at the truth when the responsible officers are not to be found. Gapen's salary runs on just the same whether he is in Indiana or in Arkansas, although he has been present at only one meeting of the Board since October, 1885.

When the present Old-Fashioned Board came into office, in 1883, the first thing done was to remove the book and storekeeper. The reasons for this step are clearly shown in the sequel. It was hardly necessary to mix ashes and soot with the butter on hand in order to make a case against Capt. Stansbury, the incumbent of the place, yet that is what Dr. Tarleton, the treasurer of the old Board, says was done. Another witness says it was lampblack. The investigation shows that lampblack would have improved the quality of some of the butter that came into the hospital afterward, by killing the animalculæ contained in it. Capt. Stansbury was got rid of on a charge of purchasing inferior supplies, and another book and storekeeper was appointed in his place, but not until one of the trustees had examined him as to his fitness for the place and found that he knew nothing whatever about the work he was to do. This trustee subsequently presented a protest against his continuance in office, on the ground that he neither kept the books nor received and inspected the goods purchased, these being the especial duties of his office and for which he was paid by the State. The other trustees objected to the protest, but could not prevent its being filed with the minutes of the Board.

A long list of irregularities, resulting in the swindling of the State and the maltreatment of the inmates, are given in detail by the committee. They are not different from many other exposures of the management of asylums and other public institutions controlled by political bosses, and worked for all they are worth in the interest of the party. Some of the facts disclosed are ludicrous and others disgusting. Sometimes the large engines of the workshop are kept running at full speed when nobody is using the machinery. On one occasion a lot of 600 diseased hogs were bought for food. "They began to die rapidly, and at the same time slaughtering went on for the table. It was neck-and-neck between disease and the butcher's knife." In the course of seven months 14,213 pounds of dead hogs were sold by the asylum for fertilizing purposes.

The superintendent of the hospital is apparently a conscientious man, contending against enormous difficulties. He has gone so far as to ask the trustees to establish this rule at once: "Never to keep in the pay of the hospital a person who is useless, and *under no circumstances* to part with one who is valuable." This maxim stamps the superintendent as self-conceited, impracticable, and visionary; a fellow who pretends to be better than his neighbors, and an aristocrat masquerading as a reformer. If his demands were conceded, how would our system of government be better than the bureaucracies of the Old World?

WHAT IS A FRIEND OF LABOR?

AN animated discussion has been recently going on in the newspapers over the question whether Mr. Benedict, the new Public Printer, is a "friend of labor." To answer such a question we ought to know what is meant by a friend of labor. The fact is, that, at the present time, a very peculiar technical meaning is attached to this phrase, and one not acquainted with this meaning would wonder why the question was considered of any importance. Such a person would say that Mr. Benedict had a certain definite sum of money appropriated by Congress to expend in the employment of labor; that he would certainly be moved to expend it all, no matter how great his enmity to the laborer; that he could not expend a dollar more, however strong his friendship might be; that the rate of wages which he had to pay was so fixed by law and custom that no change in this respect could be expected, and that the hours of labor were also so fixed by custom or by regulations that Mr. Benedict could not treat his men differently from any other Public Printer. To the unsophisticated person who took this view, it would have seemed that Mr. Benedict could prove himself a friend of labor only by acting on the general principle of the political

equality of all men, and selecting the best workmen, regardless of influence, social position, or membership of societies. He would have been surprised to learn that not one of the people who feared that the new printer was an enemy of labor, supposed for a moment that he would ill-treat his men or recognize class-distinctions among them.

In the sense in which the phrase was used in the discussion, a friend of labor means a man who, when a laborer goes to him seeking employment, will first of all ask him if he is a member of some labor union and has a certificate to that effect. If he answers in the negative, the employer shows his friendship for labor by refusing to engage him on any terms whatever. He may possess the highest testimonials of character and ability; he may have a family depending upon him for support; he may prove himself a workman of the highest class; he may show that unless he can get employment, his family will suffer for bread. To all this the true friend of labor has but one reply to make: "Your family is none of my concern, and you must look after it yourself in your own way. Nobody finds any employment here unless he is a member in good standing of some union; and as you, by your own showing, are not such, you have only to go where you please and make a living as you can." If the employer fails in this duty, if he is moved either by sympathy or the desire of having a good workman to give the man employment, he is called an enemy of labor; and if he occupies as prominent a position as that of Mr. Benedict, he will be denounced as such from Maine to California.

The other day a despatch from Cincinnati appeared in the morning papers. It bore the rather startling heading: "Deciding Against Organized Labor." The reader who went no further would naturally infer that some one had been doing something to prevent laborers from organizing, or had taken some action tending to discourage labor organizations. But on reading the despatch he would find that nothing of the sort had been done. The step taken by the Board of Public Affairs consisted in the passage of a resolution that, acting in its official capacity, it had no right to discriminate between skilled workmen, and would not do so. So far as it was concerned, every man should have the same right, whether he was or was not a Knight of Labor. How could such action be considered as directed against organized labor? Simply in this way. A resolution had been brought before the Board that none but union laborers should be employed upon public works. Their voting it down, as well as rescinding other resolutions in favor of labor unions, was looked upon as a decision against organized labor.

The mutations in the meaning of words make a most interesting theme for the student of language. In the present case we have an example of how a word may reverse not only its meaning, but the very order of thought in the men who use it. We make a bad thing seem good by giving it a pleasant name. Excessive duties on imports for the avowed purpose of making goods scarce and dear, could never have been so popular as they are had they not been grouped under the very pleasant term protection. There is, however, in this use of the term a certain plausibility, in that a seller of goods who sees somebody else underselling him feels injured, and naturally looks upon the stoppage of this injury as a kind of protection. But there is no such excuse for calling a man who would make a class discrimination between laborers, and recognize only a select few as worthy of employment, a "friend of labor." Yet it is doubtful if any one could, at the present time, be got to use the phrase in any other sense.

DREAMS.

SETTING aside those dreams (if there be such) which are *visions*, it is evident that the larger number of our dreams are but ungoverned thoughts; thoughts that have escaped from the guidance of the slumbering will; thoughts which run away with us—whatever that "us" stands for. And the course of these wild fancies often brings a revelation of our inmost selves; the ways along which rush these steeds of our imagination often indicate the lines of our spiritual life. Such dreams arising out of ourselves are, as Goethe remarked, "of interest because they cannot but have a certain analogy with all else in our lives and destiny."

One of the best known among the still living older English poets, who was a personal friend and warm admirer of Wordsworth, told the present writer some years ago of a dream *confessed* to him—the word is the true one—by Wordsworth. He said that at times, especially when he was in London, he had one peculiar dream, often repeating itself. He thought he was a large bird, delighting in his power and freedom of flight, soaring and floating where he would. But the air about him was always full of other birds, some like himself, some smaller, and his chief exhilaration was in perceiving that he rose above them all. "After this dream," he continued, "I could not but constantly say to myself: 'Billy Wordsworth, Billy Wordsworth, you had better look after your soul.'" It is evident that he held with Montaigne that dreams are loyal interpreters of our inclinations, and, with Plato, that it is the part of prudence to gather from them divine counsels.

It need not be said that the literature of dreams belongs to all times and ages, and is of enormous extent and incalculable importance, and that the dreams of prophets and poets, of saints and sages, have entered into the waking lives of all men. But it is not amiss to point out that there are perhaps indications in modern literature, for instance, Coleridge's "Kubla Khan," that the merely poetic side of dreams is likely more and more to be treated as of interest. The further civilization removes itself from *living* the 'Thousand and One Nights,' the more it is likely to value *dreaming* them.

From this point of view it is curious to recall three dreams, dreamt by three of the most remarkable minds of the last hundred years—Goethe, George Sand, and Turgeneff. They were themselves evidently deeply touched by them, as is shown not merely by their putting them into literary form, but, in the case of the two earliest authors, their more than once referring to them. With Turgeneff the narrative was written late in life, and is possibly more a conscious imagination than the others. To bring the three together is the more interesting because, while the scene of all is curiously the same—they all are on the water in boats—the individuality of each is extraordinary. Goethe's is the dream of knowledge, George Sand's of love, Turgeneff's of aspiration.

Goethe's is to be found in the 'Italienische Reise.' He says:

"I cannot but recall to you a dream which seemed to me, a year ago, full of significance. I dreamed this: that I landed in a rather large boat on a fruitful, richly overgrown island, where it was known to me were to be found the most beautiful pheasants. So I immediately bargained with the inhabitants for such sort of birds, which they in turn immediately killed and brought abundantly. They were certainly pheasants, but as a dream is wont to change all things, so they had long, many-colored tails, with eyes like those of peacocks or the rare birds of paradise. These, brought to me by scores into the boat, were laid with the heads inwards, so exquisitely heaped up that the long, brilliant tail-feathers, hanging outside, formed in the sunshine the most splendid pile that one can imagine; and such a wealth of them were there that scarcely room remained for the steersman and the rowers in the stern and the bows. In this fashion we cut through the quiet water, and meantime I already named to myself the friends with whom I would share these beautiful treasures. At last, landing in a great harbor, I lost myself among huge, high-masted ships, where I mounted from deck to deck to find a safe landing-place for my little boat."

Goethe's interpretation of this dream is found in the exclamation, five months later in date than the above—five months spent in the most eager accumulation of intellectual treasures: "It seems as if I could unload my pheasant boat nowhere but with you. May only first its load become of due stateliness!"

George Sand's dream likewise occurs in her record of wanderings—wanderings as different from those of Goethe as the character of her dream is different from his. It was at Venice that, chancing one evening to find herself in a situation which a little resembled her dream, she was led to write in the 'Lettres d'un Voyageur' the following pages:

"I have frequently told you of a dream which I often have, and which always leaves on me, when I awake, a mingled impression of happiness and sadness. When this dream begins, I am seated on a desolate river-bank, and a boat full of friends singing delicious melodies comes towards me down the rapid stream. They call me, they hold out their arms to me, and I spring into the boat with them. They tell me, 'We are going to —— (they name an unknown country); let us hasten thither.' The instruments are laid down, the songs interrupted. Each one takes an oar. We land—on what enchanted shore? It would be impossible for me to describe it, yet I have seen it twenty times; it is well known to me. . . . We disembark, and, running and singing, we pass on in all directions through the balmy thickets. Then all disappears, and I awake. I begin over and over again this lovely dream, and I have never been able to carry it further.

"What is strange about it is, that these friends with whom, as it were, I belong, and who carry me with them, are none that I have ever seen in real life. When I awake, my imagination cannot recall them. I forget their faces, their names, their age, and their number. I know confusedly that they are all beautiful and young; men and women are crowned with flowers, and their hair floats on their shoulders. The boat is large and it is full. They do not arrange themselves two by two, they move hither and yon without selection, and seem to love each other all equally with a divine love. . . . Every time that I have this dream, I immediately vividly recall the preceding dreams in which I have seen them. But this memory is distinct only at that moment; when I am awake it is disturbed and effaced. . . . As they approach, I recognize the voices which are so dear to me. Sometimes, on awaking, I retain in memory some fragments of the verses they sing, but they are odd phrases which present no meaning to a broad-awake intelligence. It would be possible, perhaps, by interpreting them, to write the most fantastic poem of our day. But I shall take care not to do that, for I should be desperately sorry to invent anything about my dream, and to change or add anything to the vague remembrance it leaves me. . . .

"As I have often told you, the morning that I am just returned from my unknown island, pale with emotion and regret, nothing in real life can compare with the affection with which these mysterious beings inspire me, or the joy I feel in again being with them. It is such that I feel the physical impression of it after waking, and all day long I cannot think of it without my heart throbbing. . . . I wonder I can live without

them, and it is my real life which then seems to me a half-effaced dream. . . . This apparition of a troop of friends whose bark bears me to a happy shore, has been in my brain from the earliest years of my life. I remember clearly that in my cradle, when I was five or six years old, I used to see as I fell asleep a troop of beautiful children crowned with flowers, who called me and made me come with them in a great mother-of pearl shell floating on the water, and who carried me into a magnificent garden. This garden was different from the imaginary shore of my isle. There was the same change between that and this as between my child-friends and the friends of my dreams now. . . ."

The reader cannot fail to be struck with the resemblance to be found in the beautiful "poem in prose" by Turgeneff (of which we will venture to give a necessarily very imperfect rendering)—the blended resemblance to both the hasty though effective sketches of the previous dreamers:

"O kingdom of the skies! O abiding-place of light, of youth, and of happiness, that dreaming I have seen! I sat with a number of companions in a stately shallop. Like a swan's breast the great white sail rounded itself under the fluttering pennants. I knew not my companions, but I felt through my whole being that they were young, gay, and happy, like myself. But I gave them no attention. I saw only all around us the shoreless sea, its azure everywhere dotted with little golden scales, and over my head another infinite sea of blue, joyously caressed by the triumphant, radiant sunlight. And there arose among us from time to time clear and sweet laughter, like the laughter of immortals. Or suddenly there sounded from some mouth words, verses, full of a wonderful beauty and of inspired power. The heavens and the waters vibrated with responsive harmonies; and then reigned anew silence, the silence of happiness. Lightly plunging through the placid waves, our boat sailed rapidly on. It was not the wind that drove it—our own joy-beating hearts impelled it; it floated where we would, docile as a living creature. We swept by magic islands, half transparent, glimmering like precious stones, emeralds and opals, while intoxicating perfumes came wafted to us from their softly rounded banks. Here would fall on us a rain of lilies of the valley and white roses; there suddenly took flight birds with long, rainbow-colored wings. The birds circled above us; the lilies and roses fell into the sea and melted in the pearly foam through which slipped the shining sides of our craft. With the flowers and the birds there flew to us sounds of ineffable sweetness—of women's voices. And all around us the sky, the sea, the undulating sail, the murmur of the water at our prow, all spoke of love, of blissful love. And she, the beloved, the chosen of each heart, was there, invisible yet present. One instant more, and her eyes beam, her smile shines, her hand touches thine and draws thee with her into everlasting Paradise. O kingdom of the skies, I have seen thee but in dream!"

Correspondence.

SPECIFIC ISSUES IN PARTY PLATFORMS.

To the Editor of The Nation:

Sir: Mr. Edmunds's advice to the Republican party to go West for a candidate who is especially sound on financial questions, seems, in the latter clause at least, to be uncommonly good advice. This country has passed the stage of development where Congress has to consider especially measures concerning national organic growth. In a distant future stage we may see our refined and cultured representative body discussing the artistic, literary, and even spiritual welfare of the nation, but just at present we are certainly in the age where questions of industrial prosperity and administration are, and are for some time to be, the absorbing ones. Questions of tariff, coinage, banking system, civil service, and expenditure of the national revenues, with all their interdependencies and details, must be discussed and settled.

Although Mr. Edmunds's advice is good, it seems to me, like too many recommendations of the same nature, too general. If we are to settle these questions, they must be taken up one at a time, and the voice of the people made distinctly audible before either party will make a move. Though the English have a different political system, we may still learn some lessons from them. Such reforms as that of the Corn Laws and Irish Disestablishment were passed only by making the "cry" specific. To-day elections to Parliament have been made on the "Home Rule" and "Land Purchase" questions as a single measure. This brings vital and specific subjects to the front. Our methods of late have produced the opposite result. Generalities are put in the party platforms, and the people vote on them or the bloody shirt. Their opinions on vital questions are never expressed at the polls. Each party is as afraid of a live issue as of a live rattlesnake.

Generalities, like "such reforms in the tariff as will correct its inequalities but still protect American labor," do not tell a man what he is voting for, or give to a successful candidate any idea of the grounds on which he was elected. Suppose, on the other hand, one party, following the English plan, should take a definite stand on some such specific financial issue as free raw materials. I have never seen or heard of a protectionist who favored perpetual protection on all things, or a free-trader who advocated immediate free trade in all things. The changes that will be made in the tariff must, in the natural development, be towards free trade. A cry of free trade in general frightens many; one of free raw materials, while it would be pronounced a leader in that direction, would repel but few, unless, perhaps, brought forward by some existing free-trade club.

This letter, however, was not intended for a discussion; but, if it seems profitable to you, I should like to see this idea of a vital and specific financial issue discussed in the *Nation* and all the papers before this and the next fall elections. The new generation of voters, as well as many of the old, are tired of generalities and the bloody shirt, and want simply an opportunity to vote for the party that will give it a definite live issue on financial questions. Can it be given to them in these coming elections of '86 and '87, so that they can make themselves felt? V.

Chicago, September 22, 1886.

ABOLISH THE SALOONS.

To the Editor of The Nation:

Sir: I read your articles against the Saloon in Politics with increasing interest, because they are getting clearer, and making up the issue more definitely as they succeed each other. I hope you will continue and evolve not only your present clear statement of the question, but a practical method of uniting the best elements of all classes and parties to destroy the saloon—the drink-selling shop.

In this city of 9,000 souls the saloons were closed thirteen years ago, and have not since been reopened. The benefit has been demonstrated by this good test to be very great. The question disappeared from politics long ago. No candidate for office would stand any chance of election who advocated license. The good results have spread abroad, and our county, including the larger city of Bridgeton, is almost entirely free. We gained our victory, fortunately, before the days of the Radical Prohibitionists or the Anti-Saloon Republicans, by a judicious and moderate course. We gained the support of many Democrats, Republicans, Greenbackers, and moderate drinkers by taking one step at a time—first limiting, and finally, when the time was ripe, abolishing the saloons. Is it not practicable on a larger scale?

Very truly, R. M. Atwater.

Millville, N. J., September 24, 1886.

LABOR AND CAPITAL—AN ILLUSTRATION.

To the Editor of The Nation:

Sir: You have made many forcible statements of the relations of labor and capital. Perhaps the following illustration would reach the plainest understanding. Suppose two mechanics with equal wages. The one spends all, determined to enjoy life as he goes. The other, by strict economy and self-denial, is able in the course of time to pay for a house. The latter is now a capitalist, whether he lives in the house himself or rents it to another. Now what decent claim can the spendthrift make upon the invested capital of his prudent fellow-workman? Yet such or similar is the origin of most of the capital of civilized communities. The dissatisfied are apt to look at the few millionaires, whose enterprises are conspicuous, but whose combined capital forms but a fraction of the whole that is in use. Many small streams contribute to fill the ocean.

You may have seen a greedy boy eat up his apple quickly, then turn to a companion and demand a share of his.—Yours truly,

W. H.

Philadelphia, September 27, 1886.

THE MADISON POST-OFFICE.

To the Editor of The Nation:

Sir: As you have been prompt in calling public notice to violations of the pledges of civil-service reform on the part of the Administration, I seek the channels of your paper to call attention to an incident, perhaps small in itself, but raised to the dignity of national importance by the fact that this is the home of the Postmaster-General, and the occurrence follows close upon the heels of his departure after a recent visit.

The Post-office here had been pretty thoroughly cleared of its old employees before this and their places given to inexperienced men; but there remained a Mr. Hastreiter, mailing clerk, a man of great competence, who, having devoted many years to the work, had come to be well-nigh indispensable in despatching the large mail that accumulates here; and a Mr. Helen, Superintendent of the Special Delivery, likewise possessed of information which it takes years to acquire. Now, shortly after the Postmaster-General's recent visit, these men were notified that, after the first of the month, they would no longer be wanted, and new and inexperienced men were appointed in their places—a most flagrant disregard of the city's interests and violation of the Administration's pledges of civil-service reform.

If this is the civil service which the Postmaster-General administers to his old friends and neighbors, is it not pertinent to inquire if this is the coin in which he proposes to redeem the President's pledges to the country at large? If the public generally is so thoroughly disgusted with its dose as the better class of citizens of this city are with this incident, the chances of reëlecting even Mr. Cleveland are few. Does it not begin to look as if the rope was already provided with which the Democratic party is to hang itself in 1888—viz., "greed for office"?—Yours for the cause of

Civil-Service Reform.

Madison, Wis., September 25, 1886.

WAS MOHAMMED A FRIEND TO LEARNING?

To the Editor of The Nation:

Sir: Sir Wm. Jones quotes from the Koran the words, "The man who has knowledge for his portion has received a valuable gift," and adds that among his (the Prophet's) sayings preserved by his intimate friends and now considered as authentic, there are several that recommend learn

ing in the strongest terms; as, "The ink of the learned and the blood of martyrs are of equal value in heaven"; "Learning is permitted to all believers, both male and female," and that precept of his which is well known, "Seek learning, though it were in China."

So much for the affirmative. Now comes Mr. E. Hungerford, in the last *Atlantic Monthly*, and says: "Whether from fear lest knowledge should sap the bottom stones of the faith, or from a belief that all that a man needs to know was made known by revelation through him, Mohammed issued an edict that made the study of the liberal sciences and arts punishable with death." Mr. H. also cites his illiteracy as evidence of his hostility to learning. In this disagreement between doctors a layman is perplexed. (See Jones's prefatory discourse to an essay on the history of the Turks in Teignmouth's 'Life of Jones,' Appendix.) N. N.

Belleville, Ill.

THE LOVE OF KNOWLEDGE IN SCHOOLS.

To the Editor of The Nation:

Sir: Physiology forms part of the first year's course in our High School, and the classes are in charge of a skilful teacher who is a great lover of nature. In one of the first lessons in the book there is a cut of the Hydra. The teacher called attention to the strange animal, and asked his boys to bring water from ponds and ditches that he might show them the creature alive under the microscope. Of fifty-six boys one complied.

This is the spirit our pupils bring from the lower schools. They have no foundation either of knowledge or love of knowledge on which we can build. It is of no use to try to make knowledge popular and attractive: they will none of it in any form. They will memorize statements and work examples by rule to get the answers; under strong protest they will commit declensions to memory; but true study is unknown among them. Nor can they be taught it. A few of the choicest spirits begin to perceive that there is such a thing, but none ever attain it, and most graduate ignorant of its existence. True learning differs in kind from anything known in school. High School Teacher.

Ohio, September 21, 1886.

WOMEN IN MUSIC.

To the Editor of The Nation:

Sir: The discussion in your columns of woman's place in music arouses in me a feeling of sympathy for such as plead her cause and claim for her a share in the honors of musical literature. I have read the correspondence on this subject in conjunction with that about the letter of "E. R. S.," "Why not make her an intellectual woman?" Every musician knows that the talent for composition is exceedingly rare, and a willingness to surmount the difficulties leading to correct writing of music rarer still. How few of the many cultivated musicians we see around us are possessed with anything like an adequate passion for the production of unaffected, original composition Our civilization seems against it. Perhaps woman's life and condition are.

As a matter of fact, women find great trouble in composition the moment they go beyond a knowledge of harmony. They cannot hear the contrapuntal parts until they are performed, nor see them before they are written down. *Yet in this they only share the lot of the majority of men.* It seems futile to deny this, and a great deal better to accept the facts as they stand. Woman's value in the musical world is not thereby impaired, and is rapidly growing greater. The question, "Why not make her an intellectual woman?" is being agitated throughout the literary world of to-day; but the question, "Why not make her an intellectual musician?" has not been much quoted. Yet it is equally necessary she should be made such, in order to clothe her with the power and prestige in music that men have as composers.

As far back as the sixteenth century, men's minds became trained in composition with singular severity. Think what a century of counterpoint did for them. When, in Bach's time, musical giants arose and poured forth their utterance divine, where were the women? Rousseau says in the 'Confessions': "Une de mes chances était d'avoir toujours dans mes liaisons des femmes auteurs. Je croyais au moins parmi les grands éviter cette chance. Point du tout; elle m'y suivit encore." Women evidently occupied much the same place then as now. Goethe celebrates Corona and others in his poems, who sang at the "Three Swans" in Leipsic, and drew such crowded houses that in 1781 the renowned concert hall in the Gewandhaus was opened for the better accommodation of the public.

It appears frivolous to be discussing the merits of the case. The fact is incontestable: women have not distinguished themselves as composers. Yet are they less indispensable in the musical world? Will not all be glad when a musical George Eliot comes to shine effulgent in the constellation of great composers?

J. H. Pratt.

Decoto, Cal., September 13, 1886.

"WOMAN" AND "LADY."

To the Editor of The Nation:

Sir: To enforce your position in behalf of "woman" as the worthy appellation of the fair sex, you might refer to two old English anecdotes—one of the superfine curate who, in the service of churching of women, in the case of his high-born patroness, prayed, "O Lord, save this *lady*, thy servant"; and had from the clerk the response to match: "Who putteth her ladyship's trust in Thee." Also, that of the wife of the bishop elect, who, for want of the official permit, was stopped at the door of the palace, and pleaded, "Why, I am the new Bishop's lady"; and received for answer, "Well, if you were the Bishop's wife, I could not let you in without a permit." Anglicus.

KOLONAI.

To the Editor of The Nation:

Sir: Permit me to state, in justice to the correctness of my quotation, that the passage in the Journal of the Archæological Institute (London, 1860) referred to in my paper on a proto-Ionic capital from the site of Neandreia, does really read to the *north* of Alexandria Troas—not to the south, as Mr. Calvert intended it should.

It is certainly gratifying that this only point wherein my conclusions, based on the investigations of the Assos expedition, seemed at variance with the opinions of Mr. Calvert—who is well known as the highest authority on the geography of the Troad—should thus prove to be due merely to a misprint. Joseph Thacher Clarke.

London, Eng., September 13, 1886.

Notes.

Next week we are promised the first number of *American Art*, one more essay to establish on this soil "a monthly magazine devoted to the interests of the fine arts, graphic and applied." The editor, Mr. Lyman H. Weeks, art critic of the Boston *Post*, will have the assistance of Mr. Wm. M. Thayer, a well-known journalist of the same city. The business manager, Mr. Frank T. Robinson, will also be a writer for the magazine. The publishers are the American Art Publishing Company, Studio Building, 110 Tremont Street, Boston.

A dozen years ago Mr. Wm. C. Bryant engaged to pass upon the labors of Mr. Evert A. Duyckinck in forming a new text of Shakspere, based on the Folio of 1623. This was done, and Mr. Bryant's preface written, when, by a singular coincidence, the joint editors both died in the same year (1878). The enterprise was not abandoned, and is now about to be put on the subscription market by H. J. Johnson and J. M. Stodart. There will be twenty-five "sections" in the issue, and each will contain four photogravures from designs in oil by F. O. C. Darley and A. Chappel. The form selected is quarto. Mr. Bryant's preface is before us, and one can but regret that he did not live to see the proofs when we find this ungrammatical construction attributed to such a purist—"of whomsoever would undertake it"—and (shade of Wordsworth!) this line from the "Laodameia":

> "An ampler ether, a *durner* [diviner] air."

The first number of Gen. John C. Frémont's 'Memoirs of My Life' (Chicago: Belford, Clarke & Co.) has appeared. It contains portraits of the Pathfinder and his wife, of Senator Benton, Thomas Jefferson, and Napoleon (the last two, no doubt, as being concerned in the Louisiana sale and purchase which made Frémont a Western explorer), sundry views on steel of Western scenery, and other illustrations. Mrs. Frémont contributes a biographical sketch of her father, and Gen. Frémont begins his Memoirs with a singular indifference to space and time, for he does not mention the place or date of his birth. His narrative makes popular reading, and promises to be tolerably discursive. We must reserve our judgment upon it till it is complete. His vindication as a Presidential candidate and a soldier is, he says, one of his chief motives in writing.

A. C. Armstrong & Son's fall announcements include 'Shakspere's Dramatic Works and Poems, with Glossary and Life,' by J. Talfourd Blair—a tiny edition; 'The Legendary History of the Cross,' containing facsimiles of nearly 100 woodcuts from a Dutch work of 1483; 'Poets in the Garden,' by May Crommelin; 'How to Form a Library,' by Henry B. Wheatley; 'A Budget of Letters from Japan,' by Arthur C. Maclay; and 'On Tuscan Hills and Venetian Waters,' by Linda Villari.

Mr. Arthur Gilman's 'Story of the Saracens,' shortly to be published by G. P. Putnam's Sons, will contain a bibliography of works on Islam such as, it is believed, has never been made in English. Mr. Mallock's forthcoming 'The Old Order Changes' is a *Tendenz* novel of the day, in which the sermon and the drama of life are judiciously combined, as is usual with this lively writer.

Mr. George J. Coombes will publish shortly M. Alfred Stevens's 'Impressions of Painting,' translated by Miss Charlotte Adams with the author's permission. Miss Adams will provide a sketch of the painter's life and work, and M. Stevens has written a special introduction for this American edition.

Mr. Frank H. Hill, lately editor of the London *Daily News*, and author of the 'Political Adventures of Lord Beaconsfield,' has engaged to write the life of Canning for Mr. Andrew Lang's series of "English Worthies."

Dates are conspicuously absent from the reissue of Mr. Charles Dudley Warner's 'Book of Eloquence,' a boys' "speaker" (Boston: Lee & Shepard). The state of the plates betokens an honorable age, and there is internal evidence that

the work was compiled early in the fifties. It is a good book still, yet not such a one as the compiler would put together at the present day. It affords food for much reflection on the change that has taken place in literary taste and judgment since this purveying was done for youthful declaimers, in the rank of the writers on Mr. Warner's list, and in the quality of the Congressional and forensic oratory which stood him in such good stead.

The handy and dangerously pretty edition of Thackeray of which J. B. Lippincott Co. are the American publishers, has just been continued with two volumes of 'Pendennis.'

G. P. Putnam's Sons have reprinted in a single volume the two parts of Mr. Worthington C. Ford's 'American Citizen's Manual.'

Thousands who have laughed at "Box and Cox," or acted in it on the amateur stage, could not name the author or his other plays. This classic farce and six companion pieces have just been published in Harper's Handy Series, under the title 'Comediettas and Farces, by John Maddison Morton.' Mr. Clement Scott furnishes a biographical preface, in which he traces the Gilbert and Sullivan partnership to "Box and Cox" (through Burnand's "Cox and Box"). The veteran playwright himself, whose genial portrait is prefixed, makes a modest bow to his latest audience; and it is to be hoped that the proceeds of the American, as well as of the English, edition may benefit Mr. Morton, who is now a "poor brother," ending his days in the Charterhouse.

Two pocket-atlases of the world reach us at the same time. One, of English make, and published here by the Messrs. Putnam, holds fifty-four double-page maps, giving the larger features and more important places of the several countries, and the following cities and their environs: London, Manchester, Liverpool, Edinburgh, Glasgow, Dublin, and New York. Some prefatory tables contain useful statistics. No railroad routes are shown on the maps. In this last respect, but in hardly any other, the maps in Rand, McNally & Co.'s 'Pocket-Atlas of the World' (Chicago)—a second, enlarged edition, by the way—are superior, until we come to the United States, when the scale is larger, and each State has a separate map. On the other hand, the descriptive matter is vastly more abundant, and colored diagrams are used to illustrate agricultural and other products. The English atlas is, in a word, for the tourist, the American rather for the commercial traveller.

From Frank S. Thayer, No. 313 Sixteenth Street, Denver, Col., we have received a dainty little eight-leaved souvenir, "In Memoriam Helen Hunt Jackson (H. H.)." The text describes the grave of this philanthropic poetess, and there are delicate heliotype views of Cheyenne Mountain, Pine Hill Forest, and Mrs. Jackson's residence at Colorado Springs, besides a pleasing portrait of herself.

Mr. Julian Hawthorne's 'Fortune's Fool,' Mr. Bret Harte's 'Snowbound at Eagle's,' and Mr. Samuel Longfellow's biography of his brother, are the latest American additions to the Tauchnitz series.

The seventh annual report of the Archæological Institute of America is brief but eloquent, for it tells of the assurance of the erection of the building for the American School at Athens, for which Prof. Wm. R. Ware has already prepared the plans. Flattering accounts are given of the results of the Wolfe expedition to Babylonia under Dr. Wm. Hayes Ward, soon to be made public; of Dr. Sterrett's recent and future activity in Asia Minor (thanks again to the liberality of Miss C. L. Wolfe); and of explorations about to be undertaken in the eastern part of the same Turkish dependency, near the seat of the Hittite kingdom, by Mr. J. H. Haynes, the photographic colleague of Dr. Ward and Mr. Sterrett in Babylonia. The final report of Mr. A. F. Bandelier on the past and present condition of the Indians in our Southwestern States is awaited with great interest. For future Old World expeditions (which will have the School at Athens for a base), the Council favor Tarentum or the Cyrenaica. A larger membership and permanent funds are, as heretofore, in order.

The first official report made by a medical officer on Corea will be found in the thirtieth issue of the Medical Reports published by the Imperial Maritime Customs at Shanghai. In a few pages, Dr. N. H. Allen gives an admirable sketch of the situation of the city of Seoul, its natural advantages for drainage and the neglect of them, the climate, the mode of house-building and house-warming; and then passes in review the various ailments of the population, in which malaria (in all its forms) is the most unexpected, and typhoid fever noticeably missing, though by all rules it ought to be very prevalent. "Smallpox is universal," but no treatment is asked for it "unless the eye is becoming seriously affected. The little patients are carried about the streets on the backs of their nurses with great unconcern." Dr. Allen praises the stone-lenses of Corean manufacture for eye glasses, which are all convex. They cost nearly $100.

An 'Index to the *China Review* from volumes i to xii' (Hongkong) has come to hand. It will be welcome, though hardly as convenient and useful as it might have been made by a little more skill.

The September number of the *Scottish Geographical Magazine* contains a very suggestive paper by Prof. Meiklejohn on "History, Poetry, etc., in Geographical Names." In it he shows the traces of Celts, Romans, Teutons, and Norsemen in Great Britain by the names especially of the rivers and towns. Rivers, he remarks, retain their names longer than any other natural feature, there being "hardly a single river-name in the whole of Great Britain that is not Celtic." This is followed by an historical and scientific description of the "Exploration of the Antarctic Regions," by John Murray of the *Challenger* Expedition. There have been but five expeditions to these regions, the last and most successful being that of Sir James Ross in 1839-43, though the *Challenger* crossed the Antarctic Circle in 1874. The great obstacle to the exploration of the land is not so much the ice as the lack of any harbor. "Where the coast is low there is a line of perpendicular icy cliffs, 150 to 200 feet in height," known as the "Ice-barrier," but where it is mountainous the coast is protected by land-ice a few feet above the level of the sea and extending many miles from the shore. No vegetable life on the land has yet been discovered, but at the surface of the ocean microscopic plants "are met with in enormous abundance." The color of the icebergs is magnificent: "The crevices, caves, and hollows are of the deepest and purest azure blue; at night they have a luminous glow." Mr. Murray considers it conclusively proved that there is an Antarctic continent considerably larger than Australia, with an ice-cap possibly "several miles in thickness near the pole." The paper is accompanied by a very beautiful "equal-surface projection" map. It seems probable that an expedition will soon be sent to explore these regions, the Premier of Victoria having recently said, in reply to a deputation which urged its expediency, that "the Government would be willing to grant a subsidy to aid scientific discovery, and that he would ask the other colonies to do the same."

Science for September 24 has an instructive communication from W. J. McGee, on certain features of the Charleston earthquake as observed by him. Four pen-drawings after photographs illustrate the water craters produced, and various torsions and displacements of buildings and monuments. A phenomenon which just antedated the earthquake—the disastrous overflow of an artesian well of which control had been lost, at Belle Plaine, Iowa—is described and illustrated by T. C. Chamberlain, and shown to be very simple and unmysterious, though happily rare.

A premium of "50 mark=62.50 frcs.=2½£=12.50$=25 Roobl." (astronomers will please take notice) is offered by "Augustus Tischner, Marschnerstrasse 7, Leipsic, frco., until Mai 1st, 1887," for the best answer to the following questions: "(1) Why do the astronomers consider the sun as being 'at rest,' while they are knowing and teaching that the sun moves? Laplace says: 'The sun moves at least with the velocity of the earth in its orbit.' (2) The sun moving and being not fixed, is the Copernican intuition of the world tenable yet now-a-days? (3) Are the astronomers right to assert that Astronomy stands or falls with the system of Copernicus, and that no other system, even by way of trial, can or may be established?" Herr Tischner announces further that "the decision about which of the concurrents shall receive the premium will be committed to the 'Astronomical Society,' which in September of 1887 will hold its assembly." If the Astronomische Gesellschaft can be induced to essay this decision, it may be hoped that Herr Tischner himself will compete for the premium, and that the Gesellschaft may see the propriety of recognizing him as the successful "concurrent."

We have before us two numbers of the *Antiquary* (D. G. Francis). The first article in the August number is by Mr. W. H. K. Wright, upon the historic streets of Plymouth, in which it is interesting to note that municipal governments in England are fond of changing old traditionary names for more sounding ones, just as they are here. Probably the most valuable article is the Rev. J. C. Atkinson's "Notes on Common-Field Names," a series commenced in an earlier number and continued in the September number, and constituting an invaluable aid and commentary to the study of early land institutions. These curious names have been collected with great industry and carefully classified, and their meanings are explained, partly on etymological grounds, partly by old customs. Frequent reference is made to Mr. Seebohm's treatise upon English Village Communities. Another learned and important article in the September number is upon "The Multiplication of Surnames," by Arthur Folkard. The several circumstances which have caused an original name to assume the utmost diversity of shapes are described (not always with sufficient illustration), and at the end we have an elaborate tabulation of the several forms of the writer's own name, *Folkard=Folk-ward*, and some other names of the same character. These two articles afford abundant material for etymological study. There is also an illustrated article of considerable length on "The O'Meaghers of Skerrin"; and another, valuable for its statistics, upon the "Accounts of Henry VI."

Two books recently published in Paris will interest American readers. One is 'La Guerre de Sécession: 1861-1865,' by M. Ernest Grasset, with a preface by M. Victor Duruy. The other is 'Yorktown—Centénaire de l'indépendance des États-Unis d'Amérique, 1781-1881,' by the Marquis de Rochambeau.

H. W. Müller, Berlin, will shortly publish a 'Deutsches Stil-Musterbuch,' or book of "elegant extracts," compiled by Dr. Daniel Sanders in the spirit of his long list of works for the better appreciation and understanding of his mother-tongue. He has restricted his selections, which are mostly complete, not fragmentary, to the pe-

riod from Lessing to Goethe's death; a second volume may be hereafter devoted to more recent models of literary style. Dr. Sanders's annotations have been carefully written in pure Teutonic "bis an die äusserste Grenze des zur Zeit Erreichbaren," and a special index has been made for them. With reluctance he has adopted the public-school orthography.

B. Westermann & Co. are able to supply to intending bidders a portion of a catalogue of a sale of incunabula at Cologne in the latter part of next month. (The whole will appear too late for American buyers.) They will also undertake to bid for these five rarities—the first printed letter of Columbus on the discovery of America, from the press of Stephan Planck (Rome, 1493), which was reprinted in the same year; a Latin-German vocabulary printed in 1469 from Gutenberg's types; P. Schoeffer's 'Liber VI. Decretalium,' on vellum, 1473; a Carthusian missal of 1490; and a block-book (uncolored), 'Historia Beatæ Mariæ Virginis,' which has never before come upon the market, and which is almost as curious for its argument (drawn from classical examples) in defence of the Immaculate Conception as for its mode of production and its art.

In our account of the "Workingmen's Scheme of Minority Representation" (see *Nation*, September 16), we were guilty of an oversight in not noticing that article xliii of the proposed amendments provides for the extension of the plan to the House of Representatives, dividing the State for this purpose, if it should be thought desirable, into six districts.

—*Harper's* for October opens with a pleasantly written sketch of the English country in the sporting season, with some characteristic full-page scenes. Contributions upon the various great branches of our National Home for Disabled Volunteer Soldiers, and upon United States Naval Artillery, are also prominent by their completeness of illustration and compact and exact information. The body-article of the number, however, from the pen of Miss Amelia B. Edwards, is a history of the ancient city of Tanis, which the successful excavations of Mr. Petrie, conducted by means of the Egyptian Exploration Fund, have recently made widely known as an Egyptian Pompeii sunk in the marshy desert which once was the garden of its prosperity. An added interest was felt in these discoveries, perhaps, because a portion of the find was destined to the Boston Museum of Fine Arts, and some of the objects already deposited therein are here reproduced; but, apart from this, Mr. Petrie's work was sufficiently striking and novel in its results to awaken a lively curiosity in it as from time to time it has been partially described in the public prints. In this paper the whole story of Tanis, as it is recovered from the monuments, is told with full knowledge and intelligence, and with an entertaining style and a tact in selection and order which deserves mention in a popular archæological study, though we cannot but regard certain cuts, out of the fancy of the artist—such as the Hottentot flight from the burning city—as meretricious and degrading to the text. Tanis had a long history, and of it very little survives. Perhaps something more could have been learned had its ruins not served as a hunting-ground for the early seekers after curiosities, who scattered their treasures, now anonymous, to the four parts of the earth; but since Mariette brought science to the spot, great care has been taken in handling the relics, and enough remains to make the city, through a period of some four thousand years, a type reflecting all the phases of Egyptian historical life, till its destruction in the Christian era.

—Cupples, Upham & Co., Boston, make two additions to Emersoniana. One, 'The Optimism of Ralph Waldo Emerson,' by William F. Dana, is a Bowdoin Prize Essay, and shows such comprehensiveness of view and acquaintance with the thoughts of others as to entitle it to a prize. The other, 'Ralph Waldo Emerson: His Maternal Ancestors, with some Reminiscences of Him,' by David Greene Haskins, D.D., is a careful genealogical study, combined with some of those odds and ends of information about a man which are apt to escape a biography, although they are full of interest and illustration. The author is Emerson's cousin. The substance of the pamphlet, it is stated, appeared in the August numbers of the *Literary World*. Its contents afford some social views of old Boston. The letter written by Madam Bradford of Cambridge, now in her ninety-fifth year, describing the household of Emerson's parents, is an incomparably fine vignette in its kind, and the sketches of the surroundings and doings of the Emerson boys from other sources are entertaining. There is, too, a just and feeling tribute to Edward Emerson's short labors in early manhood. In a literary way, Dr. Haskins has a striking remark upon his classmate Thoreau. In college, he says, Thoreau showed no promise, but upon his first meeting with him after graduation at Concord he was "startled by the transformation that had taken place in him. His short figure and general cast of countenance were of course unchanged; but in his manners, in the tones and inflections of his voice, in his modes of expression, even in the hesitations and pauses of his speech, he had become the counterpart of Mr. Emerson." It has sometimes been thought that Thoreau lent Emerson his own eye for concrete nature. Of this pamphlet, which booksellers would call "curious," only 350 copies are printed.

—The formation is announced of an association of the graduates and former members of the Harvard Law School, with a view "to advance the cause of legal education, and to promote the interests and increase the usefulness" of that institution. The organization was happily begun on Friday last at a meeting in Boston, over which Mr. George O. Shattuck presided. "The atmosphere of the School," he said, tersely and with almost literal truth, "is fatal to idleness, and stimulates to the highest endeavor." On November 5, the day before the College solemnities of the two hundred and fiftieth anniversary begin, Mr. Justice Oliver Wendell Holmes, jr., will give an oration before the Association. Excellent results have attended the attempts to apply more thorough and scientific methods to the study of law at Harvard. Those who wish to encourage these attempts, to see them continued and bettered, and to make sure that the great School maintains its old fame in the only way which is worthy of it, namely, by constantly improving upon itself, may well unite in this plan to strengthen it—keeping alive the interest of its graduates and former members in the thorough study and honorable practice of the law. The plans of the Association include an annual meeting of its members. All graduates and former members of the School may become members of the Association by sending their names, with the initiation fee of one dollar, to the Treasurer, Winthrop H. Wade, 10 Tremont Street, Boston, Mass.

—The 'Catalogue of the Hebrew Manuscripts in the Bodleian Library,' compiled by Ad. Neubauer, M.A., Exeter College, Oxford (Clarendon Press; New York: Macmillan, 1886), is a monument of learning and labor worthy of the institution which issues it. It describes, with extraordinary minuteness, 2,602 codices, grouped under the heads of Biblical MSS.; Translations of the Bible; Midrash and its Commentaries; Commentaries and Super-Commentaries; Talmud, Halakhah; Talmud, Agadah; Liturgies and their Commentaries; Theology, Philosophy, and Ethics; Masorah, Grammar, and Lexicography; Kabbalah; Poetry and Rhymed Prose; Mathematics, Astronomy, Astrology, Magic, and Cosmography; Medicine; and Miscellaneous. Indexes are added of authors, translators, family names, titles of writings, scribes, owners, witnesses, censors, geographical names, etc. The whole forms a very handsomely printed quarto volume embracing about 1,200 columns (mostly two to a page), accompanied by a collection in folio of forty 'Facsimiles. . . illustrating the Various Forms of Rabbinical Characters, with Transcriptions,' grandly executed and revised with the utmost care. Inaccuracies of Hebrew spelling or construction strike one often enough, but they are owing to the blundering of authors or copyists, whose words are rendered unaltered in the brief extracts used for characterizing the contents. Misprints for which the learned compiler or his colaborers (whose existence the stupendousness of the task compels us to suppose) can be made responsible are astonishingly rare—a merit fully appreciable only when we consider that the Catalogue contains nearly 50,000 lines of mixed Hebrew and English, parts of which are read from right to left and parts from left to right, and that each transfer of a word or words from one line to another which a correction in the Hebrew may have necessitated had to be done from the (to the compositor) wrong end of the words. To this perplexing difficulty is owing, on page 210, the disorder in which the Hebrew words answering to "Pentateuch," "Prophets," and "Hagiographa" are placed in juxtaposition with these English terms. On p. 150, "Shul'han Ora'h" apparently stands for 'Shul'han Arukh.' The date "1204" assigned in the Preface (p. vii) to the earliest manuscript in the Library appears from the disquisition on the age of the first codex to stand for 1104. The Preface enumerates the various collections of Hebrew manuscripts in the Bodleian Library, including manuscripts written with Hebrew characters in Arabic and other languages. The chief are: Collection "Laud," Archbishop Laud's, presented to Oxford University in 1635–40; "Seld.," bequeathed by John Selden in 1654; "Marsh.," bequeathed by Thomas Marshall in 1685; "Hunt.," bought from Bishop Huntington in 1693; "Poc.," Prof. Pococke's, bought, after his death, in 1693; "Opp.," the great library of Rabbi Oppenheimer of Prague, bought in 1829; and "Mich.," collected by H. J. Michael, of Hamburg, and bought by the University from A. Asher & Co., in 1848.

—In the Milan *Perseveranza* of September 5, we find an anecdote of Count Rostoptchin which, besides being somewhat curious in itself, effectually clears up a short poem of Goethe that has been imperfectly understood. The lines are to be found in the Hempel edition of Goethe, vol. ii, page 454, where they are dated 1823 and superscribed "An Fräulein Casimira Wotowska"; they read thus:

> "Dein Testament vertheilt die holden Gaben
> Womit Natur Dich mütterlich vollendet,
> Vermächtniss nach Vermächtniss ausgespendet,
> Zufrieden jeder, seinen Theil zu haben;
> Doch wenn Du Glückliche zu machen trachtest,
> So wär' es der, dem Du Dich ganz vermachtest."

Hitherto we have had to content ourselves with Goethe's own note, which is this: "Frl. Wotowska, sister of Mme. Szymanowska, tormented by certain, perhaps imaginary, sufferings, handsome and agreeable, withal melancholy and given to talking of death. A witty friend had written in her album a testament in which she bequeaths her highly amiable characteristics and distinctions one by one to various different individuals." It now appears from the *Perseveranza* (we have alighted upon the same matter nowhere else, and the Italian journal does not give its authority), that the "witty friend" referred to by Goethe

was Count Rostoptchin, famous as Governor-General of Moscow at the time of Napoleon's invasion of Russia. In 1823 Rostoptchin took the waters at Carlsbad, and while there was one day requested by Mlle. Casimira Wotowska to write something in her album. The lady was a fine musician and a great social favorite, and the Count, who was now a sexagenarian with the reputation of being somewhat bearish, complied by writing the petitioner's last will and testament, in substance as follows: "Being reduced to extremities by excess of health, and anticipating the approach of Mme. la Mort to the bed where I enjoy my tranquil slumbers, I herewith make my will, naming as my executor in this world Signor Rossini, and in the other Herr Händel. I bequeath my wit to the first young woman that loses hers; my soul to the egotists; my heart to the rich; my love for my sister to her sons; my eyes to the young women who go through the world unnoticed; my teeth to the women whose ugliness makes people afraid of them; my form to the dowerless orphans; my glance to the unlucky mothers who are compelled to ask favors for their sons; and the cup from which I drink the waters of Carlsbad to the first king that comes along." This testament is dated Cape of Good Hope, July 19, 1823, signed Casimira Wotowska, and attested by Fedor, Count Rostoptchin. A short time afterwards the Wotowska journeyed to Marienbad and there made the acquaintance of Goethe. Upon presenting her album to him she was favored with the verses quoted above. She was, however, obliged to confess that she knew no German and to ask the poet to translate his lines for her. This he promised to do, adding, according to the authority of Casimira's sister, that it was the first time in his life that he had ever done such a thing. The next day the Polish lady received from Goethe the following:

"Ton testament distribue les dons précieux
Dont la nature perfectionna ton être,
Legs sur legs généreusement designées,
Chacun est très content du lot qui lui est échu;
Mais si c'était l'intention de rendre heureux,
Celui-là le serait à qui tu voudrais léguer l'ensemble."

A SOUTHERN ABOLITIONIST.

The Life of Cassius Marcellus Clay. Memoirs, Writings, and Speeches, etc. By Himself. Vol. i. Cincinnati: J. Fletcher Brennan & Co. 1886.

To the generation that knows not Joseph, Mr. Clay makes a pathetic appeal for recognition if not remembrance. "Quorum —— pars fui," he says on his title-page, of "the overthrow of American slavery, the salvation of the Union, and the restoration of the autonomy of the States." "Quorum magna pars fui," he says, on p. 427, of emancipation and a restored Union consequent upon the fall of Richmond. Every schoolboy knows the names of Seward, Grant, Lincoln, and John Brown; but alas that he should be ignorant, till he reads this autobiography, that Cassius Clay "did more than any man to overthrow slavery" (p. 462); that he "carried Indiana for Lincoln, and thus saved the election" in 1860 (p. 251); that he "voluntarily volunteered to save Washington from capture, and did so," in April, 1861 (p. 462); that he persuaded Lincoln to adopt John Quincy Adams's view of the Government's right to interfere with slavery under the "war power" (p. 301), and hence was the real inspirer of the Emancipation Proclamation of 1862 (pp. 301, 312); that "all now admit" that his work as Minister to Russia "saved us from the united invasion of France, Spain, and England against Mexico, and thus saved the Union" (p. 219). Surely only a gigantic conspiracy could have suppressed the fame of so indispensable a factor in the history of the past half century. In truth, was not advantage taken of his absence from Chicago in 1860 to choose another Vice-President on the ticket with Lincoln (p. 249)? Did not intrigues deprive him of the post of Secretary of War, "to which public sentiment and the President himself had pointed" (p. 253)? Was it not Seward who prevented his getting the English mission (p. 255); and the same Seward who recalled him from Russia, in favor of Simon Cameron—a mere blind for the ambition of Bayard Taylor (pp. 298, 326)? Did not Halleck crush his military aspirations by forcing him to resign his major-generalship or be sent to New Orleans, "where the yellow fever was prevailing, in the heat of September," 1862 (p. 315)? Did not Henry Wilson, writing his 'Rise and Fall of the Slave Power' after Mr. Clay "had taken sides in favor of the autonomy of the South," in the reconstruction era, understate his part in improvising the defence of Washington?

Worse than this remains to be told. His physical prowess, his Southern readiness to take life in self-defence or in "vindicating" himself or free speech, has brought upon him only denunciation or oblivion. He emerged, severely wounded, from one of these encounters, in which he disembowelled a pro-slavery assailant who had provoked a quarrel on the stump, and one of the "Abolition cranks" of New England, he says, "regretted that I had not been killed." They were always wanting to make a martyr of him:

"When John Brown went down into Virginia and foolishly lost his life, he became a hero with the long-haired abolitionists; but when I fell in the defence of freedom of speech and the liberties of all men, these fellows shed tears, not because I triumphed, but because I used arms and was not killed! And the same idea was held by Bismarck's paid historian, Von Holst. If I had been killed by the mob at Lexington, I would have held a prime position in the world's eye; but, as I was wise enough to live, and to cause slavery to die, he consigns me to the place of a footnote! For the tyrants of Europe hate me as much as the tyrants of America."

This passage throws a flood of light not only on Mr. Clay's character, but upon the philosophy of the anti-slavery movement. The long-haired cranks to whom Mr. Clay was indebted for most and the nobler part of his reputation with his own generation—and but for whom, indeed, his maintaining himself as he did in Kentucky would in all probability have been impossible (for they added Northern public sentiment to his side-arms and cannon)—saw their cause advance by passive resistance to mobs, by suffering and death. Converts multiplied on the heels of triumphant violence; and the three great waves of feeling which carried forward the Northern purpose to oppose the Slave Power at all hazards, were those produced by the killing of Lovejoy, the beating of Sumner, and the hanging of John Brown. On the other hand, what did the militant Clay achieve in his own community, prepared to judge him and respect him by the common standard of passionate violence, that was comparable to the anti-slavery impulse given by the Grimké sisters, by J. G. Birney and W. H. Brisbane, who shook the dust of their native soil from their feet, and sought homes and a firm fulcrum against slavery in the free North? "A *hope* gleams across my mind," wrote Angelina Grimké to the editor of the *Liberator* during the "Reign of Terror" of 1835, "that *our* blood will be spilt, instead of the slaveholders'; *our* lives will be taken and theirs spared." Her correspondent, on the eve of the mob preparing for him in Boston, thought this spirit "Christ-like," nor did he view it differently after he had been snatched from a fate like Lovejoy's. Mr. Clay, uniting moral with physical courage, but relying on the latter, failed to weaken the system of slavery in Kentucky in any particular. Nothing came of his Emancipation Convention at Frankfort in 1849; and the next year "was made that infamous (1850) Constitution which to this day defies the National organic law—holding that the right of the slaveholder to his 'slave and the increase' is 'higher' than any other human or divine law!" (p. 187) and making "the slave clause perpetual" (p. 206). No other State, so far as we are aware, preserves this extraordinary anomaly.

It is no part of our intention to belittle Mr. Clay's services in behalf of emancipation, beginning with the liberation of his own slaves. They were heroic, and will not be forgotten. But it was his destiny to exemplify the utter futility of resisting the Slave Power on its own proper territory, even with its own weapons, and to justify the wisdom of the abolitionists, who attacked it, not beyond its reach, indeed, but still from a safe distance and without a foolhardy exposure to martyrdom. Mr. Clay did as much as any one could have done in the same situation—probably more, considering the logical looseness of his attitude towards slavery, and the want of a fundamental belief in the brotherhood of man. His explanation of his enlisting in the Mexican war, though he knew it to have been caused by the annexation of Texas, and he had denounced annexation as a scheme to promote the security and extension of slavery, is the clearest proof of his defective principle, as well as a half-amusing, half-melancholy instance of incoherent expediency. "Kentuckians," he says, "being exceptionally, from their early history, fond of military glory, I hoped by the Mexican War to strengthen myself so much that I could take the stump, where I would be an overmatch for all my foes; when, if deemed necessary, the *True American* could be located at some point secure against mobs, and act as an ally of public discussion. The result proved that I was right."

On the cover of this volume is stamped a copy of the nude bust of the author made by Joel Hart, the Kentucky sculptor. It is symbolic of the intimate revelations of himself which Mr. Clay permits, and which often go to the extreme of naïveté. Taken together, they form a valuable study of Southern character as moulded by slavery. We cannot touch upon them, least of all upon those domestic troubles which have so embittered Mr. Clay's declining years. The account of his life in Russia is decidedly the most entertaining part of his rambling narrative, and makes one long for the view of him which some one of his diplomatic colleagues may have preserved in his diary or his private letters. The unconsciousness with which he contrasts his fitness for the coveted English mission with Mr. Adams's, is refreshingly characteristic. There are not a few quotable and suggestive anecdotes and judgments, if we had room for them. The following may serve as an example:

"I heard Webster at Boston, and again at Lexington, Ky. He always spoke sense, but never excited enthusiasm. His thoughts were ever upon great speeches; Clay's upon great events. Webster used the money of his friends, and his friends themselves, as the priests of old. 'The earth and the fulness thereof belonged to the saints; we are the saints, and therefore these are all ours.' He reminded me of Homer's Cyclops, who made his sheep his companions by day, and supped upon one or more of them each night! He even drew upon them after death, and made his will full of bequests which were to be levied upon his friends.

"Altogether different was Henry Clay—exact and punctilious in monied matters to a fault. When in generous hospitality he had expended his great earnings as a criminal advocate and judicious farmer, and went to the banks at Lexington to find out his debt, that he might sell Ashland and pay it off, he was told that he had none: his unknown friends had, without his knowledge, cancelled all. His answer was—tears!"

A disorderly mass of letters from various celebrities contains a gem of the first water from the historian Alison. It bears date of May 21, 1861:

"Had a National Church been provided by Gen. Washington, coherence would have been given to the various States of the Union; but, as that was not done, a disruption in the long run was the inevitable result. There is no example in history of a great nation being produced without a National Church; and if the States desire to see their nation attain the height of power and splendor they anticipate, they must begin the work of regeneration by founding a National Church. There are, no doubt, difficulties in the way; but I think I have shown in my work on Civilization, and in the pamphlet which accompanies this letter, that these are not insurmountable. . . .

"You think the idea of converting the United States into a monarchy a very improbable result; but if you refer to the letter of the *Times* correspondent, in which he states that there is a universal feeling in Charleston for a monarchy, you will perceive that, so far as the South is concerned, the idea is likely to be realized."

After all, one closes this book with kindly feelings towards the much-daring and much-suffering author—magnanimous, we are convinced, and not mercenary, and with a love of nature that now and again tinges his pages with the most unexpected charm:

"I write in the house in which I was born. It is a well-burned brick structure, with heavy range work of Kentucky marble and gray limestone, and of the Grecian style, having three porticos of imperfect Corinthian and Doric columns. It was added to after 1861; but the old building, after the English manner, was preserved almost intact. Even at that day, though there were many homesteads, the original forests in near proximity to the mansion were almost unbroken by the axe. The tulip, walnut, ash, Kentucky coffee-bean, beech, and other magnificent trees, rose at places to sixty feet without a limb, with native vines carried up with their growth perhaps centuries old. The surface, ever undulating, was clothed in the ravines with the native cane, twelve feet or more high, as seemingly impenetrable as an East Indian jungle. But most of the surface under the trees was bare, and brown with fallen leaves the year round, covered with exquisite wild flowers in summer, and steady light snows in winter. The plum, the black haw, the May-apple, the paw-paw, the persimmon, the hickory, the walnut, hack-berries, and wild grapes were found in profusion. The rivulets, in almost every ravine, were ever fresh and perennial from the vast reservoir of the forest humus; and fish were found in the very springs, as they bubbled up in never-ceasing music; whilst birds of every color and song, the chattering squirrel, and the scream of the hawk, made all nature harmonious in its full development."

The child is father of the man. In the same house, reduced in fortune, abandoned by his wife, separated from his children, betrayed by his servants, in the evening of his days he writes (and we cannot withhold our sympathy):

"So I sought companionship with the flowers and trees and shrubs, and with all vegetable and animal life; with books and paintings and statuary—the dread memorials of those who live no more. I gathered about me dogs and improved live stock, and pigeons and barn-fowls, and the mute fishes—the flora and the fauna; and, seeking near communion with all life, I nailed a crumb-box on the tree at my library-window, where I fed the birds winter and summer—enticing the wild redbirds by my kindness, till these shyest of our songsters, generally retiring to remote and inaccessible ravines and bushy hills, came to be my every-day companions.

"But at night I was left all the more alone—till I often opened wide the shutters that the bats should enter to pick the flies, as is their wont, from the walls; and their fluttering—life, life—was a great pleasure to me. So I sat long under the trees, looking at the moon and stars, and speculating upon the *Cosmos*, and things beyond the scope of mortal intellect—seeing that the finite can never grasp the infinite. There, too, I was baffled—like Manfred, calling for sympathy with the mute worlds in vain! Had I been worse than other men, and was this the punishment of violated law? Was it of God, or of man? If of man, then I will contend with man—I will assert my eternal defence! And if from Fate, then will I 'wage with fortune an eternal war!'"

The Fall of Asgard. By Julian Corbett. Harper's Handy Series.

The King's Treasure House: A Romance of Ancient Egypt. By Wilhelm Walloth. From the German by Mary J. Safford. William S. Gottsberger.

MR. HARDY has evidently taken up with fatalism. The characters of his novel are the puppets of chance, blown hither and thither by the wind of destiny, powerless to resist their fate. "What is to be will be. Praise be to Allah!" is a modest creed, yet pleasant if one consider it; one that obviates the necessity of our shouldering responsibility and affords excuse for our failures. But if one hold with Tennyson that man is man and master of his fate, he will be very apt to grow impatient with Mr. Hardy's little episodes of love at first sight, his inconsequent situations, his excess of art and lack of matter. For in novel writing as in actual life the creed of the fatalist is but a weak evasion, an ungenerous refusal to take the consequences and by strength and character make the best of them. And yet 'The Wind of Destiny' is far from being a bad novel. One cannot, of course, expect every story which "turns out the wrong way" to be a genuinely powerful tragedy; but, for the absence of intense dramatic interest, one expects compensation in the way of pathos or surprise, and this Mr. Hardy has managed to give. In spite of a shadowy uncertainty which veils the chief characters, there is a genuineness about honest Jack Temple which, just in time, saves the story from seeming unreal. His is indeed the pathetic figure of the tale, though the lonely Schonberg, with his sad memories, seems to have been meant for the rôle. And it is to Jack also that one's sympathies go out, rather than to Rowan Ferguson, the painter, when the happiness of both is destroyed by the weak woman who had loved Rowan and married Jack. There is a quiet nobleness sometimes in the aspect of an every-day man of business who is capable of deep feeling, and of showing it without ostentation, that is dear to the American heart; and though Mr. Hardy depends largely upon his fatalism to replace natural motives, the misery of Jack Temple is plainly apparent and very touching.

'Not in the Prospectus' will doubtless be voted "rather slow" by most readers, and it certainly is a little tedious now and then following a bunch of Joy tourists through the trials of sea-sickness, foreign hotels, bad weather, and the regulation mishaps of a party sight-seeing by contract. Even the humorously drawn figures of Mr. Messer and Valeria Tubbs could not enliven the entire trip, and it is only when the heroine is disabled by a lucky accident and left behind that the love-affair, not down on Mr. Joy's catalogues, begins to take form and revive the lagging interest. There is a homely, unpretentious tone about the book which marks it off from the sort of novel just now very much in vogue—the tiresomely brilliant. The members of Mr. Joy's party of tourists are quite simple in their mediocrity; they do not trouble one with quotations from the poets or with philosophical remarks after Balzac, and Mr. Messer's efforts after cultivation through travel are too amusing to grow heavy.

'A Politician's Daughter' is a fair sample of the tiresomely brilliant novel. The heroine knows her 'Rubáiyát,' and thinks that "Omar rails at heaven and smiles at eternity sardonically through the most perfect verse"—Fitzgerald's translation, we suppose; and the criminal lawyer drinks his wine after reciting to her the very appropriate lines to Saki. One of the characters remarks, upon hearing a political speech, "he reminds me of *Gratiano*, because he talks such 'an infinite deal of nothing'"; and one smiles in sympathy while reading the passage. The story, when stripped of padding, is very slight. The heroine, the daughter of a Senator who had once accepted a block of railroad stock for his "influence," is in love with a young Bostonian, while the partner to her father's dishonest act wants her to marry his son, and threatens to expose the Senator if she should refuse. The timely death of her father and the generosity of her unwelcome suitor relieve her from the predicament, and the young Bostonian is made happy.

There is evidence of an earnest effort to do good work in 'Justina.' The story is not one that seems to tell itself, but one that requires careful, patient labor, and no little skill, to work out with even partial success. A more modest writer, perhaps, would have thought of Charlotte Brontë's novel, and would have left the story unwritten; indeed, the similarity between the plots is so great that 'Justina' cannot help but suffer by comparison with 'Jane Eyre' in the mind of any one who reads them both.

Mr. Roosevelt has either a remarkable memory for little facts or a thorough system of taking notes. The amount of out-of-the-way information concerning mossbunkers, puff-balls, sea-robins, and a hundred other curious creatures met with by the *Morning Glory* party during their summer's fishing trip, is astonishing. It is information so very much out of the way, however, that one may be excused for not finding it edifying, and for turning to the rambling, unskilful story, made up of love and luck, for what little interest and amusement there is in the book.

Judging from results, Mr. Coulter has unfortunately chosen a subject to which he is incapable of doing justice. The old story of woman's frailty and man's baseness cannot be baldly told without offence. There are certain facts in life to which one cannot, perhaps ought not, shut one's eyes; yet it is always questionable if anything but harm is done by dragging them into notice. From any standpoint, however, it would be impossible to praise the book, which shows a lack of the literary sense remarkable even among unknown novelists. It seems hurriedly and carelessly done, as if novel-writing were a pastime for patch-workers, instead of an art for earnest people to study long and faithfully.

The novelist who writes of times long past is at a disadvantage which is difficult to estimate. He may have more room for romance, for adventures and surprises; the prosaic limitations of every-day life may not hamper him; but, not to speak of the task of imagining and working out the setting for a story of the ancient Egyptians or the old Norsemen, there is always, in the mind of the reader of such a story, a feeling of alienism towards the characters that is hard—almost impossible—for the writer to overcome. Mr. Corbett has signally failed to overcome it. In reading 'The Fall of Asgard,' one is interested by the scenes and the incidents; one is pleased at learning without much labor a little of old

Norse history and of the laws and customs of the ancient Dane; but that is all. The close human interest which gives the truest worth to all work of the imagination is not there.

The children of Israel serving in bondage to the Egyptians are even further from the understanding and sympathy of the nineteenth century Anglo-Saxon than Earl Swend or Olaf Haraldsson; and the story of 'The King's Treasure-House,' in spite of realistic incidents and dramatic posturing, does not appeal to one except through curiosity. If art, as the author alleges in a preface, is exaggeration, the book is a great work of art.

SOME CLERICAL SOCIAL ECONOMY.

Studies in Modern Socialism and Labor Problems. By T. Edwin Brown, D.D. D. Appleton & Co. 1886. Pp. 273.

Our Country: Its Possible Future and its Present Crisis. By Rev. Josiah Strong, with an Introduction by Prof. Austin Phelps. Published by the American Home Missionary Society. 1885. Pp. 229.

SCHILLER confessed to Goethe that too often his imagination interfered with his logic, while, on the other hand, his poetry not infrequently suffered from the untimely intrusion of the philosophical spirit. In a similar way fares it, in our judgment, with the political economy and th preaching of this book of Dr. Brown's. The contention of it all is, in fact, that correct economic teaching includes a certain amount of moral and religious teaching. One can understand how so many have come to hold this view, but why they so persistently misapprehend the position of those who do not, why they so hysterically cry out against those who do not, is something of a puzzle. Dr. Brown takes his turn at belaboring Ricardo's "iron" law of wages, and quotes Prof. Sumner's saying, "Science is colorless and impersonal," only to exclaim, in tones almost as shrill as Carlyle's own, "God have mercy upon us if that is so!" The method of reasoning which discovers the frightful inhumanity of the economists, would produce curious results if applied elsewhere. It would convict a physician of a reckless disregard of life who should make the statement that cyanide of potassium is a deadly poison, unless he, in the same breath, were to add that the laws regulating the sale of poisons ought to be very stringent, and were to give a full list of all known antidotes. What political economy says is, not that merciless competition and pure self-interest must infallibly rule in the industrial world, much less that they ought to rule, but simply that, if they do rule, certain results will follow. There is nothing "remorseless" about that, except the way the conclusion follows from the premises.

These 'Studies' certainly deserve the name. They evince more research and deliberation than perhaps any of the series, now grown extensive, of clerical contributions to the discussion of modern Socialism. If Dr. Brown appears to have given more attention to the periodical than to the permanent literature of his subject, to have read more tracts than treatises, this, clearly, does not disqualify him for dealing with the later and more fugitive manifestations of the Socialistic spirit. Perhaps the chief value of his book will be found in the singularly clear interpretation he gives to the demands and hopes of existing Socialism. He sketches the history of its rise and progress, gives a patient hearing to its complaints and proposals, justifying, in part, the one and unequivocally condemning the other, discusses trades-unions, gives some sound advice to the Knights of Labor, endorses coöperation while not apparently expecting great things from it, and closes with three sermons on The Responsibilities of Wealth, Personal Morality as an Industrial Force, and The Church and the Workingman. A valuable bibliography is appended, together with a good index.

It is not pleasant to believe that so good and painstaking a book almost entirely fails in its main purpose. Dr. Brown wrote, as he tells us in his preface, to show the grounds of his "deepening conviction that true economic principle and right economic action are intimately related to Christian morality." It is not uncharitable to say that he has not succeeded. He gives us the results of much careful study. He counsels workingmen in a wise and honest manner. He faithfully exhorts the rich. Yet he does not really emerge from an atmosphere of vague Christian sentiment. He does not show any real, positive, scientific relation between Christian morality and true economic principle. Doubtless he has done the best possible. The pulpit, under existing conditions, cannot do more. It must be indefinite and neutral on practical questions upon which men are taking sides. This is curiously illustrated on page 12 of Dr. Brown's book, where he gives his hearers the choice of regarding the doctrine of protection as either the "highest political wisdom" or "the maddest reach of economic folly." The pulpit could not say what was its own opinion on that subject—at least, not in Providence.

Dr. Strong (he is a Doctor now) appears to have written his book on the theory which, in politics, has been called by Mr. C. F. Adams, jr., the theory of "everlasting crisis." It is true that he uses the adjective "present" in his sub-title, but Prof. Phelps, in the introduction, assures us that this matter is no novelty, since "the present hour is, and always has been," the crisis; and Dr. Strong himself, on page 144, adjourns the crack of doom to an indefinite future when, among other signs, Cincinnati shall have become a Chicago, Chicago a New York, and New York a London. Recent physiological study reveals a nervous process called inhibition, where stimulation of a nerve, instead of inducing action, prevents action. A similar effect is often a direct result of attempts like that of this book to startle into high activity by a lurid picture of impending evil. Paralysis follows, not stimulus. Men infer, even without being instructed by Prof. Phelps, that the "case is hopeless" aside from "the eternal decrees of God."

Dr. Strong's book is a Home Missionary address raised to the *n*th power. For him the statistics of the Tenth Census are the most brilliant figures of rhetoric. He toys with comparisons, graphic exhibits, proportions and percentages, and sports with ratios and relative gains, tables and diagrams. Some of his figures have been sharply questioned in the religious press, as, for example, his estimate of the Catholic and of the foreign-born population. We cannot wonder, certainly, if those masters of religious statistics who have been proving the present prosperity and bright prospects of the Church should feel somewhat surprised to find him accepting all their data, only to say (p. 216), "We have only to continue making the same kind of progress long enough, and our destruction is sure." This book is written in the interests of Home Missions. It goes on the theory of the speedy predominance of the West, and calls for largely increased gifts to the Home Missionary Societies in order that the West may be held for the Church. The author does not allude, however, to the fact that one-half the men and one-third the money of the societies are used east of the Mississippi. It also seems inconsistent with his strenuous appeal for the West, with his apparent willingness, at times, almost to abandon all work elsewhere for the sake of securing the West, to find him demanding that the missionary force in the great cities should immediately be increased ten or twenty fold. Obviously his closing chapter, taken up with exhortations to enlarged liberality, is the logical outcome of the whole. After reading his emphatic declaration (p. 185), "To make any other use of money than the best is a maladministration of trust," it excites some wonder that he has not a word to say of the shameful and inexcusable waste of missionary funds in denominational rivalry—a waste to which members of his own denomination have applied far stronger adjectives than those we have just used.

Moroz Krasny Nos: Red-nosed Frost. Translated in the original meters from the Russian of N. A. Nekrasov. Boston: Ticknor & Co. 1886. 12mo, pp. 120.

IN his interesting book, 'Le Roman Russe,' which treats of many subjects far more important than those suggested by the title, the Vicomte E. M. de Vogüé has shown us why the efflorescence of Russian poetry was of such brief duration. Not, indeed, in any single sentence or paragraph, but in the impression which we receive from his whole book, has he explained how the poem was replaced by the naturalistic novel. Two great romantic poets arose, Pushkin and Lermontoff, great in a world-wide sense, and not in a restricted Russian one; a few minor poets, Maikoff, Tutcheff, and especially Koltsoff and Nikitin, all sweet and touching; Count Alexis Tolstoi, who almost rises to the rank of a great poet;

"The mob of gentlemen who wrote with ease"

—for in that noble, rich, and beautiful language nearly every man of literary culture was a versifier—and Nekrasoff. It seems almost necessary to put Nekrasoff in a niche apart; not that, as a poet, he was so greatly superior to the rest, but he used verse—partly from innate feeling, partly because, owing to the censorship and the conditions of literature in Russia at that time, he could speak more strongly and vividly in verse than in prose—in much the same way that the great novelists used prose: to express his ideas about the state of his country, and especially to picture the condition of the peasants. The works of modern Russian poets are like a gallery of landscape paintings; the poems of Nekrasoff are full of figures relieved by the sad and pathetic background of Russian scenery. What distinguished Turgeneff and Dostoyevsky distinguished also Nekrasoff—human sympathy; love and pity for the humble, for the people. For that reason the poems of Nekrasoff are household books in Russia, standing side by side with the tales of the great novelists, all well read, if not learned by heart, by people who still feel the need of leaders for their minds and souls. A great poet Nekrasoff was not; but he was in accord with the spirit of his age—"the forties," as in Russia they call the period from 1840 on, which was so important for Russian thought; and he had the merit of novelty of form. But even in this latter respect he was not a great lyric artist. The Russian language is so rich, so supple, and in certain respects so vague, that it easily accepts any form. Nekrasoff, however, had roughness and forced expressions that remind us at times of Robert Browning, with whom even in other respects he could be compared.

But the vagueness and at the same time the conciseness of the Russian language, as well as its variety of rhyme and ending, make Russian verse very hard to translate into verse, though English and German lend themselves better to this than most tongues. For some of Nekrasoff's poetry English prose seems almost better than verse. Even in a complicated stanza the Russian is straightforward, while the English has to have recourse to paraphrases and inversions. Open the book at random; here is the literal Russian:

"Three heavy lots had fate, and the first lot is to marry a slave; the second, to be mother of a slave son; and the third, to obey a slave to the tomb. All these terrible lots have been laid on the woman of the Russian land." This is simple and direct, but to meet the requirements of the original metre, which in English seems unsuitable to the subject, it is thus rendered:

"Three grievous allotments had Fortune decreed:
Allotment the first, with a slave man to marry;
The second, a mother to be to his seed;
The third, until death his hard yoke to carry.
And all these allotments so grievous did lie
On woman 'neath Russia's broad sky."

Perhaps we are hypercritical or have chosen badly, for there are other passages which could hardly be improved. Nevertheless, the translation, read as a whole, in spite of great excellences, leaves a very different impression from the original. And what avails verbal literalness or exactness of metre if the real truth—the impression on the feelings—which the words and the metre of the original tried to sharpen and define, is not only blunted, but changed to something other? Compare this with, for instance, Symonds's translations from Poliziano, and our meaning is obvious. Symonds knows Italy so well that, though his translations are not perfect, he has caught the indefinable spirit, and in reading them we feel that we are in Italy and not in England. And this indefinable spirit of the Russian landscape and folk seems to us to have evaporated from this daintily printed translation of Nekrasoff. Nevertheless, there is so much that is good that we would urge the anonymous translator to try his hand at Nikitin or Tolstoi, or some of the contemporary poets.

Memoirs of Arthur Hamilton, B.A., of Trinity College, Cambridge. Extracted from his Letters and Diaries, with Reminiscences of his Conversation. By his Friend Christopher Carr, of the same College. Henry Holt & Co. 1886.

NOTWITHSTANDING the matter-of-fact appearance of various details, and the attempt throughout to give an appearance of reality to Arthur Hamilton, B.A., we have a grave suspicion that he was not a real person, and that the person most like his ideal presentment is his pseudonymous biographer. The definiteness of certain dates, and the frankness with which some of Arthur's utterances are praised, are devices too transparent to prevent our seeing the author through the subject of his sketch. The object of the book is stated in the "Dedication" with all possible clearness, but it is probable that the dedication was written after the completion of the book; and as the sermon written before the text is chosen has often little connection with it—it was said of a Boston minister that if his text had the smallpox his sermon wouldn't catch it—so here there is very little connection between the object set forth in the dedication and the following pages.

The avowed object is to contribute something to a settlement of the division often existing at the English universities between the regular standards of belief and worship and the opinions of individuals. This Mr. Carr proposes to do by depicting the career of a person for whom "no one," he thinks, "can fail to have the profoundest sympathy." On the contrary, we do not imagine that the average British Philistine will have any sympathy with him whatever. He will consider him a "crank," if he has yet adopted this convenient verbal form. In Mr. Carr's book there is hardly a suggestion of the intellectual and moral difficulties which result in dissidence from the traditional standards. Arthur Hamilton is not a typical person. He is *sui generis*. He is no agnostic, and he has no liking for agnostics or their ways. There are only two or three pages in the book in which the problems of the Church take any visible form. These deal with "grace," "the resurrection of the body," and "the Holy Spirit" in a very high and mighty fashion. Grace is influence, the resurrection of the body is the indestructibility of matter, the Holy Spirit is aspiration!

A secondary object of the book—to exhibit a character moulded by a philosophy of determinism—is as little carried out as its primary object. It does not generally appear how the deterministic view determines the man's action. Apparently his determinism is a stern-light, illuming only his wake. It helps him to acquiescence in the event already happened. His belief in special providence is much stronger than that of the average churchman. When he is about to kill himself with prussic acid, he finds the phial that he has carried broken, and he desists from suicide.

A third object of the writer is evidently to enter a plea for reflective as opposed to *effective* character, and this object is made good. But the value of the book does not consist in this discrimination and defence. It consists in its portrayal of an exceptional character, which unites with much singularity and absurdity many admirable traits. It further consists in many charming bits of natural scenery, in many pungent sayings, and in many suggestive hints. The book, taken as a whole, is singularly formless and inconsequent, but in its desultory and excursive manner there is interest and charm. Some of its observations on moral, and educational, and social problems are remarkably provocative of meditation. The dissidence of the author from conventional moral precepts and ideals is much more characteristic than his dissidence from theological opinions, and there is a great deal of homely sense in some of his most startling phrases.

A few examples of his manner will bring this notice to a fit conclusion. Objecting to people who "always speak their mind about a thing," he writes, quoting from Arthur Hamilton: "The art of life consists in knowing exactly what to keep out of sight at any given moment, and what to produce—when to play hearts and diamonds, ugly clubs, or flat spades; and you must remember that every suit is trumps in turn." Contending that the line which you must take is not what you *feel* to be highest, but what you *recognize* to be so, he quotes: "You can't always expect to feel enthusiasm for the best; so be true not to your sensations, but your deliberate ideals. That is the highest sincerity—all the higher because it is so often called hypocrisy." His determinism nowhere expresses itself more genially than in the following words: "I often feel, when straining after happiness, just like the child who, anxious to get home, pushes against the side of the railway carriage which is carrying him so smoothly and serenely to the haven where he would be, while all he effects is a temporary disarrangement of particles."

Cent Ans de République aux États-Unis. Par M. le Duc de Noailles. Paris: Calmann Lévy; New York: F. W. Christern.

WE took up this book with the feeling that an individual bearing such an exceedingly aristocratic and historical title would hardly have much enthusiasm to expend upon a great democracy, and we found this impression fully confirmed. The commentators upon the institutions of the United States may be divided into two classes, those who hold that their unquestioned material success has occurred *because* of democracy, and those who hold that it is *in spite of* democracy; while the same dividing line separates those who regard the serious defects which are manifesting themselves, and are of such threatening import for the future, as the natural results of democracy, on the one hand, and of the fact, on the other, that the will and intelligence of the people are defeated and set at naught. Both agree, however, in attributing to the men of the Philadelphia Convention a degree of wisdom and insight amounting almost to inspiration. If the republic holds its own for another hundred years, the reputation of those men, and especially of their leaders, Washington, Hamilton, Madison, etc., will have reached a degree of resplendence such as in ancient Greece would have been expressed by deification, or in the Roman Church by canonization in the first rank. The prime object of the book before us seems to be to show that the principles on which government in the United States is ostensibly based—sovereignty of the people, equal and universal suffrage, delegation of powers, and rule of the majority—are nonsense; that, owing to natural conditions and to certain conservative traditions inherited from colonial times, and carefully enforced by the "constituents," who had little faith in people for whose reign they were preparing, water has for a time been made to run up hill, but that there are abundant signs that gravitation is again resuming its sway. Considering that the writer admits that he has never lived in or visited the country, the work is not badly done, and is very readable. Here is a characteristic sentence from the preface:

"Could he (De Tocqueville) foresee that, after a fratricidal struggle of four years, the most formidable war of modern times, the slaves, suddenly set free by a stroke of the pen and then invested with the plenitude of civil and political rights, would oppress the white race in the conquered South, so that 'America should be governed by Ethiopia'?"

On one page the Duke says that "the Old World has poured and continues to pour into the New an enormous contingent of human forces, which it has cost the latter nothing to produce;" and on another: "The judicious sense of the Anglo-Saxon race is submerged in part by the flood of German and Irish emigration, and in part by the rising tide of social and political demoralization." He adds that, notwithstanding the abundant means of subsistence, "pauperism is making frightful progress; and the claims of labor, accompanied by the same violence as in the Old World, have rendered necessary the same armed repression."

It is a compliment to the book to say that we should like to analyze each chapter in detail, but we can take only that on "The Limits of Legislative Power." In this chapter, perhaps the most forcible in the book, M. de Noailles dwells upon the danger of legislative usurpation. He points out that legislation reaches into every department of social and political life; that both the executive and the judiciary are and can be only its instruments; and, in a passage which seems as if written to describe the recent session of Congress, he says:

"And then, what a suspicious distrust in the Legislature with regard to the other depositaries of public power! Unless these resign themselves to a servile docility, the chosen of the nation imagine themselves insulted. The least impulse of opposition, the least sign of independence, irritates and wounds them; the use, even the most correct, which another organ of the Government dares to make of its least questionable right, is denounced by them to the general indignation as a violation of their privileges and an outrage of their dignity."

"In reading the discourses pronounced in the Convention at Philadelphia, the writings of the time, and the works of the most celebrated commentators, it is striking to see how much the fear of legislative encroachments preoccupied the minds of members."

The Duke quotes Madison in the *Federalist*, that "it is against the Legislature that the people, manifesting a well-grounded distrust, should exhaust the arsenal of political precautions." Not

only Madison, Hamilton, and Jay in the *Federalist*, but Kent and Story in their commentaries, developed this fear. Not only men of the school of Hamilton, John Adams, and Washington, but the most fervent apostles of popular sovereignty, the most determined partisans of the republic, held no other language. He then goes over the restrictions provided against this danger, and shows that the limitation of powers has been almost wholly neutralized by the "necessary and proper" clause. He dwells upon the President's veto and the two-thirds vote necessary to overcome it. He regards the two-chamber system as a safeguard in the same direction, and, like most foreign observers, is inclined to value the Senate very highly from its limited numbers and mode of election, not being aware that in respect of usurpation the Senate is as bad as or worse than the House. Perceiving that between two chambers without any leaders deadlocks are inevitable, he is inclined to admire the expedient of committees of conference, not being aware, again, that, of all the dangers which threaten the country, these secret committees of conference form perhaps the worst. In fact, M. de Noailles does not at all understand how strong his case is: that all expedients directed against the danger so much dreaded by the founders of the republic have failed, and that in the general Government, and in a far worse degree in the States, it has developed into a monster between which and free popular government there is a duel to the death.

What, then, is to be done? M. de Noailles remarks that the Ministers, or, as we call them, the Cabinet, do not appear in Congress, and that the theory of this is that it keeps the legislative and executive powers separate. But he says that they have frequent interviews with the standing committees, and if these parliaments on a small scale cannot change the Ministers, they have only too great means of annulling or corrupting them. Further on he says: "Despairing of improving the Legislature, which yet must be maintained, some publicists wish to introduce responsible Ministers, who would have the duty of enlightening, directing, and controlling the incapacities, the passions, and the corruptions of the body." He doubts, however, whether the result would be gained:

"Would the majority of the Representatives be contented with the legitimate control which belongs to it, and leave to the Ministers possessing its confidence the initiative necessary for governing? Or, on the other hand, would not the Cabinet be merely the passive instrument of the will of the majority, more than ever master of the executive placed in its hands? The reform would then end in grafting ministerial instability upon republican fickleness."

Here comes in the difference of fundamental view. The author regards the people as nothing, we as everything; and we cannot doubt that some way will be devised of bringing the will of the people to bear on its representatives.

Bibliographie Hellénique; ou description raisonnée des ouvrages publiés en grec par des grecs aux XVe et XVIe siècles. Par Émile Legrand. 2 vols., large 8vo. Paris: Ernest Leroux.

THIS admirable book, one of the most brilliant achievements of bibliography in modern times, can only be appreciated as it deserves by those who have had occasion to use the similar works hitherto published in Germany and in Greece. The best of the latter is the 'Νεοελληνικὴ Φιλολογία' by Papadopoulos-Vretos, issued at Athens in 1854-57, and purporting to be a complete catalogue of the Greek books printed from 1453 to the revival of independent Greece. Now, for a space of a hundred and twenty-four years, 1467-1600, Vretos gives the titles of, or rather mentions, seventy-four books; M. Legrand, in the same space of time, catalogues about three hundred works. But the number of the citations is no criterion of their quality. Vretos saw but very few of the books he mentions; the titles he gives are mostly inaccurate, indeed, nothing better than arbitrary translations of the Latin titles which he found in Brunet's 'Manuel du Libraire.' Moreover, being a very poor critic, Vretos often mistook one date for another, mentioned works which never existed, etc. M. Legrand's method is a quite different one. As often as he possibly could do so, he hunted up and examined with his own eyes the very rare books printed in Greece during the sixteenth and seventeenth centuries. Any one who has devoted any time to a search of that kind, knows what labor and difficulties it involves. Not only are the titles reprinted *in extenso*, sometimes even in facsimile, but the prefaces and other introductory notices have been faithfully reproduced. Such an immense task would hardly have been achievable if M. Legrand had not benefited by the generosity of a learned Greek, Prince Mavrocordatos, who possesses one of the richest collections of Greek works in existence, and liberally put his treasures at the disposal of the French scholar. But more than that, when the manuscript was finished, no editor cared about printing it, Greek bibliography not pretending to be a very salable kind of literary matter. Prince Mavrocordatos, nothing daunted by this unexpected obstacle, charged himself with the truly enormous expense of printing the 'Bibliographie Hellénique,' which is not only a masterpiece of bibliography, but a typographical marvel. We can only express the regret that such a book, which no student of modern literature should be deprived of, and which has completely renovated our knowledge concerning the revival of Greek scholarship in Europe, must very soon be out of print and inaccessible to many philologists, as only three hundred and twenty-five copies of it have been printed, about a hundred of which were given away and not put in sale. But we know that M. Legrand has already in store a large number of *addenda* and *corrigenda* to his great work, and we hope that a second edition will be issued on such conditions as to enable every learned Grecist to secure a copy of it.

We should give an insufficient idea of the 'Bibliographie Hellénique' if we described it as a mere catalogue; it is a catalogue, an admirable catalogue, but it is a great deal more, and the title of the work does not do it full justice. M. Legrand has not mentioned one Greek writer without giving his biography, often accompanied by inedited documents, such as letters and various pieces, which throw new light on the abilities and exertions of the Greek refugees after the fall of Constantinople. All the ancient biographical essays on Chrysoloras, Gaza, Chalcondyles, Musurus, and many others may now be put aside as antiquated, and Boerner's 'De doctis hominibus græcis' may share the fate of Vretos's 'Φιλολογία'. M. Legrand knows more about the Greek scholars of the Renaissance than any of their Italian pupils ever cared to learn; his insatiable curiosity has restored life and reality to those curious representatives of Greek spirit which played so important a part in the revival of literature and scholarship. There is more accurate knowledge and useful matter in ten pages of M. Legrand's Introduction than in the two volumes which the once celebrated Villemain devoted to Lascaris. The age of fine phrases and literary novels has come to an end; M. Legrand's work, *primus inter pares*, shows how the problems of literary history must now be treated in accordance with the rules of sound criticism and the severe requirements of bibliographical accuracy.

A Record of Buddhistic Kingdoms, etc. By James Legge, M.A., LL.D., etc. Oxford: Clarendon Press; New York: Macmillan. 1886.

WITH a considerable flourish of trumpets, Dr. Legge has brought before us his new translation of Fa-hien's travels. We hardly need remind our readers that so far back as A. D. 1836 M. Rémusat and others first issued a translation of this book, and that during many years their translation "held the field." M. Julien, in 1852, had hinted in his preface to the translation of the 'Si-yu-ki' that Rémusat's translation was not altogether trustworthy, and this was found to be the case. Accordingly, in 1869, Mr. Beal published his 'Travels of Fah-hien,' in which he corrected many of Rémusat's errors, and added notes to the text in elucidation of Buddhist terminology. This translation, although generally accepted as an advance on the preceding version, was severely criticised by some young students in China, who thought themselves competent for the task in virtue of their having a relay of native teachers at their side to direct them in their study of the text. Undoubtedly many of their strictures were well-grounded, and, had it not been for the animus exhibited, would have taken their right place in the advanced study of the work in question. But it was too plain that both Mr. Giles and his associate were bent on the extinction of Mr. Beal's character as a Sinologue, more than on any wish to elucidate the text of Fa-hien. And so matters rested until the publication of the 'Records of the Western World,' one of Trübner's "Oriental Series," in 1884. In the introduction to this work, which is a translation of the 'Travels of Hiuen Tsiang,' Mr. Beal affords a revised translation of Fa-hien and Sung-yun. These translations embody the result of many years' study of Buddhist phraseology, and also of the system of Buddhist belief.

Dr. Legge now comes forward with his new version, framed on the Corean text of the Chinese original, which is undoubtedly an independent authority, and so far most useful for critical purposes. With regard to the translation itself, we can only say it has not advanced our knowledge of Buddhism. Dr. Legge is well known as a sound Chinese scholar, and therefore we will take no exception to the improvements and variations of his English version. But this is not the point. We wanted something more in elucidation of the spirit of the religion that led Fa-hien and others like him to brave the difficulties of their foreign travels, and risk their lives in prosecuting them. If the Buddhist religious system be altogether so frivolous as Dr. Legge seems to think, having no belief in "God, or the soul, or prayer, or worship," we want to know what was the exciting and supporting influence that carried these Buddhist pilgrims through their perils. Undoubtedly they believed in Buddha as a real savior. They recognized his goodness and purity, and they embraced his offers of deliverance from pain and troubles, on the conditions of discipleship and self-renunciation. There is a tone of depreciation (with the usual sentiment of pity for these "poor heathen") that disfigures Dr. Legge's book. He cannot rise to the belief that Buddhism, as a system, was preparatory to a higher and better revelation; that it cleared the way for the introduction of nobler truth; that in its place it "fulfilled itself," and would have been, if rightly understood, a vehicle for the introduction of Christianity throughout the East. Whether it may not yet be so in China and Japan, depends on the way in which the phenomenon of the Buddhist religion is treated by the thoughtful portion of Christendom. Our missionaries will have to alter their views, at any rate, before any healthy line of action in this direction can be expected.

Voyages of a Merchant Navigator of the Days that are Past. Compiled from the Journals and Letters of the late Richard J. Cleveland. By H. W. S. Cleveland. Harper & Bros. 1886.

Of the Salem sea-captains who first made our shipping known to the world, Capt. Richard Cleveland was the hero of some of the most remarkable and adventurous voyages. His father, who, it is interesting to know, was the brother of the Connecticut minister from whom the President is descended, was the first to unfurl our flag on a Government ship in a European port; and his son, whose biography is a broad view of American commerce in its first period, unfurled it in all parts of the world. He himself wrote a long 'Narrative' of his voyages, in an admirably plain and intelligent style, published over forty years ago; and the present volume, although drawn from letters and journals, is yet, in effect, an abridgment of the earlier work. He got his education in the counting-room, and started out to make his fortune before he was a man in years. He was daring, acute, ready with resources, prompt in action, long-enduring; and, either alone or in company with the still-remembered Algerian Consul, William Shaler, upon the Alaska Fur-Coast, in the East India seas, or among the California missions, or manœuvring between French and English in the Danish straits, or defying Spanish governors in the Chilian ports, or being plundered by Admiral Cochrane in the West Indies, or confiscated by Napoleon in the bay of Naples, he succeeded in making half-a-dozen fortunes, and also in losing them. After one of these expeditions George Cabot said to him, "You have cut a good deal of hay, but you have got it in very badly"; and the words might have been his epitaph, for he died poor, except for his sons.

His letters show that Capt. Cleveland's character grew merely by the enlargement of experience. He owed little to books, though he was an industrious reader, and came to a certain intellectual command and power unusual in a man of mercantile pursuits, with a tendency to philosophizing in a leisurely eighteenth-century way. One sentence, written in 1810, is an interesting example of the times, and also a piece of the man himself:

"My dear boys must early become accustomed to hardships. They have a prospect of living in turbulent times, when the civil must be subservient to the military authority, when the only right that is acknowledged will be that of power; and consequently they must, by the improvement of their talents and early acquaintance with danger, become masters, or, by neglect of them and a retired life, submit to be slaves. I have ordered a copy of the 'Travels of Count Beniowski' and of Plutarch. These ought to be their study till they have them by heart; and if afterwards they should die at sixty of disappointment, I'll disown them."

We suspect that Capt. Cleveland was himself nurtured on old Plutarch, from some of his boyhood letters. His interest in his boys' education had good results in establishing the Lancaster Academy, for whose first principal he selected Jared Sparks, afterwards succeeded by George B. Emerson and Solomon P. Miles. He died, full of days, at the opening of the civil war; and, if less blessed with wealth and honors than some of his early associates, it was by fortune's caprice.

The Story of Norway. By Hjalmar H. Boyesen. G. P. Putnam's Sons. 1886.

The author states in his preface that it has been his ambition for many years to write a history of Norway, and that he therefore eagerly accepted the proposal to write the volume upon his native country for the series entitled "The Story of the Nations." He explains, however, that the "story," according to the plan of the publishers, was to differ in some important respects from a regular history. "It was to dwell particularly upon the dramatic phases of historical events, and concern itself but slightly with the growth of institutions and sociological phenomena. It therefore necessarily takes small account of proportion." The *history* of Norway, for English readers, has yet to be written, and it can never be properly written within the compass of this volume. Indeed, it has been a difficult task to tell the so-called "story" of the country in a 12mo volume of 556 pages; and the narrative of the thirty-five successive rulers of the land from 860 to the time of Queen Margaret and the Union of Calmar, 1397, occupying more than four-sevenths of the volume, proceeds perforce with such rapidity that the reader has the confused impression of having witnessed a swift-moving panorama of continuous barbaric warfare. It is not made manifest that, in spite of the constant civil strife and public warring, there was a slow but sure social development, so that one is surprised at a hint that society was not in just the same crude state at the end of the 500 years of fighting that it was at the beginning.

The 400 years of Norway's union with Denmark, following the Treaty of Calmar, are very properly allowed but three brief chapters, for, as the author well says, "Many things happened, no doubt, during those centuries, but 'there were few deeds'"; but the interesting final chapter, containing the history of Norway since 1814, might with advantage have been allotted more space than barely eighteen pages of text. In the first three chapters, dealing with the origin of the Norsemen, their religion, and their viking voyages, what is quoted as legend and what is meant to be stated as historical truth is not always distinguished; and the author might have added to his collection of reference books Steenstrup's 'Normannerne' ('The Northmen') for consultation, when writing the third chapter dealing with the Viking Age. In the chapter which relates the discovery of America by the Norsemen, exception may be taken to the passage on p. 180 which reads: "The statement that the sun rose in this region, on the shortest day of the year, at half-past seven and set at half-past four, indicates a latitude of 41° 24′ 10″; Leif, accordingly, must have landed somewhere in the neighborhood of Cape Cod or Fall River, Mass." The theory that the "Vinland" of the Norsemen was situated near Fall River, depends entirely upon the supposition that the latitude deduced from the statement as to the length of the shortest day corresponds to the position of the modern city; but it has been pointed out that the computation which indicated the result quoted (published in English by Prof. Rafn), was incorrect, and that the true latitude of the shortest winter day of nine hours, in the *eleventh century* (the time of the Norsemen's arrival) would be 42° 21′; while Prof. Gustav Storm, of the University of Christiania, with the aid of the Norwegian astronomer, Hans Geelmuyden, demonstrates conclusively (*Arkiv for nordisk Filologi*, November, 1885) that the evidence as to the time of sunset on the shortest winter day, contained in the sagas, is not sufficient to indicate the exact latitude, the only deduction tenable being that the location was not further *north* than 49° 55′.

Prof. Boyesen's manner of writing is at once dignified and entertaining, and he has produced a valuable and interesting book, which deserves to find a host of readers, old and young. The publishers have taken great pains to make it attractive; the paper is excellent, the typography (excepting the proof-reading) is good, and there are more than seventy illustrations, including an excellent likeness of the poet Björnson.

Oranges and Alligators: Sketches of South Florida Life. By Iza Duffus Hardy. London: Ward & Downey. 1886. Pp. viii, 240. 8vo.

It is high but deserved praise to say of this book that it is as good in its way as Lady Barker's 'Station Life in New Zealand.' There is naturally far less of the alligator in it than of the orange, but any lack of information as to the habits of the saurian or the methods of hunting it, is amply made up by the clear idea which Miss Hardy gives of the orange culture, from the selection of the wild land for the grove to the packing of the fruit. In writing she has especially in mind those of her countrymen who contemplate settling in Florida, and her advice to them is summed up in these words: "Florida for young men without money means steady hard work or dead failure. . . . You must be ready to take up anything that comes to your hand, an axe, a pitchfork, or even a broom!" Of the ultimate success of the man who is not afraid of hard labor and scanty fare, she is confident, even though she witnessed the ravages of the cold wave last January, when the lemons, bananas, grape-fruit, citrons, and guavas were destroyed, and "the oranges were frozen stiff on the trees." The greater part of the winter was spent at Lake Maitland in Orange County, but excursions were made to Rock Ledge on the Indian River, near the headwaters of the St. John's and close to the Atlantic, and to Tarpon Springs near Tampa, on the Gulf Coast. Both of these were new settlements, and her description of them and the journey to them gives a most vivid picture of the present condition and prospects of Southern Florida. At Rock Ledge she found that the oranges, said to be the finest in Florida, had suffered but little from the cold, and were so plentiful that at the hotel "every morning a bough freshly gathered from the grove, with the glossy leaves and golden fruit growing on it, was laid by our plates." There are also scattered through the book graphic sketches of the negroes, "crackers," and young English fortune-seekers, as well as charming descriptions of the scenery.

Memoirs and Letters of Dolly Madison, Wife of James Madison, President of the United States. Edited by her grandniece. Houghton, Mifflin & Co. 1886.

"Queen Dolly," as Mrs. Madison came to be pleasantly named (it was at the ball on the establishment of peace that Sir Charles Bagot said she looked "every inch a queen"), was more truly a belle than any other woman who has presided over the gayeties of the White House. She was born of very sober parents, and was a demure little Quaker girl, with a small bag of old-fashioned jewelry, given her by a less austere grandmother, tucked away under her dress about her neck. From her grief when the string broke and she lost her treasure in the woods, a modern analyst might prophesy her future. From her Virginia home she removed to Philadelphia, and, her father failing in business and in health, she dutifully married a friend of his and at the same time a fortune; the husband soon died, and left her to be the wealthy bride of the confirmed bachelor, James Madison. In consequence of this union she was practically the lady of the White House in Jefferson's day as well as during her husband's term, and afterwards she was a great figure in Virginia society, and still later, in her widowhood, at Washington.

These facts are told in this small volume, and they are made alive and contemporary by many letters, which exhibit—in rather dull colors, it is true (but the epistolary style of those days was grave)—something of society at the period, but also a simple womanly nature, interested in a woman's affairs, bright, cheerful, domestic, faith-

ful to her duties, loyal and affectionate and considerate, in society very intent on pleasing others, and an enemy only to quarrelling and unsocial gravity—an entirely honorable, attractive, and capable character from girlhood to her last hours.

The most exciting incident is the taking of Washington by the British, which is graphically told. Few historical personages come into the canvas. Count d'Orsay, who makes a hunting excursion in Virginia — "would borrow Payne's [her son's] summer clothes, and go forth, returning as ragged as bushes and mires could make him, rest for several days and then off again, tumbling into the river, losing his way, and yet come home laughing at his adventures." Old Mrs. Madison, keeping her state in her own part of the rambling homestead, is a very delightful old-portrait-like character, with her Bible and knitting and her gifts of stockings to the favored guests, and the old negro of ninety wagging to sleep behind her chair at dinner. Signs of social manners are contained in Mrs. Madison's remark upon the Fourth of July dinner at Montpelier in 1820, when ninety persons, of whom only four were ladies, sat down—"the dinner was profuse and good, and the company very orderly." Such was Virginian hospitality. "Jeffersonian simplicity," at least in banquets, is explained by a foreigner's remark that Mrs. Madison's table "was more like a harvest-home supper than the entertainment of a high official"; to which she replied, on hearing of it, that she did "not hesitate to sacrifice the delicacy of European taste for the less elegant but more liberal fashion of Virginia." Later, in 1826, she thinks if she were in Washington she "could not conform to the formal rules of visiting they now have, but would disgrace myself by rushing about among my friends at all hours." Of Mr. Madison one sees very little; but his study, habits, and surroundings are pleasantly and fully sketched. The work has been well written, with taste, picturesqueness, and a love for the persons involved in the picture. Out of somewhat slight materials a very interesting book has been made; and the list of American women who survive in history is so brief that this biography of one of the leading public characters of her day, as well as of Virginia society in its noted time, is very welcome.

The Art Gallery of the English Language. By A. H. Morrison. Toronto: Williamson & Co. 1886.

In the earlier pages of this volume the author remarks, in the course of an *excursus* upon the future life: "I hope and trust that we shall be able to recognize our work, and give account of it to the eternal progression of the cycles, which, though concentric, like the ripples in the clear surface of water, spread ever outward and onward from the point where self-conscience first struck the great ocean of infinite being." We are inclined to leave the author to settle for this particular work with that same "eternal progression of the cycles." It is a singular exercise in rhetoric, in verbosity; never was there such a posturing of words, and the author never shows his head above the puppets except in a pretentious way. He classifies literature as architecture, sculpture, painting, and music, in language, and cites examples of words that build, carve, paint, and flow melodiously. But why not also add that literature is dancing, jewel work, millinery, horsemanship, or any other art, and cite Wordsworth's daffodils, and some more of Edwin Arnold's India work, and a dozen pieces of *vers de société*, and Byron's "Mazeppa" to illustrate the assertion? His classification is a mere metaphor; his logical faculty itself swallowed up in the rhetorical sense. His acquaintance with literature is wide, if not discriminating; there is even a quotation from Percival!—and the extracts are frequently excellent reading. For the rest, we commend him to "the cycles," according to our first decision.

BOOKS OF THE WEEK.

Accidents, and How to Save Life when they Occur, with a Complete Treatise on Poisons and their Antidotes. Rand, McNally & Co. 25 cents.
Adams, O. F. September. Boston: D. Lothrop & Co.

*** The above books will be sent upon receipt of advertised price. Catalogues of our regular stock, also of Bohn's Libraries, will be mailed, if desired, to those interested. New Catalogue of Musical Literature ready. New Catalogue of Choice and Rare Books ready.*

SCRIBNER & WELFORD, 743-745 BROADWAY, N. Y.

A HISTORY OF

Greek Literature.

From the Earliest Period to the Death of Demosthenes. By Frank Byron Jevons, M.A., Tutor in the University of Durham. One volume, crown octavo, $2.50.

Mr. Jevons has here done for Greek what Mr. Cruttwell did for Roman literature in his well-known work of which this is intended to be the companion volume. He has written a very scholarly, interesting, and well arranged history of one of the greatest—certainly the most symmetrical and complete—literary developments which the world has ever known. It differs radically from the best known books in the same department which are accessible to English students. It goes into detail with sufficient fulness to make the story complete, but it never loses sight of the large, commanding lines along which the mind of Greece moved, and a clear understanding of which is of the first importance to every intelligent student of general history or of universal literature.

"It is the most compact and most attractive book upon Greek literature that has as yet appeared, and there is not a point of importance that is not elucidated with an exhaustive thoroughness which leaves nothing untold. It is manifestly the result of vast reading and searching reflection, guided by a complete and scholarly mastery of the whole field over which it ranges. The arrangement is admirable. . . . The style is clear, nervous, and simple, and the work, though less brilliant than Taine's 'English Literature,' has quite as much fascination for the earnest reader."—*Boston Saturday Evening Gazette.*

THE HISTORY OF

Roman Literature,

From the Earliest Period to the Death of Marcus Aurelius, with Chronological Tables, etc., for the Use of Students. By Charles T. Cruttwell, M.A. One volume, crown octavo, $2.50.

Mr. Cruttwell's book is written throughout from a purely literary point of view, and the aim has been, without sacrificing essential information, to avoid tedious and trivial details. The result is a volume not only suited for the student, but remarkably readable for all who possess any interest in the subject.

From the N. Y. NATION:

"Mr. Cruttwell has given us a genuine history of Roman literature, not merely a descriptive list of authors and their productions, but a well elaborated portrayal of the successive stages in the intellectual development of the Romans, and the various forms of expression which these took in literature."

From the SATURDAY REVIEW (London):

"A most serviceable, indeed indispensable, guide for the student. . . . The 'general reader' will be both charmed and instructed."

*** Special prices and terms for copies for examinatinn and introduction will be furnished on application.*

743-745 Broadway, New York.

The Nation.

NEW YORK, THURSDAY, OCTOBER 7, 1886.

The Week.

THE *Financial Chronicle*, a very sedate and usually clear-headed journal, seems to attach much importance to the Royal Commission on the Currency which has lately been appointed by the Salisbury Ministry, under the presidency of the Rt. Hon. A. J. Balfour. The *Chronicle* thinks that unless the Commission shows us how to establish bimetallism, it will have no *raison d'être*, and that, failing this, the suffering now so acutely felt in Great Britain, and especially in India, will remain unrelieved. The question how to establish bimetallism was the very rock on which the two Paris conferences went to pieces. The number of delegates in either conference who took ground in favor of gold monometallism in the abstract—that is, those who would not have bimetallism if they could—was very small. They constituted a small but not an insignificant minority, for, although few in numbers, they were extremely forcible in the presentation of their views. If a vote could have been taken in either conference on the question of establishing bimetallism, irrespective of the means of doing so, probably all present would have voted in the affirmative except the representatives of England, Belgium, and the Scandinavian countries. Therefore, the conclusion of these conferences, so far as they came to any, was a tacit confession of those who favored bimetallism that the thing was impracticable. It was very much like the annual conventions of stockholders in the Keely motor, where there is always a large majority in favor of the production of power without expense, but an eventual failure to put it in operation for want of means to control the vibratory force. Now, is it likely that this Royal Commission will succeed where so many learned bodies drawn from all civilized nations have failed?

We have read with some carefulness the speech published in the *Chronicle* by which Mr. Samuel Smith, M. P., enforces the view that great suffering exists in the world, and especially in India, by the reason of the fall in the price of silver. If the facts are as Mr. Smith states them, the most important question to be considered is whether the fall in silver can be countervailed by any steps which do not limit the production of the article. It is very easy to say enlarge the demand, but as that is the very thing that the Paris conferences wanted to do but could not, why not attack the difficulty at the other end and try the experiment of buying up and closing the principal silver mines of the world, until the price gets back to the desired ratio with gold, say 15½ to 1? We are sure that if our Government had taken the job in hand eight years ago, it could have bought all the paying mines in the country for less money than it has expended in the purchase of bullion. This experiment would have the great merit that, being once decided upon, there would be no dispute about the means of carrying it into practice. As we have seen, the difficulties of bimetallism begin after you have decided in favor of it. No such embarrassment could block the way of a purchase of silver mines. Very few of these mines are paying large dividends at present. Consequently the owners would sell at reasonable prices, and when the cost was distributed among all the nations interested in bimetallism, the burden would not be seriously felt by any taxpayer. Then the International Conference could easily pass to the consideration of the distress of wheat-growers and other worthy people, whose productions have fallen in price perhaps even more heavily in the past eight or ten years than silver has.

The *Times* publishes a letter from Mr. William Potts, Secretary of the National Civil-Service Reform League, regarding the present administration of affairs at the Custom-house, and the sincerity of Mr. Magone, the new Collector. The League has held that public officers who are intrusted with the power of appointment and removal, should be required by law or executive order to put upon public record in every case of removal the reasons therefor, as the best assurance against the abuse of the power for partisan purposes. Mr. Potts states the gratifying fact that, "without waiting for such law or executive order, Collector Magone has established a rule requiring such a record." The establishment of such a rule in itself defines Mr. Magone's attitude as an honest reformer beyond possibility of cavil. As to the matter of appointments, Mr. Potts says of the Collector that "he is most explicit in his declaration of faith in the principle of the Civil-Service Law, and in his determination that it shall be enforced strictly in letter and in spirit." The board which now conducts examinations is not the best that can be constructed from the material available, but Mr. Potts says that he has reason to believe that this is a difficulty which it will not take long to remedy. He adds this interesting statement:

> "It is, I think, not going beyond the record to say that under the late administration of the Collector's office the Civil-Service Law and Rules were directly violated by making selections for appointments from the eligible list on partisan grounds. *Mr. Magone, as any one would expect from a man of his stamp, declares such a course as this not only illegal, but an outrage*, and the effect of such a change of attitude must be quickly seen."

In short, Mr. Magone is conducting the Custom-house upon civil-service-reform principles.

It is odd that there should be politicians blind enough not to see that civil-service reform "pays," purely as a political investment, when such object lessons as Hedden and Magone are presented. One of the most important elements in bringing about Cleveland's election was the non-partisan support of the business men of New York city, who voted for him because they believed that the great business institutions of the Government in this city—the Custom-house and the Post-office—would under him be conducted upon business principles. The reappointment of Mr. Pearson upon the expiration of his term was the application of this policy to the Post-office, and it only required the selection of a man who should represent the same principle in the Custom-house to establish beyond peradventure the confidence of the business community in Mr. Cleveland. The appointment of a man like Mr. Magone, after the failure of the Hedden experiment, has served this purpose. Two years hence the Republican and Democratic parties will again appeal to the business men of the metropolis for support, and if the Democrats again nominate Mr. Cleveland, the most powerful argument in his behalf will be the fact that he has placed the Custom-house and the Post-office upon a business basis. Not only will the men who voted for him in 1884 do so again with enthusiasm, but thousands upon thousands, who two years ago doubted either his purpose or his ability to carry out his pledges, will join his original supporters. Apart altogether from the question of honesty involved, and viewed solely as a means of vote-getting, no shrewder course could be pursued by a President than that followed by Mr. Cleveland in this matter.

Mr. Bourke Cockran makes his stand against civil-service reform with great courage and vigor, but somehow does not seem to make progress. At the meeting of the Democratic Committee on Wednesday week resolutions were moved eulogizing both the President and Gov. Hill, and Mr. Cockran thereupon introduced an old amendment that he keeps by him, showing that "popular control of the public service is an essential element of popular government," whatever this may mean, and that to limit the power of officers chosen by the people, in the selection of their subordinates, is "undemocratic" and "unwarrantable." He supported this thesis in a now familiar speech showing the horrors and dangers of the new system, and its failure even under the monarchy of Great Britain. Nevertheless, he failed to make any impression, for he was beaten by 30 to 4, and this in spite of his assertion that all his audience sympathized with him secretly. He ought now to explain this seeming mystery. If they really liked his amendment, why did they vote against it? What cows or constrains them? If Mr. Cockran will examine this question carefully and answer it in a new speech, he will command much attention.

The official figures of the Vermont election show that even in that Republican stronghold the party experiences in some measure the loss of prestige which comes from the success of the Cleveland Administration. Although the contest over the Senatorship called out a vote several thousand larger than at the last corresponding election under a Republican President in 1882, the Republicans secured only 66 per cent. of the total, against 69 per cent. four years ago. The vote of 1,541 for the Prohibition ticket, although not large in itself, amounts to nearly three per cent. of the total poll, and would represent about 35,000 votes in New York State. It is the more significant because party lines are

drawn so strictly in Vermont, and because Vermont has long been a Prohibition State.

Senator Frye of Maine delivered a speech before the Norfolk Club at Boston on Saturday afternoon in which he "went for" the Democratic party hammer and tongs. Among other evidences that it had fought every step in the path of national progress, Mr. Frye said: "The Senate at the last session of Congress appropriated $77,000,000 for educational purposes [referring to the passage of the Blair bill], and when it struck the Democratic House it died." Upon page 2070 of the *Congressional Record*, in the issue for March 6, 1886, appears the roll-call in the Senate the previous day upon the question of the passage of this $77,000,000 bill, and among the nays is found the name of Mr. Frye. In March he votes against the "bill to promote mendicancy," and in October he berates the Democratic House for not passing the measure which he himself tried to defeat.

Gen. Logan has originated an interesting theory regarding the next Presidential election, which he thus expounded the other day to a Western interviewer:

"During the years of 1862, 1863, and 1864, the loyal unmarried men of the country were in the army, and at home they were breeding Copperheads. These came of age and voted for Cleveland, as I expected. In 1864 and 1865 the soldiers came home, and within twelve months nearly all of them were married. Their boys will cast their first Presidential vote in 1888, and nine out of ten of them are, like their fathers, Republicans. We are as sure to carry the election as the sun is to rise."

The nomination of the son of the war Governor of Massachusetts by the Democrats of that State is the best possible comment upon this curious deliverance.

An encouraging evidence that race prejudice in the South is slowly but surely abating is reported from Raleigh, N. C. In that city is a large school for the education of colored youth—called Shaw university—which is supported by contributions from benevolent Northern Baptists; and the Rev. Dr. Thomas E. Skinner, one of the most prominent clergymen in the State, has just accepted the professorship of theology in this institution. What this means is appreciable only by those who know that it has always been the tenet of Southerners that native-born white men ought not to teach negroes, and that a few years ago it would have ruined the reputation of any man to accept a professorship in a colored university. Doubtless even now the old fogies will criticise Dr. Skinner, but the progressive element in the white race sustains and applauds him.

We observe that "the Irish and English Socialists," who called a mass meeting at Clarendon Hall on Thursday night, to hear Dr. and Mrs. Aveling lecture on Socialism, claimed Henry George as their candidate for the Mayoralty on their hand-bills. In fact, we presume he is the candidate of everybody who is for any reason dissatisfied with the existing distribution of property. His own hostility to property in land has won him the support of all those who dislike property in anything. But among these the number who have any property of their own is as yet wretchedly small, and does not seem to increase. Socialism thus far appears to have made its converts, with very few exceptions, among people who do not own anything, and have but feeble expectations of owning anything. These are a very large body, in some countries especially, no doubt, but they are a handful compared to those who do own something and cannot be argued into giving it up, and who in fact will never give it up without a fight. The lectures delivered by apostles like Liebknecht and the Avelings are, therefore, usually in the nature of sermons to the converted. They do not reach, or make no impression on, the heathen. Ten men possessed of money in the savings bank, or a house, or cattle, who had been argued into real readiness for a distribution of their goods, would be worth to a Socialist lecturer ten thousand who, possessing nothing themselves, had been won over to the belief that more fortunate persons ought to share with them. This is why we always feel sorry for a Socialist preacher: he seems to have such a long job before him. It has taken 2,000 years to get a few countries to practise, even in the mildest form, a few of the principles of Christianity. How many thousand will it take to convince the flower of the race, who now own property, like it, and believe in it heart and soul, that they ought to divide with the shiftless, and prodigal, and incompetent? We should think about 10,000.

We trust that Mr. Henry George's talk about his object in running for the Mayoralty will not mislead any intelligent man who is interested in the good government of this city. He acknowledges that his election would do nothing for his great scheme of social and political regeneration—the nationalization of land—beyond bringing it more prominently into notice. He acknowledges, too, that he would have to administer the city government under the law as it now is. His plans of reform have neither originality nor special merit. Everybody who has seriously considered the problem of city government is as much in favor of local autonomy as he is. He throws no new light on the subject, and he has had no experience in dealing with it. Indeed, some of his remarks would seem to indicate that he has not yet found time to make himself familiar with the existing municipal machinery. Nor are his recommendations likely to meet with more favor from the Legislature or from the country voters than those of any of his predecessors. In fact, we have no doubt that the success of the George movement would furnish the conservative and slow-minded masses of the country districts and the property-owning class of the city with an argument against home rule which would postpone it for many years or indefinitely. Everybody who has any savings would cry aloud to the Legislature not to give up their hold on the New York charter, and the politicians would be only too ready to accommodate them.

There are some, who can hardly be called cranks, who think that they may do something for "Labor" and for good government by casting a vote for Mr. George, and we would earnestly call the attention of these to some remarks of Mr. Louis F. Post, one of the ablest of the labor agitators, to the *Times* reporter, printed in that journal on Monday morning. Said he:

"The result of the recent car-drivers' strikes, and the sentence of the Theiss boycotters, and the inability of the laborers to secure their pardon, has made them see that the only way they can hope to secure what they want is to put their own men where the laws are made. They think, too, if they develop unexpected strength in this movement, and show that they can and will vote for a principle, the professional politicians will pay more heed to their demands, and help them to amend or repeal laws which they consider unjust and apprehensive."

This contains, as far as the labor organizations now supporting George are concerned, the true inwardness of the whole movement. They do not care one cent about Mr. George's promised "reforms," which are much too shadowy and remote. What they seek is to frighten the city and State officers and "the politicians" in such fashion that strikers will not be fined or imprisoned for boycotting and street rioting; and this they think they can do by giving George a large vote. That they can do it in this way we have ourselves little doubt, and if they should succeed in having the Penal Code amended in their favor, and in convincing police magistrates and judges that it was good selfish policy to wink at their disorders, they would have the community at their mercy. Col. Fellows, the Assistant District Attorney, who prosecuted the boycotters, was badly hissed on this account when speaking at a meeting of the County Democracy the other day. Supposing the hissers should be able to show that a very large body of voters agreed with them in thinking that any officer who, like Col. Fellows, enforced the law against "Labor," deserved reprobation, how long would district attorneys stand up against the reprobation?

We hope, for many reasons, that there will be no union between Tammany and the Henry George Labor party. In the first place, it will be of great interest to have the Labor party go to the polls in a solid and single mass, in order that its size may be demonstrated. The moment that a union is formed with Tammany Hall, Mr. George will cease to be the Labor candidate, and the labor issue will practically disappear from the contest. He and his party will be completely swallowed by the Tammany organization, and nobody will ever know what the size of the Labor vote is on election day. Then, too, a union with Tammany will have the inevitable tendency to stop the picturesque procession of "thinkers" which is now marching to Mr. George's standard from all the corners and suburbs of society, literature, journalism, and sanitary and other sciences. Nothing like this collection of recruits has been seen in any party since the late Horace Greeley was a candidate for the Presidency. The moment Mr. George became the Tammany candidate, all the "thinkers" would be thrust into the background and crowded out of their good seats on the ratification meeting platforms, to make room for the Cockrans, Ecclesines, Cahills, and other braves of the Tammany wigwam. They are having such a

good time now that it would be wanton cruelty thus to upset them.

The session of the Grand Jury for Saratoga County which opened on Monday possesses an element of general interest. For years Saratoga has been disgraced every summer by the operation of great gambling establishments. These institutions draw to the watering-place through the season a great number of gamblers from all parts of the country, with many representatives of the other disreputable classes of both sexes that always follow in their train. Although the existence of these gaming-houses is a violation of the laws of the State, the authorities have winked at their operations, and a foreigner visiting the place might have supposed that they were expressly granted legal protection. We are glad to learn that the moral sentiment of the community has at last become aroused to the disgrace of this business, and that a determined effort is making to secure the enforcement of the laws against these notorious criminals. The gamblers of course have plenty of money to spend in the effort to buy immunity, and doubtless some of the hotel-keepers sympathize with them, under the impression that their banishment would diminish the patronage of the place. But it is hardly to be supposed that such influences will affect the course of the prosecuting authorities or of the Grand Jury. Purely as a business question, there can be no doubt that Saratoga would profit by an enforcement of the laws against gaming, since the resort would gain visitors from the classes who are now very properly offended by the prominence of the disreputable patrons. Certainly every respectable person who is interested in the future of one of our most charming summer resorts, will sympathize with the present movement against a long-standing disgrace.

The decision of the Court of Appeals, affirming Jaehne's sentence, will cast a gloom over the entire colony of indicted Aldermen. We trust that their cases will now be pushed promptly forward, with a certainty of conviction which seems to be absolute. The affirmance of Jaehne's sentence is of great value, for it will enable the District Attorney to conduct the trial of the other guilty Aldermen under conditions the most favorable to secure for them impartial and speedy justice. There is thus a fine prospect presented that fifteen more of the men who were bribed to pass the Broadway Railway franchise will be sent to the penitentiary. It will be remembered that of the twenty-four members of the Board of 1884, only two, Grant and O'Connor, have escaped suspicion of bribery. Two members, Kenney and McLoughlin, are dead; one, Rothman, fled to his home in Germany before the storm broke; two others, DeLacy and Dempsey, are fugitives from justice and are now in Canada; one other, Waite, has been accepted as a witness for the city; and finally another, Jaehne, is now in prison, having been convicted of taking a bribe of $20,000 for his vote. This leaves fifteen members awaiting trial.

The controversy between the *Times* and the *Sun* over "the Jones River," alleged by the *Times* to have been discovered in Alaska by its own reporter, has reached a very painful stage. The *Times* offered the editor of the *Sun* the alternative of acknowledging that he had lied, or of "having the lie crammed down his throat." In the absence of a satisfactory response, the *Times* began on Tuesday morning, with the aid of sketch maps, the "cramming-down" process, which is, of course, painful to the victim and disgusting to the lookers-on. Even if it could be carried through quietly, it would be a revolting spectacle. As the *Sun* is likely to offer a vigorous resistance, it is simply intolerable. There is no likelihood that the lie will be got more than half way down, and the writhings of a contemporary with a lie stuck in the middle of his gullet, and a professor of "journalism" trying to force it through, is a sad sight even for these times. We would respectfully ask Mr. George Jones whether the honor of having a river called after him is worth all this suffering and hard feeling? Would it not be better to dwell in unity with one's fellow-men than give his name even to the Jordan or the Mississippi? No river, within historic times, has been named with all this strife and bitterness. What troubles the *Sun* is not, we are sure, the question whether there be a river in the place assigned by the *Times* to the Jones River, but the fact that it has been called Jones. If it were called Smith or Brown, we feel sure it would admit its existence. Why not then end this contention by a compromise—the *Sun* conceding the existence of the river, and the *Times* calling it the Smith River, or the Dana-jones River?

The triennial convention of the P. E. Church, now in session at Chicago, at one time promised to be of peculiar interest to members of the Episcopal communion, because the question of adopting the revised Prayer-book was there to be determined. Since that time, however, the several diocesan conventions have instructed against the proposed change to such extent that the question is virtually determined in advance. The decisive action of the New York diocese last week illustrates the feeling against the proposed alterations which has appeared in almost every quarter. At least two other subjects of more than routine interest remain to be disposed of by the Convention: the matter of change in the name of the Church, and the provision of an appellate court, for the trial of more or less criminous clerks of all degrees. These topics, together with such as are necessarily fixed for like occasions, will perhaps suffice to make the Convention of more than usual importance.

The Irish party in the House of Commons could not have sent over a better representative to plead its cause before the American public than Mr. Justin McCarthy, who is even better known as an historian and politician than as a literary man. He delivered a lecture on Monday night to a crowded audience in the Academy of Music, in which he gave an eloquent and very encouraging account of the long struggle in which he and his colleagues have been engaged, and in which Mr. McCarthy himself has borne so distinguished a part. But he must have been struck by the small extent to which the purely American public contributed to his support on the platform, and we trust he will, before he leaves, consider to what the lukewarmness of the more intelligent Americans about the cause of Irish home rule is due. They are, we believe, generally in favor of it, but they cannot be said to "hanker" after it, and the cause, we fear, is to be found in dissatisfaction and disappointment with the part the Irish play in the politics of this country—that is, the extent to which they support bad candidates and bad causes. The subject is worth the study and frank comments of an Irishman of Mr. McCarthy's high character and great talents.

The Duc d'Aumale has heaped coals of fire on the head of the Republic by presenting the magnificent palace and domain of Chantilly, the old seat of his ancestors, the Condés, to the French Institute in trust for the nation. It appears that he had made this disposition of it in his will, intending to enjoy it during his lifetime; but as his exile has made this impossible or unlikely, he hands it over now as a free gift, with all its antiquarian and art treasures. The estate, doubtless, supplies revenue enough for the expenses of maintenance. The value is about $12,000,000, but the gift will touch the imagination of the French people, especially the Parisians, to a degree out of all proportion to its value, and go far to remove the reputation of pecuniary greed which has been a great stumbling-block in the political path of the Orleans family.

In the message which President Diaz read at the opening of the first session of the new Congress, September 16, he takes a gloomy view of the financial situation and outlook of Mexico Coming from such a source it may almost be said to be a despairing view. Gen. Diaz admits that the present situation of the Treasury is "certainly not very flattering," nor can he persuade himself that the measures adopted for promoting economy and increasing the revenue have vanquished the financial difficulties of the country. He fears that "in spite of his extraordinary efforts, circumstances beyond his control, among which is the increasing depreciation of silver, will make the situation still more grave." The Mexican President acknowledges that his Government is powerless, by itself, to raise the price of silver, but hopes that the day is not distant when "the four principal nations will agree to restore the media of exchange to their normal state." Meanwhile, the best advice he can give is, that Congress should do everything possible to stimulate the production of commodities other than the precious metals, so that Mexico need not be so largely dependent upon silver in her foreign commerce. The "revolution" of which we have heard so much via Texas, appears in the message only in the brief statement that "parties of bandits and ex-smugglers have been committing robberies in the States of Nuevo Leon and Tamaulipas, but they have been energetically pursued and exterminated."

SUMMARY OF THE WEEK'S NEWS

[WEDNESDAY, September 29, to TUESDAY, October 5, 1886, inclusive.

DOMESTIC.

THE Cabinet has had the case of Geronimo under discussion, and it is reported that the Administration is embarrassed at the circumstances under which the Apache chief was surrendered. Gen. Miles, it has been alleged, has done exactly what Gen. Crook was instructed not to do, and what it is also supposed that Gen. Miles was instructed not to do. He has accepted the surrender of Geronimo upon conditions, the chief of which is that his life shall be spared, and that he shall not be turned over to the authorities of Arizona to be tried for murder. Capt. Lawton denies that there were any conditions connected with the surrender.

The September debt statement shows a decrease of the national debt, less cash in the Treasury, of $10,627,013.17.

The New York Democratic and Republican State Committees met in this city on Wednesday. The Republicans nominated Judge Daniels of Buffalo for Judge of the Court of Appeals. The Democrats nominated Judge Peckham of Albany for Judge of the Court of Appeals. They passed resolutions approving the administrations of President Cleveland and Gov. Hill. Bourke Cockran (Tammany) offered the following amendment, and made a speech in support of it: "And while heartily approving of the personal integrity of the President, this Committee believes that popular control of the public service is an essential element of a republican form of government; and that any attempt to limit the power of officers chosen by the people to select their own subordinates is an invasion of the right of suffrage, and an undemocratic and unwarrantable invasion of popular rights." The amendment was defeated, receiving only four votes, and the original was then adopted. No overtures were made by the Republicans for a conference to unite on a single candidate with the Democrats.

The Massachusetts Republican State Convention on Wednesday nominated Oliver Ames for Governor on the first ballot. The platform is squarely in favor of constitutional prohibition against the importation of foreign labor, condemns boycotting, pats the soldier on the shoulder, demands protection for the fishermen, attacks the Morrison Tariff Bill, demands a fair counting of votes, criticises President Cleveland's Administration as opposed to civil-service reform, condemns Secretary Bayard's Mexican course, asks for the stoppage of silver coinage, and expresses gratitude to Gov. Robinson.

The Massachusetts Democrats on Thursday nominated John F. Andrew for Governor. He was a Republican till 1884, when he refused to support Mr. Blaine. The platform contains the following plank: "The Democrats of Massachusetts hereby reaffirm the principles enunciated in the National Democratic platform of 1884. They view with satisfaction the beneficent results of Democratic rule in the nation. President Cleveland has kept faith with the people. He is redeeming the pledges of reform on which he was elected, and has given to the country a clean, capable, and patriotic administration, worthy of the support of all friends of good government. He has vindicated the Democratic party from the slanders of its enemies by demonstrating its fitness for power, and its ability and determination to give the nation an honest, thrifty, and conservative management of its affairs. We recognize and applaud the steadfast adherence of the President to his ante-election promises and pledges made to the people in 1884 in regard to civil-service reform. The partisan abuses of Republican rule have been largely corrected, the quality and tone of the civil service throughout the country have been vastly improved, the power of appointment and removal has been used with moderation and restraint, manifestly inspired by a sincere desire to dispense with public patronage and fill the offices, which belong to the whole people, in a new and better spirit, based upon a tolerant regard for honest differences of opinion. This is in striking and wholesome contrast to the vindictive ostracism of their opponents practised for nearly a quarter of a century by Republican Administrations." The platform demands a judicious reform of the tariff and "honest money."

The Colorado Republicans on Wednesday nominated W. H. Meyer for Governor, and the Nebraska Republicans nominated Gen. John M. Thayer for the same office.

The Dakota Territorial Democratic Convention met on Wednesday. The resolutions endorse President Cleveland, approve the efforts to wrest from railroads unearned land grants, pronounce the existing protective tariff an unjust and burdensome discrimination against agriculture, endorse the Indian policy of Secretary Lamar, and favor the submission to a vote of the people of the whole Territory of the question of the division of the Territory on the seventh standard parallel. For Delegate M. H. Day was nominated. He is in favor of the submission of the question of division to a vote of the people.

The New Jersey Republican Convention on Tuesday nominated ex-Congressman Howey for Governor. The platform favors the submission of the restriction, regulation, and control of the liquor traffic to the people, at a special election to be held for that purpose.

In the Connecticut town elections on Monday the Prohibition and Knights of Labor parties failed to show the strength that was expected. The Democrats suffer unimportant losses and the Republicans have secured unimportant gains. The Knights of Labor ticket polled less than 3,000, which is 7,000 less than the lowest estimate that has been given of their strength.

A large and enthusiastic meeting was held in Chickering Hall on Friday evening to ratify the nomination of Henry George for Mayor. Speeches were made by the Rev. John W. Kramer, who presided, the Rev. Dr. R. Heber Newton, Thomas Davidson, and others.

One thousand delegates were present on Monday morning in Richmond, Va., when Master Workman T. V. Powderly called the tenth annual Convention of the Knights of Labor to order. An address of welcome was made by Gov. Lee of Virginia. Mr. Powderly in his reply said: "The monopolist of to-day is more dangerous than the slave-owner of the past. Monopoly takes the land from the people in million-acre plots, it sends its agents abroad and brings hordes of uneducated, desperate men to this country; it imports ignorance and scatters it broadcast throughout the land. It is the duty of every Knight of Labor to assist in creating a healthy public opinion on the subject of labor, and the justice of its receiving a full and just share of the values or capital it has helped to create. In this work we seek the active coöperation of all right-minded, honest men. We work not selfishly, for ourselves alone, but extend the hand of aid and fellowship to all mankind. The lower down in the scale of poverty and oppression, the greater the need for our extended hand. The sentiment which prompts men to proclaim to the world that 'we almalgamate with none,' finds no response in the heart of the man who properly interprets his obligation as a member of our order. Every true Knight of Labor believes with the divine teacher that 'all mankind of every description is his neighbor.' In our efforts to win our way to public favor, we have made mistakes; being mortal we could not do otherwise. Our errors were of the head and not of the heart, for it was after the mistakes were made that we knew them as such." A negro Knight has been excluded from a Richmond hotel. The other members of his delegation also left the hotel.

Senator Sherman was received at the Cincinnati Chamber of Commerce on Friday. In the course of a brief speech he said: "The greatest question of all, perhaps, is the gold question—how to make the silver dollar equal to the gold dollar—for there should be only one standard. I have gone through one process of redeeming Uncle Sam's money, and I do not want to go through it again. You might have put more silver in your dollar and made it equal to the gold, but then it would be too big, as it is now. But anyway it would be a good thing to go to market with. A dollar must be a dollar, and enough silver must be put in a dollar to make it a dollar, though it be 100 or 500 grains. That is honesty and prudence. If I had my way I would stop the coinage of the silver dollar, gather it into Uncle Sam's great vaults, and then issue the certificates and let you handle them. These certificates would form the basis of our national-bank circulation, and preserve what I believe to be the best system of banks in the country. The tariff and other great issues would in a great measure regulate themselves, but the silver question is the great one of the future. One dollar of one value is what we must have before we can have that stability so necessary to national security and business success."

James A. Hedden, who, while cashier of the First National Bank of Newark, wrecked the institution, has been pardoned by President Cleveland. His term of five years in the State Prison expired on September 27, and he was serving thirty extra days, the penalty for non-payment of costs of court. The arrival of the pardon was a surprise to Hedden, as he had given up all hopes in that direction. It restores him to the rights of citizenship, and his intention, it is understood, is to go West and start life anew.

The New York Court of Appeals on Tuesday handed down a decision affirming the sentence of the lower court in the Jaehne case. He will therefore have to serve out his sentence in Sing Sing. The District Attorney of New York will proceed at an early date to the trial of a number of the indicted Aldermen of 1884.

There will not be another race between the yachts *Mayflower* and *Galatea* this season. The former has gone out of commission. Both waited in Marblehead, Mass., till October 1 for a breeze to suit Lieut. Henn, but it did not come.

FOREIGN.

Gen. Kaulbars sent a violent circular to the Russian consuls in Bulgaria, with the request that they inform the people of its contents. The circular makes twelve points, several of which the Bulgarian Government declares Russia must know to be false. It begins by stating that "the time for mere words has ended. The Czar can now be convinced only by acts. Only then will he offer this country internal and external protection." The circular accuses the Bulgarians of acts of indiscipline in burning flags and the insignia of St. George. The Bulgarian Government denies the latter accusation. The circular declares that Russia cannot allow Bulgaria to try the kidnappers of Alexander, and that it is impossible to allow Alexander and his family to return to Bulgaria.

Gen. Kaulbars on Thursday received a deputation of prominent Bulgarians, who called upon him to endeavor to induce him to withdraw or modify his circular. The deputation was composed of 114 of the most respected and influential citizens of the principality. The spokesman stated to Gen. Kaulbars that the circular had surprised the Bulgarian people, and asked him to reconsider some of the Russian demands, particularly that for a postponement of the elections two months. Gen. Kaulbars in reply said that the Bulgarians knew very well that the Czar had their prosperity at heart, but, he added, they must confide in the Czar and carry out his wishes. The spokesman, interrupted Gen. Kaulbars at this point and said: "If that is all you have to say, we will retire." The deputation then withdrew.

The reply of Bulgaria to Russia's demands

was delivered on Saturday. In it Bulgaria accepts the Czar's terms, provided the independence of Bulgaria is formally guaranteed.

Gen. Kaulbars having again asked for a reply to Russia's ultimatum, the Ministry on Sunday, after a long discussion, drafted a reply to the effect that the Bulgarian Government would comply with the demands of Russia to the extent that the Constitution and laws would permit. At a great mass meeting on Sunday in Sofia the Government and the Constitution were enthusiastically supported. Gen. Kaulbars was forced by jeers to withdraw from the speakers' platform while making a menacing speech. All but seven of the officers who were under arrest for complicity in the deposition of Prince Alexander have been released.

Prime Minister Tisza, replying for the Government to interpellations in the Lower House of the Hungarian Parliament on Thursday, said that Austria-Hungary intended to prevent any single Power from establishing a protectorate over Bulgaria. "We want independence among the Balkan States," he continued, "without having any covetous designs towards any of them. No community of interests exists in the Balkans. The Austro-German alliance continues, guarding the mutual conditions of existence without endangering peace. Austria-Hungary will not allow any single Power to make armed interference in Bulgaria. Austria-Hungary earnestly intends following this policy during these critical times. No agreement whatever exists between Austria-Hungary and Russia regarding the exertion of their respective influences either in the western or in the eastern portion of the Balkan States. Austria-Hungary firmly adheres to the Berlin treaty, which, while it is upheld sufficiently, corresponds with Austria-Hungary's interests. Austria-Hungary has taken no steps on behalf of the kidnappers of Prince Alexander. She has merely warned Bulgaria in her own interest against the adoption of any hasty resolution, and the results that would be sure to ensue therefrom. In 1868 I stated in reference to the Eastern question that it was my private opinion that, in the event of changes occurring in the East, our interests would require that the nations inhabiting that portion of Europe should form themselves into independent States according to their separate individualities. This opinion is now shared by the Austro-Hungarian Foreign Ministry. We hold that this view best answers the interests of the monarchy, which, repudiating all desire of aggrandizement or conquest, would concentrate its efforts to promote the independent development of those States, and prevent the establishment over any of them of any protectorate not provided for in treaties, or the assertion over those countries of the permanent influence of any one foreign Power. As regards Austria-Hungary's alliance with Germany, there has been no change in Austria-Hungary's foreign relations. We stand with Germany on the old basis. We have no doubt we shall be able to preserve the mutual conditions necessary to the existence of each State without endangering the general peace. We regard the Treaty of Berlin as still in force, although it has been violated in certain cases, the most serious of which occurred last year in Eastern Rumelia."

Premier Tisza's statement gives general satisfaction in Austria, although it is thought to be lacking in explicitness in regard to the relations of Austria and Germany. The Hungarian Deputies expressed some dissatisfaction because Herr Tisza did not state explicitly whether Austria would oppose Russian occupation of Bulgaria. The speech is universally approved in London and Vienna, and disapproved by the Russian press.

Special prominence was given in Saturday's London *Post* to an article which is undoubtedly a declaration of policy of the highest importance. The *Post* is Lord Randolph Churchill's organ. The substance is an urgent appeal to Bismarck to keep the peace by supporting Austria against Russia, coupled with the promise, "If he elects to take this course, he may be certain of the firm adhesion and loyal coöperation of England." The *Post* declares that England will not take the lead in the new European difficulty, "first, because we have domestic matters of the first importance on hand, and, second, because the aim of the Government is to maintain the alliance in Parliament with the Unionist-Liberals." In other words, the foreign policy of the Conservative Government, like its domestic policy, has been endorsed at every point by the Unionists.

Lord Randolph Churchill, in a speech on Saturday night, said that the House of Commons was the slave of the caprice of the Radical and Parnellite, and it was imperative to provide simple and effective means of closing debates. If Ireland followed the advice of agitators, such action would lead to further repression; but Irish commerce had begun to improve, and with the present good harvest the people of Ireland might anticipate brighter times. With regard to affairs in Bulgaria, he said it was impossible to foreshadow the outcome, but he still hoped that a peaceful settlement would be effected. England, he said, ought to support Austria in her difficulty. The Government would give the greatest attention to legislation affecting England and Scotland, which had lately been neglected for Ireland. It would introduce measures to enable farm laborers to obtain freehold allotments, and would also deal with the questions of tithes and railway rates. Measures for cheapening the cost of the transfer of land, and a genuinely popular form of local government, would also be presented. With regard to the land question in Ireland, they would have to change from double to single ownership in order to have peace. There was also the question of education to be considered. On all of these questions the prospects were fair, although the work would be heavy. He rejoiced to see a distinct revival in trade, which was evidenced by the rise in prices. He did not believe that there would be harsh evictions in Ireland.

The speech is regarded as being a definite burial of King Jingo. Only old-fashioned members of the Tory party find ground for complaint in this. As regards domestic affairs, the charge of the Liberal press that Lord Randolph Churchill has stolen the whole Liberal suit of clothes, is by no means without foundation. The Tory press have received the speech with immense satisfaction.

In receiving on Monday a deputation of Irish ladies, Mr. Gladstone said: "The present Government encourages Irish land occupiers to believe that the judicial rents will be reduced. That is embodied in the appointment of the present Land Commission; also in the Marquis of Salisbury's speech at the commencement of the Parliamentary session in what he said concerning judicial rents. I do not accept his statement to any great extent regarding the legislation which he said his Government proposes for the next session. I reserve judgment also on the wonderful encyclopædia delivered on Saturday by Lord Randolph Churchill, whose performances are less known than his promises. I am unable to gather from either of these statements a declaration of fresh concessions. I do not wish to close the possibility for a future *modus vivendi*, but I am unable to gather that anything remains to be done in that direction. It would still be wise to reconsider the pecuniary terms the late Government's bill proposed. Full justice to Ireland requires careful investigation of her financial history before we reach a conclusion as to what should be accorded her. I hope that Ireland's triumph will come with promptitude, with cheerfulness, and with joy, and I hope that there will be no intervening period of gloom."

Mr. Gladstone has received a proof copy of a manifesto to be issued by the Scottish Liberal Federation, advocating home rule for both the Scotch and the Irish. Mr. Gladstone, in reply, assures the Federation that if he feels grateful for Scotland's action in the Irish question, he feels yet more confident concerning the efficiency of that action in the future.

Sir Reginald Hanson has been elected Lord Mayor of London.

The death of Capt. Bedford Clapperton Trevelyan Pim is announced from London. He was only sixty years old, but his life was full of achievements that have been of special benefit to the world afloat. Beginning his sea life in the merchant service, he entered the Royal Navy in 1842. In 1845 he started on a voyage round the world in H. M. S. *Herald*, which was not concluded till 1851. In the search for Sir John Franklin he was a leading spirit in all its phases. He reached and succored the crew of the *Investigator*, who had become frozen in in the same search. Capt. Pim was the first man who made his way from a ship on the eastern side of the Northwest Passage to one on the western side. After these Northern labors he was in service in the Russian war and in China. In April, 1858, he was promoted to Commander. He retired from the navy in 1870, studied law, and has been a member of Parliament.

The German Reichstag will meet on November 18. An exciting session is expected over the Government's demand that the credit for the military shall be effective in times of peace for an indefinite period, instead of, as hitherto, for seven years.

The *Journal des Débats* (Premier Freycinet's organ), referring to the advice of the Berlin *National Gazette* that France annex Tripoli, says: "It is very natural that the *National Gazette* should wish to send us to Tripoli. It is equally natural that we should resist the temptation to follow its disinterested advice. Regarding Egypt, the English are deluded if they believe that France is disposed to sell so cheaply her claims there. It is her indisputable right to forbid any other maritime Power from definitely seizing Egypt. French feeling must not be judged by the refusal of the Chambers to coöperate with England in Egypt in 1882. The public opinion of France has since recognized that the Chambers then made a mistake. The annexation of Tonquin has created another interest for France, rendering the neutralization of the Suez Canal necessary. British occupation of Egypt, despite France, would produce a lasting feeling of resentment, and destroy all hope of a good understanding between France and England for a long period. This prospect, while it would in no way incommode Germany, would be a source of sadness and anxiety to France. The French people hope and gladly believe that the majority of the British people have patriotism and intelligence enough to prevent such an eventuality."

The French Chambers have been summoned to meet on October 14.

The entire domain of Chantilly, with its magnificent castle and all its dependencies, the value of which at the lowest estimate is over sixty millions of francs, has been presented by the Duc d'Aumale to the Institute of France, to be held by it in trust for the French nation. The Duke had provided for this bequest in his will, but desires the conditions of it to be immediately carried out. After having defrayed the expenses of keeping up the estate, the Institute will employ the excess of revenue—first, in acquiring objects of art; second, in pensions and pecuniary aid to literary men and artists; third, in establishing a fund to aid and encourage those who devote themselves to the career of letters, science, or art. The galleries and collections at Chantilly shall be called the Musée Condé, and be open to the public.

The Madrid courts condemned to death on Saturday the fourteen rebel prisoners, including Gen. Villacampa. It is believed that only six of the convicted men will be shot. Gen. Villacampa asserts that he only took command of the mutineers to dissuade them from their useless struggle. The Pope has interceded for the lives of the condemned.

MASSACHUSETTS POLITICS.

From the origin of the Republican party the country has regarded its conventions in Massachusetts with an unusual degree of interest. No State contributed more largely to that equipment which made it, in its early history, really "the party of moral ideas." In the period of demoralization which followed the war, no State did more to arrest the evil tendencies within the party. No State has more consistently maintained a high standard of candidacy for the office of Governor, which has retained more of its ancient dignity in Massachusetts than perhaps anywhere else in the country.

Nothing could be imagined more at variance with all the traditions of Massachusetts Republicanism than the action of the Convention which met in Boston on Wednesday week. A thousand delegates gathered from different parts of the State to select a candidate for successor to Gov. Robinson, who had declined longer service. A ballot was taken, and nineteen out of twenty of them voted to give the nomination to one man. So near an approach to unanimity is almost without precedent, and one would suppose that it must have reflected a widespread popular demand for the choice of a man qualified for the place by exceptional ability and distinguished public service — such a man, for example, as Gov. Robinson himself, whose capacity, proved by his course in Congress, naturally and properly led to his selection as Gen. Butler's opponent in the crucial contest of 1883.

Yet none of these things are true of Oliver Ames. He is a good citizen, of a type of which Massachusetts has thousands, with only one qualification to distinguish him from thousands whom nobody would ever think of suggesting as Governors of the Commonwealth. That qualification is the great wealth which he inherited, and which he is willing to utilize for the procurement of official position. This wealth, and this wealth alone, led the managers of the party to yield four years ago to his ambition for the place of Lieutenant-Governor, which in Massachusetts is one of little account. Nobody supposed that he aspired higher, and the first suggestions that he cherished hopes of the Governorship were ridiculed. It is simple truth to say that three or four years ago the idea of giving him the chief office would have been dismissed by a Republican convention as unworthy of serious consideration. Nothing has occurred in the interval to make the proposition any less absurd. As Lieutenant-Governor, he has rendered the State only perfunctory service. His most earnest advocate can "point with pride" to no achievement in his public career. He has given no evidence of any fitness for the Executive chair beyond that possessed by thousands of his fellow-citizens, and if he were a poor man, like Gov. Robinson, his most partial friends would never have thought of him as its possible occupant. As a prominent delegate to the Convention well put it, "Take this man and call him Jones; remove him to a rural gathering where he is not known and so would be stripped of his wealth and factitious importance; say, 'Let's make Jones our candidate for Governor'—and then let Jones make his little speech. I tell you the sensible Yankees of such a meeting would laugh you and your candidate off the platform!"

That such a man should receive the votes of 945 out of 994 delegates is the most impressive evidence yet furnished anywhere of the demoralization which has overtaken the Republican party. The absence of any protest against the nomination only emphasizes the discredit of the performance. Despite the "fine work" of the Ames managers in the caucuses which chose the delegates, there were plenty of men in the Convention, like the one whose words we have quoted, who realized the weakness and folly of the threatened nomination, but not one had the courage to raise his voice against it. So it came about that a rich man, pure and simple, was selected by an almost unanimous vote in a Massachusetts Republican Convention for the office once filled by John A. Andrew.

Everything about the Convention was in harmony with the nomination for Governor. Mr. Cabot Lodge presided, and his speech was of the "slang-whanging" order. The platform-makers sought to capture the Prohibition vote by a declaration in favor of submitting a Constitutional amendment, while "tipping the wink" to "Republican saloonkeepers" by nominating for Lieutenant-Governor a man who is a "moderate drinker." Finally, and most appropriately of all, a large majority of the delegates whose views regarding 1888 were learned, declared themselves in favor of Mr. Blaine. The nomination of such a man as Mr. Ames in Massachusetts, like the nomination of that other "perfect bonanza," Mr. Bodwell, in Maine, only represents the triumph of the Blaine idea in State politics.

The interesting question is, how far the Republican party in Massachusetts can be converted into a Blaine machine without losing power. The experiment tried two years ago indicated that the danger-point might be soon reached. In 1880 the Republican candidate for President polled 165,205 of the 282,512 votes, and would have had a majority of 47,898 if all the opposition had been concentrated on a single ticket. In 1884 the Republican candidate for President received only 146,724 of the 303,381 votes, and would have lacked 9,933 of a majority in case all who voted other tickets had been united upon one candidate.

The nomination of Mr. Andrew for the Governorship in Massachusetts by the Democrats shows that even if honesty in politics be not always the best policy, as some people think, it is at all events not always bad policy. Mr. Andrew is the son of John A. Andrew, the former war Governor, whom Massachusetts remembers with so much pride. He belongs to the same class of young Boston men as Mr. Cabot Lodge, and went with this gentleman as a delegate to the convention which nominated Blaine, having the same low opinion of Blaine which Mr. Lodge had and then freely expressed, and being equally opposed to his nomination on the capital ground of personal unfitness. He, like Mr. Lodge and Mr. Roosevelt, opposed Blaine's nomination in the Convention, but, unlike them, when the nomination was made, refused to acquiesce in it. He held, we presume, the old and, until recently by respectable men unquestioned rule of morality, that no mandate or trust can bind a delegate to assist in the elevation to a high office of a man whom he believes to be personally dishonest, and to have abused a public office for purposes of private gain. A delegate may be bound to sink objections to a candidate's opinions, or to sink objections to his capacity, or to sink objections to his prospects with the voters, in deference to the majority. But objections to a candidate on the score of personal dishonesty, on the score of untruthfulness and unfaithfulness to a public trust, are fundamental. They go behind all political commissions. They destroy at one blow everything that can be said in his favor, except that the country is in danger and that he is the only man competent to save it. In other words, the plea of overwhelming necessity is the only plea which an honest man can use to justify his helping to put such a person in high office.

We presume this was the view which Mr. Andrew took when he came home from the Convention, and repudiated all share in its action. He took the stump against Blaine and supported Cleveland, and has become a Democrat after passing through the Mugwump stage. When offered the nomination he has just received, he declined to accept it unless the platform contained an out-and-out endorsement of the reform of the civil service, and it does contain it. The consequence is that Mr. Andrew can look back on the last two years without shame or regret, and to the future with pride and confidence. He may not prove a great man in politics, but he has nothing to explain or defend in any company of honest gentlemen. He is not compelled to whip the devil round the stump in order to meet the reproaches of any former friend or associate. His failure to support Blaine is something which all good men all over the world will understand without a word of excuse or apology, and is something which every school of morality might use as an illustration of personal integrity.

He would, of course, have still remained open to the charge of "greenness," or simplicity, which in certain circles is a very serious charge indeed, if this nomination had not come to him. It might have been said that he was a visionary, or a molly-coddle, or an idealogue, and that he would never have made his way in politics if the Democrats had not taken him up. But even this reproach has now been taken away from him. He has done better than even that pink of youthful knowingness, Mr. Cabot Lodge. He has been put in the field for the Governorship by one of the great parties, and it seems not unlikely that they will elect him. And if elected he will furnish the Boston fathers with a very useful model for their cynical Harvard boys, for they will be able to say that although he refused to prevaricate, or evade, or eat his own words, or swear that wrong was right and white was black, and that a man might simultaneously own bonds and not own them, Andrew remained available for party use, and was still considered even by wicked politicians none too good for this world.

MR. POWDERLY AT RICHMOND.

THE public have had a number of opportunities to take the measure of Mr. Powderly during the past twelve months. He first became a conspicuous figure in connection with the great Southwestern strike and boycott, in the earlier stages of which he won some applause by efforts to check the mischief set on foot by Martin Irons and his banditti. He appeared then to represent an idea or a principle of common acceptation, viz., that order, and method, and justice must go hand in hand with beneficial progress of every kind. Accordingly, he declared that the boycott of the Missouri-Pacific Railway was not warranted by the facts as made up by Martin Irons and his followers. He then came to New York and had his interview with Gould, at the end of which he ordered the strike off. But Irons countermanded the order by telegraphing to his subordinates at the principal points to "hold the fort." When Mr. Powderly found out that Irons and not himself held the fort, he abandoned his own position and began to search for reasons to justify Irons. His subsequent correspondence with Gould showed him in the light of a common scold, for when Gould produced the telegram of instructions to Hoxie, which had been agreed upon between them and actually transmitted by his (Powderly's) secretary—a telegram which convicted Powderly of either gross misconception of the use of language or gross misrepresentation of what passed at the interview—he fell into the vocabulary of the fish market and railed by the hour, calling Gould a monopolist and a slave-driver and a taskmaster, or words to that purpose, as though these epithets, even if rightly applied, had any relation to the Southwestern strike, or any tendency to improve the condition of workingmen anywhere

Now, Mr. Powderly at Richmond seems to have taken up the discourse at the point where he dropped it with Gould, in the same temper and with the same lack of ideas. The following extract is worth reprinting as a refreshing text of this new gospel of Labor:

"To remedy the evils we complain of is a difficult and dangerous undertaking. The need of strong hearts and active brains was never so great as at the present time. The slavery that died twenty-two years ago was terrible, but, bad as it was, it never developed a millionaire, while the new slavery, which now reaches out with a far stronger hand than the old, has developed hundreds of them. The lash in the hands of the old-time slave-owner could strike but one back at a time, and but one of God's poor, suffering children felt the stroke. The lash of gold in the hands of the new slave-owner falls not upon one slave alone, but upon the backs of millions; and among the writhing, tortured victims, side by side with the poor and the ignorant are to be found the well-to-do and the educated. The power of the new slave-owner does not end when the ordinary day laborer bends beneath his rule; it reaches out still further and controls the mechanic, the farmer, the merchant, and the manufacturer. It dictates not alone what the price of labor shall be, but regulates the price of money as well. This new slavery counts among its victims servants of the State who have been chosen by the people to execute a people's will. Not alone does it control the legislator at the State Capitol, but in the halls of our national Congress you will find its most willing, cringing slave. It reaches out even further, and holds in its iron grasp the judge upon the bench; not that alone, but it has the power and does confer the judicial ermine upon its most subservient creatures. Do I overestimate its power? Have I made a single misstatement? If my word is not sufficient, turn to the pages of the history of to-day—the public press—and you will find the testimony to prove that what I have said is true. Evidence in abundance can be adduced to corroborate every statement made by the press."

This is simply the rant of Dennis Kearney—a lot of bad language which, when uttered for the first time by the California blatherskite, brought large crowds of people together, but did not hold them together because it had no cohesion and contained no thought. After Mr. Kearney had had his say once at any particular place he was not wanted a second time, and so he fell back into obscurity, as Mr. Powderly will after a little. For the present, however, he stands as the spokesman and leading representative of the most numerous organization of wage-workers in the country. For this reason only it is necessary to make a serious matter of what he says in public, for what he says reaches a great many ears. The text of the discourse is that the condition of wage-workers, as a whole, in this country is worse, far worse, than that of slaves generally under the labor system that prevailed in the South before the war. This statement was made in a city where slavery had existed, and in the hearing of some who had been themselves slaves. If it were to be taken as a true statement, it would follow logically that it would be a considerable step towards improvement to reëstablish slavery, and not confine it to the colored race, but to extend its ameliorations to all who are now smarting under the heavier "lash of gold." At all events, if slavery were still in force, and if it embraced in its scope all wage-workers irrespective of color, it would not be worth while for them to change from that system to the present system, according to Mr. Powderly. These statements were made with apparent seriousness to a large assemblage of people no one of whom would consent to be a slave under any circumstances, every one of whom would fight to the death and lose the last drop of his blood rather than enter the state which Mr. Powderly pictures as preferable to the present condition of the day laborer—and not the day laborer merely, but "the farmer, the merchant, and the manufacturer" as well. We have certainly fallen upon evil times if Mr. Thurber and Mr. John Sloane, as well as their employees, would be better off working as field hands on a plantation in Cuba than in their present suffering and degraded condition. Having drawn this picture, the General Master Workman exclaims, in rhetorical triumph, "Have I made a single misstatement?"

It is easy to foresee the early downfall of a leader who makes his organization an object of common ridicule. After hearing Mr. Powderly, no friend of the Knights of Labor (and they have some friends among the intellectual classes) can follow the proceedings of the order under his presidency without a deep sense of humiliation.

CHAIRS OF JOURNALISM.

WE receive nearly every week an application from some young man either in or out of college, for advice or instruction as to the best manner of obtaining admission to the profession of journalism and of succeeding in it. To most people, young or old, indeed, the process by which a man becomes a journalist is, as it often is to the man himself, a great mystery. Everybody knows how to become a lawyer, or doctor, or clergyman. There are settled courses of instruction to be followed, settled examinations to be passed, certain tribunals from which certificates of fitness are to be obtained. But to the world at large the exact methods by which a man gets into a newspaper office and becomes an editorial writer, or news editor, or reporter, are more or less obscure, if not altogether unknown. So that a young man who finds that he is a fluent writer, or that he is fond of politics, or that he shrinks from the drudgery and penury of the earlier years of law, or medicine, or divinity, or who longs to possess at once privileges of criticism which in other callings only come with eminence and seniority, and who thirsts for the excitement which always seems to be connected with the collection and distribution of news, is very apt to be extremely puzzled to know what to do in order to start on a journalistic career.

When in this state of mind, if his journalistic ambition is more than a passing fancy, and some chance does not fling him suddenly into some other calling, he is very apt to write to an editor whom he thinks successful, to ascertain where the gates of journalism are and what the password is. The answer he gets is generally the same—that to be a journalist he must go to work at journalism; that he must discard the notion that his college degree is of any use to him, and produce a keen nose for news, and a great capacity for writing vigorous, spicy, crisp editorial articles. In the country districts, he is probably advised that the best way of beginning an editorial career is to become a practical printer, like Horace Greeley, and learn, through work at the case, to compose the ringing articles and the pungent paragraphs, and arrange the news items, and answer the correspondents, and concoct and display the headlines. But after he has heard all this he is as wise as ever. It seems clear to him that to become a newspaper man, he must get into a newspaper office, and he has never heard of a newspaper office to which young men are admitted without pay as students, as in law offices. He knows that no newspaper office will take him in any capacity unless he can render some service worth paying for, and how can he render any such service without having experience in what he understands to be "journalism"?

It is the existence of this long-felt want which has led to those oddest of modern scholastic phenomena, the "Chairs of Journalism" and lectures on Journalism, which some of our colleges have, in a spirit of progress, lately started. The resemblance of these chairs to panaceas in medicine is very striking, for they undertake the impossible at very low rates. People laugh a good deal at the omniscience of editors, but this is not because editors need not know everything, but because they do not. There is really nothing a journalist does not need to know. Every professor in every college is actively engaged in preparing all the students in his charge to be journalists. In a newspaper office hardly any kind of knowledge is superfluous, or fails to be called for

in the course of the year. No journalist can ever say, as men in other callings can say, that it will do him no good professionally to read this book, or master that subject, or learn this language. Of this the journalists themselves are well aware, and what amuses the public is the frantic efforts they make to seem as wise and well informed as everybody knows they ought to be, but are not

A journalist, for instance, ought to have a good, forcible, and clear English style, but all the help that he can get from any professor in acquiring this he gets at college from the Professor of Rhetoric and English Literature. He ought to be a strong and lucid reasoner, but all that instruction can do to make him such is done by the Professor of Logic. He ought to know all the history and political economy and biography and mental philosophy, science and art and literature, which anybody knows who is not a specialist. But it is the business of colleges to teach these through a dozen chairs. Any one professor who proposed to teach them all would be justly treated as a charlatan. In short, a man cannot be too well or widely educated for journalism. All knowable things are his field. An ignorant journalist is a very common thing, but it is always an absurd one. A wicked journalist, too, is a very common thing, but it, too, is absurd, because he preaches so much morality, and condemns so much immorality, and so stoutly defends the social virtues, and talks, as Mill has remarked, so wonderfully like a Hebrew prophet.

Journalism, of course, like all other callings, has its peculiar and technical or practical part; but this is really a small and purely mechanical part, and has to be learned in a newspaper office, just as practice has to be learned in a law office. By far the larger part of the skill of the news editor and reporter, as well as of the editorial writer, is moral and intellectual; and the part that is not moral and intellectual, but mechanical, cannot be communicated by lecturing. It has to be learned by doing. Nobody can show a man how to be a good collector of news, for instance. Capacity in this direction is mainly constitutional. It is a mixture of energy, curiosity, industry, working under the guidance of experience—for it is experience, after all, which tells a man what is news and what is not, and what the relative and absolute importance of any particular piece of news is.

If we consider for a moment what the faults most commonly imputed to journalists are, we shall still more clearly see the folly of setting up a chair in college specially devoted to teaching aspirants to avoid them. It is said that journalists are, in collecting and publishing news, reckless whether it is true or false, or whether it causes pain or damage to innocent people; but against this vice every young journalist ought to be fortified by his professor of moral philosophy. It is said also that they are careless and slangy in their English composition; but their professor of rhetoric ought to have looked after this. They are accused of writing a great deal on subjects which they do not understand or only understand imperfectly, but all college professors teach thoroughness and accuracy. They are accused, when cornered in a discussion, of escaping by covering their adversary with abuse, in order to divert attention from their own discomfiture; of accusing a man who denies one of their charges of something new, so as to break the effect of his denial; of refusing to correct gross or distinctly proved mistakes, in order to preserve an appearance of infallibility; of carrying on their business fraudulently by lying about their circulation, about the hour and day on which their paper is published, by giving fabulous accounts of the wisdom, goodness, and shrewdness or luck of its own editor, and equally fabulous accounts of the stupidity, ignorance, and dishonesty of other editors; by stealing despatches and reports from other papers and producing them as their own; by inventing and selling as genuine, bogus interviews and narratives about persons, places, and things; by hiring at high wages correspondents and reporters noted for their mendacity and skill in coloring and distorting, and retaining them in their service after their dishonesty has been exposed. But every one can see at a glance that a professor of journalism is not needed to put neophytes on their guard against these forms of professional vice. This work begins, or ought to begin, at the journalist's mother's knee. It is continued in the school and in the ordinary college courses in ethics and jurisprudence. It is contained in all denunciations directed against adulterations in provision trade, against the forgery of pictures, against "bishoping" horses' teeth, "deaconing" of baskets of fruit, and making false representations to mercantile agencies, and selling brass watches for gold. In short, the well-educated man who wants to be a journalist, and does not see the joke of a chair of journalism, may feel sure that he is wanting in one of the essentials of success, namely, a sense of humor.

A PARLIAMENTARY REVIEW.

LONDON, September 23.

THE brief session of Parliament has afforded little opportunity for Ministers to show their qualities either in business or in debate. The burthen of work has fallen upon Lord Randolph Churchill, as leader of the House of Commons and as Finance Minister, though in the latter character he has only had to pass Mr. Gladstone's estimates. The light-hearted dealing of his youthful inexperience with the Irish danger suggests a realization of the prophecy of the time when the sucking child shall play on the hole of the asp, and the weaned child shall put his hand on the cockatrice's den. But the millennial period when these baneful creatures shall be harmless and allow of these liberties, has not yet arrived, and the Irish asp is as venomous and threatening as ever. Lord Randolph is not a juggler skilful enough to have extracted its poison bag, or to have made it dance to his music. He cannot be said to have proved his capacity to lead the House of Commons. Neither, on the other hand, can he be said absolutely to have shown his incapacity. The experiment is still going on; the term of probation is not yet complete.

Lord Randolph's strength and temper, or, to express in one word the two aspects of the same phenomenon, his nerves, have occasionally given way. But the same thing, too, may be said of every one who has held the position which he now fills. Lord Palmerston, who became leader of the House of Commons when he was over seventy, and who swayed it in extreme old age with paramount authority, spread consternation among his friends and excited indignation among his opponents by the blustering and dictatorial ineptitude which he showed before he settled down to his work. Lord Randolph has made strenuous and laudable efforts to subdue himself. There has been something almost pathetic in his resolute decorum. The "I will be good" of a constitutionally naughty boy, who is conscious of his tendencies to bad behavior, and fears that they may prove stronger than he, has been expressed in his language and demeanor. But every now and then the old virus has broken forth. Danton's maxim that the one thing essential in politics is audacity, might suit very well a revolutionary period and the leader of a fourth party, which was also a party of force; but Pitt's doctrine that the most indispensable quality in a Parliamentary leader is patience, must now have its turn if Lord Randolph is to remain where he is. He has climbed to what is practically the highest post in English political life—for a Prime Minister in the Lords is a less important person than the Ministerial leader in the Commons. It remains to be seen whether he will descend with rapid discomfiture.

Next to Lord Randolph, Sir Michael Hicks-Beach has been the most prominent figure on the Treasury bench. The office of Irish Secretary, which until recently was seldom a Cabinet office, and which is still in theory only a department of the Home Office, scarcely ranking above an under-secretaryship, has become now as important politically as the Foreign Office, with which adverse critics of Mr. Gladstone's home-rule scheme might say it threatens to have a closer connection. The curious manner in which, in our English annals, political and family history repeats itself, though with differences as remarkable as the resemblances, is illustrated in the relations of the Hickses. Sir Michael Hicks-Beach is primarily a Hicks, and only secondarily a Beach. The first Sir Michael Hicks was the secretary and confidential man of business of the first Robert Cecil, Earl of Salisbury. The association of the two families in public affairs, renewed in the reign of Victoria, dates from that of Elizabeth. The present Sir Michael has the trustworthiness, the diligence, the exactitude of a confidential man of business rather than the qualities of a Parliamentary leader or a statesman of the first rank. He is the agent of the great man rather than the great man himself. There is something in Sir Michael's manner, grave, reserved, subdued, which suggests the revival in him of this ancestral type of character. Be this as it may, he has acquitted himself very well, so far as he has had opportunity for acquitting himself in any way whatsoever, in the office to which he has now returned, after having held it without a seat in the Cabinet in Lord Beaconsfield's first administration. The Irish members get on better with him than they have done with any previous Irish Secretary with whom they have been in opposition except Mr. Campbell-Bannerman. With Mr. John Morley, of course, they had no quarrel: he was their Chief Secretary. They would as soon have obstructed Mr. Parnell. The uncouth plain-speaking and the ursine roughness of Mr. Forster irritated them, and the rather pedagogic and didactic airs of Mr. Trevelyan, whose manner was that of a man obtrusively long-suffering, prompted a malicious schoolboy teasing. With Mr. "Jem" Lowther they got on better. He was "Jem" Lowther, with a flavor of the Jockey Club and the stable yard about him which the Irish love of sportsmanship relished. Mr. Campbell-Bannerman

had the inestimable faculty of not treating them seriously when they were not serious. "What is the use," one of the Irish members said in explanation of their forbearance, "of trying to badger a man who only puts his finger to his nose at you?"—an expression which must of course be understood in its metaphorical and not in its literal sense. Sir Michael Hicks-Beach does not put his finger to his nose at the Irish members—it is impossible to think of him in such an attitude—but neither does he bite his thumb at them. He is more urbane than Mr. Forster; he treats them more seriously, when they are serious, than Mr. Jem Lowther did, he is less priggish and less consciously a martyr to his own virtue than Mr. Trevelyan was. Though they dislike the policy and the party—until the party shall change its policy—they do not dislike the man.

The elevation of Mr. Henry Matthews to the Cabinet and the Home Office was one of those events which justify Count Smorltork's statement in 'Pickwick': "The word politics surprises by himself." Mr. Matthews had been for a long time out of Parliament; he had not distinguished himself when he was there much more than the average of clever lawyers who take the House of Commons on the way to the bench; no one thought of him in connection with politics, still less office. He was known as a witty and accomplished man of the world and of society, and as a dashing and fearless advocate. Until the debate on Mr. Parnell's Anti-Eviction Bill on Monday, he has had only to answer the incessant questions which are every night levelled at the Home Secretary. The answering of questions pointedly and briefly is apparently the most difficult of Parliamentary arts, if the difficulty is to be judged from the rarity of the acquirement. It is the one accomplishment which Mr. Gladstone has not been able to master. He makes a speech; he answers questions which have not been put; but he is constitutionally unable to say positively "Yes," or, with a distinct negative, "No." Mr. Matthews is succinct and clear in his replies. But until Monday evening what he could do in debate was unproved. He was put up to reply to Mr. Gladstone, and he left only one impression on the House, and that is that he was not afraid of Mr. Gladstone. All criticism was absorbed and swallowed up in the delight and awe of this discovery. There is no other man, probably, in the House of Commons of whom the same thing can be said. M. Gambetta, in the days of the National Assembly, once described M. Buffet as the Minister of perpetual interruptions. Mr. Gladstone, who is impatient of the slightest interruption—whom a sarcastic cheer, a defiant "No," or a sceptical "Oh, oh," which a judicious stage manager, arranging a stage mob, would deem essential to the effect, drives into paroxysms of scolding—is himself incessant in interruption, interjecting not only single words, but whole sentences, into the speeches of other members, shaking his head, gesticulating, and rising from his seat. If he were anybody else but Mr. Gladstone, the wildest Irish member would not be more frequently called to order, and told from the chair that Mr. So-and-So was in possession of the House and must be heard without interruption. Mr. Matthews spoke on Monday, in the midst of a constant fire of exclamations, contradictions, and corrections from Mr. Gladstone, and sustained skilfully the diversion from his main argument which these sallies necessitated. His speech to the House was interrupted by a series of single combats with Mr. Gladstone, Lord Hartington was exposed to the same scarcely warrantable annoyance on the following evening. He is understood to have expressed himself before with some soreness with respect to this practice of Mr. Gladstone. On Tuesday, though he paused and deferentially inclined his head as Mr. Gladstone interposed time after time from the bench which they both occupy, he took no argumentative notice of the interruptions, but proceeded with the tenor of his argument as if they had not been intruded on him. Mr. Gladstone's gestures and looks showed an irritation scarcely capable of being confined to gestures and looks. The rumors of a serious misunderstanding between the two statesmen, with which gossip has for some days been busy, have their origin, I believe, in explanations and remonstrances on this subject. There is no help for it. Mr. Gladstone's great qualities and his petty foibles must be taken together. He will remain what he is to the end of the chapter.

During a financial session the House of Lords has of course been a nonentity. It can only assent to money-bills, for it cannot alter them, and it dares not reject them. In this respect it is simply a court for registering the decrees of the House of Commons. Those persons, and their number is increasing among politicians, who have no theoretical affection for a second chamber, and who, in spite of Mr. Francis Galton and Mr. Darwin, have no great belief in the principle of heredity in politics, but who yet desire to have some security taken against political surprises, have some reason to complain of the treatment which the House of Lords receives. A peer of historic name complained in conversation the other day that the House was becoming more and more a receptacle for the "leavings" of successive governments. Politicians who have failed in the House of Commons are sent to the House of Lords. Every ministry and party sheds its withered leaves there. "I wonder where she'll go to," says the Lyceum *Mephistopheles* of *Martha*, "when she dies; I'll not have her." Lord Randolph Churchill, omitting the preliminary speculation, is believed to have applied the declaration of *Mephistopheles* with emphasis to Sir Richard Cross and Sir Frederick Stanley. The former is now in consequence Viscount Cross, the latter Lord Stanley of Preston. It is easy to understand Mr. Gladstone's treating the House of Lords in this fashion; but it is not so easy to explain Lord Salisbury's motive. To disparage an institution for the sake of adjusting personal claims, or for the riddance of a temporary personal embarrassment, is scarcely a Conservative policy. As a chamber of notables, or superiorities, as a chamber of wealth and privilege, as representing the classes against the masses, a second chamber is on a certain theory defensible, though it would be hard to prove that the House of Lords has any of these characteristics in a marked degree. To convert it, as successive Ministries seem disposed to do, into a sort of constitutional Charterhouse or political asylum for poor brethren, is not the way to prolong its existence or to increase its usefulness.

L. L.

THE EASTERN CRISIS.

PARIS, September 20.

THE state of Europe at the present moment somewhat recalls to mind the epoch which followed the dethronement of Napoleon the First and the Restoration of the Bourbons. The great Continental alliance which is the foundation of the present policy, and which is commonly called the Alliance of the Three Emperors, resembles in some respects what was called in 1815 and in the following years the Holy Alliance. There is a certain sort of vagueness, an awful mystery, in the new alliance, as there was in the great league of kings and emperors who had triumphed over the crowned representative of the French Revolution. But the similitude ends here; the Holy Alliance was essentially conservative and monarchical; it respected all vested rights, it was defensive and not offensive. It had no programme of future changes, it gave no support to the disturbers of the peace, it threatened no sovereigns; it made the treaties of Vienna and thought them perennial. A different spirit is found in the new alliance. First of all, it has excluded the Occidental Powers from the Olympus of the great Powers; it is, in one sense, an Eastern alliance, though the motive power lies in Berlin and not in Moscow or in St. Petersburg. The Eastern question and the questions connected with it are one of its chief objects. If you remove this Eastern question from the subjects which lie at its base, the whole fabric falls to the ground. The necessity of including the Eastern question among the objects of the alliance gives to the latter an active rather than a passive character. Of course, the alliance of the three Emperors is nominally concluded in the interests of peace. The great word Peace is always first pronounced in the meetings of sovereigns and of ambassadors; but the resolutions adopted at such meetings contain often the possibility, we might say the virtuality, of war.

The great, the first interest of Germany, as she is constituted since the last great wars, is the continuation of peace in the west of Europe. Everybody feels that Germany would not lightly compromise the great results which she has obtained. A new war with France would not, if it was successful, add much to what she already possesses; and, if it was unsuccessful, might be the beginning of terrible misfortunes. She has not much to gain and she has much to lose in new warlike enterprises. The leaders of Germany would in consequence be well satisfied with the *status quo*. They know that the work of consolidating the new empire requires time. They do not desire to absorb for the present all the German-speaking provinces of Europe; they are willing to leave something to the future, and to be content with the present. In order to secure the results of the past and to maintain the existing order of things in the west of Europe, Germany has contracted a close alliance with two countries which have not the same passive policy as she has herself just now. Austria and Russia have not the same reasons for being satisfied as the new German empire. They are jealous of each other, and they both have vague and almost endless aspirations. Since Austria has abandoned the leadership of the German States and has become again the "Oesterreich," she looks constantly on the peninsula of the Balkans, she has occupied and virtually annexed Bosnia and Herzegovina, she keeps Servia in her dependence, she extends the network of railways which will soon unite the Hungarian provinces with the Ægean Sea. The ambition of Austria is not noisy, but it is tenacious; it is not comparable to a tempest, but rather to the slow and irresistible influence of a current.

It is not so with Russia. There we see a new people, with all the passions, the inflammability, the versatility, the ardor of youth. One of my friends, who has just visited Russia, tells me that nothing can be more surprising, more interesting to an accidental observer than the state of mind of the Russian people. We can have a glimpse of it in their curious literature, which is just beginning to be known. In the absence of all parliamentary institutions, with the régime of an official or officious press, the thinking minds are tossed in all possible directions, without any guidance, any counterpoise. The sentiment of orthodoxy is deeply mixed up with the monarchical sentiment in the mind of the people. The Emperor is a sort of Constantine; he is the liberator, the hope of the faithful; he looms, in the

eyes of the people, like the great and almost awful figures which are surrounded with gold in the Byzantine mosaics. The communion between the people and the sovereign is still complete; the Emperor may have an absolute power, but he is a representative man, and, in one sense, ceases to be a person. It is a well-known fact that, since the accession of the new Emperor, the Panslavist party has become the ruling spirit of the Empire. And the Panslavist party is, by its essence, I will not say a revolutionary party, but what the Italians would call a party of action. The Panslavists are loyal, but they are not contented, and they are all the more discontented the more loyal they are. I was asking my friend, who has had very peculiar facilities for entering into Russian political circles: "What do they want, your Panslavists?" "They want everything," was the answer. They want Asia, they want Constantinople, they want the Persian Gulf, Persia, Afghanistan—they want India.

For some time it seemed as if the German Chancellor had given Russia *carte blanche* in Asia, on condition that nothing should be changed in the Balkan Peninsula. But the imperial interviews this year have effected a change; the time had come for Austria and Germany to seal again for a new term their compact of alliance. It is said, but merely on supposition, that the German Chancellor had become anxious to substitute for what has been so far merely an alliance of sovereigns an alliance of nations, that is to say, to obtain a regular treaty, in due form, which could be submitted (with the exception of a few secret articles) to the approbation of the Parliaments of Germany and of Austria-Hungary. Time will show if this supposition is correct. It is clear that there would be many advantages in such a treaty: nations are more willing to incur sacrifices for a known than for an unknown object, and the armed peace of the present time is a great sacrifice. Germany would feel more secure if she knew distinctly how far she could count on the help of Austria-Hungary in certain eventualities. It is therefore not impossible that a diplomatic instrument was prepared with a view to forming in Central Europe a combination of forces capable of entering into action in more than one direction.

Russia has never occupied in the alliance the same position as Austria-Hungary; she is not, like Austria, a semi-German Power. She has threatened sometimes to remain outside of the alliance; she has been threatened sometimes herself with being kept outside. At the last moment the difficulties between Russia and Germany have always been settled by a sort of magic power. This year, again, we have seen the same phenomenon. In old times, the name of Poland always worked like a charm; now, Poland has been replaced by the peninsula of the Balkans. It really seems as if Europe was destined to see something similar to the famous partition of Poland. The crisis in Bulgaria has shown very clearly to the world that the German Chancellor is not willing to counteract the plans of Russia in the East.

The kidnapping of Prince Alexander of Battenberg reads like a story of the Arabian Nights. His triumphant return, his submissive letter to the Emperor of Russia, the answer of the Emperor, the resignation of the Prince, all the incidents of this drama are familiar to everybody. The most unexpected part of it has perhaps been the suddenness, and, if I may say so, the thoroughness of the decision of the German Chancellor. Public opinion, not only in Vienna but in all Germany, could not help sympathizing with a brave young Prince, with the conqueror of Slivnitza, with a Prince of Bulgaria who intended to keep Bulgaria for the Bulgarians, and not to be a mere vassal of Russia; but public opinion was immediately made to understand that it was going wrong: that there were stronger interests than the interests of a Prince of Battenberg. The young Prince was sacrificed, and England soon understood that she could find no support in Germany in a campaign in his favor. The English press had been enthusiastic in its praise of the young hero; the *Times* had denounced in the strongest terms the treachery of Russia, its brutality, its ambition. Germany spoke, and the enthusiasm soon faded away; the letter of Prince Alexander to the Emperor of Russia was declared to have been too humble and too servile; it was whispered that something must have given great and perhaps just offence to the Emperor of Russia. In short, England soon understood that she could not all alone begin a Quixotic campaign in favor of a Prince who was given up by Germany.

The question then naturally arose, What price has Russia promised to pay for the sacrifice of Prince Alexander, and for the almost insolent triumph of her policy in the Bulgarian provinces? Bulgaria lies prostrate at the feet of the Emperor Alexander; practically, the new Bulgaria, including Western Rumelia, becomes a Russian dependency. The Treaty of Berlin is replaced by the Treaty of San Stefano. The Porte, receiving no support from anybody, seems to understand that the best thing she can do is to confide in the generosity of her old enemy. Why has the German Chancellor allowed Russia to regain so rapidly, so completely, in the East what she seemed to have lost? The recent events have done more for her prestige in the peninsula of the Balkans than the battles before Plevna. All diplomats will tell you "il y a quelque chose"—there is something hidden in this neutrality and complacency of the German Empire. It is quite conceivable that the German Chancellor should try to remove all the difficulties from the path of his aged sovereign; that he should have an almost morbid desire for peace. Still, he is not a man who ever forgets the interests of the country, and the predominance of Russia in the peninsula of the Balkans has always been deemed a danger in the eyes of all German patriots.

The mystery will some day be unravelled. For the present, Prince Alexander of Bulgaria will be sacrificed; the German Empire will concentrate all its forces, so as to be well prepared against all direct dangers; it will not offer any offensive alliance to England, in the interests of the Ottoman Empire. If England will renounce her inactivity, take an energetic attitude, and begin again in the Mediterranean basin a Palmerstonian policy, she must act at her own risks; the German policy, as defined by the press inspired by the German Chancellor, is for the present essentially defensive. Under such conditions, it is very doubtful if even a Conservative Cabinet will risk anything in the cause of the Treaty of Berlin. After all, the interests of Austria in the valley of the Danube and in the peninsula of the Balkans are greater than those of England. Prince Alexander of Battenberg is not an English prince; England also can remain on the defensive, and await the development of events. She is out of the great alliance of the Emperors, and must have the benefits, if she have the inconveniences, of isolation.

ANTI-CLERICAL AGITATION IN ITALY.

ITALY, September 23, 1886.

"ROME ever does her duty with honor, solemnly commemorating on the 20th of September the anniversary of the completion of our unity and national independence. With all Italy I render homage to the memory of my august father and to those who, by dint of such immense sacrifices, attained that intangible conquest which is to-day intrusted to our wisdom, our patriotism, our fidelity to the principles on which are based Italian resurrection (*risorgimento*). . . . The Italians have proved once again that they feel and comprehend the supreme post assigned to Rome."

This telegram of King Humbert to the Mayor of Rome—a solemn confirmation of his father's famous speech on this sixteenth anniversary of the entry of the Italian army through the breach made in Porta Pia into Rome, capital of United Italy—has set the royal seal of approbation on the anti-clerical agitation which, with unprecedented unanimity, now stirs Italy from the Mediterranean to the Adriatic and from the Alps to Sicily. I use the word unprecedented deliberately. Never in the most hostile of times of Pio Nono did the great Moderate party abandon the hope of a reconciliation, at some more or less distant period, between the Church and the State. Cavour's motto, "A free church in a free state," long remained their ideal, even when Sedan deprived the Pope of the French bayonets which alone sustained the temporal power by the destruction of the Roman republic in 1849, and the chassepôt "miracles" at Mentana in 1867. The laws on the guarantees passed by the Italian Parliament prove how sincere and heartfelt was the desire for reconciliation. When, at Pio Nono's death, Leo XIII. succeeded, the Moderates believed that the hour of triumph was at hand, and, despite his present acts, there can be no doubt that the new Pope not only devoutly desired it, but was conscientiously and intellectually convinced that such a consummation would insure the prosperity and stability of the Church itself. How well I remember his ascension, when, preparations having been made for him to bless the populace from the outer balcony of St. Peter's, all Rome was gathered in the piazza in trembling expectation. "The good old days of 1846" seemed to have returned for the veterans who remembered the enthusiastic hopes of Italy, united in peace and liberty by the blessing and embrace of the supreme Pontiff. Thoughtful Liberals trembled. "We shall have material without moral unity," said they, "if there be peace between the Vatican and the Quirinal in Rome." Half an hour passed, and on the balcony no Pope appeared. Then (I happened to be with a devout Catholic) the *initiated* were told that those who would be blessed must enter the precincts of St. Peter's. The Jesuits had won the day.

The triumph, however, was not theirs. Liberty of conscience was the victor. Notwithstanding this first check, the Moderates and Leo himself hoped on. Concession after concession was granted by successive governments—all, remember, belonging to the Left, or to the so-called Liberal party. While all anti-clerical and anti-monarchical demonstrations were punished, the hostile manifestations of the clerical party were left unreproved, nay, even protected by the soldiers and the police from the radicals. Coarser insults were never launched against the King of Italy during Pio Nono's reign than by the clerical press during these latter years, but press trials against Catholic papers are rare as white flies, whereas the slightest offence by the radical press against the Vatican has been punished by imprisonment, fines, and sequestration. Religious processions rigorously prohibited by the Rattazzi law of 1867 have cropped up in large cities and small villages all over the peninsula. Catholics, creeping into the municipal and provincial councils, have restored the catechism in the common schools, where, by the vote of liberal municipalities, it had been excluded. Young girls have been forced to take monastic vows, despite the prohibitory law. So long, nevertheless, as the Italians regarded these manifestations as simply religious, no violent reaction set in; but now that the Jesuits have regained the upper hand, now that it is proved that Leo XIII. is entirely in

their power, now that peace between Germany and the Papacy is concluded and that a fresh crusade for the restoration of the temporal power seems the order of the day, Italy is on the defensive, from the King to the artisan, from men of the ten to men behind the plough. For (and this is a novel feature in Italian history) the power of the priest, if not destroyed, is weakened to an inconceivable extent among the agricultural populations. Once the story of Dives and Lazarus could be spent as current coin among them; but now that peasant boys attend the common schools in the winter months and often evening classes in the summer, now that Socialistic orators pervade the country, while the hinds still cling to their belief in heaven and immortality in reward for good deeds, and in punishment for bad ones, they have very clear ideas of their right to a portion of the good things in this world, and have firmly resolved to make common cause with those who sanction and maintain this right.

The salient feature of the present agitation is, as I said at first, the fact that the chiefs of the Moderate party, that is, the ultra-conservative, monarchical, church-and-state party, are so alarmed that, being first patriots and then Catholics, they do not hesitate to express their fears and declare themselves ready for defensive warfare. First and foremost in such a question as the present stands Ruggiero Bonghi, whose remarkable article in the *Nuova Antologia*, "Leo XIII. and his Latest Acts," ought to be translated entire to give full force to his previsions. No one hoped more than he did from the new Pope, no one has so constantly expressed his admiration for his talents and his virtues, or manifested such respect for the "Pontiff as Pontiff, elected by the sacred college and by the will of God." After reviewing the state of affairs between Germany and the Papacy, Signor Bonghi writes:

"If this does not harm the kingdom of Italy, it forces that kingdom to be on its guard, all the more because the Pope's policy beyond the Alps is quite a different thing from his policy on this side of the mountain frontier. Nay, the gentler it is there, the bitterer it becomes here. In fact, in all the Pope's conduct it is difficult to discover a single sign of reconciliation with Italy, of acceptance of the conditions which the kingdom has created for the Papacy. Leo XIII. does not pour out on the kingdom the wordy torrents of Pio Nono, but his animus towards it is in no wise changed, and, as the years pass, this becomes ever clearer. If we could at first indulge in some illusions, it is difficult to do so any longer. The kingdom as it is constituted and as alone it can be constituted cannot allow the Pope, as sovereign, to possess a single *crumb* of Italian soil; but the Pope does not conceive now, any more than he did in the past, of the independence of his spiritual power unaccompanied by some span of territory of his own, and he no more accepts the principles of the law of guarantees to-day than did the Roman Curia the first day that it was promulgated fifteen years ago. Among the reasons that influence the Pope's transalpine policy stands foremost the desire to create for himself a favorable opinion among foreign governments and foreign peoples which shall support him in a future revindication. He is convinced that some day or other the impossibility of the free exercise of spiritual power apart from temporal sovereignty will be made so clear to governments and peoples that it will be restored to him by common accord. This conviction of the Pope and the Curia is as strong to-day as in times gone by."

Later on, Signor Bonghi admits that the Italians are justified in regarding as a sign of obstinacy the brief of June 13 in favor of the Jesuits. He regards "the consultation demanded of the consistorial advocates as to the right of the Italian Government to dispose of the ecclesiastical benefices" as a sign of "evil disposition (*malanimo*) and of hostile intentions against the Italian Government. . . . It is clear that the Pontiff will not defile himself (*imbrattare*) with this Government and the people which has constituted it. It is a fresh declaration that he regards it as a leper—a leper so doomed that not even charity can compel a priest of Christ to touch it and cure it; and this seems to me the most disheartening, although the least noted, of the Pope's acts."

After such words as these from such a stanch and long-enduring champion of the Papacy, in as far as its existence was compatible with the absolute unity and independence of Italy, even the King's telegram glides into the shade. While Queen Margaret is as devout a Catholic as any of her regal race, and does her utmost to educate the future heir to become a champion of the Holy See, King Humbert has quite other convictions, hopes, and aspirations. Hence his affirmation of the "intangible conquest of Rome, capital of Italy," while it gratifies, does not surprise.

Second in importance to Bonghi's article comes the speech of Silvio Spaventa on the temporal power, at Bergamo, on the 20th instant. That arch-Moderate and worshipper of Cavour, in an exhaustive speech, demonstrates that "Cavour's ideal was impossible of realization—nay, more, that its failure was Italy's victory; that in the irreconcilability of the Papacy lies the future prosperity of Italy; that the Church to-day is as free as liberty of conscience can demand; that any sort of concession, any failure in the execution of existing laws, would be fatal not only to intellectual liberty and to morality, but to the material existence of the new kingdom." I must confess that when I first read Bonghi's article and Spaventa's speech, I turned to see whether the former was not signed "Carducci" and the latter spoken by Aurelio Saffi! Of course Saffi and every surviving Liberal, Progressist, Radical, Unitarian, Federalistic, and Socialistic patriot has done his duty and said his say in each of the hundred cities and many hundred villages where this year the celebration of the 20th of September assumes the form of a new plébiscite. Most remarkable, perhaps, is that of Bologna, where Moderates and Clericals used to unite against the Radicals, and where now Moderates and Radicals are uniting their forces against the Jesuits. Venice, too, has come out strongly, and the Venetians are decidedly a religious people; but there in starry light gleamed Victor Emmanuel's pledge ("To Rome we came, in Rome we remain"), and in the grand gondola procession, like globes of fire, shone the names of Fra Paolo Sarpi, Savonarola, Arnaldo di Brescia, Galileo, Campanella, with the more recent victims—Monti, Tognetti, Locatelli—of papal tyranny and intolerance. Apropos of Locatelli, Pio Nono's latest victim: his bones being found by accident outside the gates of Rome, where they were hidden after his execution, the Clerical municipality of Rome attempted to sequestrate them, but the attempt was frustrated, and the "commemoration protest" (as the celebration of the 20th of September was called in Rome) was in itself a momentous expression of the universal national will.

There is no fear in Italy of a no-Popery agitation being got up such as we have seen twice in England. The live-and-let-live policy in religious matters most mercifully prevails—would to heaven the same tolerance were observed in politics! The question is not in the least whether Tizio, Caio, or Sempronio is Catholic, Protestant, Jew, or freethinker, but whether the Jesuits are to take possession once more of the national youth, male and female; of national palaces, colleges, and of many of their old tenements, there to store, increase, and put to use their gigantic wealth, so that when the hour for revindication strikes they shall have an organized, equipped, well-disciplined army to officer such recruits and conscripts as meanwhile they may enroll. Signor Tajani, the present Minister of Grace and Justice, has commenced with a few stringent acts—has taken possession, in the name of the State, of several edifices retained illegally by religious orders in Florence; has given orders, already executed, for the eviction of some eighty old and newly-made nuns from the grand edifice of the Sapienza in Naples; and has at the same time issued a circular to prefects touching the violation of the law by the admission of fresh recruits to the convents and monasteries. So far so good, but without a rigorous enforcement of every past and present law against the Jesuits, such half measures will serve only to irritate honest Catholics and to encourage the audacity of the Curia and the Jesuits to defy the King, the Government, and the people of the new kingdom of United Italy, against which, in a European war (which, alas, looms on the horizon), they calculate openly to find allies where but yesterday were arrayed against them violent and, it seemed, implacable foes.

Correspondence.

A REFORM ISSUE.

To the Editor of The Nation:

Sir: A letter from me can hardly contain aught but a thrice-told tale; but illustrations of a principle are always in order, and the appeal which "V." sends from Chicago is exactly in point. There is a general disposition to make financial, and especially tariff, reform the basis of future political effort, but the difficulty is to get it out of the stage of generalities into that of definite action. The progress from the close of the war to the present time has been absolutely nothing, and the outlook is far from encouraging. It is conceivable that every member of Congress might be elected on a distinct basis of tariff reform without our getting one whit nearer to any practical result. There is a vast multiplicity of interests, each of which might be ready to sacrifice all the others, provided itself is left untouched, but will support all the others sooner than give way itself. We may even go further than this, and assume that each might be willing to make a considerable sacrifice provided any permanent policy could be arrived at which could be shown to promise ultimate general benefit. No such policy, however, can possibly emerge from the committee-rooms. The work there is a chaotic struggle of opposing interests; it is always treated in detail and never as a whole; always from the point of view of localities and never from that of the nation. There is no public discussion and no focussing of the light of experience. Every year the subject is taken up *de novo*, and even were a bill passed there would not be the slightest security that it would not be pulled to pieces at the next session. Apparently the only thing that could be accomplished by general public opinion would be a horizontal reduction, and it is more than probable that, if carried to any considerable extent, it would produce such immediate and severe disaster that it would be repealed in a panic, and the suffering have all been incurred to no purpose. In fact, our high tariff is so interlocked with our system of currency that it would be extremely dangerous to take violent action as to one without having our eyes open as to possible consequences chargeable to the other. The finances need to be treated as a whole, a process with which the committee system is absolutely incompatible.

The instances of "home rule" and "land purchase" in Great Britain adduced by "V." have in one sense nothing to do with tariff reform, but in another they are so perfectly apposite as to be

worth considering. In each case, besides the general principle, there is a definite measure of detail, brought forward by Mr. Gladstone with the whole weight of his personality; and the last election turned upon those particular measures *plus* Mr. Gladstone. The country has pronounced against both, and now mark what follows. The subject is not thrown into Parliament to see whether that body can agree as to some alternative measure for which they are just as incompetent as the mass of the electors, so that the result would only be to excite passion both in and out of Parliament to a white heat. On the contrary, the new Ministry have to show that they can govern Ireland without any such measure, and, if not, what else they propose. The effects of both courses of policy will be thoroughly discussed in and out of Parliament, so that if ten, twenty, or fifty years hence a settlement is arrived at, each year and each measure and each Ministry will have contributed a share towards working it out, while a whole generation of statesmen will have been tried as by fire.

Now, let us suppose a party platform with a resolution as follows:

"We believe that the tariff as well as the finances in general should be placed in the hands of the Secretary of the Treasury, subject to his responsibility to Congress and the country; and that, with this view, he should be called upon to submit in person at the opening of the session a measure in full detail for the adjustment of the tariff, and to take part in the public discussion of the same."

By such a measure and the discussion upon it, the public would get some real idea of the qualities of the Secretary and of individual members, and of the merits of the case. Suppose that, after discussion, Congress should reject the Secretary's plan. We should, at any rate, be no worse off than we are now. A year of discussion by the country which should turn on this particular measure, as well as the degree of ability shown by the Secretary and by members, would so inform that official and Congress that they would have a much better chance of coming to terms at another session. But suppose a second rejection. Before another session a Presidential election would intervene. If Cleveland were elected, but with a still hostile Congress, it would mean that he must change his Secretary, and two years of public discussion would furnish a much better guide to a choice than whether a particular State or section considers itself entitled to be represented in the Cabinet. If the new Secretary could make no headway, the next Congressional election would determine whether the country preferred to go on in anarchy or to make Congress submit.

It may be said, "But it would take years to settle anything in this way." Well, we have spent twenty years already, and have done absolutely nothing, and there is no apparent prospect of doing anything for twenty more, unless by a jump out of the frying-pan into the fire. Two or three years would be well spent in finding out what the country does want or whether it wants anything.

"V." asks for discussion. It is much to be wished that he or yourself or somebody would leave the generalities of free trade and protection, and point out something practical to be done in the particular crisis in which we are placed, instead of merely urging the election of Congressmen in accordance with our general views, and then blindly trusting that somehow or other something will be evolved. G. B.

Boston, October 2, 1886.

A LICENSE PLAN.

To the Editor of The Nation:

Sir: Feeling convinced that prohibition does not prohibit, and that the license system fails to check the evils connected with the liquor traffic, and having little faith in the efficacy of the anti-saloon scheme, I ask leave to present to your readers the following plan for regulating the sale of intoxicating liquors, whether for medicinal, scientific, or social uses.

In each ward or school district let one license be granted to the highest bidder in that ward or district, the licensing board having power to reject any bid on account of the character of the applicant or his proposed site of location. For the amount of his bid let the successful bidder open one place of business, and also have the privilege of opening additional places, on the payment for each new one of a sum equal to the amount of his bid, the authorities having in every case the same power of refusal as above.

In this way the number of liquor-shops and dealers would be greatly lessened, competition, the life of the liquor as well as of other traffics, would be reduced to a minimum, responsibility would be centred, and the enforcement of regulative laws rendered possible. In short, most of the defects of the present loose license system would be remedied. The tone of the saloon, the quality of the liquor sold, and the respectability of the seller would be greatly improved.

And perhaps not the least important result of the plan here outlined would be to array the liquor-dealers on the side of the law. Their self-interest could be depended on to prevent unlicensed individuals from selling, and also to detect any of their own number violating the law. For I should have it that a single violation of the law by a licensed dealer should be punished by forfeiture of license, and thus the loss of one would be the gain of the rest.

Edward T. Lee.

Cambridge, October 2, 1886.

THE PEABODY STRIKE.

To the Editor of The Nation:

Sir: I wish to correct an impression which, judging from your editorial in the issue of September 30, referring to the Massachusetts State Board of Arbitration, you apparently entertain concerning the responsibility of the Knights of Labor for not making an effort to settle the tannery strike at Peabody and in this city by the means above named.

The fact is, the manufacturers have openly announced that they will not consent to arbitration; that the Knights of Labor will not be recognized by them as far as any compromise is concerned; and that any man who wishes the trouble were over, to render it so in his own case, has only to leave his comrades to get out of it as best they may, and make an individual bargain with his future employers.

I have no sympathy with unjust strikes or boycotts, but in this instance the blame for the long continuance is not all on one side. W.

Salem, Mass., October 4, 1886.

ECONOMIC SCIENCE AND CHRISTIAN MORALITY.

To the Editor of The Nation:

Sir: Not having read the work of T. Edwin Brown, reviewed in the *Nation* of September 30, I have no means of judging as to his success or failure in attempting to show a relation between economic principles and Christian morality. As to the fact of such a relation, much depends upon what is required as a sufficient basis to establish a relation. My own views may not be of much consequence, but will not occupy much space.

From a Christian standpoint, there is just as much of a "relation" between the two as is involved in their being coexistent parts of a thoroughly harmonious whole. Of course this is intended to apply only to what is true in each. Neither economic science nor Christian morality can be held to account for the ignorance and superstition which masquerade in their garments.

Finding fault with general laws which cannot bend to suit individual cases is a weakness not of the clergy or Church, but of human nature. The principle which causes the kind-hearted Christian philanthropist to distrust economic science because some honest, hard-working man is made to suffer by its invariable laws is the same principle which, with different environments, causes the anarchist to fling his deadly bomb at some neighbor who gains a competence while he goes cold and hungry. The trouble with both is, that they want the whole universe so attuned as to harmonize with them, instead of bringing themselves into harmony with it.

What is needed to remove prejudice against government in accordance with the fundamental principles of economics, out of the Church as well as in it, is a knowledge of what those principles are. Arouse a popular interest in the question, and the solution will be forthcoming.

W. H. Johnson.

MR. JONAS AND THE WISCONSIN DEMOCRATIC NOMINATION.

To the Editor of The Nation:

Sir: Permit me, in the interest of truth and in justice to myself, to correct certain statements made in the *Nation* of September 23, and which I had heretofore overlooked, concerning the proceedings of the Wisconsin Democratic State Convention. I desire to say, firstly, that I am not and never have been a Socialist; on the contrary I have always vehemently opposed all Socialistic doctrines, advocating simply the undeniable rights and just interests of the workingmen as American citizens. Secondly, that I positively declined to be a candidate for any position before that Convention. Thirdly, that the circular distributed without my knowledge and against my desire did not "demand" my nomination, neither did it advocate the same on account of any "Socialistic tendencies," which have no existence.

I am, sir, most respectfully yours,

Charles Jonas.

Racine, Wis., October 1, 1886.

THE TILDEN BEQUEST.

To the Editor of The Nation:

Sir: Recent correspondents of yours, in advocating a limited-circulation scheme for public libraries, it seems to me, have hit upon a method which would relieve many men of research unable to obtain access to a scarce work. For my part I have for years been anxious to make use of the report of Lieut. Allen (the commander of the military escort which accompanied Mr. Schoolcraft) of the expedition to the sources of the Mississippi in 1832. The State Historical Society's Library never contained it, nor the State Library, and though I have watched second-hand catalogues for years, I have never seen it for sale. Under such circumstances I have naturally had to do without it, for a poor man cannot pay for journeys to other cities for the sake of reference to a single book, though he could make pecuniary deposit for the safe return of any such scarce book he might need for use in getting up an article which would be incomplete without certain facts contained in the author required.

Alfred J. Hill.

St. Paul, Minn., October 1, 1886.

CURIOSITIES OF TRANSLATION.

To the Editor of The Nation:

Sir: If not too late, I would add my offering to the contribution of curious and incorrect

translations which appeared in the *Nation* a short time ago.

The translation is one of Kurtz's 'Church History,' by J. H. A. Bomberger, published in Philadelphia in 1861. In vol. ii, page 261, the following passage on Zinzendorf occurs:

"He spoke equally disrespectfully also of the miserable fisherman's, shepherd's, and visitator style, of the classical obscurity and Rabbinical *shoulderminology* of the Holy Scriptures."

On refering to the original it appears that "shoulderminology" is a translation of "Schulterminologie." What the translator supposed the word meant I cannot conceive.

THOMAS L. COLE.

STAATSBURGH, N. Y., September 27, 1886.

Notes.

FROM the *Publishers' Weekly* we take the following selection of further fall announcements. *Cassell & Co.*:—Certain large and important illustrated works, viz., 'American Art,' a folio of twenty-five etchings, with text by S. R. Koehler; Sir Walter Scott's 'Christmas in the Olden Time,' with designs by Harry Fenn and other American artists; 'Shaksperian Scenes and Characters,' and 'Songs from Shakspere.' Also, 'A Mother's Song,' by Mary D. Brine; 'Electricity in the Service of Man,' from the German of Dr. A. R. von Arbanitzky; 'An Introduction to the Study of Robert Browning,' by Arthur Symons; 'The Twilight of Life: Words of Counsel and Comfort for the Aged,' by John Ellerton; and a 'Beecher Book of Days.' *S. E. Cassino*, Boston:—Thackeray's 'The Mahogany Tree,' with photogravures from designs by F. T. Merrill; and Dickens's 'Christmas Carol,' also illustrated. *Cupples, Upham & Co.*, Boston:—'Our Eyes, and How to Take Care of Them,' by Dr. H. W. Williams; and a 'Life of Mrs. Barbauld,' by Grace A. Oliver. *Dodd, Mead & Co.*:—D. G. Rossetti's 'The Blessed Damozel,' illustrated and adorned by Kenyon Cox. *Estes & Lauriat*, Boston:—Owen Meredith's 'The Earl's Return,' illustrated with photo-etchings and woodcuts after drawings by W. L. Taylor; Hood's 'Fair Ines,' illustrated by W. St. John Harper and W. F. Freer; and a limited sumptuous edition of George Eliot's complete works, illustrated. *Harper & Bros.*:—The following notable illustrated works, viz., Goldsmith's "She Stoops to Conquer," with E. A. Abbey's and Alfred Parsons's designs; Charles Dudley Warner's 'Their Pilgrimage'; 'Happy Hunting Grounds,' by W. Hamilton Gibson; 'Home Fancies and Heart Flowers,' by Mrs. M. E. Sangster (the verses) and Frank French (the vignettes of child types); and Reber's 'History of Mediæval Art,' translated by J. Thacher Clarke; also, 'Ancient Cities of the New World,' by Désiré Charnay; 'Mexico of To-day,' by S. B. Griffin; 'Retrospections of America,' by John Bernard, an English actor; 'A Plain Man's Talk on the Labor Question,' by Prof. S. Newcomb; 'Outlines of International Law,' by G. B. Davis; and a 'Greek-English Lexicon of the New Testament,' enlarged by Prof. J. H. Thayer, of Harvard. *D. C. Heath & Co.*, Boston:—'How to Teach Reading, and What to Read, in the Schools,' by Prof. G. Stanley Hall; a series, "Reading for Home and School," to be edited by Prof. C. E. Norton, of Harvard; 'Studies in Greek and Roman History, 1000 B. C. to 476 A. D.,' by Mary D. Sheldon; and 'An Introduction to the Study of Browning's Poetry,' by Prof. Hiram Corson, of Cornell. *J. B. Lippincott Co.*:—'The Book of American Figure Painters,' with thirty-two examples, the text being by Mrs. M. G. Van Rensselaer; and Buchanan Read's 'The Closing Scene,' illustrated. *D. Lothrop & Co.*, Boston:—'Idylls and Pastorals,' by Celia Thaxter, twenty-four poems with as many photogravures by leading American artists; 'Youth in Twelve Centuries,' again with twenty-four photogravures, of racetypes; and 'The Land of the Czar and the Nihilist,' by the Rev. J.M. Buckley, D.D., illustrated. *A. C. McClurg & Co.*:—Victor Hugo's 'On Shakspere,' translated by Melville B. Anderson; 'The Home Life of Great Authors,' by Hattie Tyng Griswold; 'The Standard Oratorios,' by George B. Upton; and 'The Aztecs: Their History, Manners, and Customs,' from the French of Lucien Biart, by J. L. Garner. *Roberts Bros.*, Boston:—'The Procession of Flowers in Colorado,' with twelve water-color drawings by Alice A. Stewart; 'Sonnets and Lyrics,' by the late Helen Jackson; 'The Last Days of Marie Antoinette,' by Lord Ronald Gower; 'Margaret of Angoulême, Queen of Navarre,' by A. Mary F. Robinson, in the "Famous Women Series"; 'John Jerome: His Thoughts and Ways,' by Jean Ingelow; 'Mabel Stanhope,' by Kathleen O'Meara; 'A Year in Eden,' by Harriet Waters Preston; 'Franklin in France,' by Edward Everett Hale; 'Two Pilgrims' Progress from Fair Florence to the Eternal City of Rome,' by Mr. and Mrs. Pennell; and 'Familiar Talks on Some of Shakspere's Comedies,' by Mrs. E. W. Latimer. *Geo. Routledge & Son*:—'Les Misérables,' as already announced in these columns; 'England, Scotland, and Ireland,' from the French of P. Villars, expensively illustrated; 'The Vicar of Wakefield,' with water-color adornment, like the 'Gulliver' of last year, by V. A. Porson; 'The Frenchwoman of the Century,' by Octave Uzanne, in collaboration with Albert Lynch as designer in color; 'An Apple Pie,' by Kate Greenaway; and 'One Hundred Famous Americans,' by Helen Ainslie Smith, with numerous portraits and other illustrations. *Scribner & Welford*:—'Giovanni Dupré,' by President Frieze of Michigan University; 'The Follies and Fashions of our Grandfathers,' one of Andrew W. Tuer's amusing compilations, with tinted plates; 'Stories of the Magicians,' by A. J. Church; and a folio edition of Munchausen's Adventures, with eighteen colored plates by Bichard. *Charles L. Webster & Co.*:—'McClellan's Own Story,' with illustrations by A. R. Waud, the well-known "special artist" of the civil war. *White, Stokes & Allen*:—'The Good Things of *Life*,' third series; '*Life's* Verses,' second series; 'Cap and Bells,' verses by Samuel Minturn Peck; 'Thoughts and Remembrances,' poems by Emily Leith; 'Make Thy Way Mine,' chiefly religious poems, by George Klingle; and 'Lives of the Presidents," in separate volumes.

'The Lorgnette,' a series of illustrated society sketches, by S. W. Van Schaick and J. K. Bangs, will shortly be published by George J. Coombes.

To their meritorious "Desk Outline Map of the United States," prepared by Dr. Edward Channing and Dr. Albert B. Hart, D. C. Heath & Co. will add "Progressive Outline Maps" of the several continents, printed on substantial drawing paper, adapted to lead-pencil or to ink.

Next week will appear the first number of the *Quarterly Journal of Economics*, edited by Prof. C. F. Dunbar of Harvard (Boston: George H. Ellis). Prof. Dunbar writes the opening paper on "The Reaction in Political Economy"; Mr. Arthur T. Hadley on "Private Monopolies and Public Rights"; Mr. S. Dana Horton on "Silver Before Congress in 1886." Mr. A. Macfarland Davis begins "An Historical Study of Law's System." There are departments of Notes and Memoranda and of Correspondence; and an Appendix deals with "Wagner on the Present State of Political Economy." The above table of contents bears out the declaration of the prospectus, that this University publication "is not to represent any special school or body of economic doctrine."

The most curious paper in the *Magazine of American History* for October is that entitled "President Lincoln and Colonization." In it Mr. Charles K. Tuckerman briefly tells of the Congressional provision, made at President Lincoln's request, for colonizing the blacks who were expected, after the Emancipation Proclamation, to overrun the North. The incident is well-forgotten, but it was worth calling to mind the one result of this panicky legislation—a deportation of some hundreds of negroes from Fortress Monroe to Hayti, Mr. Tuckerman being very unwillingly one of the contractors; their utter failure and almost starvation there; their subsequent reshipment to their native country; and the loss to the contractors of nearly $90,000, no cent of which was ever recovered from the Government.

Devotees of lacrosse who wish to vindicate its title to the otherwise bestowed appellation of "the national game," may consult the latest *Bulletin* of the Essex Institute (Salem, Mass.). In a scholarly paper on "Indian Games," Mr. Andrew McFarland Davis shows how "cross," with slight variations, was played by the aborigines throughout the length and breadth of the American continent. Platter and straw, gambling games, the latter resembling Chinese odd and-even gambling with cash, are also described, together with a sort of bowls, called chunkee, or hoop and pole. The extent to which the Indians would beggar themselves in these games of chance knew no bounds even of personal liberty.

The opening paper in the September Proceedings of the Royal Geographical Society is by Capt. C. Bridge, R. N., descriptive of his "Cruises in Melanesia, etc.," during the last five years. It is brimful of information about the islanders, many of whose peculiar customs are fast disappearing. Referring to the difficulty of communicating with them on account of the immense variety of languages, he gives specimens of the "sandal-wood English or the *bêche de mer* lingo," which has become the universal language of commerce, a prominent characteristic being the frequent use of "exceptionally vigorous profanity." Of the Melanesians, whose intelligence and truthfulness he highly commends, he says that all "who have not been converted to Christianity are cannibals," but "are almost invariably ashamed of cannibalism." The Marshall Islanders are great navigators, and "make curious charts of thin strips of wood tied together with fibres," and indicating "the position of the different islands with a surprising approach to accuracy," as well as giving "the directions of the prevailing winds and currents." Attention is called, too briefly, to the remarkable cyclopean ruins, in the Caroline Islands, of canals and artificial harbors, built of blocks of basalt, twenty-five or thirty feet thick. In conclusion, Capt. Bridge refers to the fact that the British have for some years given up the practice of retaliation for "outrages," still persisted in by some nations, with the most satisfactory results in establishing friendly relations with the natives. The second paper is by A. P. Maudslay, giving an elaborate account of his "Explorations of the Ruins of Copan," in Honduras, last year. He believes that he has found conclusive evidence of the existence among them of the remains of stone roofed houses, a conclusion contrary to that of Stephens and other travellers. Accompanying the paper are plans and illustrations of the sculptures and hieroglyphs.

The nineteenth issue of the *Bibliographical Contributions* emanating from the Library of Harvard University, under Mr. Justin Winsor's editorship, is a catalogue of the Kohl collection of early maps relating to America in the possession of the State Department at Washington. It is, however, much more than that, for Dr. Kohl's notes have been revised and retrenched, while

important maps not in his collection are inserted chronologically. The list is, therefore, of the highest value and authority.

As a narrative of adventure, Mr. C. W. Doubleday's 'Reminiscences of the "Filibuster" War in Nicaragua' (Putnams) is not without a certain interest, badly handicapped as it is by an absurdly inflated and grossly inaccurate style. As a half-avowed apology for an international freebooter, the book is worthless. The author expresses some resentment at the epithet "filibuster," applied to Walker, on the ground that the latter was a man of great personal courage, and that he was faithful to his friends. This is substantially all that is offered to justify the impression, vaguely given here and there, that Mr. Doubleday is in the possession of evidence which ought to modify the historical verdict in the case. When it comes to the pinch, he expressly declines to defend Walker's usurpations, highway robberies, and murders. As he admits (p. 22) that he has "no justification to offer" for his own part in the "war," glad to be relieved of the duty of pronouncing judgment, we are content to accept his confession.

The revised edition of 'Bacon's Dictionary of Boston' (Houghton, Mifflin & Co.) gives us one of the best works of its class ever published. Typographically, though condensed, it is both legible and handsome. A great deal of thought has been bestowed upon the titles, and one finds (most fitly in the case of Boston) even an article given to "isms." Cross references, too, have been well looked after, yet when one meets with "*Horace Mann statue;* see *Mann, Horace, statue of*," he expects a much more needful concession to mental infirmity in the case of "*Great Fire of* 1872," to which there is no reference from *Fire*. Here and there, too, we could have desired a bit of bibliography, as, a reference to a certain city document on the naming of the Boston streets under "*Nomenclature of Streets*," or to the interesting volume on the Old State House under that head. But we instance these desiderata not by way of reproach. The dictionary is exceptionally well conceived and well made, and may be commended not only to the inhabitants whom it immediately concerns, or to chance visitors, but also to all exiled Bostonians, who may read in it the city's growth, transformations, and greatness. Dr. Geo. E. Ellis contributes a capital introduction.

Miss Florence Marryat's 'Tom Tiddler's Ground' (London: Swan, Sonnenschein & Co.) is fantastically and not very appropriately thus entitled, for it gives an account of her professional tour in this country two years ago. Her adventures in the various places which she visited are told with some vivacity, but at times with a coarseness almost inconceivable in a woman. In her criticisms of American customs and manners, she follows faithfully in the footsteps of the travellers who have preceded her; and the same may be said of her blunders, some of which are amusing. Of herself, her "show," and her novels she writes with an entertaining frankness, going so far as to say of the latter, "I have the written testimony of more than one of them [the American publishers] to the effect that no living novelist has a larger sale in the United States at the present time than myself." We can only say that we sincerely hope that this assertion is incorrect. In one way Miss Marryat's book is a curiosity. It begins with "Chapter I," but we have looked in vain for a second, and it is divided into paragraphs at times without the slightest reference to the sense. We have noted one, six and a half pages long, in which she discusses international copyright, describes a sleeping car, snoring, station lavatories, and "car-sickness." The book is well printed, in large type, on excellent paper, and can be fairly said to have attained the writer's aim, "to help to pass an idle hour pleasantly."

Upon the sudden and lamented death of Dr. Austin Flint in March, among his papers was found the Address he had been invited to deliver before the British Medical Association in August. It has been beautifully published by D. Appleton & Co., with an excellent likeness of the distinguished author. Fifty professional years extended their vista behind him, but with a single glance at the past he devotes himself to the 'Medicine of the Future,' to plausible speculations, not upon the discoveries themselves, but upon the direction in which discoveries and advance may be anticipated. As would be supposed, the mere extent of his information, the resources that he had at his command, emphasized to him the great breaks in knowledge, the meagre appliances that, after all, limit physicians in their conflict with disease; and, with a hopefulness unusual in the aged, he glows with the prospect that awaits the coming man. For instance, he invokes for the diagnostician the aid of electricity, and reasonably insists upon the possible development of auscultation through it, when the footsteps of the fly have been heard with the microphone. But he especially looks forward to discoveries on the causation of disease. Pathology, the study of morbid conditions, is far in advance of etiology, the knowledge of the essential causes of disease, and in this latter direction he believes and hopes investigation will especially turn. He thinks it a mere question of time when specific organisms will be determined for all infectious diseases as their creators, and that methods to avoid their propagation will be discovered sooner than means to slay them when active — in other words, that prophylaxis will outstrip cure, and that a rational guidance of the disease-career will replace the system of medicinal dynamics, which is, indeed, already losing power.

A petition has been addressed to the Trustees and Faculty of Cornell University deprecating their intention, as announced at the last Commencement, to grant honorary degrees hereafter. The alleged motive of such a step being to recognize the claims of the University's own graduates upon their *alma mater*, the almost unanimous support which the petition is receiving among these graduates is an adverse argument hard to resist. The petition itself presents forcibly the reasons against the practice *per se*, and is a convenient document of reference on the general subject. The presidents of no fewer than thirteen Cornell alumni associations have signed the petition, which we trust will be heeded.

The number of the *Nouvelle Revue* for September 15 contains the announcement that Mme. Edmond Adam has given up the direction of the *Revue* to M. E. de Cyon, formerly *directeur* of the *Gaulois*. Mme. Adam will still continue as heretofore her letters upon French and foreign political affairs, a department of the *Revue* which has always been made very prominent. A greater literary and philosophical development is promised for the future by the new direction.

'The Publishers' Trade-List Annual' for 1886 has appeared, marking the fourteenth year of this ever-growing bundle of catalogues, with its indexed Record of New Books published from July, 1885, to July, 1886, and Educational Catalogue for the current year, with publishers' prices. Though this is a booksellers' tool, the general public ought to be familiar with its existence and accessibility. Consulting it would prevent a great many questions now addressed to editors. The bibliographical annotations derived from the *Publishers' Weekly*, which directs this enterprise, furnish a practical guide to buyers of which not one in a thousand can be aware.

— The October *Lippincott's* opens with a ghastly realistic Lear-story, not without excellences, but so told that it belongs in the domain of the philanthropic tract, and provides instruction and awful warning for East-Side daughters whose fathers' majestic but ruined torsos could once stand their thirty of lager daily. The rest of the number is unusually varied, but with articles of disappointing brevity. "How to Choose a Library" certainly does not expose itself to this latter observation, for we do not remember to have seen so little advice in so large a space; and, in fact, the writer seems more engaged with the question How not to Choose a Library, to which a very considerable amount of autobiography is deemed serviceable. Two other "experience" papers are found (and happily not together)—one by a base-ball umpire, and one by Mr. George P. Lathrop. This latter tells a tale of very hard labor, and may well be read by "the young aspirant," who will respect the author of it for the fight he has made, but perhaps will decline to follow his example. A paper upon the usefulness of a conciliatory spirit between labor and capital is one that we wish had been longer, coming as it does from a temperate official on the labor side; and the admirable tribute by Mr. Nadal to Mr. John Welsh, our late Minister to England, might profitably have been extended. The management announces that henceforth each issue will contain a complete novel, in addition to the amount of matter now given, thus being double the present size. This change, in connection with the fact that a portion of the contents are now identical with those of *Temple Bar*, removes this magazine so far from the other American monthlies as to give it a new and entirely different character.

— The principal war paper in the October *Century* is Gen. Rosecrans's account of the battle of Corinth, Miss. This is commonly regarded as the most satisfactory of the general engagements directed by Rosecrans. The controverted point is whether the victory was followed up with the vigor desirable and the full fruits of it reaped. Gen. Grant answers this question in the negative, by implication, leaving Rosecrans responsible. Gen. Rosecrans repels this conclusion, and prints the despatches in which he urged Grant to a vigorous subsequent campaign in pursuit of Van Dorn and Price. The controversy will still turn on the question of the possibility of *instant* pursuit with the forces already in Rosecrans's control. In addition to this are two papers on Stonewall Jackson, both in the nature of personal reminiscences; one, by Capt. Smith of Jackson's staff, describing his conduct at Chancellorsville, and giving what must be considered the fullest and most authentic story of his wounding and death. The other is by his sister-in-law, Mrs. Preston, and deals wholly with his personal characteristics and his idiosyncrasies—mental, moral, and religious. Nothing before published is so valuable an aid to the comprehension of Jackson's personality and character as this. The portraits and illustrations from photographs of scenery, though not so full as the *Century* sometimes offers, are of the established standard of excellence. In the Memoranda Mr. Collins gives a thrilling picture of the rout at Chancellorsville, and pays a high but deserved tribute to the personal bearing of Gen. Howard at the height of the disaster.

— In his address to the Anthropological Section of the British Association at the recent meeting at Birmingham, the President, Sir George Campbell, among other notable points, ventured this: "Probably we have enough physiological knowledge to effect a vast improvement in the pairing of individuals of the same or allied races, if we could only apply that knowledge to make fitting marriages, instead of giving way to foolish ideas

about love and the tastes of young people, whom we can hardly trust to choose their own bonnets, much less to choose in a graver matter in which they are most likely to be influenced by frivolous prejudices." Perhaps "they manage these things better in France," but it is questionable whether to the physical improvement of the race. Sir George "can hardly doubt that the English breed, crossed with a dash of Celtic blood, produces a better animal than either of the parent races." He doubts "the popular belief that the cross between an Englishman and a Hindu produces a race inferior to either," or "that the European race cannot survive in India beyond the second or third generation." In respect to the well-being of his American cousins he does not pronounce *ex cathedra*, but kindly says that "some people think that the stimulating climate tends to make the white race in America wear itself out, and that . . . it would be a real improvement to the American race if the whites were crossed with the more phlegmatic blacks, say in the proportion of six or eight of white to one of black."

— At home he asks for a geographical inquiry into the letter *h*, in which he thinks "there is a great racial persistency"; notes that no Scotchman or Irishman was ever in the smallest degree wanting in aspirates—that they are rather hyperaspirators, while "the greater part of England, on the contrary, is equally persistent in the dropping of *h*'s," or, phenomenally, in omitting it where it is written and putting it in where it is not, "in a peculiarly aggressive manner"; dropping it, moreover, in words direct from the Latin, such as *hour*, *heir*, and *humor*, while in the Latin pronouncing it fully. "Is the spoken language the true tradition? Can it be that, while the Greeks spoke in aspirates which they did not write, the Romans clipped those which they did write, and that the modern Englishman combines the practice of these two famous races? Or is there any foundation for what I can call no more than a conjecture, viz., that the real English is that spoken by the Scotch, and that the corruption of the *h*'s is French brought in by the Normans? . . . Perhaps a few hundred years ago it was the aristocratic thing to clip the *h*'s, and the fashion may have gradually gone to the lower classes, like the swallow-tail coat worn by the typical Irish peasant." There is very much more that is *racy* in this lively address, which may be found in *Nature* for September 9.

—English readers of *Le Livre* for September are likely to pass by the leading articles and to find their instruction elsewhere. A letter from J. d'Arçay, for example, sent to M. Uzanne from Shanghai, apropos of the death of Hetzel, the publisher, contains a curious bit of French history. How did it happen that Crémieux, who was the natural candidate of nobody, got upon the list of members of the Provisional Government of 1848? Hetzel was the indirect cause. Lamartine, in the Chamber of Deputies, had the floor, and had just uttered the fate of the monarchy, when Hetzel mounted the tribune and handed him a list of candidates which he begged him to read. "But I cannot," said Lamartine; "my name is on it." Nothing discouraged, the publisher ran to Crémieux's seat, and said, "You have good lungs; take the tribune and read this list." "But," answered Crémieux, "my name is not on it." "Well, put it on," assented Hetzel, and the deed was done. A different sort of interest attaches to the twenty-fourth annual report of the Société Franklin, from which *Le Livre* makes liberal extracts. This monument to "Poor Richard" was suggested by an association of lithographic workmen, formed to procure the books they needed, and of whose existence they had learned from a lecturer before the Association Polytechnique. Messrs. Chasseloup-Laubat, Jules Simon, Amédée Thierry, Lefèvre-Portalis, Jean Macé, Laboulaye, Legouvé, Augustin Cochin, and Michel Chevalier were among the early directors of the Franklin Society, whose mission was and is to propagate public libraries. This is effected partly by supplying books on demand at favorable rates, and partly by gift, and more than 600,000 volumes have been thus distributed. Towns, hospitals, barracks, and posts are cared for, in Algeria, Tunis, and Tonquin as well as in France, and the Society would fain supply the navy in the same way. A censorship in the interest of good morals has watched over the selection of the books.

—The Minneapolis Industrial Exposition, which closed its six weeks' career last Saturday, made a new departure in two particulars. First, it was held in a large and fine edifice, built (on the highest ground in the city) for permanence almost as decidedly as the world-famous flouring-mills it overlooks, and costing a third of a million. Every variety of Yankee mechanical notion was well represented in the main structure; but the most notable feature of the show, and one thus far unique in the Northwest, was the Hall of Antique Sculpture. The casts from the masterpieces in Paris, Rome, Athens, and all the chief museums abroad, amounted to one hundred and fifty-two. Thanks to a fortunate accident, these plastic facsimiles, selected in Government ateliers by Cesnola for the New York Metropolitan Museum, became the permanent possession of Minneapolis. They will be invaluable to its art school, and have already given a hundred thousand Northwesterners a good idea of a transatlantic sculpture gallery. There are specimens downward from the oldest finds in Rome to the latest in Pergamos and Olympia. Among the pictures, one room is filled with more than fifty executed by Munich artists. These, with several hundreds from New York, a score of them by Bierstadt, are mostly for sale; but the casts from the antique are the property of the Association, and will form the nucleus of a perennial exhibition in the Art Annex.

—Laymen need not be wholly warned off from Prof. E. C. Pickering's 'Investigation in Stellar Photography conducted at the Harvard College Observatory'—an extract from vol. xi of the Memoirs of the American Academy. Mixed with the tables and the mathematical discussions will be found almost romantic relations of the history of this method of astronomical observation, and of its achievements hitherto. It is thirty-six years since the first daguerreotype of a star ever made was secured at the Harvard Observatory by Prof. W. C. Bond. The invention of the collodion process shortly after put a new phase on the process, which has now become an invaluable adjunct of the usual resources of the astronomer. The photographic plate not only is "as efficient an instrument of research as the eye itself, by means of its power of accumulating the energy radiated upon it," but can reveal "a star too faint to be seen in the largest telescopes." It "furnishes an excellent test of the color of a star, since, on comparison with the visual brightness, the stars which are faint photographically may be assumed to be red, and the bright ones blue." It enables us, by means of clock-work keeping pace with the earth's revolution, to image the heavens in great tracts, so that "it would be possible to prepare in this way [at two stations, one for the northern and one for the southern stars] a map of the whole sky in a single year." Or the sensitive plate will, if the telescope is left stationary, record the trails of stars in their passage across it, and "measurements of the trails show that the position of a star may be determined from its trail with an average deviation of 0".03, which is about one-half the corresponding deviation of eye observations." Excellent stellar spectra can be photographed, and those of the Pleiades strongly confirm the common origin of the majority of the group, owing to the "similarity in the chemical and physical conditions indicated"; while "the variation in the spectra of such stars as Nos. 338 and 447 seem to indicate that these stars happen to lie in the same direction from us as the others, but are not really connected with them." "Ordinary means fail to distinguish the individuals of these two classes," and the discovery points to the need of a special observation of the stars just named "in a study of the parallax of the Pleiades." The wonder-working plate, finally, can register automatically the cloudiness of the night; and in so doing may serve as a tell-tale for the watchman, who "must cover the lens at intervals for a minute or so." Prof. Pickering states that a higher degree of sensitiveness than that already attained would be useless in the neighborhood of a great city, owing to the fogging of the negative by artificial atmospheric illumination. We have not exhausted the interest of this monograph, but must pause with a mere mention of the admirably ingenious mechanical contrivances involved in the progress of the art, which is peculiarly American.

DR. ELY ON THE LABOR MOVEMENT.

The Labor Movement in America. By Richard T. Ely, Ph.D. Thomas Y. Crowell & Co.

THE author of this book enjoys the double distinction of being the leading professor of his subject in the Johns Hopkins University and, for the moment, the most voluminous writer in the country on economic topics. The field to which he has principally devoted himself is the exposition of the Socialistic theories and labor movements of the day. So far as can be inferred from his own statements of the ground he occupies, he looks upon his work as descriptive rather than critical, being intended rather to show how Socialists and labor reformers think and feel, than to pass judgment upon their theories. His writings show great merit in one direction and marked defects in another. He is at his best in the analysis of social phenomena. As an example of what he can then do, we may refer to his description of the town of Pullman, which appeared last year in *Harper's Magazine*, and pictured the workings of a novel and curious social experiment. But when he essays the discussion of social movements as a whole, he shows a lack of logical acumen and a narrowness of view which, in a university teacher, are most remarkable. A critic describing the architecture of St. Peter's as he describes social movements would concern himself principally with the notches in the stones, the decay of the mortar, the spots on the statues, and the paint on the dome.

His worst defect is an intensity of bias, and a bitterness toward all classes of society except one, to which it would be hard to find a parallel elsewhere than in the ravings of an Anarchist or the dreams of a Socialist. Most men of his ilk try at least to mould their prejudices into the external form of impartial judgments. Not so our author. An untutored reader, deriving his first and sole knowledge of men from this book, would infer that capitalists and employers as a class were men without a spark of humane feeling. He would learn that, to all previous oppressions of labor, these men had "in this country added two refinements of cruelty called the black-list and the iron-clad oath." He would learn that "black-listing" consisted in sending the name of some poor man to a great alliance of employers all over the country, who would then defeat all his efforts to obtain a livelihood, and make him

change his name or drive him into rumselling. Our untutored reader would naturally want to know what motive men could have for practising this cruelty, but would find none mentioned except some form of disfavor, such as "whim, caprice, or personal spite." He would find no hint that blacklisting, whatever its results, was originally intended to protect employers against dangerous or criminal candidates for employment. His natural conclusion would be that it was an amusement, like bull-baiting or cock-fighting, in which men were selected as the objects of torture instead of animals. The other refinement of cruelty, the "iron-clad oath," is described as "an agreement to do or not to do certain things as a condition of employment; generally, not to join a labor organization."

Now, the most singular feature of our author's mode of thought is, that he has here selected for condemnation two systems the practice of which is one of the main objects of labor organizations, and for which he has nothing but apology or silence in their case. The black-list of the labor unions does not merely consist of a few poor fellows against whom some spite is entertained, but of every non-union laborer in the country whose work comes into competition with that of their members. They do all they can to prevent their victims from gaining a livelihood by refusing to work with them, and by holding up to public contempt all who employ them. To compare the practice of that other cruelty, the "iron-clad oath," we quote side by side from our author (1) his example of cruelty, and (2) the pledge exacted of its members by the Bricklayers' Protective Association of Philadelphia:

I, A. B., hereby agree to work for C. D. at my trade at the regular established prices—withdrawing from the Knights of Labor, and ignoring all outside parties, committees, and trade or labor associations; and also agree not to connect myself with the Knights of Labor or any similar organization, or to join in any meeting or procession of any such organizations while in the employ of said C. D.

I hereby solemnly and sincerely pledge my honor as a man that I will, without equivocation or evasion, and to the best of my ability, so long as I remain a member thereof, abide by the constitution and by-laws, and the particular scale of prices of work adopted by it; that I will acquiesce in the will of the majority; and that I will at all times, by every honorable means within my power, procure employment for members of this association.

Of these two pledges the second is the worst, notwithstanding its innocence of tone. The man who takes the first can still leave the service of C. D. whenever he pleases, and he is then released from his pledge by its terms, without incurring any disability whatever. But the man who takes the second can never escape except at the expense of being placed upon labor's black-list, the catalogue of unorganized laborers.

Our reader would also learn that all recent progress in economic policy has really been due to labor reformers, whose measures, at first regarded by the better classes as dangerous, were found on trial to be beneficent. Hence "the function of the more learned, prudent, and cautious" is to examine and discuss the measures initiated by the masses, and "at times to exercise a controlling and restraining power over popular movements in the interest of society as a whole."

It is not alone the untutored man whom we have considered that may profit by the book. There exists among us a large class of men, deeming themselves intelligent, who suppose that the necessity of a public-school system was felt by the earliest American colonists; that the establishment of public schools in most of the States was coeval with the formation of their constitutions, thus antedating any efficient or extended organization of labor; and that popular education through such systems has few or no enemies among us. Let all who entertain such views listen to our author:

"What, then, has the labor movement brought us? I reply, first of all, it has been one of the chief causes which have brought us a public-school system—a public-school system which has already accomplished incalculable good, and promises greater benefits in the future, as it is further developed. But our public-school system is attacked by men whose political wisdom and sense of social justice I prefer not to characterize in terms which would seem to me fitting. Where shall we find guardians against assaults on our public schools? Where shall we find those who will not only protect what we have, but help us forward in new achievements in education, particularly by means of public schools? To both questions I reply—in our labor organizations. All over the world, labor organizations are supporting and bearing forward every popular educational movement" (p. 123).

Who are these foes attacking our public-school system? Our author forgets to name them.

That no sound reasoning in economics is to be found in the company of such ideas as we have described, is self-evident. But we were not prepared to find in the writings of an educated economist a bald assertion of the old superstition that "the purchaser of labor has it in his own power to determine the price of this commodity (labor) and the other conditions of sale." He devotes several pages to the proof of this proposition. So much of the proof as is founded on any reference to facts has no relation to the proposition; and that part which sustains the proposition has no more relation to the facts of history than a story of dreamland. Any one of the women who carried the head of a baker through the streets of Paris in the first Revolution, had she only been endowed with the faculty of putting her thoughts into logical form, would have sustained her course by an argument of which we find only a feeble adumbration in the book before us. She would have said: "Talk what you may of the law of supply and demand, we do not meet the baker on equal terms, but are entirely at his mercy. We, the hundred thousand, must have bread *to-day* or we starve. But he can hold out weeks or months without suffering. When we tell him what price we are able to give he can say no, and can say no every day as long as he pleases. When he tells us what price he is willing to take we cannot say no; we must pay it or starve. Therefore do we in self-defence make an example of these cormorants who would sacrifice the hundred thousand on the altar of their greed."

The bias we have described is seen not only in our author's judgments, but in his narrations. Like a good advocate, he says as little as possible about the disagreeable side of his client's case, and enshrouds that little in so thick a mantle of apology that no one can feel displeased with it. All the numerous good things said and done by the Knights of Labor are very well told us; but the great strike in Missouri and Texas last spring—perhaps the most important event in the history of the organization—as well as all subsequent action leading to riot or disorder, is passed over in silence, or dismissed with the general intimation that labor-unions have sometimes done things which, though perfectly natural, merit disapproval. The reader will learn nothing about the doings or functions of the "walking delegate." Even if this official were a myth, it would be right and proper that that fact should be shown. The boycott does not appear, except incidentally in the chapter upon remedies.

Here the mode of treatment shows the intellectual confusion characteristic of the writer in a curious way. We begin by learning that the boycott is really nothing new, having been employed against obnoxious persons from time immemorial by clergymen, abolitionists, railways, and business men. As we read his parallel between the boycotts of the present time and the older practices which he describes, we are astonished at the intellectual obtuseness which cannot distinguish between them. But, on turning over a page or two, we find that he is fully conscious of the difference, and points out to workingmen that their boycott is really wrong. Reading on yet further, we find that, notwithstanding this wrong, it is equally wrong, or at least highly impolitic, on the part of the public to attempt its suppression by legal proceedings of any kind. And why? Simply because by doing so we excite the angry passions of Mr. John Swinton and numerous other Socialists, Anarchists, and social reformers. Dr. Ely proves this by extended quotations from the utterances of the labor and Socialistic press, showing what wicked and intemperate language the well-meaning but inconsiderate judges who condemned the boycott unwittingly called forth.

Perhaps the most instructive chapter of the work is that descriptive of the first period of the labor movement. We have all entertained the view that the labor movement derives its vitality and its ideas from the great change which has come over the forms of industry during the last half-century, and which includes the formation of great corporations for manufacture and transportation, exercising a power never before known in our history. But what were the war-cries of the labor reformer fifty years ago, when a railroad company was an insignificant affair, and manufacture on a large scale in its infancy? We quote them:

"The right of man to the soil; vote yourself a farm."

"Down with monopolists, especially the U. S. banks."

"Freedom of public lands."

"Abolition of chattel slavery and all wage slavery."

"Homesteads made inalienable."

"Corporations and monopolists ought to be discouraged, for capital, banks, and monopolists, as oppressors of the people, have taken the place of the barons, lords, and bishops of old England."

"The laws have made it a just and meritorious act that capitalists shall combine to strip the man of labor of his earnings, and reduce him to a dry crust and a gourd of water."

Our conclusion from the close parallel of these cries to those we now hear (which, it is unnecessary to say, is not shared by Dr. Ely) is, that labor discontent is perennial in human nature, and is bound to continue, no matter what measures we take to cure it. We may perhaps draw the equally encouraging conclusion that it will do no more harm in the future than it has in the past.

We have devoted so much space to this production less on account of its importance than of the position and reputation of the author. It is marked by a general puerility of tone and treatment, a scrappiness of narrative, and an absence of everything like strength of touch, mental grasp, or logical unity—faults which deprive it of all real interest. The two uppermost ideas in the author's mind are that the treatment of the humbler by the higher classes is marked by indifference, contempt, or heartless cruelty, and that it is to labor organization that we are to look for all real social progress. The first is proved by showing how women have been ill treated, men contemned, and children made to toil in factories; the second by citing numerous good things said by labor-organizers; and both by a miscellaneous collection of paragraphs and quotations from writers of every class, scattered through nearly the whole book. We close with the following gem, which the reader must not take to be ironical:

"Newspapers which appeal to the worst passions of the wealthy, teaching them to despise, distrust, and resist the humble social classes, are as dangerous as the incendiary sheets of the Anarchists, and should be unhesitatingly condemned and discountenanced by all who mean well" (p. 314).

Dr. Ely seems to us to be seriously out of place in a university chair.

Meditations of a Parish Priest. Thoughts by Joseph Roux. Introduction by Paul Mariéton. Translated from the third French edition by Isabel F. Hapgood. Thomas Y. Crowell & Co.

THE Abbé Roux is an elderly parish priest of the flat, dreary, moorland Bas-Limousin district, which to his Parisian editor seemed "a very distant country." He was discovered by this editor, M. Paul Mariéton, whose attention was attracted by some *chansons de geste*, and whose search for the author was rewarded by finding a classic where he had expected only a note on an obscure Limousin poet. A classic, at least, if M. Mariéton rightly styles him the La Bruyère of the peasants. He went to visit this unearthed solitary, and found him, "like the Limousin giant of his 'Geste of Charlemagne,' with his strong, square-built form, and his deep bass voice, . . . with a face large and lofty, gentle and rugged—like those English lords of Henry VIII., colossi of the North painted by Holbein—and reflecting a fund of almost feminine sensibility, like the accent of his words. With the gentleness of a child and a poet, he exhibited to me the simplicity of his life, and I departed more affected than I can express." He departed, however, metaphorically if not literally, with a burden for the world, made up of the Abbé's complete works, which are to fill four volumes, prose and poetry. They are the fruit of this priest's mind, incessantly working in painful isolation upon his own and others' thoughts, and upon the peasant life he observed. These *Pensées* form the first of the four.

The priest's literary studies had a wide range, and a considerable portion of his detached thoughts are critical, and largely mere antithetical dicta, setting one author over against another. It is a kind of guerilla criticism, too rapid, brief, and lacking in concentration and scope. This literary form is a bad one for such a use; the most it can accomplish is a brilliant *mot* upon a well-known author. The thoughts, fortunately, are not confined to the classics, ancient or modern, but range over all the fields of reflection. Sometimes they are fine by virtue merely of expression, often because of some new touch in the idea; often, too, because of what the editor calls the "intimate cries" of the soul. "The real gives exactness, the ideal adds the truth"—mints old gold anew. "Athens diffused the soul over the flesh; Paris diffuses the flesh over the soul"—is the same truth as the former, only historically stated. "The orator is the mouth (*os*) of a nation"—illustrates a host of his etymological *sententiæ*. "How many sacrifice honor, a necessity, to glory, a luxury"—he philosophizes; and nearer home he moralizes: "Say nothing good of yourself—you will be distrusted; say nothing bad of yourself—you will be taken at your word." As a whole, the collection has no unity of temper or system or sentiment, of interest or purpose, nor even of character, except that given to it by what ought to be a secondary circumstance in a man of genius—the fact that the author is a priest. But the religious idea is not a controlling one.

The editor himself is inclined to find the true value, the only originality of the Abbé, in his studies of the peasants. These are sharply cut, with a sincerity, a vividness and force that spring from violent repulsions, or from pathetic attachments to what is human amid the general brutishness. For the peasant in the abstract the Abbé has but one word—he is "sin, original sin, still persistent and visible, in all its brutal simplicity." Here are four quotations that frame in the type. "The peasant is a deist; beyond that he heeds nothing that is said or done. The peasant loves nothing and nobody except for the use he can make of him. The peasant admits that the most petty employee in the town is greater than he. The lot of the peasant is always the same, . . . his sordid dwelling, his frightful bed, his dirty table, his coarse bread, his hard and heavy linen and his vile clothes, his loathsome food and his nauseous drink, his life narrow, harsh, desolate, imposed upon by every one, deceived by all, rendered harder by all." But far more close and vigorous than such maxims and descriptions are the half-dozen "characters"—prose poems—though most of the author's work of this sort is reserved for a subsequent volume. Two or three of these belong with the art of Rembrandt and the nature of Burns. It is by them, and what others of equal worth there may be, that the Abbé Roux will prove a classic, if at all; and at least they have an historical value, since the life of the Bas-Limousin has changed but little in centuries—which is what M. Mariéton meant by calling it "a very distant country." Here, after a destructive storm, peasants have been seen, "madmen shaking their fist at heaven or even levelling their guns, loaded with ball, at the zenith, and firing without a movement of the eyelids, in order to hurl dead from His throne Him who reigns on high."

Enough has been said of this, yet one cannot leave the book without a word of appreciation for the true poetic temperament diffused through it, as it were by waves of feeling, which render it, in the editor's French phrase, "humid with melancholy." The poet's power, the genuine essential faculty, is shown in the peasant-portraits; but beyond that, this priest has unveiled the man's heart in him, and seldom indeed does one meet with self-revelation so delicate, so refined in poetic feeling as in the two strophes—"Obscure germ, remain beneath the earth. . . . I will be a flower, I must be a flower." This is in the very ether of lyric poetry, as truly as his maxim, "The priest, the soldier, and the peasant die without affectation," is in the prison-walls of fact. So wide is his world of thought and feeling; but after all does he not soar with a middle flight? He owes the best of his work to an adventitious subject. Whether the Academy will at last grant his classicism, however, is for the Academy to declare: meanwhile, it is a curious figure for the observer of modern life to come upon—this priest working through thirty years of intellectual and poetic life, in that rude country, to find fame in this hap-hazard way. His isolation saved him. If he had been under the protection of Notre Dame de Paris, he would not have written of the Limousin peasants.

Shooting: Field and Cover. Moor and Marsh. By Lord Walsingham and Sir Ralph Payne-Gallway, Bt. With contributions by Lord Lovat and Lord Charles Kerr. Illustrated. [The Badminton Library.] London: Longmans, Green & Co; Boston: Little, Brown & Co. 8vo, pp. viii, 357; viii, 348.

AMERICAN lovers of sports in the field will turn with much interest and curiosity to these two handsome volumes, written by English noblemen and dedicated to the Prince of Wales. The authors are not modest in their explanatory preface. They say that their work is intended to "supply a want," viz., a "modern encyclopædia to which the inexperienced man who seeks guidance in the practice of the various British Sports and Pastimes can turn for information." Shooting on the preserved estates of the rich English landowners differs so radically from the same sport in the United States, that cis-Atlantic readers find many puzzling expressions in British accounts of it in the newspapers and magazines, and occasionally in some novel. All these mysteries are made plain by the work before us. The range of topics is very comprehensive. Starting out with a general sketch of "shooting, past and present," there are "hints for beginners"; a great deal of information on gunmaking, and the prices, choice, and care of guns; chapters on partridge, pheasant, grouse, black-game, woodcock, snipe, wild-fowl, and rabbit shooting, and deer stalking, with directions for rearing game, destroying vermin (that destroys game), and making fowling punts; advice, too, about gamekeepers and the care of dogs, with one chapter devoted to as black a picture as can be drawn of the poacher and a description of his nefarious ways. We are initiated fully into the methods of securing game by "driving" it, and are shown how it is possible for one man, in an English preserve, to kill 172 partridges in one day, nine men 1,576 pheasants, the same number of shooters 5,089 rabbits, and seven men 2,080 grouse—scores that to the uninitiated American reader would seem grossly exaggerated.

For a work that purports to be an encyclopædia there is one flagrant omission. In only a single instance is the ornithological name of any of the birds given; this is in the chapter on pheasants. The names of game birds notoriously differ not only in different countries, but in different sections of the same country. An American, reading of the partridges, pheasants, and grouse that these writers describe, might be quite mistaken about the birds actually intended, were it not for the illustrations. In the Northern United States the *Ortyx virginianus* is always called a quail. In the Southern States it is almost always called a partridge. With us the *Bonasa umbellus* is called by strict-speaking sportsmen a ruffed grouse. In the Northern States it is commonly known as the partridge, and in the South and Southwest as the pheasant. So with the different varieties of snipe and ducks: it is impossible to recognize most of them in a written description unless their technical names are given.

After a careful reading of this account of the shooting in which wealthy Englishmen indulge at home, we do not think that any American sportsman would care to cross the water for a season's sport. The argument of the writers is that actual "hunting" for game over a pointer or setter is "old style." Their idea of sport with game birds is for a dozen men, more or fewer, to station themselves at advantageous points, perhaps concealed behind artificial hiding-places, in a preserve where hundreds of birds, many of them artificially raised, have been guarded by hired game-keepers, and to have a small army of men, called "beaters," drive the birds over the shooters; or to march in an extended line through a turnip patch, and take, each man, the bird that rises in front of him. The only dog required for such sport is the retriever. At much length the noble authors contend that it requires greater skill as a marksman to kill driven birds than to shoot those that rise in front of a pointer, and defend their "modern sport" against those English writers who scoff at such shooting and deride the so-called "hunting" of birds that have been raised in door-yard coops. The assertion that it requires little skill to knock down a bird that a dog has pointed, could be made only by a man who has done his shooting at very tame birds and in very open country. A day's work with a dog in quest of ruffed grouse in New Jersey or Pennsylvania, or of quail in any of our States, would soon convince him of his error. If merely shooting to kill constituted sport, a day in a farmer's barnyard would afford lively enjoyment. If a test of marksmanship is all that is required, the glass ball or clay-pigeon trap meets the requirement.

Sir Ralph Payne-Gallway, in his chapter on "Shooters," with curious inconsistency says: "A sportsman ought to be, and usually is, a man who takes delight in using his gun *and* brains," and

then he goes on to show that, in a day's shooting in England, the only men who are called to expend brain-work are the hired servants who find the game and drive it in the wished-for direction. While every sportsman wishes for "luck," by far the largest part of his day's enjoyment ought to consist in his search for the game; and this search will be very unsuccessful (outside of a preserve) unless he understands the habits of the game that he seeks, and is acquainted with the country that he traverses. Moreover, he adds very largely to his enjoyment by watching the working of his trained setter or pointer, who will show as much skill and knowledge in the search for birds as his master. To appreciate the difference between such hunting as these English authors describe and that which is enjoyed in America, a person has only to compare one of the chapters on "driving" pheasants, partridges, or grouse, and a chapter of one of Frank Forester's experiences in the Warwick woodlands. The former is a matter of dry details; the latter makes the blood tingle in the veins of any reader who has the sportsman's instinct.

The chapter on deer-stalking is the most interesting in the two volumes. Stalking—or, as we call it, "still hunting"—is the principal method of killing deer that is now recognized as legitimate in England and Scotland; coursing or hounding being abandoned, as it should be, and driving not being considered so fair a sport as stalking. Much valuable information is given about the habits of deer, and the methods of approaching within gunshot of them. In stalking, the British sportsman generally depends on the skill of a stalker to direct his movements until he is near enough to fire; but even then much more is required of him than of the man who depends on drivers to put birds within his reach.

The chapters on wild-fowl shooting also contain many directions to enable the sportsman to depend on himself for his bag of game. In one way, the English view of duck hunting is far behind our own. The use of the swivel gun is recognized as legitimate, and directions are given in much detail about handling it and building boats for its employment. In most of the Atlantic States the use of such weapons in shooting wild fowl is now contrary to law, as it should be.

Contributions to the Science of Education. By William H. Payne, A.M. Harper & Bros. 1886.

Educational Psychology. A Treatise for Parents and Educators. By Louisa Parsons Hopkins. Boston: Lee & Shepard.

Habit, and its Importance in Education. An Essay in Pedagogical Psychology. Translated from the German of Dr. Paul Radestock by F. A. Caspari, with an Introduction by G. Stanley Hall, Ph.D. Boston: D. C. Heath & Co. 1886.

Prof. Payne's volume of disconnected essays and addresses is characteristically marked as the work of a practical and experienced as well as a thoughtful educator. His positions are firmly taken and his opinions strongly worded; and, whether he is agreed with or not, he makes himself respected. There is, too, a liberal-mindedness about his spirit, a catholicity and reach of view (especially in the chapters on the secularization of the schools as a world-movement), and moreover a minuteness and range of acquaintance with the literature of his subject, which shows the master of the field; and the tonic power of his reflections is wholly unusual. These may seem vague words; but it is only by general terms that we can express adequately our sense of the controversial and stimulating value of a volume too various to be dissected in detail. Like a man of age and experience, the author has great respect for the past, and is not inclined to think that the "new education" is likely to be revolutionary, or "the Quincy method" destined to as great a future as was the Baconian. He directs attention rather to the need of a determination by experiment of education values in the different studies, and to the propriety of seeking in psychology the basis of the leading principles of the art of pedagogy, while he has no patience with the theory that assumes a child-mind psychology or any of its companion novelties. He attacks Spencer's positions, with modesty enough, but without any fear, and especially objects to the doctrine that the child's education should repeat that of the race, and he has something to say against the dictum that the pupil must proceed "from the known to the unknown," and other maxim-shibboleths. In short, he is an independent and vigorous thinker, thoroughly informed and well-disciplined; and though some of his essays are touched by local interests, the book is to be recommended to the attention of those practically interested in education, with the certainty that they will find it full of good sense in general matters and of valuable suggestions in specific subjects. At the close of the volume is a detailed account of the organization and work of the department of pedagogics at Michigan University, of which Prof. Payne holds the chair.

'Educational Psychology' is a little primer-like volume, which sets out on the ground that psychology ought to be the basis of educational practice and theory, and proceeds to compress into a small space the scientific analysis of sense-perception, memory, imagination, judgment and reason, and taste or the sense for beauty. This is done with clearness and brevity, and from the latest authorities, whom the authoress has carefully studied. The volume is, in fact, a digest of a course of lectures given to a normal class, and may well be of advantage to any teacher who wishes to give a class so much of the groundwork of psychology as is most necessary to the understanding of the learning powers of the mind.

Dr. Radestock's essay, which is translated entire under the title 'Habit in Education,' is a kind of mental deposit from wide reading, of which the intent is to show that habit, in the scientific sense, working by nerve-disposition, is the essential of education. He traverses the physiological and psycho-physical field, and arrives at conclusions in the realms of the will and of the highest faculties of intelligence, with some glances at the peculiar provinces of genius and insanity. The volume is of interest rather on the theoretical side in relation to the science of education, for which it affords a preliminary analysis, in some sort. On the practical side many questions would be put, and one recollects that not only Rousseau, but so late a writer as Sully, questions the desirability of firmly established habit. In fact, the goodness of any "habit" depends on the fixity of the conditions under which it arose, and with a change in them a modification of itself is needful, which often is brought about with difficulty. Thus "habit" sometimes becomes a limiting and damaging element, when originally good. But the discussion is so largely one of words and meanings as to be endless if entered on; and independently of the great scope which Dr. Radestock claims for the rule of habit in education, his analysis and expositions are of great interest to theorists in the art.

El Maghreb: 1,200 Miles' Ride through Marocco. By Hugh E. M. Stutfield. London: S. Low. 1886. Pp. xi, 347. Map. 8vo.

The author's first visit to Marocco was in 1881, when he made various excursions in the neighborhood of Tangier; but the greater part of his book is an account of a journey made two years later to the cities of Fez and Marocco. Though he and his companion travelled in English dress, and with a single soldier for an escort besides their three servants, they were not simply unmolested, but were treated in nearly every place, even in the sacred city of Wazan, with courtesy. The Government has suffered so severely of late from the "claims" of foreigners, that the anxiety of the kaids of the villages at which they camped for the night to protect the travellers from robbery was often embarrassing. Fez was the only town in the interior through which they passed that showed any signs of commercial activity. "Trade here, at times, really is brisk." But what is said of the capital, "there is an air of desolation about the place, as of a city of the past," seems to be true of all the others. In the southern district of Wadnoon there is a considerable trade with the desert tribes, largely in ostrich feathers, but "slaves are the most important article of commerce with the Sudan, and Marocco forms the chief market for the traffic in human flesh." While Amicis, in his lively description of Marocco, gives but a curt account of Mequinez (where, indeed, he had enough to do to escape the mob), Mr. Stutfield found it, with its magnificent gate, beautiful buildings, extensive ruins, and wonderful wall outside the Mellah or Ghetto "twenty-five *yards* thick," to be the most interesting town in the country. Within a day's journey of the capital they entered a famine-stricken region, which extended to the coast. The clamors of the wretched people for bread by day, and the crying of the starving children by night, made this part of the journey very distressing—the more so since it was evident that these periodically recurring famines could easily be prevented. The land is fertile, in some districts said to be the richest in the world; irrigation and cultivation are easy; but bitter experience has taught the people the uselessness of laying up the surplus of a crop simply to be the prey of their rulers, and so the failure of a single harvest means starvation. In Marocco, as in all countries cursed with the Mussulman rule, the land is gradually but surely becoming a desert. The author passed through a good-sized town, the last inhabitant of which "had left or died (the words are synonymous in the euphemistic Moorish language) a few weeks before, and the houses and streets were now as silent as the grave."

In his description of the political condition of Marocco Mr. Stutfield dwells at length on the evils of "protection." This is the right granted by the Madrid Convention of 1880 to each foreign Power to protect twelve Moors, and, in addition, to every European trader to protect two native agents. These "protected" natives are freed from the authority of the Moorish Government, and are responsible only to the Power which protects them. It is easy to see what opportunities this system offers for abuse. So eagerly have the people, especially the Jews who make a business of "selling the protection," availed themselves of it, that the Sultan has "complained that it was impossible for him to carry on the government of his country under such circumstances, wherein numbers of his subjects can set his laws at naught, and, freed from all the restraints and duties of citizenship, plunder and rob the unfortunate natives who have not the good fortune to be of the protected ones." Even the Shereef of Wazan, in one sense the head of the Mohammedan Church and virtual ruler of a wide territory, is now a French subject, "so that a large tract of the Sultan's dominions is practically withdrawn from his authority, and placed under the dominion of the representative of the Republic." While the British Minister, Sir John Hay, has firmly and constantly opposed

the abuses of this system, it is to be feared that the United States, if Mr. Stutfield's statement is true (that "America, by the way, appears to throw the ægis of the Stars and Stripes over a surprising number of Jews in Marocco") is not without guilt in the matter. In discussing the future of the country, the author naturally deprecates the growth of the French influence, but does not venture to more than hint that Marocco should become a part of the British Empire. Yet the benefits flowing from such an acquisition would be considerable. For not only is Gibraltar "wholly dependent on Marocco for its supplies," but the country, which, it should be remembered, is only four days' sail from her shores, under a stable government would produce corn enough to "render England, with even a doubled population, independent of the rest of the world."

Florida Fruits, and How to Raise Them. By Helen Harcourt. New and enlarged edition. Louisville, Ky.: John P. Morton & Co. 1886. Pp. 347. 12mo.

THIS book gives a glowing account of the capabilities and prospect of fruit-culture in Florida, not only of the orange as the chief staple, but subsidiarily, of pineapples, bananas, and cocoanuts; also of grapes and figs, peaches and plums, strawberries, and the like, which are supposed to affect more northern latitudes; indeed, the conundrum which the fair author asks, "What cannot be grown in Florida?" she gives up entirely as a still unsolved problem. Apropos of the peach, we are told that "to Persia do we owe this most popular fruit, and yet, strange to say, in this its native home it was considered unwholesome"; and that "its first visit to foreign lands, and the first true appreciation it met with, was on Chinese soil, and there we find it flourishing and at home almost as early as it was noted in its native land." But De Candolle has recently shown that the peach was known and prized in China very long before it can have been known in Persia, and that the interior of China is its probable source. This may be worth noticing in the next edition, when the incongruity of the statement respecting the original unwholesomeness of this fruit with what follows may be explained. "That the peach was one of the trees in the Garden of Eden there can be no doubt, and surely God could have placed there, for the comfort of our first parents, no more delicious fruit than this." But would the Lord have given this originally unwholesome fruit among the trees "pleasant to the sight and good for food," or did an originally delicious fruit partake of the curse at the fall and become unwholesome until the "heathen Chinee" restored it to its pristine innocence?

Seriously, Mrs. Harcourt's book is full of practical information, teaching us not only how to raise fruits in Florida, but how to fight their enemies and how to preserve and cook them (*i. e.*, the fruits). She even tells us to add sugar to our dish of fresh figs and cream, which well-ripened figs should not require; and, altogether, her bountiful instructions allow her to indulge the hope that, so guided, the "veriest novice may make a success of his new pursuit in his Florida home." He has our best wishes.

Study of the English Classics: A Practical Handbook for Teachers. By Albert F. Blaisdell, A.M. 4th edition, revised. Boston: Lee & Shepard. 1886.

MR. BLAISDELL is one of those teachers who have taken an active part in the educational reform in literary study in our schools, which consists practically in substituting the works of authors for manuals concerning them. The present volume contains schemes of courses, examples and types of lessons, exercises, recitations, reviews, etc., and summary studies—a kind of syllabus—of seventeen representative authors, English and American. There are very many valuable hints and leading principles of use to teachers, and an unlimited number of examination papers, and thousands of trial questions. It is, in a word, a normal-school course for teachers, in the branch of literature. So far there is no fault to be found, and there can be no doubt of the excellence of the work and its utility when once its sphere is granted. Nor shall we do more than hint our impression that Mr. Blaisdell's students will not escape a danger to which his own eyes are wide open. The defect of the old system was that it taught literature as a form of history, biography, and criticism; the danger of the new system is that it will teach Shakspere, Milton, and Pope as a form of grammar, mythology, rhetoric, etc. In fact, as one reads over the specimen questions, they bear a curious resemblance to the sort of interrogatories put by classical teachers concerning the text of Virgil, Ovid, and Cicero, and they lie under the same old charge often brought against this mode of instruction—that the exercise is not a study of literature in a true sense. On the first stanza of Gray's Elegy we have here three solid pages of questions, fine print. This exhibits only the ingenuity of the teacher. Literature, the highest culture study, is necessarily one of the last to be imposed; and it is doubtful whether it is not degraded by being made the medium of practical studies such as grammar, rhetoric, and "allusions."

BOOKS OF THE WEEK.

Alcott, Louisa M. Jo's Boys, and How they Turned Out. Boston: Roberts Brothers. $1.50.
Amusing Adventures, Afloat and Ashore: Three American Boys. 300 Engravings. Mrs. Frank Leslie's Publishing House. $1.

SCRIBNER & WELFORD, 743-745 BROADWAY, N. Y.

Charles Scribner's Sons

PUBLISH TO-DAY:

Little Lord Fauntleroy.

By Frances Hodgson Burnett. Illustrated by R. B. Birch. 1 vol., square 8vo, $2.00.

No book for children has appeared for years which has attracted immediately and to the same degree the admiration and praise of readers, young and old. One of the chiefly interesting things about the story is that the little lord numbers among his friends almost as many grown people as children, and who will be certain to welcome it most heartily in this handsome book form. It has been widely and enthusiastically commended by the critics.

"There never was a sweeter, more beautiful story, than 'Little Lord Fauntleroy."—*Brooklyn Union.*

"The charming idealistic serial of 'Little Lord Fauntleroy,' by Mrs. Burnett, is undoubtedly the most notable child's story of the year, and in each chapter develops the influence of the pure, sweet little lord among his retainers with clear beauty."—*Boston Journal.*

"It is very hard to have such a story dealt out to one by instalments of a chapter or two at a time. In the illustrations the spirit of the story has been caught and reproduced."—*The Churchman.*

"There is something in the way in which Mrs. Burnett writes of children, or rather in the way in which her children speak, that appeals irresistibly to the heart."—*N. Y. Star.*

Chronicle of the Coach.

Charing Cross to Ilfracombe. By John Dennison Champlin, Jr. Illustrated by Edward L. Chichester. 1 vol., 12mo, $2.00.

Mr. Champlin has written a breezy story of a ride through England on a coach-and-four. He visited, with his party, some of the most famous and most interesting towns and literary landmarks in Devonshire and old England. The narrative of this unique journey, it goes without saying, is always bright and entertaining. The illustrations by Mr. Chichester are extremely clever, and add much to the charm of the book.

The Ivory King.

A Popular History of the Elephant and its Allies. By Charles Frederick Holder, Fellow of the New York Academy of Science, etc., author of 'Marvels of Animal Life,' etc. 1 vol., small 8vo, illustrated, $2.00.

Prof. Holder's new book is a companion volume to his 'Marvels of Animal Life,' published last year. The elephant certainly stands preëminent in the animal kingdom as the most interesting in his character and habits, and Prof. Holder has made the most of an especially fascinating subject.

Woolsey's Political Science.

By Theodore D. Woolsey, lately President of Yale College. *New and revised edition, at a greatly reduced price.* 2 vols., 8vo, $5.00.

Reissue of the Bible Commentary.

Also known as the Speaker's Commentary. $3.00 net per vol.

JUST READY:

V. ISAIAH. By Rev. Dr. W. Kay, author of 'The Psalms translated from the Hebrew,' etc. *JEREMIAH, LAMENTATIONS,* by R. Payne Smith, D.D., Dean of Canterbury, author of 'Bampton Lectures for 1869,' etc

VI. EZEKIEL. By Rev. Dr. G. Currey, author of 'Hulsean Lectures, 1851.' *DANIEL,* by Archdeacon H. J. Rose, author of 'Sermons on the Duty of the Clergy,' etc., and Rev. I. Fuller. *MINOR PROPHETS,* by Rev. E. Huxtable, Professor Gandell, Rev. F. Meyrick, Rev. S. Clark, Rev. W. Drake.

Hans Brinker; or, The Silver Skates.

A Story of Life in Holland. By Mary Mapes Dodge. Beautifully illustrated. 1 vol., square 12mo, $1.50.

A new edition of Mrs. Dodge's ever-popular book, published with all the illustrations of the fine holiday edition, at one-half the former price.

The Nation.

NEW YORK, THURSDAY, OCTOBER 14, 1886.

The Week.

THE expedient of calling in 3 per cent. bonds in large amounts has had little effect upon the supply of active money; and the offer of the Treasury to cash uncalled bonds on presentation, though before the public for more than a month, has only elicited some two and a half millions. It is the most signal in a long series of proofs that the redemption of bonds by the Treasury, whatever else it may accomplish, does not act as an efficient relief to a money market which is habitually depleted by the Treasury's operations. So far as the money market is cramped by the collection of surplus revenue, the calling in of bonds offers, though with uncomfortable delays, an adequate return. But the position is complicated by the presumed requirement of law to lock up all the lawful money received from national banks on account of bank notes retired. This lock-up has now reached the sum of nearly $70,000,000—a sum which withdraws the whole capital of the banks of this city, $59,312,700, and one-fourth of their surplus of $42,759,000. The *Evening Post* prints a memorandum on this subject, submitted in October, 1882, to Secretary Folger. The principles involved are unchanged; the money locked up is some seventeen millions greater. The document is now published in order to bring its suggestions before the business community.

A correspondent asks why may not the national-bank circulation be continued indefinitely, by the banks leaving in the Treasury the money received by them when their bonds are redeemed, except, of course, the 10 per cent. margin which the law requires when bonds are deposited. The answer is that that is exactly what is done, to a very large extent. The October statement of the Comptroller of the Currency shows that the sum of $68,529,417 lies in the Treasury to redeem an equal amount of national-bank notes. The one sum offsets the other. The national-bank circulation is not necessarily curtailed by the redemption of the bonds, but its elasticity is curtailed, or rather suppressed altogether, since the banks have ceased to exercise any control over it, and the Government has no function to discharge in the premises except to redeem it when the notes are presented for that purpose. As the law requires the money deposited by any bank for the redemption of its notes to be placed to the credit of the bank on the Treasurer's books, it is plain that the Department has no control over the deposit except for that specific purpose. To vest the Treasurer with any discretion as to its use would be to authorize him to go into the banking business himself, for he could make no other use of it than to lend it to somebody, or possibly to redeem more bonds, which would be simply repeating the process. The important fact is, that the circulation of national-bank notes is not necessarily lessened by the redemption of bonds, but the aggregate circulation of banknotes and greenbacks is lessened, and that of silver certificates is augmented.

The London *Economist* has lately had some interesting tables illustrative of the effect of the fall in the value of silver on trade. The bimetallists maintain that it has been very great, but have never been able to produce in support of their assertions facts not explainable on any other hypothesis. It so happens that while British imports from silver-using countries declined considerably after 1876, and were very high in 1882-3, they have been nearly steady during the other years which have since elapsed. On the other hand, British exports to silver-using countries have risen almost steadily since 1876. We reproduce the totals in millions :

TRADE WITH SILVER-USING COUNTRIES.

Year.	Imports.	Exports.
1885	£63,071	£61,587
1884	64,951	66,075
1883	72,917	66,058
1882	75,990	65,409
1881	65,039	65,859
1880	65,732	64,197
1878	63,633	51,421
1876	71,244	50,471

The anti-ten-hour strike in the pork-packing houses at Chicago has probably been precipitated by the great decline in pork products There is just so much foundation for the charge that the packing-houses connived at or were not averse to the strike. The business had ceased to be profitable, and it was detrimental to the interests of the trade to pile up more stock upon a glutted market. This is a situation which not seldom comes to pass in other trades. If the business can still be carried on so as to yield a profit by working ten hours a day, but cannot be carried on with eight hours' labor, it is for the interest of all that the ten-hour rule should be adopted. If the facts are, as the men claim, that the interests of the employers are served by a stoppage, that is a first-rate argument for their accepting the ten-hour rule, at least until the pork market improves.

The price of wheat in the Chicago market on Monday fell below seventy cents per bushel. This is said to be the lowest quotation that has been seen in a quarter of a century. Can any one doubt that the American farmer has at last secured the "home market that he has been so manfully striving for these twenty-five years under the blessings of a protective tariff ? He has been told from time to time that there was nothing like a tariff to make a market for his wheat and his corn and his pork ; that it was simply ridiculous to send his stuff 3,000 miles and pay freight on it when he could have a market at his own doors by keeping out foreign goods. He believed all this because it was so plausible and so easy to understand. He was told to "grin and bear it" until the manufacturers had time to get started, and then he would see good prices for everything he had to sell. He has borne it since 1861, but without grinning to any great extent, and he is bearing it still. He has been virtually hiring people to eat his products, and the more he has hired the less he has got for what he had to sell. There is nothing very strange about this except that the delusion in the bucolic mind should have lasted so long.

The appointment of Gen. John M. Corse as Postmaster of Boston is an excellent one. Gen. Corse was one of the finest officers who served in the Union army during the war, and his exploits were such as in any European country would have been rewarded with all sorts of enduring testimonials. He has been a life-long Democrat, and always in sympathy with the progressive element in his party. Naturally, therefore, since his residence in Massachusetts he has opposed Butlerism, and he has been a hearty supporter of President Cleveland. He is a sincere believer in civil-service reform, and may be trusted to enforce the law in the largest post-office of New England with as much fidelity to both its spirit and its letter as Collector Saltonstall has displayed in conducting the chief custom-house in that division of the country. Gen. Corse is a man of executive ability, and well qualified for the position which he assumes. His appointment is thus in sharp contrast with that of his Republican predecessor, who was given the place upon eleemosynary grounds, rather than because of any fitness for its responsibilities.

The President has now filled four of the chief Federal offices in New England, having previously appointed Leverett Saltonstall Collector of the Boston Custom-house, George M. Stearns United States District Attorney for Massachusetts, and John E. Fitzgerald Collector of Internal Revenue for the Eastern Massachusetts District, which is the most important in the Eastern States. No candid Republican will question the high quality of each of these appointments, and it is simple truth to say that together they represent a higher average of ability and character than has been seen in these four offices for years. An Administration is properly judged by the character of its appointments to the most responsible offices in its gift ; and judged by this test, no fair-minded man will deny that the cause of good government in New England has gained rather than lost by the committal of the appointing power to a Democratic President. Nor can any shrewd politician fail to see that the Democratic party is stronger in New England by reason of such appointments than it would have been if these important offices had been turned over to Democratic spoilsmen.

Mr. Andrew's letter accepting the Democratic nomination for the Massachusetts Governorship is a brief but admirable document. A better statement of the existing political situation could not easily be made than this:

"Two years ago the Republican party, which for a quarter of a century has controlled the national Government, was deprived of its power by the deliberate action of the people,

because it sought only its own preservation and stood for nothing but a political machine. Since then that party has shown an absolute unwillingness or incapacity to profit by the lesson of defeat, while the Democratic party has given the country an honest, able, and fearless Administration, satisfactory to the people, and has shown a progressive spirit ready to deal with the issues of the day. The intelligence of the nation, irrespective of political parties, heartily approves the earnest efforts of President Cleveland to divorce the civil service from politics; to reduce the tariff to the requirements of times of peace; to lessen the burden of taxation, and to prevent the coinage of a debased currency."

The nomination of Mr. Andrew appears to gain strength as the heads of the two tickets are contrasted, and he is receiving the hearty support of the Independent voters, never so numerous in Massachusetts as now. On the other hand, the Republican candidate arouses no enthusiasm in his own party, and the main reliance for his election is the hope that he may attract to his support the worst elements of the opposition.

The nomination of Mr. Abram S. Hewitt by Tammany was probably the greatest surprise to which that institution has ever treated the public. He was one of the last men in the city we should have expected its managers to talk of, much less to nominate for high office. That it is a good nomination we hardly need to say. Mr. Hewitt is just the kind of man New York should always have for Mayor. His one defect is the condition of his health, but if elected he would, by a rigid enforcement of the Civil-Service Law and a rigid abstinence from "deals" or "dickers," lessen the demands of the office on his strength and energy by at least one-half. He is an eminent business man, one of the largest and most successful employers of labor we have, an authority on most of the economical questions of the day, and has a character on which, although he has been for long years in politics, nobody has ever been able to inflict the smallest damage. Whether he will accept we do not know, but if he does, we should think the best thing the County Democracy can do, if Mayor Grace will not run again, is to adopt the nomination. Mr. Hewitt is to all intents and purposes a County Democrat rather than a Tammany man. In fact, his production by Tammany for a municipal office would seem to indicate some serious internal change in the moral constitution of that body. The action of the County Democracy and of the Republicans will now be awaited with interest. The latter are still talking of Mr. Acton, but we believe he would not accept, possibly through dread of the "knife." The "boys" will probably hit on some one whose goodness will be less offensive.

Henry George's submissiveness in taking away the plates of his book from the printing-office in which a strike was pending, in obedience to the demands of a trade union, is a fine illustration of the kind of Mayor he would be if elected. The strike was by boys, none of whom were old enough to be voters. When it first began, Mr. George was asked to intercede in behalf of the boys, but, nothing coming from that, a union ordered him to take the plates of his book away from the establishment on pain of their immediate displeasure, which was, of course, a threat not to vote for him for Mayor. Mr. George submitted at once, swallowing his frequently uttered protests against dictation. When he was asked a few days ago about the threat of one of his campaign leaders to "spot" every union man who "scabbed" on election day, he said that the "labor organizations were not so low as that," and that the "spirit of the labor movement was the reverse of coercive." Now he submits tamely to "coercion" upon himself, and does all he can to assist a boycott which is brought in aid of a strike. He would be a fine "reformer" to have in the Mayor's chair if the demands of every union were to be yielded to as meekly as this one was.

Mr. George apparently has great faith in the "free lunch" contingent of the labor party. He said in a speech on Monday night:

> "I want you to show these political managers that the workingmen have a right to be heard right here in New York. Why, as you are now placed, you have no rights but to work, and toil, and pay what you earn for the privilege of living. Why have you no rights? Because you have not asserted them. These horse cars that run along your streets should be as free as air—just as free as the elevator that carries you up into the upper stories of tall buildings. It is your privilege to have cars to run you out to the unoccupied land that lies all about you and is held by the millionaires for a rise."

If the workingmen are entitled to free horse-cars, and free house lots, why not to free cabs and free meals and free theatre tickets? Why limit their "rights" at all? They will need to have everything free if Mr. George's theories about their not having to toil and work and pay for their living are to be put into practice.

The Governor's action in pardoning the Theiss boycotters strikes us as humane and wise. All of his reasons must command the respect of fair-minded men. There is no doubt that the boycotters were ignorant of the fact that they were violating the law. They did not know that there was anything in the Penal Code which applied to boycotting, and their ignorance is not surprising, for at the time of their offence the same ignorance prevailed in the editorial rooms of nearly the entire press of the country. It required repeated quotations from the Penal Code and repeated exhortations to the press of the country to explore its treasures, to disseminate the valuable information that boycotting was a crime, and that persons practising it were liable to fine and imprisonment. The sentence of the Theiss boycotters was a valuable lesson not only to them and other laboring men, but to the newspaper press of the country as well. Having received their lesson, and having promised that, if pardoned, they would refrain from boycotting in the future and obey the laws of the land, the Theiss boycotters have served a most useful purpose. They had the strong excuse of ignorance, since they were the first to be tried under the law. Future offenders will not have this excuse, and the Governor's act cannot, therefore, be made a precedent.

The meeting of the American Board at Des Moines has taken action on the question of the conduct of the Prudential Committee in rejecting, or even virtually recalling, missionaries who do not hold the Committee's views of the ultimate fate of the heathen. But the action as reported is only the familiar verdict of "Not guilty, but don't do it again." It is a settlement which settles nothing. From the nature of things this must be the case. The difference between the two parties is fundamental, and the cleavage extends from the bottom to the top, leaving no possible point of meeting. One side holds that the heathen must be for ever lost if the Gospel be not preached to them in this world; the other believes that opportunities of salvation may be afforded after death. There is no possibility of "harmonizing" these views, and as there exists no authority in the Congregational order to declare which belief is true or binding, the divergence must continue. It is a striking sign of the times that whereas Mills and his companions had only an ardent, unquestioning desire to send the Gospel to the heathen, the American Board of to-day, outcome of the prayers and labors of those pioneers of missions, is inquiring what the Gospel is.

One serious trouble in the matter is, that many of the leading ministers of the denomination in this country hold and preach the probation theory, and the question therefore arises very naturally why, if this doctrine is so poisonous for the heathen, it can be administered in such large doses to Americans without mischief. Mr. Newman Smyth of New Haven and Dr. Ward of the *Independent* would probably be considered excellent missionaries to the heathen, and yet they teach the probation heresy in this country. The case of the poor heathen is, under the circumstances, a very hard one. When they are converted, and hear for the first time about eternal damnation, they are naturally very solicitous about the fate of their dead relatives, and would like to get some sort of assurance, knowing what kind of people they were, that they were getting another chance to behave decently in the next world. But the Board is unwilling to have the missionaries say a single word of cheer to them on this subject, so that the poor fellows receive with Christianity the awful revelation that the better Christians they are, the more certain it is to them that they will never see any of their deceased kinsmen again.

The Andover professors who believe in the "second probation" theory are to be brought to trial on a charge of fraud—that is, that they are drawing their salaries under a pledge to teach certain doctrines which they do not teach. The culprits are five in number, and their offence is known as "the Andover Hypothesis." The Board of Visitors of the College has summoned them to appear and answer October 25, but the professors have denied the jurisdiction of the Board, and there the matter rests until the 25th. That the charge is very serious may be inferred from the fact that the complainants look on the hypothesis as destructive of the doctrine of the atonement, of eternal punishment, and of the inspiration of the Scriptures. If this be true, of course, the controversy over the missionaries is a very subordinate incident in the affair. The trial, if it takes place before an ecclesiastical court, must be very long, but the case will, in all likelihood, find its way eventually into a court of law, as theological controversies are apt to do when the question of salary is involved.

The Register of the Treasury adds a note to the list of "balances due to and from the United States," which has lately been published, calling attention to the necessity of looking into each of the several statements in order to determine the indebtedness of a particular officer. That is, after finding a balance set down against one, further search may show him a creditor on another account. The Register maintains that this state of affairs "demonstrates the necessity of a system of unification, where a total indebtedness can be found at one glance." It seems strange that the Register, who is the official bookkeeper of the Treasury, clothed with important powers, and supplied with a large corps of clerks, cannot introduce this demonstrably necessary change in the method of keeping the Government accounts. But the truth is, as may be inferred from the plaintive note in question, he is powerless. He is, as his title indicates, a mere "register" of the balances which are certified to him by the Comptrollers, and each of these works in ignorance of the operations of the others. The First Comptroller, for example, may to-morrow certify a balance to be due to a marshal or to a consul of the United States, and order its payment, too, though the Commissioner of Customs may have a large outstanding difference against the same individual as a former Collector, or though the Second Comptroller may have been urging him for years to close his accounts as late paymaster in the navy. Under the present system this frequently occurs, and when it does not occur it is due to some accident or to the supererogatory diligence of a clerk. What is needed to bring about the unification of the accounts, as well as other important reforms, is a radical change in the present system of accounting. We have long since outgrown the present system, which was adapted to our wants when we had but one Auditor and one Comptroller. We now have six Auditors and three Comptrollers (calling the Commissioner of Customs a comptroller), who act independently of each other, and often at cross purposes, who establish rules of evidence and methods of procedure which are constantly clashing, and who allow credits to an officer without conference with each other concerning his accounts rendered in another official capacity. It is obvious that a consolidation of the three Comptrollers, or the bringing of them into more intimate relations than at present exist, would be a palpable improvement of our civil service.

The correspondence between Mr. Phelps and Mr. Allen Thorndike Rice about the non-presentation of the latter to the Prince of Wales has been printed, and is very droll, all the droller because it was Mr. Rice who published it. Mr. Phelps's letter would have been cruel if written to a person with keener perceptions than Mr. Rice, but he rallied after it promptly, and took his revenge by intimating that he (Rice) did not consider Mr. Phelps fit for his place. What made the letter cruel was Mr. Phelps's production in full of the undoubted fact that the presentation of any American at court is a purely discretionary civility on the part of the Minister, and always has been so; and Mr. Rice's claiming it as a right, and denouncing its refusal as "censorship of the press," was therefore almost as funny as his claiming a dinner at the Legation would have been. The Minister is supreme judge of the expediency of presenting anybody. He would not present a personal enemy, nor would he present the editor of the *Police Gazette*, and nobody would be silly enough to ask him for his reasons. It would have been a gross impropriety to present to the Prince of Wales the author or editor of a blackguard lampoon on his superior officer and personal friend, the Secretary of State; and the Prince of Wales, we are sure, would be the first man in England to recognize the fitness of his refusal. One of the drollest things in Mr. Rice's letter, however, is his calling "Arthur Richmond," the blackguard whom he admitted to his *Review*, "The Press," and denouncing anybody who did not like "Richmond's" ruffianism, as a "censor." Calling him "The Press" reminds one of the practice of calling strikers "Labor" when they are throwing brickbats at non-unionists. If Mr. Rice were to let a man occupy one of his front windows to abuse the passers by, or distribute libellous handbills on his sidewalk, he would, we suppose, consider any one who gave him a good kicking an enemy of "Liberty."

A queer controversy has started up respecting the "loyalty" of a school-book published by the house of A. S. Barnes & Co., entitled a 'Brief History of the United States,' by the late Prof. J. Dorman Steele of Elmira, N. Y. The question was raised a few weeks ago in the Grand Army Post at Saratoga whether this work was suitable to be put in the hands of youth as a text-book, and it was decided in a qualified way in the negative. The question is now agitating the Board of Education of Newark. The facts have been brought out that the book has been in use fourteen years without a word of disapproval until now on the score of loyalty; that it was prepared by a Union soldier who was desperately wounded at the battle of Fair Oaks while leading his men (Company K, Eighty-first New York Volunteers) in action; that it received the approval of the official organ of the Grand Army of the Republic (the *National Tribune*), and that the principal charge brought against it—that of underrating the numbers of Lee's army at the final surrender at Appomattox, and thus belittling the achievements of Gen. Grant—is untrue, since the author in a foot-note gave the official returns of both sides. Such a controversy has more of the marks of a fight among book agents for the command of the market than of a competitive examination for loyalty.

The biennial report upon the schools of Vermont by Superintendent Dartt, presented to the Legislature upon its meeting last week, shows that the educational system of the State is retrograding rather than improving. In 1880 the number of children enrolled in school at some time during the year was 73,952, while in 1886 it has sunk to 71,667. As the last census showed 99,463 persons of school age, it follows that only 72 per cent. of the children now enter a public school, against more than 74 per cent. six years ago. The present proportion falls below that in four of the Southern States—Delaware, West Virginia, Florida, and Texas—79 per cent. of all the children being enrolled in the last named commonwealth, while Missouri is within 4 per cent. of Vermont's record, and even South Carolina falls but 9 per cent. behind.

Senator Pike of New Hampshire, who died on Friday, had suffered so much from ill-health since he was elected three years ago that he had not been able to show his quality, which was much above the ruling level in New Hampshire Senators of late years. He was neither a crank, like his associate Blair, nor a mere wire-puller, like Rollins, whom he succeeded, but a man of good ability and unusual independence for a State where partisans are as a rule so hidebound. It is to be regretted that he did not enjoy the opportunity of doing something to relieve New Hampshire Republicanism from the reputation of representing only charlatanism in statesmanship or the Machine in politics. The Legislature which is to be elected next month will have the choice of his successor, but as that body will not, in the regular course of things, meet until next June, the Governor will appoint a man who will fill the seat during the next session of Congress. The Democrats are given an unexpected chance to gain a seat in the upper branch of Congress by Mr. Pike's death, but they have only carried the Legislature twice (in 1871 and in 1874) during the thirty years since the Republican party was formed, and it is not very likely they will have such a piece of good luck this year.

We say it with deep pain, but we cannot avoid it, that in our opinion the *Sun* demonstrated on Monday that Lieutenant Schwatka did not discover "the Jones River," or any other river in Alaska, and that the river to which he has given the name of "Jones" has been known to the Russian and other explorers for a century or thereabouts. Unless the *Sun's* reproduction of the map from Tebienkoff's Atlas is a base forgery, it is fatal to the contention of the *Times* that Schwatka had any right to give a name to any river in that region. This result is made all the more melancholy by the simultaneous appearance in the *Times* of a sarcastic poem, containing passages of great power and beauty, directed against the editor of the *Sun*. But for the Tebienkoff's Atlas it would have been difficult for the editor of the *Sun* to stand up against this poem. The Atlas has saved him in the providential way in which a copy of the New Testament in a young man's waistcoat pocket occasionally stops a bullet in battle. We need hardly say that we do not think any blame in the matter attaches to Mr. Jones beyond over-confidence in Schwatka, who is, we should say, a sanguine, fussy sort of person, whose "discoveries" should be received with great caution. To Mr. Jones the mortification of having his name forcibly detached from the river will doubtless be great, but giving one's name to rivers or mountains, in the teeth of opposition, is a delicate business on which a prudent man will not venture. It is a distinction in which the civilized world has to acquiesce, in order to give it any permanence or value.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, October 6, to TUESDAY, October 12, 1886 inclusive.

DOMESTIC.

A FEDERAL office-holder has decided to resign on account of the President's order about non-interference in politics. Philip Kumler, United States District-Attorney and Republican candidate for the Common Pleas Judgeship in Cincinnati, will send his resignation to the President. The President is reported to be very indignant at the way in which his order has been violated, and it is believed that he will make conspicuous examples of several offenders.

The United States District Attorney who has been warned by the Administration that he must resign if he desires to run for Congress, is understood to be A. J. Delaney of Wisconsin, who defeated Gen. Bragg for renomination in his Congressional district. Mr. Delaney has recently said that he did not understand that the order prevented any man from seeking another office, and he believed he could hold his present office until he became a representative of the Second District in Congress.

Charges of interference in active politics are brought against Collector Troup of New Haven, and Collector Bishop of Cincinnati.

Gen. John M. Corse has been appointed Postmaster at Boston. He has a brilliant record as a soldier.

The Civil-Service Commission in all probability will amend the civil-service rules so that employees may be transferred from the various departments throughout the country to places at the national capital. The object is to strengthen the service in the departments there.

The American schooner *Marion Grimes* was released on Tuesday afternoon at Port Shelburne, N. S.. Consul Phelan having deposited $400 for the fine.

The British Minister at Washington, acting on instructions from his Government, has applied to the Department of State for all information obtainable in regard to the recent seizures of the British Columbian schooners *Onward*, *Thornton*, and *Carolina* by the U. S. revenue steamer *Corwin*, for alleged violation of the laws regulating the hunting of seals in Alaskan waters.

The New York *Times* on Sunday said: "We take pleasure in laying before the public copies of several letters bearing upon the reported misconduct of Mr. Sedgwick, the Special Agent of the State Department, in the City of Mexico. The testimony of these letters is strong in vindication of Mr. Sedgwick and in support of his own published denial. We are confident that they will be accepted by his friends and the public as a sufficient answer to the accusations brought against him."

From the annual report of Gen. Miles as commander of the Department of Arizona, in New Mexico, it appears that the surrender of Geronimo was unconditional. Gen. Miles in his report argues at some length the question of punishment, and calls attention to the fact that heretofore in such cases removal has been deemed sufficient. He suggests that the Apaches be treated as other Indians have been under similar circumstances. He highly compliments Capt. Lawton, Lieut. Gatewood, and the officers and soldiers generally for their meritorious services during the campaign.

Judge Brown of the United States Court at Detroit, Mich., on Monday handed down his decision in the case of the United States against John Craig, on the action brought to recover a penalty of $1,000 provided for in the "Assisted Immigration Act" of February 26, 1886. Judge Brown sustains the constitutionality of the law.

Gen. Gordon was on Wednesday elected Governor of Georgia without a contest. Two amendments to the Constitution were almost unanimously adopted. The first was to extend the power of the Legislature, which now may furnish limbs to maimed ex-Confederates, so that in its discretion the relief may take any other form. The effect of this amendment will be to give Georgia an extended pension list, The second amendment is to permit local legislation to originate in the Senate as well as in the House, instead of in the House exclusively, as formerly. The majority of the Legislature is undoubtedly for the policy of prohibition.

The Colorado Democrats on Wednesday nominated Alva Adams for Governor. The platform favors the free and unlimited coinage of silver on the same terms as gold, and criticises the Republican party, claiming that they have while in power created and maintained gigantic monopolies, resulting in serious conflicts between capital and labor, which now agitate all sections of the country. It also commends President Cleveland "for his impartial execution of the Civil-Service Law," and congratulates the Democratic party on its return to power, and upon the "honesty and integrity which, by reason of such return, has characterized the administration of public affairs during the past two years."

In his letter accepting the Republican nomination for Governor of New Jersey, B. F. Howey says: "I have carefully examined the platform adopted by the Convention, and am in hearty accord with its declarations. In acknowledging the distinguished honor conferred upon me by the Convention, I beg to say that I am a Jerseyman by birth, as were my ancestors; that my interests are coupled with the prosperity of the State, and that my affection for the commonwealth is such that, should I be called upon to act as her Chief Magistrate, it will be my constant care to guide her interests and protect her honor."

At the Tammany Hall Convention on Monday night Mr. Abram S. Hewitt was nominated for Mayor of New York by acclamation. The motion was made by P. Henry Dugro, who had previously declined in committee to accept the nomination himself. The nomination was a complete surprise to the uninitiated. It is probable that the County Democracy will approve the nomination. Mr. Hewitt has not yet signified his intention to accept.

Richard H. Dana recently wrote to John F. Andrew, Democratic candidate for Governor of Massachusetts: "I hope I am not asking too much when I beg you will let me and the public generally know if there is any truth in the rumors of your contributing large sums to the Democratic campaign fund? I have heard denials also." Mr. Andrew replied: "I am happy to reply that I have long thought that the extent to which money is used in political campaigns is very injurious, and that candidates for office should not be called upon to supply funds. The leaders of the Democratic party were informed of my views upon this subject before the Convention tendered me its nomination, and they recognized their entire propriety. They knew that money would not be furnished by me, directly or indirectly, for campaign purposes, and they perfectly understood that this is my fixed determination." Mr. Dana has announced that he will support Mr. Andrew for Governor, and the whole Mugwump organization of 1884 will probably work in his favor.

Gov. Hill on Saturday commuted the sentences of the Theiss boycotters to 100 days' imprisonment in State prison, which made their terms expire on Tuesday. The Governor has written an elaborate opinion giving his reasons for this decision, among which are the following: That the prisoners were not aware that they were violating any law of the State in what they did; that the prisoners are honest workingmen who do not belong to the criminal class, and this was their first offence; that they are now penitent, and have promised in writing to hereafter cease boycotting and obey the laws of the State; that the District Attorney of New York favors the commutation of the sentence; that the prisoners, or nearly all of them, have families dependent upon them for support, and are all poor men worthy of Executive clemency.

Notices were on Thursday morning posted in all the stock-yards' packing-houses in Chicago to the effect that on and after Monday the hours of work would be ten instead of eight, as is now the rule. The notices were signed by nineteen firms, comprising all the packers of consequence in Chicago. Another great strike of pork-packers was accordingly begun on Friday. About 16,000 men are involved. Order has been well preserved.

The Convention of Knights of Labor at Richmond, Va., has not yet succeeded in transacting any important business. Mr. Powderly has written a letter on the color-line, which aims to conciliate both North and South, and in effect recommends a proper respect for local prejudices.

Judge Gary, in the Criminal Court of Chicago on Thursday, overruled the motion for a new trial in the cases of the eight Anarchists charged with the Haymarket massacre, and confirmed the verdict of the jury that Spies, Parsons, Fielden, Schwab, Engel, Fischer, and Lingg should be hanged, and that Neebe should suffer imprisonment for fifteen years in the State Penitentiary. On Saturday they were sentenced to be hanged on December 3.

One of the indicted ex-Aldermen of 1884, H. L. Sayles, has fled to Canada. His brother and bondsman, after transferring his property, has also left the city. Ten of the ex-Aldermen were rearrested on Tuesday afternoon on a bench warrant, and required to give more bail.

In the Protestant Episcopal Convention at Chicago on Thursday, Dr. Huntington's motion to appoint a joint committee to consider the whole subject of liturgical revision, and report not later than the tenth day of the session, was adopted. The following is the committee: Bishops Williams, Bedell, Doane, and Lyman, the Rev. Drs. Huntington of New York, Egar of Central New York, Gold of Chicago, Hart of Connecticut, and Hale of Iowa, Messrs. Sheffey of Virginia, Nash of New York, Dr. Shattuck of Massachusetts, Packard of Maryland, and Gilbert of Long Island.

At the conclusion of the long debate of the American Board of Congregational Foreign Missions on Thursday relating to the new departure, the following was resolved: "That the Board recognizes and approves the principle upon which the Prudential Committee has continued to act in regard to appointments for missionary service, in strictly conforming to the well-understood and permanent basis of doctrinal faith upon which the missions of the Board have been steadily conducted, and to which, in the exercise of its sacred trust, the Committee had no option but to conform. The Board is constrained to look with great apprehension upon certain tendencies of the doctrine of a probation after death which have been recently broached and diligently propagated, that seemed divisive and perversive and dangerous to the churches at home and abroad. In view of these tendencies they do heartily approve of the action of the Prudential Committee in carefully guarding the Board from any committal to the approval of that doctrine, and advise a continuance of that caution in time to come. The Board recommends to the Prudential Committee to consider, in difficult cases turning upon doctrinal views of candidates for missionary service, the expediency of calling a council of the churches, to be constituted in some manner which may be determined by the good judgment of the Committee, to pass upon the theological soundness of the candidate; and the Committee is instructed to report upon this matter to the Board at the next annual meeting." The resolution was adopted by a two-thirds *viva-voce* vote. All the members of the Prudential Committee were re-elected on Friday except Dr. Thwing and

Prof. E. C. Smyth of Andover. The former could not act again because of his removal to the West, and the latter was dropped.

Charges of heresy have been preferred against five Andover professors, and brought before the Board of Visitors. They are accused of preaching the doctrine of second probation.

Senator Austin F. Pike of New Hampshire died suddenly on Friday at the age of sixty-seven. His term would have expired in 1889.

Ex-Senator David Levy Yulee of Florida died in this city on Sunday after a six days' illness. Mr. Yulee caught a severe cold on a Fall River steamer and died of pneumonia. He was born at St. Thomas, W. I., in 1811. His name was David Levy. His father took him to Virginia in his boyhood. He removed to Florida in 1824, studied law, and became a planter. He was elected to the Twenty-seventh and Twenty-eighth Congresses, and changed his name to David Levy Yulee. From December 1, 1845, to March 3, 1851, and again from 1855 to 1860, he was United States Senator from Florida. He went with his State in the secession war, and was confined in Fort Pulaski in 1865 as a prisoner of State.

Rear-Admiral Edward T. Nichols, United States Navy, died in Pomfret, Conn., on Tuesday, at the age of sixty-three years. Admiral Nichols was one of the most efficient Union naval officers during the recent war. He was born in Georgia in 1823. In 1836 he entered the navy, and in 1850 was made a lieutenant. During the first two years of the civil war he commanded the *Winona* of the West Gulf Blockading Squadron. When Farragut's fleet went up the Mississippi he accompanied it, and it fell to his lot to receive the surrender of the two strong rebel forts, Jackson and St. Philip, on which the Confederates depended for the safety of New Orleans. He was also in the river engagement against Vicksburg, and assisted in penning up and destroying the rebel ram *Arkansas*. In 1866 he commanded the *Mendota* of the North Atlantic Squadron, and was on duty in New York for two years. His promotions were to a captaincy in 1866, to the rank of Commodore in 1872, and to that of Rear-Admiral in 1878.

FOREIGN.

The Bulgarian Government has notified the foreign consuls at Sofia that Gen. Kaulbars, through the Russian consul at Rustchuk, ordered the military commander there to release the political conspirators in his custody, threatening to hold him responsible if he disobeyed, promising him as a reward for compliance promotion to the rank of Commander General "when the Russians arrive," and informing him that the penalty of refusal would be reduction to the ranks. The Commander informed the troops under his command that he had received and declined the command, and the soldiers applauded his conduct.

Gen. Kaulbars has telegraphed to the Czar that he must now be either recalled or furnished with troops. The failure of his mission is generally admitted. It is reported that the Russian Government is preparing a note to the Powers, which will be the forerunner of decisive measures in Bulgaria. A plot has been discovered to create revolts throughout the two Bulgarias by means of armed bands engaged by the Russian Consulates at Sofia, Philippopolis, and Rustchuk. Several of the ring-leaders have been arrested.

In the Bulgarian city elections for members of the Great Sobranye to elect a successor to Prince Alexander, all the Government candidates have been successful. M. Karaveloff, pro-Russian, received but 50 votes out of the 1,500 cast in his district. During the elections on Sunday, Macedonians inspired by the Russian Consulate endeavored to create a disturbance.

The returns of the Bulgarian elections so far show that 400 Ministerialists and 21 Pro-Russians or Zankovists have been chosen. All the members of the Ministry have been elected by immense majorities. It is said that Prince Alexander is prepared to accept the Bulgarian throne if reëlected. A despatch from St. Petersburg says that the Czar, while discussing recently the Bulgarian crisis, said: "If the Bulgarian question can be settled peaceably, well and good, but I will not go to war for the sake of the disorderly Bulgarians." The newspapers of St. Petersburg are unanimously of opinion that decisive action by Russia in regard to Bulgaria is imperative.

Rumors were current on Thursday to the effect that a conspiracy had been discovered to kidnap King Milan of Servia, and to force him to abdicate, with the alternative of death. They have not been confirmed. M. Karaveloff has resigned as Regent in Bulgaria. Gen. Kaulbars has been treated with marked coolness during his tour through Bulgaria.

Premier Von Taaffe, in the Lower House of the Austrian Parliament on Friday, replying to interpellations, said that any supposition that the relations between Austria and Germany had been shaken were completely groundless. "The relations rest now, as hitherto," added the Premier, "on the basis which the Ministry have repeatedly defined before the Delegation. There is no occasion to apprehend any loosening or disturbance of the close and trustful relations existing on both sides."

It is currently rumored at Constantinople that France, Russia, and Turkey are on the eve of coming to an understanding, and that Turkey will send an ultimatum to England demanding the immediate evacuation of Egypt.

There is a vivid growth of the war feeling in France. The Boulanger party have begun the issue of two new journals—*La Revanche* and *Le Soldat Laboureur*—to advocate an offensive policy in vindication of the old military prestige of France. Gen. Boulanger, however, disowns any connection with the papers. M. Lavedon, the military critic, writes to the *Figaro* that Gen. Boulanger has prepared a well-conceived plan, in conjunction with a staff officer of high rank, for a Continental campaign. The *Militaire* says that Gen. Boulanger desires war, not for the purpose of recovering Alsace, not to gratify personal ambition, but as a step leading to the solution of social questions. The strictest taboo of everything German is being observed.

Premier de Freycinet has informed his colleagues in the French Cabinet that the disputes between the Malagasys and the French in Madagascar are almost settled.

Louise Michel has been pardoned and will soon be released.

It is reported that Señor Zorilla left France voluntarily in order to prevent embarrassment to the French Government.

It now appears that the Spanish Cabinet really resolved to confirm the sentence of death against the revolutionists, but an under-secretary misunderstood Premier Sagasta, and announced to the waiting crowd that the sentence had been commuted, and it was quickly spread over the country. The whole Cabinet resolved to resign. The Queen thereupon called on Señor Sagasta to form a new Cabinet. The Queen has signed a decree freeing the remainder of the slaves in Cuba from their terms of servitude.

A new Spanish Cabinet has been formed as follows: Minister of the Council, Señor Sagasta; Minister of Foreign Affairs, Señor Moret; Minister of Justice, Señor Martinez; Minister of Finance, Señor Puigcerver; Minister of the Interior, Señor Leon Castillo; Minister of Public Works, Señor Rodrigo; Minister of War, Gen. Castillo; Minister of Marine, Admiral Arias; Minister of the Colonies, Señor Balaguer. It is rather more conservative than the preceding. The first act of the Ministry will be to raise the siege. It will endeavor to check the disaffection in the army, and will pursue a policy compatible with the gradual execution of the Liberal programme.

A London newspaper reports the details of a startling Anarchist plot to destroy Vienna and to assassinate Emperor Francis Joseph. The conspirators, whose plans were frustrated by the authorities, had intended to carry out the plot on October 4. A large number of foreigners and Austrians were arrested. The ring-leader escaped to Germany.

The Vienna police have furnished the press with an account of the plot. Although many details are obviously suppressed, it is shown to have surpassed in extent and diabolical ingenuity any dynamite plot hitherto concocted. Seventeen of the conspirators have been arrested. An examination of the prisoners shows that the plot was hatched in and directed from America and London, and was to be carried out by Viennese Anarchists who recently returned from America. The plan was cleverly discovered. The conspirators were divided into several groups, one of which was detailed to set fire to the city, another to take charge of the dynamite operations, and another to forge the necessary official documents and to coin money for expenses. Parties were detailed to set fire to Penzing, Untermeidling, Hetzendorf, Meidling, and Favoriten. The police got wind of the plot and watched until it was almost mature. They receive universal praise for their zeal and circumspection.

The Russian Government will introduce a tobacco monopoly throughout the empire in 1887.

The London *Daily News* announced on Saturday morning, in a two-column article, that the Government intend to bring in a bill establishing home rule in Ireland upon the basis of four national councils, representing the provinces. It added that Lord Hartington and Mr. Chamberlain had been consulted about this. Both were prepared to support it. The Marquis of Hartington has authorized a denial of the statement that he has promised to support the bill.

The London *Daily News* said on Monday morning: "It is the intention of the Government, after promising a home-rule bill, to take up the procedure measure as the first business of the session. The Government have so intimated to Lord Hartington and Mr. Chamberlain, but nothing definite has been arranged. Although the Government hope to carry the home-rule measure by a majority of 100, they prefer to secure the right of closure first. It is likely that the Parnellites will object to the Government's programme, and insist that Irish affairs be the first business."

The Conservative newspapers avoid direct mention of the *Daily News's* statement that the Government will introduce a bill giving four provincial councils to Ireland. The *Standard* refers to "big gooseberry revelations of important Cabinet secrets before the Ministers themselves have arrived at any decision." The bill is generally discredited.

The Director of Catholic Missions in Paris has been informed that 700 Christians have been massacred in Tanhoa, Tonquin; also that thirty villages in that district have been burned, and 9,000 inhabitants are starving.

Advices from Apia, Samoa, state that the English, German, and American Commissioners have begun their conference respecting the rights and claims of their respective Governments in the Samoan Islands. The conference is said to be proceeding smoothly.

The column of British and Indian troops sent from Minhla, Burmah, to relieve a surrounded garrison, has succeeded in performing the mission. It took the column six days to make a march of thirty miles through one jungle. In this the troops found several crucified British messengers. Every officer and nearly every man in the rescued garrison was prostrated with fever when the relieving expedition reached them.

The long overdue steamer *Anchoria* arrived at St. John's, New Foundland, on Monday; all on board well. She had broken her shaft.

THE RECORD AS TO THE OFFICES.

THE *Civil Service Record* has rendered the public a great service, in securing and publishing a large collection of statistics as to the changes which have been made in the various executive departments since the new Administration came in, a year ago last spring. The lack of such data hitherto has prevented anything like a comprehensive exposition of the facts, and it has consequently been impossible to show with any approach to exactness the real state of the case. The *Record's* tables enable us to get at the truth, and the showing is full of interest.

The first thing which strikes one is the evidence that the Civil-Service Law has been strictly enforced. This is furnished by the table of removals in the "classified service," which is the term adopted to designate that part of the service subject to the law of 1883. There are about 5,650 such places in the departments at Washington, and, under the old spoils system of a "clean sweep" upon a change of national administration, this army of clerks appointed under Republican rule would have been discharged in short order. In point of fact, between March 4, 1885, and June 16, 1886 (since which latter date very few changes have been made), the whole number of removals aggregated but 368, or only one in every fifteen persons, and thirteen of these were on account of reduction of force. In some departments the reasons for discharges are furnished in every case, and it is evident that they were made solely for the good of the service. Thus in the War Department sixty-one persons were removed during this period, and Secretary Endicott gives these as the causes: Reduction of appropriations, 10; services no longer required, 15; to accept appointments in other departments, 2; inattention to duty, 2; intemperance, 7; absence without leave, 6; inefficiency, 10; misconduct, 8; political, 1. Ten persons in the classified service in the Post-office Department were removed, and the cause in each case is recorded, as, "drinking to excess," "absent from duty without permission," etc. It thus clearly appears that the Civil-Service Law interposes no obstacle to removals for the good of the service, while the impossibility of filling vacancies except upon proved merit, as established by competitive examinations, removes the motive for discharging efficient employees to make room for personal or political favorites.

The moderation of the Administration in the use of the removing power is also shown by the record as to changes in the unclassified service, to which the law does not apply. The detailed statistics as to these are given in the case of the Interior Department, and they show that out of about 1,080 such employees only 223, or one-fifth, were removed. The 105 resignations doubtless include a large number of persons who would have been removed had they not voluntarily taken themselves out of the way; but even lumping all the removals and resignations together as forced, they amount to only 30 per cent. of the whole number who might have been summarily got rid of without any violation of law. Even in the Department of Justice, among the Territorial judges, the United States attorneys, marshals, etc., only two-thirds of the whole number have been changed, and our readers have doubtless noticed that one of the Federal attorneys whose resignation has just been demanded, because he has been nominated for another office by his party, is an Ohio Republican.

The showing as to the diplomatic service is peculiarly creditable and encouraging, since this branch of the Government has long been the refuge of broken-down party hacks. The changes made in this service since Mr. Bayard became Secretary of State, counting everything, from an envoy extraordinary and minister plenipotentiary down to an interpreter, aggregate only 144 out of 327 such officers in the service of the United States, or only 44 per cent. The Administration at Washington has changed from one party to another for the first time in a quarter of a century, and a list compiled in the second year of that Administration shows that, instead of the old-fashioned "clean sweep" abroad, much less than half of the representatives of this Government in foreign lands have been changed. To understand what this really means, one should contrast this record with that made four years before, when there was not a change of parties, but only of representatives of the same party in the executive departments. When Mr. Garfield became President and made Mr. Blaine Secretary of State, he found the diplomatic service filled with men appointed by Republicans, yet during the four months between March 4, 1881, and the day of the Guiteau tragedy, no less than fifty-five changes were made in a total number of offices then but little exceeding 300. In other words, changes were made in 18 per cent. of the diplomatic offices within four months by Mr. Blaine as a Republican Secretary of State, against only 44 per cent. in more than a year by Mr. Bayard as a Democratic Secretary, although the change of parties presented the strongest temptations and excuses for wholesale changes in the latter case.

Such figures as these are full of encouragement to the friends of civil-service reform. They show that the system of treating public offices as public trusts is steadily making headway; indeed, that it has already become too thoroughly entrenched ever to be overthrown by the spoilsmen.

THE RECENT THEOLOGICAL CONTROVERSIES.

WE are not concerned to note the merely ecclesiastical relations and results of what is known as the Andover movement. Still less do we feel called upon to discuss the theological bearings of the points at issue, being content, for our part, to leave to the factions engaged in the dispute, and to the religious press, a monopoly of sweeping assertions on one side and the other in regard to a matter concerning which man has no means of proving anything. But there are certain larger relations of these recent church controversies to which we would call attention.

Almost for the first time since the civil war, we are given a reminder, in the events alluded to, that the divisive forces of Protestantism are not spent. There is a schism, practically, in the Congregational Church. It may never take organic form. The troublesome faction may not be cut off; it may not go out voluntarily. Yet there has been made evident such a sharp and radical difference on a point regarded as of the essence of the faith, as would have led, infallibly, in other days, to the creation of a new sect; as would lead now, in a denomination possessing any central authority, to trials for heresy, and excision. Here we see, then, a recrudescence of the schismatic tendencies of Protestantism. These were in a state of high activity in the United States during the closing years of the last century and the first half of this, and were remarkably fertile in the production of new sects formed on a basis of theological differences. The more recent rendings of the American churches were the work of slavery. Now, it would appear, after a long period during which the disruptive forces have been in abeyance, there is danger of cleavage along theological lines again.

This is all the more significant in the face of the immensely widened tolerance of divergent views which has come to prevail in the churches. A difference must be great indeed to lead to a schism in a church whose policy, more and more, has been to keep up the spirit of religion by admitting all opinions into the sanctuary. No complaint is oftener in the mouths of the older clergy than that denominational names have lost their meaning. Pascal was astonished to find that two degrees of latitude were enough to reverse the principles of jurisprudence. A much shorter distance is all that need be travelled in the United States to find the same denomination standing for different things. Thus the conservative element in the meeting of the American Board counted it no small advantage that the sessions this year were held at Des Moines, the Congregationalism of the West being of a far different temper from that in the neighborhood of Boston. It is highly noteworthy, we repeat, if a party in the church has come to hold views too radical for even such an elastic mantle of toleration to cover. It is a sign that the course of Protestant development is still to be marked by disruption, as well as by slow and peaceable change.

The complacency with which some of the other sects have been regarding this movement within the Congregational body is not without its amusing aspects. The Unitarians, for example, have been maintaining all these years that they have followed the only sure course towards denominational stable equilibrium, and that change and advance must necessarily go on in other denominations until a resting-place similar to their own is reached. Accordingly they have seen a clear confirmation of this opinion in the agitations of Congregationalism for the past ten years. But they are just now rudely disturbed by the need of attending to a threatened schism in their own church. The Western Unitarian Association has decided that the way to secure an equilibrium really stable is to broaden the basis of denominational fellowship; and the old leaders of the church, who had supposed that all was settled, are lifting up their voices against dangerous tendencies, quite in the orthodox fashion. At the other extreme may be

seen the Presbyterians, proudly pointing to their rigid ecclesiastical system and their definite and obligatory creed as effective bulwarks against all innovation They sadly shake their heads when they talk of the "New Departure" in the Congregational Church, and begin planting missions of their own in New England so as to be ready for anything that may happen. Yet some of them are half-conscious that they may be making the same mistake which Principal Tulloch showed was made, in supposing that the Scottish churches had remained quiescent in religious thought because they maintained the old Calvinistic creeds intact. It must cause a sense of hollowness in Presbyterian self satisfaction to remember that some of the most outspoken leaders of the Andover movement were, until recently, Presbyterians, honored and unquestioned leaders.

Then there must be some ground for disquiet in the attitude of the hyper-orthodox Presbyterian Church of the South. That body makes no concealment of its conviction that the Northern Presbyterians are not safely orthodox. This conviction is now, probably, the greatest obstacle in the way of a union between the two churches. In fact, it would seem that one effect of these recent theological disturbances will be indefinitely to adjourn the question of a general union of the Protestant sects—a union h ralded by many as an event of the near future. All attempts towards such a consolidation, thus far, have been rather sentimental than practical. Aside from an extremely limited cooperation on some missionary fields, little has been accomplished beyond the exchange of vague inter-denominational compliments and greetings. It has not been possible to form a basis of doctrinal agreement. It seems certain that these recent revelations of theological differences so marked within the bounds of a single denomination will make a general Protestant union still more out of the question.

We should be sorry to be thought to see in these movements within religious circles nothing of significance for the larger interests of truth and liberty. These varied theological opinions and disturbances seem to be necessary stages in the slow education of mankind. Count Tolstoi speaks of the curious way in which an individual often reproduces in his personal development the historical progress of the thought of the race, as in the embryo the different steps in the evolution of its ancestry are displayed. In a similar way it would seem to be sometimes the fate of a denomination to represent in epitome the whole history of religious thought. Certainly we cannot hesitate to pronounce fragmentary and divisive Protestantism vastly better than the dead solidarity of religion in Spain and Turkey. It is as much better as liberty is better than slavery, intelligence than superstition, progress than stagnation.

COÖPERATION AND CHARACTER.

THE British diplomatic agents have made a report on coöperation in various countries, and it has been issued in a small volume, of which we find a summary in the London *Daily News*. Nothing can be more interesting than experiments in coöperation, because it is the only one of the proposed solutions of the "labor problem" which has even a flavor of rationality about it. We include profit-sharing under the same term, for it is a form of coöperation, and depends for its success on an appeal to the same motives. Among European countries, France occupies by far the foremost place in the field of coöperation in production. Coöperation in consumption, which has been so successful in England, the French, for some unexplained reason, have never taken to. But they have set up more coöperative societies for production, and carried them on more successfully, than any other country. Before the Franco-German war they were numerous, and some of them very successful. A society of working pianomakers, for instance, starting with simply their own little savings, were worth $8,000 in two or three years. The war and the Commune ruined most of them, and there has been no revival of the movement. Those who are disposed to try industrial experiments have for the most part joined the Socialists and Anarchists, and are clamoring for the conversion of the whole State into a coöperative association. In fact, the success of the coöperative associations in France destroyed or greatly damaged coöperation as a solution of the "labor problem," in the eyes of the discontented working class in France. This is an extraordinary and at first sight puzzling fact, but the explanation of it is easy, and we commend it to the attention of all who are pottering over the labor problem in this country.

The explanation is this: All the experiments made brought out, more clearly than is possible under the wage system, the part played by character in producing industrial success. "The fate of these institutions," the *Daily News* says, "was in exact conformity with the law of all human endeavor. Where the associated workmen were prudent, honest, laborious, and self-denying, they were prospered; where they were not, they failed." The result was, that in spreading they tended to create a sort of natural aristocracy in the working class, and to mark off the prudent, honest, laborious, and self-denying from the shiftless, dishonest, lazy, and extravagant. The associations had to get rid of their less capable and trustworthy members as a condition of success, and associations which were not made up in the main of picked men soon went to the wall. This ruined them in the eyes of the inferior workmen and in the eyes of the labor agitators. These last in France are now the worst enemies of coöperation. They discourage all attempts at it, and preach in more and more savage tones the great gospel of "Collectivity," which proposes to have the "State" take possession of all property, and hire each person to do his particular kind of labor.

This is a very instructive phenomenon, which we advise our professorial and clerical Socialists to study carefully. Trades unions, including the Knights of Labor as at present conducted in the United States, all have in view the concealment of those differences of character and capacity which the coöperative associations bring to light. The object of the former is to arrange the work of production in every field in such a way that it shall not be possible to perceive which of any dozen men working together is the ablest, or most skilful, or most industrious; and that the lazy, or shirking, or incapable man shall escape the penalties with which he is, under our present civilization, remorselessly pursued. In other words, they want to eliminate from industry the influence of character on success. They seek to overthrow in the moral world the law of the survival of the fittest. They insist that all shall survive, both the fit and unfit; that virtue shall not have even the reward of achievement, and that the qualities which most distinguish man from the brutes shall not profit any individual man materially. The savage war on non-union men to force them to enter the unions is carried on in furtherance of the same idea. They are hindrances to the dead-level system. Of course the unions might be conducted without this system. They might give free play to individual superiority; but to do so without exciting heartburnings and jealousies would call for greater skill in management than has yet been displayed.

Correspondence.

REPUBLICANS AND FREE TRADE IN MICHIGAN.

TO THE EDITOR OF THE NATION:

SIR: You seem to think that the nomination of Mr. Robinson, "a pronounced anti-protectionist," as you call him, by the Republicans of the Detroit district is an indication of a change of opinion on their part regarding the tariff. Permit me to call this an error, and to tell you why Robinson was nominated and who he is.

Your article in the same number of your paper regarding Henry George's candidacy for Mayor of your city makes me think that the information might interest you, as their cases are to some extent analogous, and perhaps your readers would like to hear a little about practical politics in Michigan. Mr. Robinson has for many years been an enthusiastic leader of the Greenback party of this district, but has not refused outside help to get an office. At present he is a justice of the peace, the election to which office he obtained on a Greenback-Labor nomination, supported by a bargain under which his party supported the rest of the Republican candidates in return for their endorsement of Robinson. Mr. Robinson has been one of the leaders of labor organizations that have exercised a reign of terror in this city during the last year, crippled business, and compelled workingmen to suffer want when they had a fine chance of earning good wages. He has never advised deeds of violence directly, but has made speeches at socialistic meetings denouncing capitalists, banks, etc., which must of necessity have had a pernicious effect on his uneducated hearers. Some of those speeches he would now like to have forgotten, and in a discreditable manner he *now* denounces the then reports of the same as false. In short, Mr. Robinson might be called a demagogue, for he has the character and ambition to be one, but lacks the ability even for that rôle. His election would in some respects have the same results as that of Mr. Henry George, which you consider so very grave.

Some time ago the labor organizations of this city nominated him for Congress on a free-trade, greenback, silver, anti-monopoly, etc., platform.

Subsequently the Democrats nominated a very able though somewhat dissolute man on a free-trade platform, and then the Republicans, knowing what little chance they had in this Democratic district against those two candidates, began to look around for a candidate of their own. Disregarding Robinson's political character and history, his principles, or those of his party, so antagonistic to their own, they nominated or rather endorsed him as the only man who, owing to his labor associations, had a chance of being elected, adopting, however, a high-tariff plank in their platform; and Robinson, carried away by ambition, accepted their endorsement, and now stands before us as a candidate on two platforms as much opposed to each other as possible.

Success is what the Republicans want, cost what it may; *success* is the consideration for which Robinson casts aside, or rather embraces, all principles. It is touching to hear how Republicans try to reconcile their tariff views with their wishes for the welfare of the laboring men who suppose that their candidate stands on a free-trade platform. They of course point out the difference in favor of American laborers between them and their brethren in Europe, and ascribe it to the results of a providential Republican tariff legislation. This must be puzzling to many. The laboring man who votes for Robinson has, however, his choice between a free-trade and high-tariff candidate combined in one individual, and is sure to see his condition bettered in any event. This, again, must be most gratifying to the laboring man.

The Republican party managers, however, understand their business and know their man. They perceive how even now the flattery of a Republican nomination, the friendly smile of their prominent men, has intoxicated Robinson, how he is now already polishing up his old Republicanism; and they correctly assume that, if by any chance he should be elected, he will be one of theirs, and his further political career will be under their control, for he is ambitious and weak, and they are powerful and influential. The Republican party in Michigan is a lumber, copper, and iron party, and will see to it that no free-traders are elected with its assistance. As a matter of fact, there is little chance of Robinson's election, but his endorsement is a shrewd scheme to catch the labor vote with a Republican hook to be used on future occasions.

Yours respectfully,

W. E. H.

DETROIT, MICH., October 5, 1886.

MICHIGAN'S SALOONS AND FOREIGN POPULATION.

TO THE EDITOR OF THE NATION:

SIR: As bearing upon the labor problem and the liquor traffic, the following statistics drawn from vol. i, Census of Michigan, 1884, just issued by the Secretary of State, Lansing, Mich., are of peculiar interest.

In Michigan in the year 1884, 80,131 persons, ten years of age or over, were returned as unable to read or write. Of this number 225 were of unknown nativity; 15,743 were born of native parents; 6,338 had foreign-born parents; 2,359 had one parent foreign-born; and the remaining 53,053 were themselves foreign-born. The total population of the State was 1,853,658, and the total of inhabitants whose parents were one or both foreign-born was 975,144. In other words, 54 per cent. of the population furnished 80 per cent. of the illiteracy.

The number of saloon-keepers and bar-tenders was returned at 3,894, and the number of brewers and malsters at 557. "Expressed approximately, the foreign-born inhabitants who form but 26 per cent. of the total population, furnish 57 per cent. of the saloon-keepers and bar-tenders, and 78 per cent. of the brewers and malsters."

In the light of such a showing, the wisdom of the aggressive immigration policy pursued by Michigan until recently appears to have been foolishness, if not something worse.—Respectfully, ERWIN F. SMITH.

WASHINGTON, D. C., October 9, 1886.

THE MADISON POST-OFFICE AGAIN.

TO THE EDITOR OF THE NATION:

SIR: Your issue of September 30 contains a letter from "Civil-Service Reform" which, uncontradicted, might mislead many of your readers and give forth wrong impressions. He says: "The Post-office here had been pretty thoroughly cleared of its old employees before this,* and their places given to inexperienced men; but there remained a Mr. Hastreiter, mailing clerk, . . . and a Mr. Helen, superintendent of the special delivery, likewise possessed of information which it takes years to acquire." He says, further: "These men were notified that after the first of the month they would no longer be wanted, and new and inexperienced men were appointed in their places—a most flagrant disregard of the city's interests," etc.

As to Mr. Hastreiter, he is one of those good-natured souls the public would rather not have disturbed—but he is a Republican, and must go. As to Mr. Helm (not Helen), he is a younger brother of the Assistant Postmaster, and, before his advent to the position of one of the four route-carriers, was delivery clerk—a place in which he rendered himself so obnoxious to those who had business at the "general delivery," that his displacement was loudly clamored for by Republicans and Democrats, women and children. To appease this clamor, Gen. Bryant, then Postmaster, relieved him from the delivery window and put him upon one of the carrier routes. That he has been faithful in the discharge of his duties, I have never heard questioned; but it goes without saying among those with whom he came in contact that he was always grouty, ill-tempered, and never deigned to give a civil answer to any one on any occasion. There never has been an employee in the Post-office here about whom there has been so general and warrantable complaint as this same man Helm, and it is immensely gratifying to all who have any business with the Post-office that his head has gone to the basket; and there is little doubt that "Civil-Service Reform" is as pleased over it as any one else, only that he is shy of acknowledging it.

"Civil-Service Reform" suggests that "if the public generally is so thoroughly disgusted with its dose as the better class of citizens of this city are with this incident," then "even Mr. Cleveland's chances of reëlection are few." The writer hereof is a Republican, always has been, and is free to say there are hundreds of other Republicans in this city who vigorously applaud the author of "this incident," and only regret that it came not sooner. REFORMER.

MADISON, WIS., October, 1886.

RESULTS OF BAD TEACHING.

TO THE EDITOR OF THE NATION:

SIR: I was lately in a company of well-to-do gentlemen, a sort of circle of culture, in which the Anarchists of Chicago were discussed, and from them by an easy transition the conversation turned to the strikers and their evil ways. With singular unanimity the opinion was expressed:

(1.) That every man has the right to refuse working at wages which he thinks too low, or on any other conditions which he dislikes.

(2.) That workingmen have the right to combine in such refusal in any numbers, in order to make this refusal effective; in short, they have the right to strike.

(3.) That they have, however, no right to prevent others who are willing to work at lower wages, or on less favorable conditions (in short, rats or scabs), by force from taking the places which they vacate; nor even to use the pressure of a "boycott" for any such purpose, though without such force or conspiracy their strike might fail. Hence, the strikers at Milwaukee, Chicago, and on the Missouri Railroad system were in the wrong; and any violence committed by them, if it resulted in death, was murder, both in law and in morals.

I agree with the reasoning and in the result reached; but I maintain that there are strong mitigating circumstances for all the violence and murder that was instigated by Martin Irons and August Spies, and their ignorant or crackbrained associates—reasons why society, why the people of the United States, should judge their doings mildly. I find these mitigating circumstances in the bad teaching which has come from the leaders of both of our great political parties, in the emission of false doctrines from the high places where wisdom and truth should have been expected.

In Chicago itself, where mob violence took the most dread-inspiring form and the most colossal dimensions, these false and misleading doctrines had been most loudly and most authoritatively preached. Not to speak of the platform of the Republicans, we need only look among the resolutions of the Democratic National Convention, held in the great City of the Lakes in the summer of 1884, to find such socialistic rant as this: that in order to secure the American laborer (say, an unnaturalized Bohemian or Slovak) against the pauper labor of Europe, a customs duty should be imposed on imported articles sufficiently great to make up for the difference in the scale of wages. Translate this into the language of the strikers:

(1.) A hand in a pig-iron furnace can refuse to work for less than $2 a day.

(2.) All the hands in all the American pig-iron furnaces can combine in this refusal, and thus keep the rate up to $2 a day.

(3.) If any workman in England, Sweden, or Belgium propose to work at $1 a day and thereby furnish to the American consumer cheaper pig iron—ah, what then? Then the ships bringing the product of this labor of scabs or rats to our shores are to be forced by the revenue cutters of our Government to turn back, and if they disobey, ships and cargo will be sunk rather than that scabs should be allowed to compete with that great trades union which the tariff has established among all pig-iron workers in the United States. Or say, instead of pig-iron workers, all the silk-weavers, all the wool-growers, all the cotton-spinners, etc. (By the by, the Oleomargarine Bill has extended this socialistic principle a little; the "bull-butter men" are simply scabs trying to compete with the Dairymen's Association.)

Now, what is the difference in morals between Martin Irons and his followers, who ditch trains and "kill" locomotives, to prevent men not belonging to the order of Knights of Labor from working for Gould's railroad companies, or August Spies, seeking to drive underpaid scabs out of the McCormick Reaper Factory, on the one hand, and Randall and Kelley, using the armed vessels of the United States to prevent English and Belgian miners or French weavers from working for the American iron or cloth market? There is a marked difference in *law* between them: Martin Irons and August Spies have not

* Referring to Postmaster-General Vilas's recent visit here—about the middle of September.

yet succeeded in shaping State or Federal legislation in favor of "organized" labor; Randall and Kelley pretend that they have shaped Federal laws in favor of the "American" workingman, though it is very doubtful if those laws do any class of American workingmen any good. Maybe, after a while—having started out briskly with the Oleomargarine Bill—we shall have a perfect system of laws protecting the laborer in the right to earn such wages as he demands, no matter whether any one wants his services or those of a cheaper competitor for employment; and then Martin Irons and August Spies will be looked on as the forerunners of the better time—the latter, if hung in the meantime, as a sort of John Brown, a martyr to his premature zeal. But even then I shall maintain that the men upholding those laws will, in the forum of morals, be just as much in the wrong as Irons and Spies and as Randall and Kelley are now. L. N. D.

LOUISVILLE, KY., October 8, 1886.

WHY WE NOTICE THE LABOR AGITATION.

TO THE EDITOR OF THE NATION:

SIR: For eight months past the *Nation* has given more space to the labor question than to any other. The last number, for instance, contained about ten columns of matter bearing in one way or another upon this topic. The great dailies are filled with reports of the doings of the labor world. The columns of the religious press and the magazines are crowded with labor literature.

Now, all this writing is either about something, and therefore proper, or it is about nothing, and therefore destined to become very tiresome as soon as it ceases to be droll. If the labor movement is half as strong as it is represented to be, then discussion and criticism should go on in season and out of season. But if it is weak, as the *Nation* would have it believed, why should so much attention be given to it? The action of the *Nation* is hard to understand in this matter. Henry George, who, we are told, is a harmless theorist with a "handful" of followers, gets two columns of space in the last number; Mr. Powderly, a suicidal blatherskite, gets two more; Dr. Ely, whose writings are compared to those of a "raving Anarchist," gets four columns.

This lengthy treatment might be ascribed to the necessities of journalism, but that would not explain the intensity of feeling displayed by the *Nation* in its discussions of this question during the past year. It cannot bear to think of Mr. Powderly—who, by the by, is considered a very worthy gentleman in these parts. It would cast him into jail, where Dennis Kearney has been and ought to be now. It would throw poor Prof. Ely out of his position just because he shows a bias towards labor organizations.

How can the *Nation* be justly considered anything but an "enemy to labor," when it attacks so furiously everybody who dares to lift his voice in behalf of laboring men? Enmity towards the leaders of a cause is prima facie evidence of enmity towards the cause. When did the *Nation* ever have a kind word for *any* advocate of labor organizations? When did it ever go to the workingmen with any other message than "the perpetual, monotonous lie, 'it is all very good and right'"? S. E. FORMAN.

CARLISLE, PA., October 9, 1886.

[The action of the *Nation* is not hard to understand by those who read the *Nation* with any care, which, apparently, you do not. The *Nation* has repeatedly—say twenty-five times—spoken of the labor movement as the most important with which the American people has had to deal since the extinction of slavery. This is the reason why so much appears in its columns about the labor movement. But can you not understand that a movement may be a very great movement, and some of the men who figure in it very small and very foolish? Look at the history of any movement, and you will find this to be the case. The French Revolution was a great movement, but Robespierre was not wise or great, nor Marat either, nor was Theroigne Méricourt an ideal woman. Your assertion that the *Nation* "cannot be considered anything but an enemy to labor" because it "attacks furiously everybody who dares to lift his voice in behalf of laboring men," we prefer to consider silly rather than malicious. It is not true that the *Nation* "attacks furiously," etc.; therefore your "because" is absurd. If the *Nation* attacked you, for instance, it would show that it was the true friend of labor, and it would attack you if it thought that you were a real and not a merely careless reader.—ED. NATION.]

THE ANDOVER CONTROVERSY.

TO THE EDITOR OF THE NATION:

SIR: "The doctrinal quarrel in the Congregational Church known as the Andover controversy," noticed by you on the 30th ult., will continue for a time, and its vital points should be understood. Upon one of these you, with most secular writers, seem to have fallen into error concerning Congregational views. You seem to think that Congregationalists believe that "those who have never known the teachings of Christ are as badly off after death as those who, having known them here, neglected or refused to order their lives in accordance with them"—*i. e.*, that they are beyond hope.

In the absence of correction by another hand, please accept the following:

Dr. J. L. Withrow of Boston delivered the annual sermon this week before the American Board, a representative man before a representative assembly. On the following three points preacher and hearers seemed to be in emphatic agreement:

(1.) "It is not the intellect but the will that is at fault" in all that God recognizes as wrong-doing.

(2.) The heathen are not utterly unconscious or ignorant of duty. "Lighthouses stand along every dangerous coast; beacons blaze from every cliff"; "Stars are shining where there is no sun."

(3.) Some pagans *have* gladly walked in the light, and *all* may, can do so. "It is *not* the doctrine of the Church that the entire mass of the pagans have gone down to endless impenitence and death."

It is the belief, doubtless, of the American Board, of intelligent Congregationalists, and of thinking Christendom, that, helpful as a knowledge of "the historic Christ" and His words may be in building character pleasing to God and to all who love moral good, it is not *essential* to it.

Congregationalists generally believe that, if a "second probation" is necessary for the heathen, it is just *as* necessary for the entire world, yet unnecessary for either. They believe that the realm of hopelessness is entered only through the gate of known and neglected duty, is entered thus from India as from America.

L. F. PARKER.

IOWA CITY, October 9, 1886.

FRENCH HUMOR.

TO THE EDITOR OF THE NATION:

SIR: We are always told that "familiarity breeds contempt"; but, after all, there is nothing like unfamiliarity for this purpose, at least in literary matters. People who are a little weak on French literature are apt to bestow on it two contemptuous criticisms, neither of them just. One is to the effect that French stories are unpleasant; the other, that with all their wit they are devoid of true humor. The trouble is that these critics judge from too small a number of examples. Emerson says, I know, that it is the mark of genius to generalize from a single case; but is it not also the mark, much more infallibly, of a species of character largely treated of in the Proverbs of Solomon? The Gallic mind is rather a complex organ, very lively and very expansive, and one must not get hold of its literature by the wrong handle.

I have just been reading, with unadulterated delight, a book which I should like to recommend to all persons who have accepted the two adverse judgments above mentioned. It is Daudet's 'Tartarin sur les Alpes.' The exquisite little illustrations are themselves a sufficient evidence of both the sense of beauty and the sense of humor in the French mind; but the scenes as sketched by the pen are even more delicious. Take, for example, the faithful chamois peacefully lapping his warm wine in the kitchen after his exhausting chase on the Alps: or the two scared gasconaders confessing each other in the *arête;* or the ticklish situation of the party in the crevasse—one of the richest I know of in any literature—where the suicidal Swede hangs by one listless hand at the head of the line, discussing the temptation to pitch off into the abyss, while Tartarin (aware that if one goes all go) expends his best eloquence in combatting the untimely pessimism of his neighbor.

If there is any good definition of humor that would exclude such conceptions as Tartarin and his companions, it would be interesting to hear it. E. R. S.

CUYAHOGA FALLS, O., October 4, 1886.

THE TRANSFORMATION OF SURNAMES.

TO THE EDITOR OF THE NATION:

SIR: A reference in a late number of the *Nation* to the origin and development of surnames leads me to offer the suggestion that, before it is too late, some one should collect the various changes of names among the French emigrants to New England.

A few instances from a single village will illustrate the richness of the field for investigation. In a few years M. Du Bois has become Mr. Wood; M. Boisvert is now Mr. Greenwood; M. Papillon has changed his name to Mr. Butterfly; M. Antoine Changras is now known as Mr. Oughtney Jangraw, and the whole family has changed its name to Jangraw. The first three changes are obvious enough; the last results from the manner in which a school teacher wrote down a pupil's name as she understood the pronunciation. Here is one more: M. Michel St. Onge was informed, when he came to this country, that people here were called by their Christian names. So he became, not Mr. Michael, but Mr. Mitchell, and his descendants all bear the name of Mitchell.

Similar examples of odd changes could easily be multiplied. A few years hence it will not be as easy to recognize the origin of the names of the descendants of these French immigrants.

Very respectfully yours, M.

October 4, 1886.

Notes.

HARPER & BROS. will shortly issue 'A Demigod,' a romance of Greece; 'School Elocution,' by John Swett; and a popular edition of Dr. W. M. Thomson's 'The Land and the Book.'

Charles Scribner's Sons have in press the first

volume (of three) of H. Morse Stephen's 'History of the French Revolution,' with a special preface and map; and 'The Huguenots and Henry of Navarre,' by Prof. Henry M. Baird.

"The Bankside Shakspere" is the title adopted by the Shakspere Society of New York for an edition which Mr. Appleton Morgan will edit and Houghton, Mifflin & Co. will manufacture. It is to consist of "an arrangement of the earliest known text printed in parallel pages with the 1623 Heminges and Condell text, thus illustrating the *growth* of a Shakespearean play during the lifetime of the Dramatist himself." The critical apparatus will be peculiar to this edition. "No readings (so called) will be incorporated into the text itself." Twenty plays will be included in as many volumes. The edition is limited to 500 copies.

Mr. Frank R. Stockton's latest story, 'The Casting Away of Mrs. Lecks and Mrs. Aleshine,' will be issued in paper covers and in cloth binding on the 20th of October by the Century Co.

'Souvenirs of My Time,' by Jessie Benton Frémont, is in the press of D. Lothrop & Co., Boston.

Funk & Wagnalls announce 'The Buddhist Diet Book,' by Laura C. Holloway.

Mr. George Parsons Lathrop launches his first story-book for children, 'Behind Time,' through Cassell & Co.

Thomas Whittaker publishes shortly 'A Handbook of Biblical Difficulties; or, Reasonable Solutions of Perplexing Things in Sacred Scriptures,' by the Rev. Robert Tuck.

J. B. Lippincott Co. have in press 'Othello and Desdemona: their Characters, and the Manner of Desdemona's Death' by Dr. Ellits; and 'House Plants as Sanitary Agents,' by J. M. Anders, M.D.

The latest work from the fertile pen of Mr. Benson J. Lossing bears the somewhat sensational title, 'Mary and Martha, the Mother and the Wife of George Washington' (Harper & Bros.) It is a literary museum of all the current anecdotes of the various branches of the family, beginning, in true Knickerbocker spirit, with John Ball, of fourteenth-century fame, from whom the mother of Washington was possibly descended. To these are added descriptions of the personal appearance, wardrobe, plate, household furniture, and daily routine life of a well-to-do Virginia family, the whole spiced with the early love affairs of the different members, and "padded" with much wholly irrelevant matter. It is a pleasantly told story, though marred by diffuseness and the ever-present personality of the author, and possesses some antiquarian but no historical interest. Doubtless our forefathers in their younger days would have read it with zest, but if the modern school of historians have done nothing more, they have at least shown that history need not be given in the homœopathic form in order to be acceptable.

A work issued in a second edition in 1866, and now freshly put upon the market, speaks for itself as meeting the approval of those for whom it was intended. Such has been the fate of 'Poems of Sorrow and Comfort,' selected by Prof. F. J. Child (Boston: Houghton, Mifflin & Co.). This time there has been no enlargement, whether because the compiler is too much occupied with weightier labors, or whether the additions to devotional verse have been meanwhile insignificant.

'The Influence of Clothing on Health' (Cassell & Co.), by Frederick Treves, an English surgeon and lecturer on anatomy, reinforces what physiologists and hygienists are always insisting upon. We observe nothing new in it, but it is a convenient reference-book for this branch of the domestic sciences. The Adams and especially the Eves of society, who continue to yield to the temptations of subtle tailors and dressmakers, promising that they shall be as gods in the fashionable world, sin against warning and in the midst of abundant light.

Sir Henry Thompson's paper in the *Nineteenth Century* for May, 1885, on "Diet in Relation to Age and Activity" has been reprinted (Scribner & Welford), and in this convenient form is commended for both its matter and its style to all who eat, especially to men, whether of active life or of uncertain appetite.

A different style of book from the foregoing is 'Household Remedies,' by Dr. Felix Oswald (Fowler & Wells Co.), a rambling treatise on fresh air, exercise, sunlight, and abstinence from alcohol, as a practical armamentarium against most of the ills that beset the flesh. Despite exaggerations of style and statement, its teachings tend to a rational simplicity of life and to the avoidance of disease.

Mr. Edward Money's 'The Truth about America' (London: S. Low) is one prolonged growl; the national remedy for a grievance, "a letter to the *Times*," being expanded into a book. Induced by glowing advertisements, backed by specimens of fruit "in wax," the author went last year to take up some land in southern California, and, finding the promised Eden to be a desert, writes an account of his experiences to prevent his countrymen from falling victims to the same delusive hopes. To do him full justice, however, not everything in this country meets with his disapproval. The climate of California is perfect, and the advantages of Colorado Springs as a "cure-place" are unequalled. But the blame far overbalances the praise. The impression is even given that Mr. Money in some way holds us responsible for the extremes of heat and cold in New York, and especially for the amount of sandy desert in the Southwest. At times he gives vent to his feelings with great energy: "Oh, this beastly want of courtesy in America, how I did loathe it!" With especial abhorrence does he regard the Yankee, "the worst type on earth." Some of our peculiar customs are described with great fulness of detail. For instance, a page is given to the "naughty" practice, which we are assured is universal at the West, of getting a light. A man "takes out a match, lifts up the right leg, bent at the knee to draw the trousers tight, and ignites it on the lower part of the thigh." In his efforts to tell the truth about us Mr. Money touches upon a great variety of subjects, nothing seeming to escape his critical eye—not even the fact that the Western tea-cups "have no handles."

The bound volume of the *English Illustrated Magazine* for 1885–86 (Macmillan) has the usual comely appearance of this periodical. Local topics, such as London Commons, the Charter-house, Leicester Fields; places, domestic and foreign, as Decayed Seaports, A North Country Fishing Town, Newcastle-on-Tyne, Yarmouth and the Broads, Old Chester, Ulm, Umbria, the Valley of the Arno, Sicily, Côtes du Nord, the Jotunheim, Afghanistan, the Equator; personal associations, as Charles Kingsley and Eversley, Charles Lamb in Hertfordshire; customs and industries, like Fox Hunting, Cheese Farming at Chester, Ostrich Farming in the Cape Colony, Japanese Tea Cultivation—such is a suggestion of the nature of the contents. A few of the full-page engravings, such as Watts's "Pygmalion," are notable, and clever are Mr. H. Furniss's pen-and-ink sketches that accompany Mr. H. W. Lucy's paper on the House of Lords.

The second number of the Proceedings of the American Society for Psychical Research (Boston: Cupples, Upham & Co.) has a very general interest. It gives in full the address of President Newcomb, a sane, sceptical, and almost discouraging survey of the field and of the probability of success in it. Dealing chiefly with thought-transference, he suggests that juries might be expected to obtain in this way from the prisoner himself a clue to his guilt or innocence; but they do not, consciously. He thinks the reality of this phenomenon almost disproved by the Society's researches hitherto. There is no increased facility in producing it nor in investigating it. The report on hypnotism, by Dr. Wm. James and G. M. Carnochan, is a valuable contribution. It tells of one subject made to believe he saw, on a blank sheet of paper unmarked in any way, a photographic portrait. This imaginary object he was then made to follow in its travels over the sides of the room back to the paper, which meantime had been secretly turned upside down. The restored image thereupon appeared inverted to the subject of the experiment. The upward and downward passes of the magnetizer seem to have the power ascribed to them. Dr. James for himself relates his experience with a trance-medium, which satisfied him that she was honest, that her trance was real, and that she possessed "a power as yet unexplained."

It is instructive to turn from meditations on the present furore for Russian novels to what we may call a Unitarian vote on *the* "ten great novels, the noblest available to English readers" ('Ten Great Novels: Suggestions for Private Reading.' Chicago: Charles H. Kerr & Co.). The vote was taken in 1884, or before Tolstoi's 'War and Peace' dawned on the English horizon, and this author's name is of course unmentioned. Three of Turgeneff's works received at most two votes, against twenty-three for Auerbach's 'On the Heights,' the lowest on the resulting list.

The "Élite Engagement Calendars" issued by E. P. Dutton & Co. make a prettily framed ornament for the shelf or table. A lady who is content with nine engagements a month could wish no better memorandum.

Notes on Verrocchio as the master and precursor of Leonardo da Vinci, by M. Eugène Müntz, are the most noticeable portion of the contents of *L'Art* for September 1. They are illustrated.

The *Revue Internationale de l'Enseignement*, a monthly magazine of solid worth published in Paris by Armand Colin & Cie., has in its September number an unusually attractive table of contents. We remark a sketch, by M. Louis Leger, of the beginnings of Russian literature; an article on the utility (or say rather inutility) of Greek in the study of botany, in which the writer summarizes an essay on this subject by Dr. Wilhelm Petrold of Brunswick; the speech and formal address on behalf of the Institute made by its President, M. Zeller, at the Heidelberg festival; and the text of the decree by which M. Paul Bert has created the Tonkin Academy (Bac-ki-hanlam-vien).

Mr. Henry Harrisse is about to give a permanent form and value to his investigation of the dilapidated library of Fernando Columbus. From B. Westermann & Co. we have his prospectus for subscriptions to 'Excerpta Colombiana: Bibliographie de 400 Pièces Gothiques, Françaises, Italiennes et Latines du commencement du XVIe Siècle' (Paris: H. Welter). These early works, in prose and verse, were printed before 1539 at Paris, Lyons, Avignon, in Germany and the north of Italy. Mr. Harrisse's notes will be copious and authoritative; and in the case of Columbus's books (four-fifths of the collection) he will reproduce this bibliophile's inscriptions of price, place of purchase, and sometimes personal details. The edition will be limited to 288 copies.

—Proposals have been issued by Joel Munsell's Sons, Albany, for a work entitled 'America Heraldica' to be edited by E. de V. Vermont. It is

to consist of six parts, costing $15.00 in all, to contain 192 colored coats-of-arms. The 192 coats have been selected, and the list is appended to the circular. It is said that undoubted facts only will be stated; yet in a preceding paragraph it is said that there will be "a short argument concerning the family connection, *if any*, between the European and American possessors of said coats-of-arms." The list is not encouraging. Many of the families named never used a coat-of-arms, and many more have no evidence of a right to use one. Of course there are two hundred families now residing in America who are *armigeri*. Reckoning in those of other than British nationality, probably there are two thousand such families, possibly very many more. But this list does not treat of these true cases. It is confined almost entirely to British families, and is incorrect even in regard to them. We see no good purpose to be served by this publication; certainly, no excuse for the very costly form it is to assume. Printing in gold and colors does not add to the historical value of the work, though it does to the expense. As the project now looks, it would be emphatically an American Book of Snobs. It would add nothing to our knowledge of the past, it would in no way justify the title of 'America Heraldica'; it would foster and perpetuate error; and it would properly point many a sneer from transatlantic writers. We sincerely trust that the misguided promoter of the scheme will drop it, and do some honest literary hard work. We suggest to him, for example, an inquiry as to the number of noblemen now resident in the United States. It seems that emigration has nearly extinguished the Norwegian nobility. France, Germany, and Italy have sent many genuine bearers of titles here. Let us have a register of these, and we shall get facts, whether they be valuable or not.

—The *Century* closes the year with a brilliant number. Something of the romance and a good deal of the hardship to be found in a Gloucester fishing voyage give occasion for the broad sea-effects of the leading illustrations, and for a well-written description of the sailors' lives, with their wives and families (in the Kingsley vein of feeling) in the background. This article is, perhaps, "timely"; but, politically, the topic of our fishery interests is handled with much clearness and vigor in a communication by Capt. J. W. Collins to the "Open Letters" department. He reviews the situation from the standpoint of the fishermen, and explains exactly why they do not desire a renewal of the conditions of the expired treaty. We have space here only to direct attention to it as an able and succinct exposition of the Cape Ann case. There are agreeable articles on Björnson's home and private life, and on the Assos expedition, though the illustrations are by far the most valuable portion of the latter. Education is attended to by President Gilman, who makes a plea in favor of the introduction of manual training into the public schools, lending the weight of his authority to a growing cause; and Matthew Arnold contributes some results he has reached in thinking over his observations on foreign common schools, which he hopes may be as serviceable in America as in England. This is the address recently delivered by him before the University of Pennsylvania. He reinforces his well-known views in favor of a consolidation of State education, with the purpose of bringing the influence of the centres of the higher education, and the heads of opinion in them, more directly into connection with the common schools. This is the ideal of the Western universities, and in Michigan at least Mr. Arnold could study some of the practical results on American soil. The instinct of home rule and local independence is too deeply set in our people to allow of any such close educational bonds between universities and common schools as are possible in bureaucratic communities. The *Century's* Prospectus of announcements for the next year is very long, and is partly made up of articles crowded over from this year, and of others which are not expected to appear until after another twelvemonth has gone by. The most important is the Life of Lincoln, by his secretaries, Messrs. Nicolay and Hay, which will be one of the monuments of our history. Mrs. Oliphant, Mrs. Van Rensselaer, Dr. Eggleston, Cable, and Stockton are prominently put forward, and there are to be serials on the Food Question, Spiritism, and the War, though the last subject is to occupy less space.

—Americans who visit Stratford-on-Avon have henceforth a new motive and a new object of curiosity. Their countryman, Mr. Henry F. Waters, has discovered in "Ye Ancient House," now standing in admirable preservation on High Street, and "the best specimen now left in that street, or perhaps in the borough," the home built for himself in 1596 by Thomas Rogers, the maternal grandfather of John Harvard. This truly elegant specimen of the domestic architecture of the period is shown in a heliotype plate prefixed to the October number of the *New England Historical and Genealogical Register*; and it is pleasant to observe next door to what might be called the cradle of Harvard College the store of a well-to-do printer, bookseller, and stationer. Here in Shakspere's time lived Katherine Rogers till she married Robert Harvard, "and to it she may have come with her little son John to attend the obsequies of her father," a prominent citizen, "one of the Aldermen," who died February 20, 1610–11. Mr. Waters produces the probate act of Thomas Rogers's will, and prints a large number of wills of Harvard's ancestors and connections, broadening out our knowledge of him till it touches the New World again through his step-father, Richard Yearwood, who was related to Sir George Yeardley, the Governor of Virginia. The record of Yearwood's marriage to "Katherine Ellettsone" has also been found in the parish register of Wandsworth, Surrey, and proves that this thrice-married dame was widowed each time less than a year before plunging again into matrimony. The will of her sister Rose, who married Ralph Reason, is given, wherein she calls herself "Raysings." "Rasing" was another form of her husband's name, the family crest being a bunch of grapes; and Mr. Waters pertinently recalls *Falstaff's* jest—"If *reasons* were as plenty as blackberries." Thanks to these intelligent and almost instinctive researches, as Mr. J. T. Hassam remarks in the *Register*, "from being almost a semi-mythical figure in our early colonial history, John Harvard bids fair to become one of the best known of the first generation of settlers on these shores. No better illustration could be given of the importance of the work Mr. Waters is doing in England; no more striking instance could be found of the extraordinary success which is attending his labors there. The Committee earnestly hope that funds sufficient to carry on still further these valuable investigations may be speedily raised."

—This number of the *Register* is notable also in other ways. It closes the fortieth annual volume of a work which is the pioneer of its kind, and has been maintained with extraordinary vigor and interest, never greater than now under the editorship of Mr. John Ward Dean, whose continuous connection with it covers thirty-two years. By a pleasing coincidence, the present month witnesses the commemoration in England of the eight-hundredth anniversary of the completion of the Domesday Survey of England. In a paper on Lord Timothy Dexter, Mr. William Cleaves Todd of Newburyport attempts to rectify "history" and tradition in regard to this singular character, examining those statements regarding his fortunate commercial ventures which have been accepted, as coming from Dexter himself, though inherently as improbable as they were foolish. He thus disposes of the tales of his sending warming-pans and (English) Bibles to the West Indies. In illustration of the untrustworthiness of history, Mr. Todd cites Prof. J. D. Butler of Madison, Wis., whose grandfather, an eye-witness, often told him, in regard to Ethan Allen's "In the name of the Great Jehovah and the Continental Congress," that what the surprised commander at Ticonderoga actually heard was, "Come out of here, you d—d old rat." This matches Taylor's reply to Santa Anna, "General Taylor never surrenders," translated by a skilful aide from the vernacular, "Tell him to go to hell." Another important paper, by the Rev. George M. Bodge, is on the Sudbury fight, of which the date is fixed beyond cavil, and many fresh particulars given. As this is the sixteenth chapter on "Soldiers in King Philip's War," and more are to come, there is plenty of material for a book of permanent value, and we hope one is intended.

—The eighth volume of Mr. Henry Cabot Lodge's edition of the Works of Alexander Hamilton (Putnams) concludes the Correspondence. The ninth and final volume will consist of the *Federalist*. These letters (1780–1804) possess a high degree of interest and value, and exhibit the writer's dispassionate character under the very strongest personal provocation. The heat in which he composed his letter to Philip Schuyler (February 18, 1781), informing him of his having, under unjust reproof, quitted Washington's military family, does not seem to us, as it does to the editor, completely to invalidate its judgment of Washington. We are not bound to accept this judgment, but there seems no reason to doubt that it was genuine, and not dictated by momentary passion and resentment. Hamilton's accounts of the defeat of Gates, of Arnold's treachery, and of André's execution might well be borrowed almost textually for our school-books of history; just as his autobiographical sketch for the information of a Scotch relative might be adopted by the shorter dictionary makers. In one of the letters, never before published, by the way, is this singular reference to his father: "Though, as I am informed, a man of respectable connections in Scotland," etc. As early as 1788, it is worth noting, Hamilton advises prudence in procuring the admission of Vermont, because the South was jealous of any increase of Northern votes in Congress; and in 1795, writing to Pickering, who was about to leave the Cabinet, he urged the absolute necessity of choosing a successor "from some State south of Pennsylvania. All the great offices in the hands of men from Pennsylvania northward *would do the Lord knows what mischief*. I speak as to public opinion." In his disgust at the state of parties in 1802, Hamilton proposed to James A. Bayard the formation of "The Christian Constitutional Society," whose objects should be: "1. The support of the Christian religion. 2. The support of the Constitution of the United States." The year after his death, was born the future leader of a party which held that the support of the Christian religion was incompatible with the support of the United States Constitution as Hamilton had helped to make it—the Constitution which the civil war destroyed. Hamilton did not propose to "put God in the Constitution," but he had the queer notion that his C. C. Society might promote "institutions of a charitable and useful nature, in the management of Federalists." The revival of this idea would perhaps not be hard for our stalwart Republicans. Our

recent legislation over the Presidential succession is recalled by this passage in a letter of 1792: "You know how much it was a point to establish the Secretary of State as the officer who was to administer the government in defect of the President and Vice-President. Here, I acknowledge, though I took far less part than was supposed, I ran counter to Mr. Jefferson's wishes," etc. Mr. Lodge is somewhat unlucky in his tart rebuke (p. 512) of Mr. J. C. Hamilton's slovenly editing, which made him print Gouvion for Gouvernet: for on the opposite page (513), on page 523, and in the index he prints Harrison Grey Otis (for Gray). This first letter to Otis is omitted from the Correspondence index, which is far too meagre, dealing only with the names of the persons addressed by Hamilton. The general index is open to a like censure, and is wrongly said to embrace vols. i-viii, though a separate index is expressly provided for the latter (in connection with a part of vol. vii).

—"The American Publication Society of Hebrew" at Chicago have issued an 'Assyrian Manual,' by Prof. D. G. Lyon, of Harvard. It is designed for those "who desire to become acquainted with the Assyrian language, but who cannot readily have access to oral instruction." It contains tables of the different classes of characters used in writing Assyrian, a grammar of the language, transliterated texts, texts in the cuneiform character, translations, notes, and glossary. The preface contains instructions for the use of the book by those who have no teacher. To such persons, and to many other students, this Manual, the first of the kind that has appeared in Assyrian, will be of very great service. The only formidable thing in learning the Assyrian language is the difficulty of mastering the written characters. In other respects it is comparatively easy, especially for those who have studied Hebrew. Those who fully master the less than two hundred pages of this book will have accomplished the most irksome part of their task. The transliteration in Roman characters, though it may offend some eyes, will doubtless be found, all things considered, to be advantageous. And, with a nearly complete list of signs and a not inconsiderable vocabulary, the student will be fairly equipped for the examination of the already great mass of Babylonian-Assyrian literature, and for the investigation of the important historical and other questions that yet await solution. There are several chairs of Assyrian in this country, and the Wolfe expedition has brought cuneiform material to New York. An ever-widening field, embracing the beginning of Greek art, as well as the illustration of the Old Testament and the reconstruction of Western Asiatic history, is opened to the young men of this generation. Professor Lyon has performed his task with conscientiousness and skill.

—The English Eclipse Expedition, whose personnel was given in No. 1104 of the *Nation*, arrived in Grenada about two weeks before the eclipse, and divided into two, so as to eliminate as far as possible any local effects of unfavorable weather. Their observations were wholly successful, and it was noticed that the corona extended nearly two diameters from the sun, exhibiting a feathery structure at the poles. Good photographs were obtained of the spectrum of the corona at the blue end, this spectrum being similar to that of the eclipse of 1883, as observed in the Caroline Islands of the South Pacific. The recent observations are also confirmatory of those in Egypt of the eclipse of 1882. Capt. Darwin's work with the coronagraph is reported as disappointing, the glare of irradiation from the body of the sun being visible on his plates, and not the true corona. Many astronomical physicists will be greatly disappointed to know that Dr. Huggins, the inventor of this instrument, regards its failure as fatal to the method which seemed to promise so much new knowledge of the corona. The partial phases of the eclipse furnished conditions which would put the success of the method beyond doubt, if the plates showed the corona partially cut off by the moon during its approach to and passage over the sun. Not only at Grenada, but at the Cape of Good Hope, where a coronagraph was also used by Dr. Gill, this partial cutting off of the corona fails to appear in the photographs taken, and Dr. Huggins hastens to be himself the first to make known this untoward result. Mr. Common, however, considers it quite possible, and indeed probable, that this is entirely due to the state of the sky, for we have the positive evidence that the moon has been seen so projected in various solar eclipses, and in one case it was so photographed. The fact of greatest importance brought to light by the observations of this eclipse appears from the work of Prof. Tacchini, who found that the prominences as observed during the eclipse, and after the eclipse by the usual full-sunshine method, are entirely different objects; the latter being, in fact, only a part of an intricate phenomenon, while the former, as seen only during eclipses, are, wholly or in part, downrushes of relatively cool material. The prominences seen during the eclipse itself had the same character as the filamentous or so-called "white prominences" observed by Prof. Tacchini at the Caroline Islands in 1883; and they appear whiter and dimmer as the distance from the photosphere increases. The curious prolongation of the corona observed on several previous occasions to occupy the sun's equatorial plane does not appear in any of the photographs taken, though it was visible at all of the stations except Mr. Lockyer's.

ADMIRAL PORTER'S NAVAL HISTORY.

The Naval History of the Civil War. By Admiral David D. Porter, United States Navy. New York: The Sherman Publishing Company. Pp. 843.

At the present time, when correct methods of historical investigation are being gradually applied to the study of the war, the appearance of a naval history by Admiral Porter has, or should have, a singular importance. In the multitude of books treating of the Rebellion, there is to be found no adequate account of naval operations as a whole, much less a discussion of their strategic merits from a competent professional critic. This is all the more remarkable as the war at sea presents a novelty and an interest absolutely *sui generis*. Apart from its merely dramatic features, it is the first, and, but for the struggle between Chili and Peru, one might almost say the only, contest in which the modern appliances that have revolutionized the art of naval warfare—marine engines, ironclads, rifled guns, rams and torpedoes—have been employed, and its battles are as far removed from Trafalgar as Waterloo is from Agincourt; so much so, indeed, that for the student of naval science as it exists, there is little or nothing to claim his attention before 1861.

In many respects Admiral Porter is exceptionally well equipped for his task. He was actively employed from the very beginning in the most responsible duties, and his service ended only with the fall of Richmond. The Gulf, the Mississippi, the Atlantic coast, the James River became in turn the field of his operations, and the operations were upon a more extended scale than those of any other commander. His relations with the great military and political leaders were close and confidential. He had no serious differences with his colleagues of the army except Gen. Butler, and none at all with those of the navy, either superiors or subordinates. His energy and tenacity, his resource, his readiness to take responsibility, his cool strategic judgment, his game-cock pluck, which made fighting only the keenest sport, and, finally, his success, which culminated in the two great victories of Vicksburg and Fort Fisher, have given him a place in the history of the navy second only to that of Farragut.

Admiral Porter's book, from which we had reason to look for so much, is in different parts of very unequal merit, and on the whole is a disappointment. The most satisfactory chapters, as might be expected, are those narrating events that came under the author's own eye. In the campaign on the Mississippi he is at his best. His story is clear and simple, and, telling of events with which he is personally familiar, he writes rapidly, with a firm hand, and with a certain degree of power. The account of New Orleans is reasonably full, and is supplemented by copies of the official reports. In the description of the first attack on Fort Fisher, Gen. Butler comes in for his full meed of censure. The second attack, especially that part of it in which the Naval Brigade was concerned, receives a somewhat imperfect treatment. There is a strong opinion among professional men that a better organization and more thorough preparation would have given a very different aspect to the forlorn hope which Breese led to the assault of the northeast bastion, but the Admiral's account tells little more than his official report, sent in immediately after the action.

Aside from the narrative of personal experience, the most valuable part of the 'Naval History' is to be found in the critical opinions upon operations directed by other commanders. In passing judgment upon his contemporaries the Admiral is outspoken, but always fair and free from prejudice or partisan feeling. He cordially unites in the popular judgment of Farragut, and dwells on the great merits of Du Pont, showing how that most brilliant officer was sacrificed to the misguided policy of the Navy Department. Goldsborough gets the faint praise he deserves; the fine sailor-like qualities of Rowan are applauded, and the conduct of the officers at the Norfolk Yard, at the Head of the Passes, and at Galveston in 1863 is stamped with unmeasured condemnation. Full justice is done to Foote, Davis, Rodgers, and Worden, and a warm commendation is given to Bailey, who became the victim of Farragut's unintentional misstatement. But it is especially when discussing operations from a professional standpoint that the Admiral's criticisms are important. The opinions that he expresses of Stringham's attack upon Fort Hatteras, of the engagement at Donelson, of the naval assault on Fort Sumter, of Buchanan's action in the *Tennessee*, of the escape of the *Florida* from Mobile and of the *Sumter* from New Orleans, are the mature judgments of the greatest living master of naval warfare, given without reserve, and as such their value to the critical student of naval history can hardly be overestimated.

Side by side with its merits Admiral Porter's book has some very serious defects, both of form and matter. Its clumsy shape, its double columns, its glaring covers, and its abominable woodcuts are needlessly repelling, and many essential maps are wanting. In some parts of the book there is an almost inconceivable carelessness about names and dates. Thus the *Pembina* is half the time called the "*Paulina*"; the *Tyler* always figures as the "*Taylor*," Col. Vogdes as "Vodges," Chas. H. Marshall as "Chas. H. Maxwell," Gen. Lloyd Tilghman as "Loyd Tighlman." On p. 134 the Admiral says:

"In April, 1862, after the war had progressed

for a year, Gen. Leonidas Polk seized upon the heights near Belmont, Ky., and, mounting heavy guns there, blocked the way for army transports from Cairo to the sea."

It would be difficult to crowd more gross blunders into a single sentence. Belmont is not in Kentucky, but in Missouri; the heights that Polk seized were at Columbus, on the opposite bank of the river; the date at which Polk seized them was early in September, 1861, and they were abandoned in the following February. How a writer who describes in detail all the operations at Belmont, Fort Donelson, and Island No. 10 could make such an error and crystallize it by the phrase, "after the war had progressed for a year," is something that passes comprehension. The succeeding events, oscillating at random between 1861 and 1862, are reduced to hopeless confusion. Of course, heedlessness like this makes the book wholly untrustworthy as to names and dates. Other errors of a no less glaring kind serve to throw serious doubt upon all the Admiral's statements. Thus he says that "in cases of non-condemnation [of prizes], compensation was always allowed by the courts"; which is very wide of the truth. Of the *Trent* affair, it is said, rather audaciously, that "the wires under the sea were flashing the news to England about the outrage to the British flag," when there was no submarine cable in operation. According to the Admiral, the best evidence of the illegality of England's action in reference to the *Alabama* is to be found in the fact that the "English Commissioners," animated by a sense of fair play, concurred in the Geneva award—a fact that will be new to most of his readers.

The Admiral's method of presentation, as well as his matter, leaves much to be desired. When he is off his own ground, his narrative is disjointed, involved, sometimes almost incoherent. Inconsequential statements, repetitions, interruptions, bits of information thrown in pell-mell, give parts—and a good many parts—of his big volume the effect of notes transcribed from a scrap-book. He proposes in his preface to "put the records in plain shape and write them down in plain English." Unfortunately, in too many places he has done neither. Admirals may be allowed a good deal of latitude in literature, but such phrases as the resolution "was never resurrected," "each vessel fighting on her own hook," and "Semmes began to breathe a little easy," would hardly be tolerated in a schoolboy; while the rhetorical flights, as where "the army and navy wiped out the foul blow that had been struck," or men were "carried away by the glamour of a great contest," or the rebels forgot "that the men they were slaying not long before may have met them in amity at the festive board," are worthy only of a dime novel. There are innumerable passages of this character, but one example will suffice. On page 42 the Admiral says:

"It was only when these deaths of gallant officers occurred that the country began to realize the Secessionists were animated with a fell purpose which would not be appeased until the whole land was saturated with blood and sorrow walked over the battle-fields where friends and foes lay mingled together in the arms of death."

This is a fair sample of the rubbish that fills page after page of the Admiral's book, when he gets away from the Mississippi. Nevertheless, some portions of the work have real merit; and though, as a whole, it cannot be considered well done, either from a popular or a professional point of view, both the popular reader and the naval student, if they have time and patience to separate the wheat from the chaff, will find themselves repaid by its perusal.

ENGLISH EXPLORATIONS IN NORTH AMERICA.

English Explorations and Settlements in North America, 1497—1689. [Narrative and Critical History of America. Volume iii.] Edited by Justin Winsor. Boston: Houghton, Mifflin & Co.

THE present volume, the second in course of publication, and apparently the first written, bids fair to prove of wider interest than its predecessor. That followed the course of Spanish discovery and conquest, this depicts the foundation of English colonies; and though there is fascination still in travellers' tales, readers to-day find a keener zest in watching the unfolding of political formations. The earlier chapters, indeed, rehearse the beginnings of Arctic exploration, the records of which vie in interest with those of any land; but the bulk of the book is devoted to an exposition of the process whereby Englishmen wrested from the wilderness the secret of colonization, and learned amid new conditions to separate the germ from the wrappings of government.

The papers show a uniformity in style and structure. Nearly all are pitched in the low, business like tone of modern historical writing, which may soothe but cannot exhilarate the reader. None of the writers have "sacrificed fact to rhetoric"; the majority have made no attempt at literary effect. Nor is this all: the point of view, the method of treatment, have a resemblance which is explained when we observe that, in selecting his collaborators, the editor has availed himself largely of the assistance of those historical societies whose field of action lay within the limits of the volume.

Mr. Charles Deane, Vice-President of the Massachusetts Historical Society, is the author of two valuable articles. He opens the volume with an exhaustive account of the Cabots, comprised in a narrative of seven pages and a critical essay of fifty—a fine illustration of the law of the discussion of sources, viz.: that the length of the examination of materials must be in inverse ratio to the square of their extent. It is interesting to compare with this monograph the book recently published by M. Harrisse, entitled 'Jean et Sabastien Cabot' (Paris, 1882), and to note a substantial agreement in conclusions, while in fulness of bibliographic detail the advantage is certainly with Mr. Deane. Both writers give the chief credit of the discovery of North America to John Cabot, and place the discovery in 1497 and not in 1494, as the "Cabot" map has it. As to the landfall they are at variance, Mr. Deane regarding the claim made for Cape Breton on the map of 1544 as sufficient, in the absence of other testimony, to make that a working hypothesis, while M. Harrisse, from an examination of the topography of that region and a calculation of Cabot's rate of sailing, is inclined to put the landfall further north, and to consider the entry on the map as resulting from an attempt made by Sebastian Cabot to revise his fading recollections of the discovery in the light of Cartier's explorations. To our mind, this view has much to recommend it.

In his second article Mr. Deane has set some order in the tangle of royal grants in New England, made in the happy days when the geography of that region had scarcely asserted its claim to regard, and has sketched the political history of the several colonies down to 1689 rather more briefly than the limits of the volume required. In the critical chapter, a copy of the "Winthrop" map of Boston, the earliest known, discovered in the British Museum since the chapter was written, has been inserted. A fuller account of the Massachusetts public records than is here given can now be found in the report of the Commission on the Records, recently printed.

It is a little odd, in view of the course adopted elsewhere in the book, that all the New England colonies except Plymouth should have been treated by one hand, and we look for protests from several quarters, particularly from the small but sensitive State that borders Narragansett Bay, since neither Mr. Deane nor the editor is imbued with sufficient hatred of the oppressors of Roger Williams.

"It is interesting," says Dr. Hale in his essays on Hawkins and Drake, very properly emphasizing a well-known part of the former's career, "to observe that in all these early narratives of the slave trade there is no intimation that it involved cruelty or any form of wrong. Hawkins sailed on the ship *Jesus* with faith as serene as if he had sailed on a crusade. His sailing orders to his four ships close with words which remind one of Cromwell: 'Serve God daily; love one another; preserve your victuals; beware of fire; and keep good company.' By 'serve God' it is meant that the ship's company shall join in religious services morning and evening; and this these slave-traders regularly did. In one of their incursions on the Guinea coast they were almost destroyed by the native negroes, as they well deserved to be. Hawkins narrates the adventure, with this comment: 'God, who worketh all things for the best, would not have it so, and by him we escaped without danger. His name be praised for it!' And again, when they were nearly starved, becalmed in mid-ocean: 'Almighty God, who never suffereth his elect to perish, sent us the ordinary breeze.'" All who intend to dip into the late anti-slavery controversy are advised to keep the above paragraph before them. Dr. Hale, who has devoted much study to the question, is convinced that Drake, in 1579, discovered the present Bay of San Francisco, and holds out hope of the speedy and definitive decision of the question. It should be stated that the author of Mr. H. H. Bancroft's first volume on California is of a different opinion.

With the chapters by C. C. Smith on Frobisher and Fox in the Northwest, and W. W. Henry of Virginia on Raleigh, we leave for a time the period of discovery and enter upon that of colonization, guided by Robert A. Brock of the Virginia Historical Society, who relates the bungling struggle of the Jamestown colony for existence. He refuses to accept the story of the rescue of Smith by Pocahontas, and brings the history of Virginia down to 1680. He is followed by Dr. De Costa, who upholds his peculiar views regarding Weymouth and Gosnold in an interesting chapter on Norumbega. This is supplemented by an editorial note containing a valuable list of the earliest English publications on America (1509–1599).

From a somewhat perfunctory and nebulous chapter by Dr. Ellis on the religious element in New England, wherein he has not done by the subject what we rightfully expected from him, we pass to one of the best bits of work in the book, an article on the Pilgrim Church and Plymouth Colony by Prof. F. B. Dexter of Yale College—altogether admirable, and a model of what such a summary should be.

John Austin Stevens treats of New York from 1664 to 1689 in an agreeable essay, notable for an unusual estimate of Sir Edmond Andros. This is not shared by Mr. W. A. Whitehead of the New Jersey Historical Society, who relates the confused story of the Jerseys. The founding of Pennsylvania is described by Mr. F. D. Stone, Librarian of the Historical Society of that State, and the volume closes with a chapter on the Baltimore Colony by William T. Brantly of the Maryland Historical Society, who takes the usual

local view of the religious tolerance practised by the Proprietary. We must not omit reference to a short but very complete monograph by G. B. Keen on Plowden's Colony of New Albion, which will be new to many.

As a whole, the volume is well up to the standard already set. The editor has not written much for it, but marks of his supervision abound. If the number of maps and cuts has fallen off, it is partially due to the subject-matter. It is much to be regretted that modern reference-maps have not been more freely inserted, both in this and the former volume. With a work in octavo or smaller it is permissible, and often advisable, to relegate maps to an atlas; but where, as here, the page is abundantly large, it is a pity that readers should be forced to refer from one cumbersome volume to another.

The effect of having the history of a colony treated by a loyal resident of the locality is good, and, in spite of a compensatory lack of continuity, necessitating an unpleasant dependence upon the index, the coöperative method may score another success. If it be said that the colonial period is peculiarly adapted to such treatment, and that it will fail to secure a faithful picture of national life, we cannot agree. We believe that the United States can have its past most truthfully portrayed by a skilful blending of local, sectional monographs. That it may at some time be given to one man to write the philosophy of our history, we do not mean to deny; but the history itself will be best told by a union of writers, so long as the national motto shall retain its truth.

RUSSIAN AUTHORS FOR FRENCH READERS.

Under the title 'Le Roman russe' (Paris: Plon & Nourrit; Boston: Schoenhof), M. le vicomte E. M. de Vogüé has now collected and arranged the very interesting studies upon Russian literature which he has contributed to the *Revue des Deux Mondes* during the past three years. He has prefixed to them a general introductory chapter upon the present condition of literary art in France, which appeared in the same periodical in May last, only a few weeks before the complete work was published. Another short, but for the purpose of the author very complete, sketch of the poets who illuminated the years before "the forties," the great era in Russian literary history, and of whom the central figure is Pushkin, which appeared about the same time in the *Revue Bleue*, was taken from the chapter upon the influence of Byron and the Romantic school during the earlier years of the century. Thus the entirely unpublished matter that a reader will find in looking through the newly issued volume is not very great. The most important and interesting portion of it is what relates to Bielinsky and the critical tempests of the middle of the century, the wars of the Slavophiles and the Occidentals, of the literary coteries of Moscow and St. Petersburg; and, closely connected with this, the half-philosophical, half-political disturbances which influenced all the literary life and work of the period. Much of this was originally scattered through the papers upon the four great masters, Gogol, Turgeneff, Dostoyevsky, and Tolstoi, which were published in the *Revue des Deux Mondes* at long intervals, and the final form in which the whole appears is rather a rearrangement of the material already prepared than a revision and condensation of it, as at first it seems to be.

Nothing more interesting and more instructive could be found for a critical study of the methods of a writer who cares very much for the form in which he clothes his thought, than a comparison of the article in the *Revue* upon Turgeneff, for instance, with the chapter in 'Le Roman russe' upon the same writer. All that had a merely temporary interest (the article appeared just after the death of Turgeneff in 1883) has been carefully removed, as well as many eloquent passages which, though not inappropriate where they were, injured the unity and simplicity of the impression. These passages all find their place in an introduction to the chapter, which prepares the way for what is to come, and leaves no necessity for explanatory remarks. The fine literary sense of M. de Vogüé, developed by his classical training and sympathies, has thus brought out the figure of the master by very simple means, with far greater clearness and vigor than before. It is a much better literary performance, and if it is not so spontaneous, the reader forgives an author who understands so well how to conceal the labor he gives to the perfecting of his work. At a time when so many books are made up hastily, by a gathering together of fugitive papers published here and there, such conscientious care is worthy of all praise.

When M. de Vogüé first addressed the readers of the *Revue des Deux Mondes*, Russian literature was an almost unexplored field, and it is not too much to say that it is to his articles that French and English readers are indebted for a knowledge of Tolstoi and of Dostoyevsky and even of Gogol. The article upon Tolstoi appeared only a few days before the republication in Paris of the French translation of 'War and Peace,' which, though published in St. Petersburg ten years before, was known to very few outside of Russia. The enthusiasm with which the new writer was received was owing in a great measure to the clearness and beauty of the presentation of his works by M. de Vogüé. When the translation of 'Crime and Chastisement' was published in Paris, the readers of the *Revue des Deux Mondes* were prepared for its reception by the very interesting and sympathetic article upon Dostoyevsky which M. de Vogüé contributed to its pages not long afterwards. It is from the publication of these two works in Paris that the present great interest in Russian imaginative literature dates. Other translations had been made before, others had written of them with admiration and sympathy, but the public had never until then been moved and interested. More than thirty years ago Mérimée had written with enthusiasm of Pushkin and Gogol, and had published translations from both; Viardot, with the assistance of Turgeneff and other Russians, had also given some of their most interesting work, in translations far more faithful and expressive than much that is now being done; but the interest in the literature did not extend beyond a small literary circle. Even Turgeneff, so well known and so much talked and written about, was comparatively unread during his lifetime, and Turgeneff is the most Occidental of Russian writers.

M. de Vogüé has not attempted to write a history of Russian literature or even of the Russian novel. Such a work, for foreign readers, would be an impossibility, so wide and unexplored is the field, so numerous the writers, so unknown the literary and political and social history of the times. He has instead taken the four greatest writers of the last half century, all of whom are accessible by means of translations, more or less complete and satisfactory, of some, at least, of their writings. With sincere admiration, and generally with fine appreciation of all that is best and noblest in their writings and in their lives, he has presented to his readers both the writers and their principal works, their lives and the world in which they lived. If all this is interesting and attractive from its unlikeness to everything with which we are familiar, it is still more so from a certain simplicity and grandeur of soul, a sincerity and uprightness, alike in the authors and in the creations of their imaginations, which charms and subjugates us. This M. de Vogüé has felt, and has made his readers feel, with a sympathetic and, to a certain extent, a poetic fervor, in his chapters upon Turgeneff and Tolstoi, and especially in that upon Dostoyevsky. He is not always so happy in what he says of Gogol, or rather of his earlier writings, for no one has shown a greater depth of insight or a finer appreciation of all his later work, the work of his second manner, than M. de Vogüé. But the fantastic imagination of the supernatural legends of the Ukraine, the epic grandeur of 'Taras Bulba,' move him but little. He acknowledges his lack of sympathy in both cases, and he only touches upon the works of the author during this period of his literary life in order to show the transformation which took place in this most comprehensive and representative of writers, whose earlier work continued the romantic tradition of Pushkin and of Lermontoff while transforming it, and who later was the creator and the precursor of the modern school of Russian writers. All the latter part of M. de Vogüé's study of Gogol, that part which relates to this second period of his literary life, is in his very best manner.

M. de Vogüé is not a literary critic who is seeking to form and direct the opinions of his readers, much less to impose his own; but a student of literary history, seriously and enthusiastically impressed by the beauty and excellence of the new literature which he is in a great measure revealing to them. The reader does not always assent either to his literary or to his moral judgments, but the purity and elevation of purpose in all that he writes are so great that he does not offend even at such times.

Turgeneff's well-known story, 'On the Eve,' which originally appeared in Russia in 1859, has recently been translated into French by M. E. Halpérine, and published by Hetzel (New York: Christern), under the title 'Un Bulgare,' with the sub-title "À la veille." It is strange that it should never have been translated into French before, as was announced at the time of its publication, if such is really the fact. It is certainly one of the most exquisite of Turgeneff's stories, as Helen is one of the most exquisite of his lovely young girls; and nowhere has he drawn a character more successfully than that of Shubin. With his finest and most delicate touches he creates this Russian *Hamlet*, whose melancholy is not sad but gay. From the opening chapter, where he lies in the shade on the river bank and discourses upon art and love and the rest of life, to the last page, he is in a sense the central figure of the book, the most sympathetic, the most human of them all. Every one of his many interviews with the good, serious, upright Bersenieff is a masterpiece, equalled only by the later ones with Uvar Ivanovitch. And who but Turgeneff could have created and used with such artistic skill this last expressively silent personage? The book is a poem from beginning to end in conception and in treatment; but that is only saying that it is written in Turgeneff's customary fashion.

Two of the earlier works of Count Leo Tolstoi, 'The Cossacks' and 'Sebastopol during the Siege,' have recently been translated into French and published in a volume together, with the titles 'Les Cosaques' and 'Scènes du siège de Sébastopol' (Paris: Hachette; Boston: Schoenhof). In his early manhood Tolstoi served in a regiment of artillery for several years—at first, in 1851 and 1852, in the Caucasus, in which the scene of 'Les Cosaques' is laid; and afterwards, during the Crimean war, in Sebastopol. It was here, during the siege, that some portions, at least, of the 'Scènes du siège de Sébastopol' were written,

and from here that they were sent to Moscow for publication in the *Russian Messenger* while the siege was going on. The complete work is composed of three detached portions, entitled respectively Sebastopol in December, in May, and in August. These are neither personal recollections nor imaginary adventures, but something between the two: the personal impressions of the writer given under a slight veil of partly unreal circumstances. All the characteristics of the battle-scenes of 'War and Peace' are in these thrilling narratives of the events of the three periods chosen, and the personal emotion of the young officer of twenty-six, who relates what he sees passing around him constantly, moves his readers just as the sympathetic imagination of the mature author of 'War and Peace' does twelve years later, when he shows them, through the minds of his various heroes, his own impressions of war by means of the great battles of Napoleon.

After the Crimean war was over, Tolstoi published another semi-autobiographical work, 'Childhood, Boyhood, and Youth,' a translation of which, by Mme. Arvède Barine, under the title 'Enfance, adolescence, jeunesse,' is announced as in preparation, and of which fragments have already been published in the *Revue Bleue*. This work, as we have had occasion to point out, apropos of the American version, has all the charm of a biography without actually relating the events of the author's external life. In all that is essential, however, the young Nicolas seems to reflect the growth of the moral and intellectual nature of Tolstoi himself, as in the narration of his boyish faults and vanities and self-reproaches, in the minute and vivid descriptions of his life and companions, we divine the personal experience of the author.

A little later than this, but during the same period of his life, in the years between his retirement from the army and his marriage, Tolstoi published his third work of importance, the exquisite idyl which has now appeared, under the title of 'Les Cosaques,' in the same volume with the 'Scènes du siège de Sébastopol.' As long ago as 1878, Mr. Eugene Schuyler gave to English readers a translation of this work, which Turgeneff is said to have considered "the finest and most perfect production of Russian literature"; but it is only within a few months that it has been made accessible to French readers. 'Les Cosaques' contains the first fresh impressions made upon Tolstoi during his years of military service in the Caucasus, by the free and uncivilized life into which he was thrown, and by the wild and magnificent scenery surrounding him. It is the poetic expression of the feelings of a very young man, filled with delight and astonishment at the new existence revealed to him. The story itself is slight, but the interest never flags; for here, as in all his later works, it does not depend upon events but upon the analysis of character and of feeling, the passionate admiration of the young man for everything around him, and his instinctive repulsion for the old life which he had left. Though published some time after this life in the Caucasus was over, and only after several other books, 'Les Cosaques' has a certain freshness and joyousness of youth which none of the other works of Tolstoi possess; and if it was revised and arranged at the time of its publication, it was probably written, in its essential parts, in the midst of the scenes and the persons pictured in it.

In 1860, at the age of thirty-two, Tolstoi married, and very soon after retired to his estates in the country, where he has lived ever since, in the midst of his family and tenants, a life which the readers of 'Anna Karénina' might easily imagine for themselves, even without the revelations of his later works. At some time during this long period of retirement from the world, but probably not during the earlier years, he wrote the charming story which has been translated by M. le comte d'Hauterive under the title of 'Katia' (Paris: Perrin; Boston: Schoenhof). This translation was first published in 1878, when Tolstoi had scarcely been heard of outside of Russia, and it was only when the book was republished a few months ago that it began to be read. Another translation, with the title 'Mon mari et moi,' appeared last winter; but it was buried in the pages of the *Revue Internationale* and was read by few. Nothing that the author has ever done contains more exquisite writing than this; none among his charming young women are more lovable than Katia; none of his men more simply noble than Sergiei; and nowhere has he revealed with so tender and sympathetic a touch the most delicate and evanescent shades of sentiment and of feeling as in this exquisite little story.

The latest translation from the writings of Tolstoi is a volume containing half-a-dozen short stories with the collective title 'À la recherche du bonheur' (Paris: Perrin; New York: Christern). If the preceding works represent and sum up all the literary life of the author, this one is the expression of the moral and religious beliefs and feelings which now govern all his actions. These popular stories, legends, and parables are written for the Russian peasants, with the same simplicity and directness of purpose that he has shown in other directions. If his readers of another class regret the author they have lost, they cannot help respecting and admiring the moralist who writes for the poor and humble with so much single-minded devotion.

'Souvenirs de la maison des morts' (Paris: Plon & Nourrit; New York: Christern) is the expressive title of the book in which Dostoyevsky has related his years of exile and imprisonment in Siberia, in consequence of supposed complicity in a political conspiracy. A slight veil is thrown over the reality; a few unimportant modifications of facts place it beyond the limits of the severe rules of the Government censure, which, without some such disguise, would have prevented its publication. But in everything of importance it is the veritable 'Souvenirs' of Dostoyevsky himself. At twenty-eight years of age, in December, 1849, after eight months of imprisonment, he was led out with his companions to hear the sentence which had been pronounced upon them. It was immediate death. As the prisoners stood together upon the scaffold waiting the execution of the sentence, a white flag was raised between them and the file of soldiers whose guns were already directed towards them. It was a signal of respite; they were to be sent to Siberia. Dostoyevsky's sentence was four years of hard labor in prison, and afterwards incorporation for life in a Siberian regiment as a common soldier, with the loss of civil rights and his rank as a gentleman. It was during these four years spent in irons and constantly guarded, in the midst of the worst criminals, never for an instant alone, with no books but a Testament, no knowledge of the outer world, that the young author, who had already begun to be famous, laid up the materials for his 'Souvenirs de la maison des morts.' It seems as if he had reproduced in the pages of this book all the events, all the companions, all the agonies of these years. It is done with the utmost patience and submission of spirit on his own part; with the finest insight into the characters of his companions. But what is most impressive is not the wonderfully minute and searching analysis of the inmost souls of the miserable beings who people this Inferno: it is the inexhaustible sympathy and compassion with which the author writes of them, revealing the divine spirit in the most degraded—a sympathy and compassion which never relieves itself in words, but which inspires the whole book and glorifies it.

Whoever has read the strange and thrilling work of Dostoyevsky, 'Crime and Chastisement,' can perhaps imagine something of the manner in which he would treat such a subject as that of 'Krotkaïa' (Paris: Plon & Nourrit; New York: Christern). "Imagine a husband in the presence of the body of his dead wife, a few hours only after she has thrown herself out of a window." Dostoyevsky begins his exposition in this way in a short preface to the book. The husband is in extreme trouble, unable to collect his thoughts, going over to himself all that has happened confusedly, justifying himself, accusing his wife for the past, recalling all their life together from the beginning, all that has led to the catastrophe. Gradually all the past becomes clear to him; he sees it truly and his own part in it. The *terrible romancier*, as M. de Vogüé calls him, has here a subject suited to his powers. Such an exposition might seem to promise a repulsive book, something tumultuous and horrible. It is almost calm and all the more impressive. It is not painful to read. It is not agreeable, but it shows the strange and powerful writer in one of his most characteristic moods, and it is a marvellous study of the human soul.

In a recent number of the *Revue Contemporaine* there appeared some very striking pages entitled "Le Grand Inquisiteur." They were taken from the last work written by Dostoyevsky, 'Les Frères Karamasoff,' which M. Victor Derély is now translating, and which is announced for approaching publication by Plon & Nourrit in their series of the complete works of the author. The passage published is complete in itself. One of the brothers relates to the other the subject of a kind of philosophical or theological poem, 'Christ in Spain.' The simplicity and unadorned directness of the style in which he expresses his thought, the grandeur of the form in which he embodies it, the gradual gathering up and unfolding of the idea in one unbroken conception without a flaw or stain upon its unity, is something marvellous. It is the highest point to which Dostoyevsky has attained in anything yet translated. The luminous beauty of this prose poem can best be realized by a comparison which readily suggests itself with the 'Torquemada' of Victor Hugo, or his 'Fin de Satan.'

Richard Steele. By Austin Dobson. [English Worthies.] London: Longmans, Green & Co. 1886.

THE discovery of Steele in the character of an English Worthy, instead of Man of Letters, has a touch of the same humorous surprise in it that his comrades of the mess must have felt at his original appearance in literature as *The Christian Hero*. In his own day he found it a hard matter to deserve that reputation—to be a wit of the coffee-house was the easy thing; now the tables are turned, it seems, and the too humanly complying Captain of the Life-Guards, denied the boon companionship of Swift and Addison under the literary editing of our century, turns up among the worshipfuls. His heart, we may be sure, would swell with the new title, could he be made to think it belonged to him. Mr. Dobson does his best to make the reader think so. He knows very well, however, that his is not the usual task of the biographer of a previous age, merely to evoke the spirit of a dead mortal: the historian and the novelist have been beforehand with him, and when the literary imagination has seized upon a character of the past, truth has as little chance against its illusions as against a popular hero. Macaulay's sinister dislike and Thackeray's warm affection have created a Steele for us; and, different as their judgments are, the divergence

springs' rather from their temperaments than from their conceptions of the culprit's career. Mr. Dobson suggests that Steele, in this character of the culprit, whether graceless or humbly apologetic, is not a justifiable representation of the whole man, and that the flings of the one and the condonements of the other of the great literary portrait painters are too much in one tone of color. For himself, he has tried, though against tremendous rhetorical odds, to give us only a natural picture.

Had it not been for some intricacies in his career, and the entanglement of his fame in consequence of that famous foreign alliance by which he called Addison to his aid, Steele's character would never have seemed anything but simple. It is not even rare, except for the excess of its attractiveness and that subtle power which the literary gift seems to blend with the other elements of human nature. Indeed, Thackeray was able to idealize it so plausibly because it approaches so near to a general type. Mr. Dobson analyzes it briefly into a weak will and an honest purpose; and this conjunction, as in the case of other people, frequently brought Steele into trouble. Furthermore, his own lips and the lips of his enemies, and fortune in the shape of hundreds of his familiar letters, made his affairs the open gossip of Queen Anne's taverns and our own libraries. It was perhaps a disadvantage to him that he always "owned up" and ate humble pie. His reputation affords a striking instance of the damaging effects of self-depreciation, not only in his life, but in literature. Of the trio, Swift had more mind, Addison more cultivation—vastly more; and Steele was as destitute of the contemplative serenity of the one as of the intellectual fury of the other. But he was distinguished from both as being the man of heart, the lovable one, the one "like unto ourselves." Mr. Dobson has indicated this primary quality in Steele while discussing Addison's superiority as a "classical" writer; "but," he says, "for words which the heart finds when the head is seeking; for phrases glowing with the white heat of a generous emotion; for sentences which throb and tingle with manly pity or courageous indignation, we must turn to the essays of Steele." Style, of this sort, is one of the great virtues of a writer.

Nor did Steele lack a second great virtue, invention. If one were disposed to cavil, he might smile at this, and remind us of the search Steele made in the beginning of his career for the philosopher's stone, and of the fish-pool patent he took out at the end of it; and truly he had his share of the follies that attend projectors, among whom he is placed by his fertility and the restless practical energy that belonged to his mercurial temperament. But the eighteenth-century essay was a project of another sort, and Steele did originate and conduct it—one of the distinct historic forms of English literature; and, moreover, this involved the invention of light social satire, domestic genre-painting, and all the other forms in which he was the adventurer before Addison came to occupy the land. Though the country perpetuated the name of Americus, let us remember who discovered it. And Steele, in doing this, was not only the forerunner of Addison, to whom at his best he is as superior in feeling as at his worst he is inferior in finish; he wrote what Goldsmith read, and ushered in the novelists. But one should not push too far the advantage a man holds by virtue of his historical position in the tendency of a literary age, and we fear that we are too readily falling into the strain of those writers whose papers on Steele are made up of apologies and claims—a strain which Mr. Dobson himself, with all his watchfulness, cannot wholly avoid. It is so natural to love Steele, and to feel that in the world's hurly-burly for justice he is irretrievably the under-dog, that one's pen pleads for him before the head is aware, and, like Lord Finch, "could fight for this man."

Mr. Dobson masks his batteries, but they are there, and they play silent havoc on all those who have undervalued Steele's part in the Queen Anne time, whether in the hen-pecking manner of Macaulay or with the patronizing charity of our much-beloved Thackeray. It behooves the reader to be wary, or he may suddenly be believing that possibly Steele was a better man than he thought himself; that the political fervor which made him a partisan, and drew the rancor of faction on his name, was patriotic duty; that the moral sense which made him denounce gamblers and duelling, his indignation at wrong, his pity for the suffering, and the quick alliance of his sympathy with the weak, which made him in no sentimental sense the friend of humanity; and especially that his loyalty to an ideal yet human virtue, which made him such a censor of the town that he pleased them with the wholesome truth about themselves—the reader, we say, may begin to know that these are in fact the traits of an English Worthy, and not of the traditional Culprit, the Steele of fiction. He may even find himself admiring instead of forgiving him; and if at the end, when all is done, and the pretty Welsh scene near the death, and the dance afterpiece which Mr. Dobson provides, are both over, he coolly remembers the Captain of Life-Guards and the Lover-Gazetteer and the Sir Knight at Edinburgh, and cannot quite make up his mind that Steele was a hero, after all, yet he will surely think of him more truthfully, and recognize in him more manhood for this Life of him. That one prefers to think of him as a man of letters, with the failings and brilliancies and the human charm that belong to that quality, is no diminution of praise.

La Religion à Rome sous les Sévères. Par Jean Réville. Paris: Ernest Leroux. 1886. 8vo, pp. 302.

STUDENTS of the history of religion will find in M. Réville's treatise a very interesting and, we think, to most a wholly novel chapter of that history. The reign of Septimius Severus formed, as readers of Gibbon know, an important epoch in the Roman Empire. Since Gibbon wrote, we have been taught more fully and precisely the nature of the constitutional and social changes at this period which gave it this importance. From M. Réville we learn that the religious and theological changes of these years were no less marked and decisive.

The principal facts in this connection are, to be sure, not wholly new. That Elagabalus was a priest of the sun, and that he did not cease to be a priest by being crowned Emperor; that Alexander Severus had in his chapel images of Christ and Abraham by the side of those of Orpheus and Apollonius of Tyana—are familiar facts. But their bearing, as parts of a great *syncretic* movement which culminated at this period, has, we think, never been so fully shown before. Even "Syncretism"—the sense of the oneness of religions—was not really new. It was the same thing when Greeks or Romans adopted the deities of other countries, or identified their own deities with them. When the Romans borrowed Apollo from Greece and Isis from Egypt; when they recognized that Athena was Minerva and Thor Jupiter, these were acts of syncretism—a distinct step towards an understanding of the universality of law and the unity of the deity. The growth of this conception was slow and gradual. It reached its culmination at the beginning of the third century; and when the pagan syncretism of the Severi broke down, it found Christianity just prepared to occupy the ground which it was itself incapable of filling. The pointing out of the relation between this pagan syncretism and the growth and triumph of Christianity is one of the most interesting points in this book.

The character of pagan syncretism appears well displayed in this sentence (p. 108):

"Where we say at the present time, 'to the sovereign God who reigns in the heavens, who disseminates light and inspires wisdom, the God who dispenses war and peace,' etc.; the pagan syncretist said, 'to Jupiter Greatest and Best, to Juno, Apollo (or Sol), Minerva, Mars (or the Genius of Victory), Peace,' etc."

An interesting point of detail (p. 93):

"The cult of Mithra offers the greatest analogy with that of the gnostics. It was in reality a pagan gnosticism, with its theories upon the evolution of souls and its procedures to assure their return to the upper world. It had its vast ambitions and its puerilities, its combination of elevated views and superstitions."

The closest analogies with Christianity are explained in the following passages:

"A new sentiment thus takes possession of the religious conscience of paganism. . . . It is a moral conviction which offers the greatest analogies with the sense of sin among Christians, and which is, so to speak, its pagan expression. It is believed that there are in human nature bad, impure elements; appetites and passions which, while natural, are none the less impious—only, instead of attributing the origin of these bad tendencies to a bad use of liberty, they are explained from the very constitution of human nature. They abandon themselves more and more to dualism: matter on one side, source of evil, and spirit on the other side, source of good and of life; on the one side the body with its passions, on the other the soul with its higher aspirations" (p. 152).

"Apologists for and detractors of Christianity would have spared themselves many discussions if they had taken account of the numerous facts which testify to this truth [the existence of this sentiment]. It is no more suitable to pay honor to Christianity alone for this awakening of the religious conscience, than to hold it alone responsible for the ascetic customs and institutions which were its consequence. Christianity and paganism were carried along in the same current, but the bark of Christ was better suited to such navigation than the vessel of paganism, which was accustomed to sail in other waters" (p. 153).

The details of this pagan revival are narrated with great fulness and vivacity. It was, as is shown, inspired and guided by four women of Asiatic birth, whose relations to the imperial throne gave them an opportunity to exert an unusual influence upon the religious thought of their age. These were Julia Domna, wife of Septimius Severus and mother of Caracalla; her sister, Julia Mæsa: and the two daughters of the latter, Julia Soemias, mother of Elagabalus, and Julia Mamæa, mother of Alexander Severus. The characterization of these four women is very interesting from a purely historical point of view. The two elder sisters, Domna and Mæsa, were alike ambitious and imperious. Domna exercised great influence in the reigns of her husband and son, while Mæsa ruled in the name of her grandson, Elagabalus. The two younger sisters were very unlike: Soemias was weak and voluptuous, like her worthless son; Mamæa, of the purest and noblest type of women, worthy of her virtuous son. In each of these three again—leaving out Julia Soemias, who appears to have been a nullity—syncretism took an individual and peculiar shape. It was under Julia Domna that the name and sanctity of Apollonius of Tyana came into currency—as a kind of rival to Christ, some think, but M. Réville thinks not. Julia Mæsa aimed, through the priest-emperor Elagabalus, to introduce a syncretism resting upon the supremacy of the sun-god, El Gabal. Julia Mamæa and her son, Alexander Severus, worshipped a syncretism composed of the saints of all times and all religions. Of this culminating period of paganism—a higher religious level,

it would seem, even than that of Marcus Aurelius—we are told (p. 275),

"No intolerance (*intransigeance*)! Peace between all forms of worship! For all have their ground in history, and all are legitimate from the moment their adherents find in them the satisfaction of their religious needs. For this reason Alexander Severus, even supposing him to have had more energy and other advisers, could not have accomplished the work of Constantine. He was too honest to be converted for political reasons like Constantine, and too sincerely syncretic to agree to the intolerance of the Christians towards other cults. No matter. The Christian church owes as much perhaps to Alexander Severus and those of his school as to Constantine, not only by reason of the great toleration which they exhibited towards it, and which permitted it to acquire a power without which the work of Constantine would have been impossible, but also by reason of the religious impulse which they gave to the pagan syncretism, peculiarly fitted to prepare minds for Christianity."

History of the Reformation in England. By George G. Perry, M.A., Canon of Lincoln and Rector of Waddington. A. D. F. Randolph & Co. 1886.

THIS volume, one of the "Epochs of Church History" series, is in much better accordance with the title of the series than 'The English Church in Other Lands,' the only other volume of the series so far published. While it glances backward for a moment at the remoter causes of the English Reformation, it is devoted mainly to the period from the fall of Wolsey to the establishment of the national Church, in substantially its present form, in the second decade of Elizabeth's reign. It may be objected that the writer stops half way; that the Puritanism, Presbyterianism, and Independency of the seventeenth century were the completion of the Reformation. But it was just as well for Canon Perry to stop where he did. It is evident from his tone, wherever he speaks of Puritanism, that he could not treat of it with justice or with temperance; while his book, as it now stands, is remarkable for its general exhibition of these qualities. The tremendous influence of Henry VIII. on the establishment of the English Church is not underrated in the usual manner of the Anglican historian. It is made perfectly evident that the "act of supremacy" subjected the clergy to him as they had never been subjected to the Papal power. Nor is there any glossing of the sordid elements that entered into the new establishment, and largely influenced and controlled the direction of events. No attempt is made to palliate the baseness of Henry's Vicar-General, Crumwell (*sic*, and a convenient spelling which deserves general adoption), and, in acknowledging that Cranmer was the fairest product of the Reformation period, the weakness of his character is not disallowed, but indicated with the utmost clearness. The much-vexed question of the spoliation of the monasteries is treated with less of partisan bias than in the histories of Mr. Froude. But while the reasons there as elsewhere assigned for it are declared false and insufficient, it is argued that the time for the cessation of monachism in England had fully arrived. The treatment of Mary has less of bitterness, and that of Elizabeth less of sickening adulation, than we generally find in histories written from the Anglican point of view. The rhetoric of closing paragraphs is apt to be somewhat turgid, and Canon Perry's is no exception to the rule, as when he calls the Reformation "the parent of all that is greatest and best in the triumphs of the human intellect." Homer and Dante should certainly be included in that "all," and there is nothing in Shakspere that reflects the influence of the Reformation on his mind. Canon Perry has the easy conscience of his order generally in the matter of subscription. He says: "It is clear that, fairly considered, the affixing of a signature to a long doctrinal confession is not equivalent to an assertion that the signer admits and believes every statement in that confession." It may be clear to him, but it is very far from being so to many thoughtful persons.

Addresses and Speeches on Various Occasions, from 1878 to 1886. By Robert C. Winthrop. Boston: Little, Brown & Co. 1886.

IN one of the many obituary notices in this volume, Mr. Winthrop has occasion to refer to the 'Éloges' of Mignet, and he takes the opportunity to say that he had heard that eminent orator pronounce two of these discourses, which he regarded as models of their kind, in diction and delivery; and he adds, "The remembrance of them has often given me the inspiration and the example for efforts in the same line." Mr. Winthrop's field has less distinction than Mignet's, as his *portraits historiques et littéraires* are less elaborated. A few foreign names of the great world of literature, it is true, adorn the roll of his mortuary record, and at Yorktown and at the celebration of the completion of the Washington Monument he had occasions to satisfy the highest oratorical ambition, whether the concourse of people, the national significance of the event, or the splendor of the subject, be regarded. A period of incessant centennials, not only of Revolutionary, but of scientific and colonial, and even earlier beginnings, as far back as Wycliffe, and a period, moreover, when many of his own lifelong associates were falling off from old age, could not fail to make his utterances in the main reminiscent and votive, and largely commendatory of the worthies of his own circle. It is a wide circle, such as could grow about one man only by virtue of public position and exceptional private respect. From the early days of a political novitiate under Clay, Everett, and Webster, whom he is proud to remember, and of an introduction to European celebrities through the learned Baron de Circourt, to the later time of philanthropic labor in connection with the Boston charities and the Peabody Education Fund, and his last visit abroad, which is linked with the inherited names of Rochambeau and Lafayette, a host of the personages of the age emerge and defile upon the page; and the pleasing part, to a literary reader, is the judgment, the ease and opportuneness of Mr. Winthrop's remarks about each newcomer. What is said is not much more than a greeting to the living and a farewell to the dead, but it is enough; and, taken with the longer and more labored orations, it serves to remind us that Mr. Winthrop is a distinguished continuer of the memorable line of occasional orators in which Massachusetts has been, and still is, so fruitful. If these addresses are, with two or three great exceptions, brief and transitory, proceedings and contributions rather than speeches, they are such as belong to a serviceable old age, engaged in Christian benevolence of both municipal and national scope, interested in local organizations and entertained by colonial antiquarianism, old buildings, old portraits, and old graveyards. Not a little of the more permanent interest of the volume lies in those parts from the proceedings of the Massachusetts Historical Society, with which Mr. Winthrop has almost merged his literary identity, and especially in those small medallions of the Mignet pattern, as the writer says—those tributes to members or (as it were) connections of that body, the lesser known gentlemen of Boston and the vicinity, to whom that city owes much of its silent history.

Mr. Winthrop, who has withdrawn from several of the posts which drew forth these occasional utterances, announces that this, the fourth volume of the series, will be the last.

Assyrische Lesestücke nach den originalen theils revidirt, theils zum ersten male herausgegeben nebst Paradigmen, Schrifttafel, Textanalyse und kleinem Wörterbuch, von Dr. Friedrich Delitzsch. Dritte durchaus neu bearbeitete Auflage. Leipzig: J. C. Hinrichs.

THE third edition of Prof. Delitzsch's 'Lesestücke' is easily the most important Assyriological work of the past year. In a new science, where the results constantly coming in are hidden away in dissertations, reviews, and scientific journals, the collection of the discoveries is more epoch-making than the discoveries themselves. But to have this collection made and enhanced by one who is himself one of the most active workers in the field, gives it a scientific value which few textbooks possess. The 'Lesestücke' was always intended for self-instruction. In the past editions a pupil not guided by a teacher would have been somewhat of a genius to have mastered the difficult cuneiform characters. But in the third edition Dr. Delitzsch has come nearer to his ideal in this regard. He transliterates a text, gives a brief statement of the principal grammatical facts, and appends a very full vocabulary, so that with sufficient industry and a knowledge of Hebrew (always presupposed) any theological student can be initiated in the mysteries of Assyriology. The vocabulary, Prof. Delitzsch says, he determined to add only at the last moment. He has been promising an Assyrian dictionary ever since 1878, and asserts that the present vocabulary (of a thousand words or more) was written "entirely from memory." This statement he deems important enough to emphasize—by italics and repetition; but one cannot commend his prudence.

The first and most noticeable improvement is the three pages on Assyrian grammar, which contain tables of pronouns and particles, of verbal and nominal suffixes, together with paradigms of the strong and weak verb. While we might have preferred to have the *præteritum* known as the *imperfectum*, Semitic syntax, especially with regard to the tenses, is in so confused a state that names are of almost no significance. The only statement in the grammatical portion really open to question is that concerning the *verba tertiæ infirmæ*, to the effect that they cannot practically be distinguished, on which account the third stem consonant, after the practice of the Hebrew lexicographers, is set down as *he*. Schrader and Haupt have in a number of cases been enabled to determine, through the help of Hebrew and Arabic, what the last stem consonant in such cases is, and there seems to be no valid reason why the "Sanskrit of the Semitic languages" should be modelled after the unscientific method of the Hebrew lexicographers. In the *Schrifttafel* the changes are numerous, the most significant being that words of aboriginal derivation are simply called "non-Semitic." *Dibbara*, as the reading of the name of the pest-god, has been abandoned. The meaning of 'bullock' for *parû* is still retained, though it has been pretty conclusively shown that *parû* means 'mule'—*puru* being the word for bullock. Prof. Haupt's discussion of the word *qablu* seems to prove that it means 'waist,' 'coast,' rather than 'middle.' A significant change is to be found in the meaning given to the common term *salmat qaqqadi*. This is literally 'the black-headed,' and was formerly taken as applying to the Sumero-Akkadians, but our author is now inclined to think that it is the ordinary phrase for 'people.' The most welcome addition is the list of Babylonian signs ranged alongside of the ordinary Assyrian forms.

Leaving this portion, we find a great improvement in the pieces selected for reading. The Eponym Canon is left out, and its place is taken by historical inscriptions, incantations, and

hymns. So good is the selection that one can get a very fair idea of Assyrian literature by reading through the 'Lesestücke.' The vocabulary is the largest yet published, and though some of the etymologies are open to criticism, and the absence of references is rather tantalizing, it is both useful and serviceable. The mechanical labor of preparing such a work is very great. The whole book is but a lithographic transfer from the author's own manuscript. That a few mistakes should creep in was inevitable. The most important for a beginner to note is that the sign No. 100 has the syllabic value *ta*. With so excellent a guide as the 'Lesestücke,' and with the help of the promised dictionary, Assyrian will be placed on a footing with the Semitic languages, and its study proportionately increased.

A Romanized Japanese Reader. (Easy written style.) By Basil Hall Chamberlain, Professor of Japanese and Philology in the Imperial University of Tokio, etc. London: Trübner & Co.

THE second half of Prof. Chamberlain's work on the Japanese written language has at last appeared, unavoidable delays in going through the press having separated it from its companion. It consists of a triplet of little books, containing, one of them, the Japanese text; another, an English translation; and the third, notes. The first is made up of a collection of short stories, selected partly for their intrinsic interest, partly as specimens of the various Japanese written styles, and ranging from the "zokubun," or common style, to the classical. Thus we have examples of extremely simple Sinico-Japanese, of easy classical, of easy Sinico-Japanese, of the historical (a mixture of classical and Sinico-Japanese), of the popular narrative, of the ordinary Sinico-Japanese of modern books and newspapers, of the higher narrative, and finally of the semi-epistolary style. The pieces are derived from all manner of sources, and comprise proverbs, poems, and prose. The names sufficiently suggest the subjects—for instance: "The Mother of Mencius," "The Crows' Conversation," "A Family of Fools," "The Great Earthquake of Yedo," "Parting," "The Heart Itself is Buddha," etc. There are sixty-four of them in all. The second volume—if we can use the term for what has weight without bulk—is a translation of the first, intended as a key to it. The author has (we think most wisely) made this as literal as is possible between two tongues so radically different as Japanese and English. The judgment shown in the choice of the pieces and in the manner of their translation is excellent, but it is in the third book of the trio, the notes, that the learning and the research of the author are most apparent. These notes are of various kinds. Those devoted to the primary purpose of grammatical explanation serve it admirably; they are at once full and succinct, and, from being numerous at the start, disappear insensibly as the reader progresses. The construction of the inflected words is carefully pointed out, and the constitution of the uninflected ones is as critically analyzed, while the structural peculiarities of the language are thoroughly explained.

It is, however, for the less perfunctory portions of his task that we are especially in debt to Prof. Chamberlain. Much more clearly than is true of English to-day, Japanese words tell their own history of development in meaning. To a competent scholar the original significations of most of them are still decipherable, and these significations underlie and serve to explain the uses of the words at the present time. Examples lie scattered throughout the book. We will quote two:

"*Machi* does not correspond exactly either to 'street' or to 'town.' It signifies rather 'a street in the mercantile quarter.' For 'town' there is no satisfactory Jap. equiv. The nearest are *fu* or *tofu*, 'capital'; *mura*, 'village'; *minato*, 'seaport'; and *machi*, as above" (p. 52).

Machi is perhaps derived from *ma*, 'a space' and *chi*, 'a way'; just as *michi*, 'a road,' is, as the author has elsewhere pointed out, derived from *mi*, 'honorable,' and *chi*, 'a way,' therefore 'the honorable way' and hence 'a highway.' The meaning 'town' may have arisen from the fact of the natural development of a village along one main street, as is still peculiarly the case in Japan; the name having been first applied to that part of the highway, and thence extended by implication to the village itself. The expression is common as a factor in the compound proper names of towns, as Harumachi, "Springville."

Again, on page 69, we find;

"Note how the word *kami* denotes what is uppermost or superior in the most various ways—the hair of the head, a lord, the government, a god, etc."

The last quotation is pregnant, for *kami* is no isolated case. It is but one of many such instances of what we may call primitive words. They are words which, without being in the least abstract, are, from their very simplicity, necessarily general, such, in fact, as were suited to the early concepts, and which in course of time came to be applied to many different objects, having in common only the general distinguishing property in question. *Kasa*, 'any round top-covering,' and thence, 'halo,' 'bowl-cover,' 'acorn-cup,' 'hat,' 'umbrella,' etc., is another instance of the same class. One primitive word came thus to be the ancestor in meaning to a whole clan of later ideas. In the spoken language the context furnishes the key to the particular idea in any given case, and in the written language the Chinese ideographs are called in to do the same duty.

Besides notes of this character there are complete explanations of the sources and the general meanings of the various stories, so that the student gathers no mean amount of knowledge about Japanese literature by the way. And finally, the book, as its name foretells, is a Romanized Japanese Reader, that is, the Japanese words are printed in Roman characters, in accordance with the reform initiated by the Romaji Kai, or Roman Letter Association, in the founding of which, about a year ago, Prof. Chamberlain was one of the leaders.

Living Paris and France. A Guide to Manners, Monuments, Institutions, and the Life of the People; and handbook for travellers on an entirely new and original plan. By Alb. With maps and plans. London: Ward & Downey; New York: Scribner & Welford.

"JE serai votre guide dans la ville splendide," says or sings the young man in "La Vie Parisienne" of MM. Meilhac and Halévy; and Mr. Whiteing makes the same promise in his rather clumsy title-page. There is already an abundance of guide-books to the capital of France, from the pair of stout tomes of the 'Paris Guide,' which M. Louis Ulbach edited in 1867, and for which Victor Hugo wrote a grandiloquent preface, to the inadequate and antiquated Galignani's 'Guide'; but Baedeker's remains the best, the simplest, the most concise, and the most complete. Mr. Whiteing's is rather a supplement to Baedeker's than a substitute for it. He has endeavored to make the descriptions of places and things secondary to the account of people and customs. This is an excellent endeavor. Too many people rush through Paris, seeing the sights in a week or a month or even a year, and quitting the city by the Seine as ignorant as ever about the life of its inhabitants. Mr. Whiteing describes society, the *salons*, the clubs, the newspapers, sport, art, literature, and the drama. He has a chapter on dining in Paris (this is by Mr. Theodore Child—it is useful, but flippant and superficial). He considers politics, the constitution and the working of the government, the army and the navy, and the administration of justice. These are surely subjects important enough to fill a book by themselves, and we think 'Living Paris' would have gained by omitting the chapters reduplicating the information to be found in every other guide-book—descriptions of monuments and galleries, and notes on the environs of Paris and the French watering-places.

In the main, Mr. Whiteing's work is very well done. Its chief fault is a certain journalistic flavor, not often unduly obtrusive. We may as well note a few slips for future correction. Mlle. Pierson is not "a queen of tragedy" (p. 212); Paul de Saint Victor's 'Deux Masques' is not "an authority on classic and modern art" (p. 158), because it is not about art, but about dramatic literature; 'Autour du Mariage' was not, as a play, "the delight and scandal of a season" (p. 42), because the play failed dismally and was immediately withdrawn.

Virginia Carolorum. 1625-1685. By Edward D. Neill. Albany: Joel Munsell's Sons. 1886.

WHEN a stately house has been built, and an admiring public applauds and congratulates the architect, few think of the humble quarrymen who toiled to get together the stones. And it is a fortunate thing, for historians as well as for architects, that men exist with ransacking and burrowing instincts, like those whom Epistemon saw, "touts occupés à chercher les espingles rouillées et vieulx clous parmi les ruisseaulx, . . . mais de ce travail et de mal-heureté il ne leur soubvient, tant ils sont actifs"—men whom an irresistible impulse urges to search musty records and forgotten books, to glean some overlooked scrap of fact that may at some time find a place in history. A codicil to a will, a marginal note, a casual mention in a letter, are veritable treasure-trove to these modest and unappreciated journeymen of the day of small things. To this useful class Mr. Neill belongs. The instinct which impels the *vos-non-vobis* creatures to their disinterested labors, drives him to ransack, with praiseworthy industry, the sources of Southern colonial history: not only such thrice-sifted heaps as Hening and the Calendar of State Papers, but other and less known repositories; and a part of the fruits of these researches he gives to the world in his 'Virginia Carolorum.'

It is no imputation on Mr. Neill that we discover no new fact of historical importance in this work: that was hardly to be expected. But the small facts he has unearthed are not without interest. When we read of a wealthy burgess, in 1630, bequeathing to one friend a thousand pins and to another six pounds of soap, we gain a livelier idea of the trials of the early colonists. When we learn that Joan Butler was judicially ducked for calling Marie Drewe an unmentionable name, we are glad to think that some descendant of Mistress Drewe may rejoice at this vindication of the fair fame of his ancestress from undeserved aspersion. In fact, there is hardly anything here—even to the information that in 1635, in digging a well near Jamestown, the workmen found a large bone eighteen feet below the surface—but may some time be of use to somebody.

One historical error, evidently the result of hasty reference, we have noticed. On page 188, referring to the overthrow of the Ingle insurrection in Maryland, the author says: "In December Governor Calvert returned from Virginia

with an armed force and took Hill [the acting Governor] and the Assembly, then in session, prisoners"; and he refers to, and partly cites, a letter from Baltimore to the Assembly. If he had looked more closely at his authority, he would have found that the letter he is citing is not from Baltimore, but from the Assembly, and that both letters controvert this statement. When Governor Calvert resumed power, he not only did not molest Hill's Assembly, but continued it in office, as the letter referred to states. Hill returned to Virginia, and for some time pestered the Maryland authorities for the arrears of his salary while acting Governor; and the claim was, in part at least, allowed.

In some of Mr. Neill's earlier publications he has tried to generalize facts, to draw inferences, and to reach conclusions; but in the volume before us he has, very judiciously, almost entirely abstained from such attempts, and thus deserves our double gratitude.

The Round Year. By Edith M. Thomas. Boston: Houghton, Mifflin & Co. 1886.

THE inhabitants of "the leafy coverts of New England" have had it all their own way for a long time in the matter of these books of poetic wood-craft, wild-life, and the changes of the sky and the seasons; from the Maine border to the Adirondacks, along the Bay, by the Merrimac, the Connecticut, and the Hudson, in the Berkshire, the White, and the Green Hills. In all these selected observatories, as well as on Boston Common, the diary of nature has been minutely kept. It is consequently with pleasure that one finds that Miss Thomas's 'Round Year' went circling through the months on the southern shore of Lake Erie. This assures us a new field, though not a new fauna and flora; and with the advantage of a great object of nature, the Lake—still undescribed after the Thoreau fashion—to serve for a perennial background. But Miss Thomas is not a naturalist; her temperament is poetic, and nature is more plastic to her fancy and obedient to her call than in the case of a true observer. Moreover, she is harmed by literary consciousness, which leads her to seek variety, as it seems, in a way nature does not, and to cut up the seamless garment into "subjects." In one or two essays the authoress makes much of the Lake, deals with it as a native and familiarly, and tells us things novel, impressive, and stirring about it, until the imagination does begin to take hold of it and come face to face with its power. Nevertheless she writes of it as a landsman would about the ocean; she does not seem at home. This lack of nearness to nature and intimacy with it is not unrelated to the literary consciousness of which mention was made above; and the same flawing influence affects the workmanship of the writer. She shows too plainly that she is mistress of her rich vocabulary, and uses it too lavishly, as if syllabification were style. Keats himself suffered by his love for a fine word. But this criticism goes too far afield; and we must return to say that though it is true that this is a poet's rather than a naturalist's book, fuller of deft fantasy than of ornithology, and dropping more easily into a moral homily or a rustic characterization than into forest-lore or the habits of squirrels and chipmunks, it is a studious and, in a literary way, painstaking volume of observations of natural surroundings, of the real inland beach, with the creek, the fields, and the sky over it, "the rain and the fine weather"; and is besides a near and neighborly view of a new region.

Gazetteer of Grafton County, N. H. 1709–1886. Compiled and published by Hamilton Child. Syracuse, N. Y. 1886. Pp. 644, 380. Portraits, map, large 8vo.

THIS volume contains more than the word "gazetteer" generally implies. Following a description of the physical features of the county, which includes the Franconia and a bit of the White Mountains — the geological part being from the pen of Prof. C. H. Hitchcock—there are sketches of all its prominent lawyers. This has evidently been prepared with considerable care, and is a noteworthy contribution to the legal history of New Hampshire. The most famous of all the cases which have arisen in the county was that of Dartmouth College, a full account of which is given. From it we also learn that the old court-house at Plymouth, in which Daniel Webster made one of his earliest, if not his first, plea, has, after having been used as a wheelwright's shop, been restored to its original appearance at Senator Blair's expense, and is now used for a library. Short histories of the towns in alphabetical order, with numerous biographical and genealogical details, especially of the early inhabitants, and accounts of the principal industries complete the first and largest part of the volume. It is interesting to note from the census tables that the population in 1880, 38,788, was less than it was in 1840, when it was 41,080; only one town, Bethlehem, showing any marked increase. The second part is a directory not merely of the business men, but of all the inhabitants, whose homes are designated in a very clear and ingenious way. On the accompanying map the roads in each town are numbered, and after each person's name is the number of the road upon which he lives, as, for instance, under Lisbon is "W. B. Phillips, r 23 cor 21." From the portraits in this volume we fancy a composite portrait could be made which would well represent the typical Yankee.

BOOKS OF THE WEEK.

A Boston Girl: A Story of Boston, Bar Harbor, and Paris. Belford, Clarke & Co.
Alexander, Bishop W. The Divinity of Our Lord. Cassell & Co. 40 cents.
Atkinson, J. The Sháh Námeh of the Persian Poet, Firdausi, Translated and Abridged in Prose and Verse. Frederick Warne & Co. $2.00.
Ayres, A. The Mentor: A Little Book for Men and Boys. Funk & Wagnalls. 50 cents.
Bernard, G. S. Civil-Service Reform versus the Spoils System. John B. Alden.

THE MORAVIAN RAG DOLL,

to quote a prominent writer, "is the most Christian-looking doll I have ever seen; my children are delighted with it." $3 post-paid. "DOLLS," Box 185, Bethlehem, Pa.

Scribner & Welford's

NEW BOOKS.

A History of Parliamentary Elections and Electioneering in the Old Days:

Showing the State of Political Parties and Party Warfare at the Hustings and in the House of Commons from the Stuarts to Queen Victoria.

Illustrated from the Original Political Squibs, Lampoons, Pictorial Satires, and Popular Caricatures of the Time.

By JOSEPH GREGO,

Author of 'Rowlandson and his Works,' 'The Life of Gillray,' etc.

Demy 8vo, cloth extra, with a Frontispiece Colored by Hand, and nearly One Hundred Illustrations, $6.00.

AUSTRALIAN PICTURES.

Drawn with Pen and Pencil.

By HOWARD WILLOUGHBY, of "The Melbourne Argus."

With a large Map and 107 Illustrations from Photographs and Sketches, engraved by E. WHYMPER and others. Imperial 8vo. Cloth, gilt edges, $3.50.

The New Volume of the "Pen and Pencil" Series. It is written by a well-known member of the Australian Press who is thoroughly acquainted with the scenery, life, products, and business capabilities of the different parts of Australia. Great efforts have been made to award adequate space and treatment to each of the Colonies.

THE HANDY NATURAL HISTORY. By the Rev. J. G. WOOD, author of 'Homes Without Hands,' etc., etc. With 224 Engravings. Small quarto, cloth boards, gilt edges. $3.50.

Written in Mr. Wood's happiest vein, it gives an enormous amount of accurate and interesting information about the life and habits of animals and birds. It is also written with the serious purpose of showing how wonderfully the Creator has adapted the bodies of these different creatures to their habits and needs.

FINE ART JUVENILES.

THE LAND of LITTLE PEOPLE. Poems by FREDERIC E. WEATHERLY. Pictures by JANE M. DEALY. Beautifully printed in colors and monotone. Oblong 4to, gold and brown, boards, $2.00.

The children have their favorites as well as their elders, and certainly no book has been more popular among them than 'Told in the Twilight.' That the same authors are again associated is a sufficient introduction of 'The Land of Little People,' which is even more beautiful than its predecessor. It is an ideal children's book, with the most daintily conceived verses and the most beautifully executed pictures.

THE GIRL'S OWN ANNUAL FOR 1886. Containing 832 pages of interesting and useful reading, profusely Illustrated by eminent Artists. In handsome cloth. $3.75.

THE BOY'S OWN ANNUAL for 1886. Containing 832 pages of Tales, Sports, Travel, Adventure, Amusement, and Instruction. Colored and Wood Engravings. Handsome cloth. $3.75.

"The respectable and sometimes excellent translations of Bohn's Library have done for Literature what railroads have done for internal intercourse."—R. W. Emerson.

"I may say in regard to all manner of books, Bohn's Publication Series is the usefullest thing I know."—Thomas Carlyle.

STAUNTON'S WORKS ON CHESS. 4 vols... $2.00 and 2.40 each.
GILBART ON BANKING. 2 vols..... 2.00 each.
LOWNDES'S BIBLIOGRAPHER'S MANUAL. 11 parts .....$1.40 and 2.00 each.

*** The above books will be sent upon receipt of advertised price. Catalogues of our regular stock, also of Bohn's Libraries, will be mailed, if desired, to those interested. New Catalogue of Musical Literature ready. New Catalogue of Choice and Rare Books ready.*

SCRIBNER & WELFORD, 743-745 BROADWAY, N. Y.

Charles Scribner's Sons

WILL PUBLISH ON SATURDAY:

The Huguenots and Henry of Navarre.

By Henry M. Baird, Professor in the University of New York. Uniform with the author's 'The History of the Rise of the Huguenots of France.' 2 vols., 8vo, with maps, $5.00.

Prof. Baird gives an account of the struggle of the Huguenots of France to secure a fair degree of religious liberty. The work narrates the story of the heroic and unflinching determination which finally secured the Edict of Nantes, the last chapter giving a sketch of the halcyon days of Protestantism in France under the Edict, and down to the death of Henry IV. The work, while distinct in itself, is supplementary to the author's 'The Rise of the Huguenots of France.'

Children's Stories of American Progress.

By Henrietta Christian Wright. 1 vol., small 8vo, illustrated, $1.50.

CONTENTS:

The Beginning of the Western Settlement.	The Story of the Railroad.
The Barbary Pirates.	Indian Troubles in Florida.
The Purchase of Louisiana.	The Story of the Telegraph.
The expedition of Lewis and Clarke to the Pacific Ocean.	The Annexation of Texas.
The First Steamboat.	The Mexican War.
The Battle of Tippecanoe	The Settlement of the Northwest Boundary.
The War of 1812.	The Discovery of Gold.
The Purchase of Florida.	The Rebellion.
The Story of Slavery.	The South after the War

Miss Wright has the rare faculty of writing history in so entertaining a way that young people are led to read it with quite the same interest that they would devote to a romance. In this book the author touches upon the important events in our history in so graphic a way as to firmly impress them upon the minds of young readers. The book is a companion volume to Miss Wright's 'Children's Stories in American History,' published last year.

Woolsey's Political Science

By Theodore D. Woolsey, lately President of Yale College. *New and revised edition, at a greatly reduced price.* 2 vols., 8vo, $5.

"Such a work from such a publicist will not only be of great value, and do important service in this country, but will be accepted the world over as an authority on its topic, and a credit to the national literature in which it is produced."—*Boston Advertiser.*

The Creoles of Louisiana.

By George W. Cable, author of 'The Grandissimes,' 'Old Creole Days,' etc. 1 vol., 4to, richly illustrated, extra cloth. *New and Cheaper Edition.* $2.50.

"Vivid, discriminating, picturesque; an admirable piece of literary work."—*Boston Journal.*

*** These books are for sale by booksellers, or will be sent, postpaid, on receipt of price, by*

Charles Scribner's Sons,

The Nation.

NEW YORK, THURSDAY, OCTOBER 21, 1886.

The Week.

We have now three candidates for the mayoralty of New York who are stigmatized as free-traders, Mr. Hewitt, Mr. Roosevelt, and Mr. George. It is known that all three are in favor of tariff reform. There are shades of difference among them as to the measure of reform that would be beneficial, but in the lingo of protection they are all alike British free-traders, enemies of American industry, and tools of the Cobden Club. Now what inference will the country draw from this remarkable concatenation? Some people may conclude that the city of New York has been debauched by the importers or flooded with British gold. Cable telegrams announced two shipments of gold last week from England—one of $1,100,000 and one of $1,600,000—a total sum of $2,700,000. This has a suspicious look when three free-traders are nominated for the mayoralty simultaneously, and no protectionist is nominated for that office by anybody. We say that some people are likely to draw this inference. But our inference is, that when the exigencies of politics require all parties to seek men of high intelligence and character, these are pretty sure to turn up free-traders, or men who hold that tariff reform is one of the imperative requirements of the day. We cannot otherwise explain this remarkable coincidence.

The uneasiness of the *Times* about Mr. Hewitt is very marked, and apparently increases. On Wednesday week it ridiculed his "determination 'to lay his frail life on the altar of his country'" by going back to Congress. On Thursday it proffered him its "profound sympathy" while engaged in "the laborious process of making up his mind" whether he would accept the nomination for the mayoralty, and declared that any delay would be "unbearable." On Friday it recurred in a sympathetic vein to the "state of his health," as making it natural he should insist on having a good President of the Board of Aldermen. It also warned him that if he thinks "his character is a sufficient guarantee" that he will fill the vacancies which may occur during his term of office in a proper manner, he is mistaken, because the "pressure" on him will demand "a degree of firmness which is altogether exceptional among public men." But then what is poor Hewitt to do? He cannot die till his time comes, or even promise to die during his term of office. His health is just as good, and, we think, better than that of the *Times's* first choice. He made up his mind in a day about the mayoralty, which is fully up to the average time taken by the editor of the *Times* to clear his brain on subjects of equal moment. And as to the "pressure," we suppose that he would say that he is himself an "exceptional" public man, and that, therefore, his firmness is exceptional. The reason, in fact, why his nomination is received with such favor is, that he is considered exceptional all over. Everybody who is worth much in this world is exceptional. The *Times* is an exceptional newspaper, with exceptional views, which it expresses in an exceptional manner. Let us be thankful that it does not consider Mr. Hewitt a born knave, or an irredeemable scoundrel, or a fool, or a sneak thief, or an irreclaimable liar or drunkard or ass.

Mr. George's letter to Mr. Hewitt is a very fair-sounding document, and, to one not accustomed to look beneath the surface, would seem to be a good answer to Mr. Hewitt's letter of acceptance. Mr. Hewitt said that the Henry George movement was an attempt to array class against class, and was therefore at war with the American idea of government. This Mr. George denies, and, in order to show that Mr. Hewitt's interpretation is erroneous, he quotes the following plank from the platform of the convention which nominated him:

"We declare the true purpose of Government to be the maintenance of that sacred right of property which gives to every one opportunity to employ his labor, and security that he shall enjoy its fruits; to prevent the strong from oppressing the weak, and the unscrupulous from robbing the honest; and to do, for the equal benefit of all, such things as can be better done by organized society than by individuals; and *we aim at the abolition of all laws which give to any class of citizens advantages, either judicial, financial, industrial, or political, that are not equally shared by all others.*"

We suppose that this declaration was drawn by Mr. George himself, since, so far as it is outspoken, it corresponds with his teachings, and, so far as it is not outspoken, it can be interpreted according to his teachings. The words we have put in *italics* were not inserted as a rhetorical flourish. They affirm that there are laws that give to some class of citizens advantages that are not equally shared by others, and that these should be abolished. What are they? If there be any such laws, then the American system of government, of which equal rights are the beginning, middle, and end, has strangely failed. Read by the light of Mr. George's books, the paragraph has a very distinct meaning, for he holds that the right of property in land does give to one class of citizens, namely land-owners, advantages not equally shared by others. This is all that there is in the Henry George philosophy. This right he would abolish by confiscation; but since difficulties of detail would arise from an attempt to eject land-owners, he would confiscate through the taxing power, by taking the entire rental value of land annually for public uses. He scouts the idea of making any compensation to the owners for the value of the land itself, since they ought never to have owned it at all.

We regret that Mr. George should have "shaded" his doctrines a little in another part of his letter, where he says:

"The platform on which I stand, and which I wish you would compare with the platform on which you stand, contains, among other things to which you probably would not object, a declaration to which I infer you do object, viz.: That all taxation upon buildings and improvements ought to be abolished, and *that taxes should be levied on the value of land irrespective of improvements.* The office to which we both aspire gives its occupant no power to carry this principle into practice; but it is true, as you intimate, that what a man stands for as well as what he can do, is a legitimate subject of consideration in his election."

Now, the "platform" upon which Mr. George was nominated must be interpreted according to the larger and broader one which the candidate has been constructing for himself some ten years past. When the platform says that "taxes should be levied on the value of land irrespective of improvements," it means that the entire annual value of land, irrespective of improvements, should be taken by the tax gatherer—in other words, that the entire value should be seized by the State. Mr. George acknowledges that "what a man stands for, as well as what he can do, is a legitimate subject of consideration in his election." Well, this is what he stands for—confiscation of landed property by the State without compensation to the owners. If this idea could be realized, how long would it be before confiscation of railroads and telegraphs and everything else which is termed a monopoly would begin? There are scattered phrases in Mr. George's writings which show that no great resistance would be met from him in the application of his doctrine to railroads.

In his message to Congress last December, President Cleveland made a long and powerful argument against further coinage of the silver dollar, concluding with this unequivocal declaration: "I recommend the suspension of the compulsory coinage of silver dollars, directed by the law passed in February, 1878." In a stump speech at Boston Tuesday evening, Senator Dawes of Massachusetts, during a diatribe against Mr. Cleveland, said: "The President could not wait until his inauguration before he thundered forth his condemnation of the coinage of the depreciated silver dollar, but a committee of the faithful waited upon him at Albany and took him by the ear, and he has been silent upon that subject ever since." This is a fair sample of the speech, and the speech was characteristic of the man. Mr. Dawes's term expires next March, and Massachusetts will justify the worst that has been said of her political degeneracy if she does not seize the opportunity to get rid of him.

The effects of applying business principles to the conduct of the Government offices at Washington are becoming apparent. Under the spoils system, when the head of the office abandoned his duties for weeks to run a Republican campaign in a "pivotal" State, the clerks, as was to be expected, were very remiss in their attendance, and there was a heavy loss from their unwarranted absence. Since it became known that efficiency instead of partisan service was the test of retention, there has been a marked change in this respect. The aggregate number of days' work lost by the absence of clerks from the Pension Bureau during the fiscal year ending with June 30, 1886, the first full year under a Democratic Administration, was only 38,652,

against 54,316 during the year ending with June 30, 1885, which included the last eight months of Republican rule, or only about two-thirds as much. As the improvement set in with the advent of a Democratic Administration in March, 1885 the contrast with the last full year under a Republican Commissioner—that ending with June 30, 1884—would be still more marked. Both the taxpayers at large and applicants for pensions suffered by the laxity which permitted unjustifiable absence, as clerks were paid for service which they did not render, and old soldiers failed to have their papers acted upon because the clerks were not at their desks when they ought to have been. It is an amusing commentary upon the claim of the Republican politicians that their party is the special friend of the soldier, that the Pension Bureau never made such rapid progress with its work under Republican rule as since the Democrats came into power. But how could it be expected that subordinates would be efficient when they saw that most efficient chief, Mr. Bentley of Wisconsin, removed by Garfield in 1881 to make a place for an Indiana politician, whose "claims" were based on partisan service of the lowest sort in the canvass of 1880?

Mr. Blaine has started for Pennsylvania to help "save" that State to the Republicans, and thus show that the heart of the American people still beats true to the great principle that the tariff is so sacred a thing that it must not even be revised. The speech which he is delivering at intervals throughout the State is the same old tariff speech which provoked the ringing of the "chestnut" bell by his Maine auditors a few weeks ago, varied only by an occasional outburst of Bourbonism on the sectional issue, as when he says that "the people of Pennsylvania are fighting over again the precise issues that were presented a quarter of a century ago in the person of Mr. Buchanan and in the person of Abraham Lincoln."

Mr. Blaine is distressed because negroes at the South do not get as large pay as whites at the North, their wages being, according to his New York organ, the *Tribune*, "over 100 per cent. less." It is, unfortunately, impossible to secure data for comparisons in most cases, but there is one class whose wages in the various States can be exactly computed. This is, moreover, a class whose treatment is universally held to be an excellent test of the condition of civilization in a community—the teachers in the public schools. "It appears from the report of the National Bureau of Education," the Portland *Advertiser* has correctly said, "that the average rate of women teachers in Maine is less than in any other State or in any Territory." The last report of Mr. N. A. Luce, State Superintendent of Common Schools in Maine, places the average wages of female teachers, who constitute four-fifths of all teachers, at $16.28 per month. South Carolina is a State with five negroes to every three whites, and the schools are supported almost exclusively by the taxation of the whites. The last report of Mr. A. Coward, the State Superintendent of Education, shows that the average wages of female teachers (a large proportion of whom are colored) are $24.48 per month, or one-half larger than are paid white women in Maine. Alabama is a State with almost as many negroes as whites. The last report of Mr. Solomon Palmer, State Superintendent of Education, contains a table giving the average monthly pay of teachers in white and colored schools for every county in the State, which shows that in half the counties the rate is higher for the colored schools than the white schools, and for the whole State is almost the same; the average monthly pay of all teachers in colored schools throughout the State being $22.78, or considerably larger than the average pay of all teachers, male and female, in Maine. The fact that such Southern States as South Carolina and Alabama pay the female teachers of their colored schools much more than Maine pays white women, ought to make Mr. Blaine rather shy of challenging comparisons between wages at the North and the South.

The Mugwump has appeared in Nebraska. The Omaha *Bee* is a leading Republican paper of that State and carries the Republican State ticket at the head of its columns. But it has bolted the Republican nomination for Congressman in its district, and it sustains its course with good Mugwump doctrine. The nominee is Church Howe, and his supporters urge the familiar plea that he is the regular Republican candidate, and that "any Republican who antagonizes him is playing into the hands of the Democracy which has so long dominated the lower house, and, in so doing, is antagonizing the Republican party of the country of which his vote will be a material national part." But the *Bee* refuses to be moved by such arguments. It declares that Mr. Howe has a twelve years' record as an active politician in Nebraska, and that this record "has been a continuous record of infamy." It avers that he has been an active agent in corrupting Nebraska politics and bringing dishonor and disgrace upon conventions and Legislatures. It affirms that "his name has been associated with all kinds of rascality, jobbery, and bribery," and it denies that a "regular nomination" entitles such a candidate to any honest Republican's support. "Before the party can command the fidelity of its followers," the *Bee* concludes a vigorous article, "its leaders must show themselves true to its principles and worthy of their support."

A notable sign of the growth of sound ideas regarding tariff reform is furnished by the announcement that David June, President of the Champion Engine Works at Fremont, Ohio, and the largest manufacturer in the Tenth Congressional District of that State, has come out in favor of Frank Hurd, the Democratic nominee and the pronounced advocate of a radical revision of the tariff. The action derives the more significance from the fact that Mr. June has always been a Republican and an active partisan. He says that he has concluded to support the Democratic candidate because he believes as a business man in the principles advocated by Mr. Hurd. This shows that the leaven which has already converted the Republicans of Minnesota so thoroughly that they nominate Vice-Presidents of the American Free-Trade League for Congress, is working in Ohio.

Mr. Perry Belmont was renominated for Congress on Thursday by a handsome majority in the Democratic Convention of the Long Island District. The opposition to him rested partly on the superstition that nobody should represent the district more than three terms—which means that nobody should go to Congress after experience and study have made him a useful member—and partly on dissatisfaction with Mr. Belmont's inefficiency as an office-broker. In his speech at the Convention, Mr. Belmont said that he did not consider it the chief aim of a Congressman's career to peddle offices, and that he should take his renomination as evidence that the people of his district desired him to give his thoughts to public affairs rather than to lighthouses and gaugerships. This was well said, and it may be added that Mr. Belmont, in spite of the office-seeking worry that nowadays falls to the lot of every Democratic Congressman, has found time to study the tasks of statesmanship, and has applied himself conscientiously to that endeavor. He has also set a first-rate example to young men, his contemporaries, by high aims and a correct life. He is one of those whom riches have not spoiled. He has gained the position of Chairman of the Committee on Foreign Affairs by diligent application to his duties, and not through favoritism or the prestige of wealth. We should esteem it a misfortune if he were not reëlected.

The Knights of Labor Convention still drags along at Richmond, but only a languid interest is now felt in its proceedings. Even the most sanguine believers in the organization now recognize that the Convention is not going to bring about any improvement in the methods of the order. Indeed, the conservative element have been powerless from the first, and the radical "Home Club" clique has had its own way. Mr. Powderly has been reëlected Grand Master Workman without opposition, but only because he had made terms with this element, and it is evident that he will be no check upon it in the future—as, indeed, he has not been since he surrendered to Martin Irons in the Southwestern strike last spring. Disintegrating influences are evidently at work, and there is now but a remote prospect that the Constitution of the United States will be amended to suit the views of the Knights of Labor, as a member of the Congressional Investigating Committee encouraged Mr. Powderly to expect a few months ago.

Every one who has read 'Gregory of Tours'—one of the most delightful books of any age—must be struck with the resemblance between some of the outbursts of violence at the South and those of the Christianized barbarians in Gaul in the seventh century—that is, the grotesque way they managed to unite ferocity with deep religious interest. The story of the Frankish chief who demanded the Communion from a bishop, and was refused because he was a notorious cut-throat and robber and fornicator, is peculiarly droll, because he compelled the

bishop to give way by threatening to murder everybody else to whom he should administer the sacrament. Incidents almost as odd occur nearly every month at the South. The news came last week that a worshipper in one of the churches in Tennessee had been called out as if on pressing business by a messenger, and on reaching the door was seized by two brothers, one of whom held him while the other "cut" him fatally with a huge knife. Next we heard that in Gainesville, Georgia, Mr. and Mrs. George Tuck were discussing the Scriptures with a certain "Ed." Manning, at the house of a certain "Bud" Manning, and Mrs. Tuck hazarded the opinion, now so widely held by scientists and by the Dutch school of exegetists, that "Adam was not the first man God ever made." Ed. Manning, who is evidently not familiar with the latest conclusions of sceptical criticism, thereupon denounced her as "a liar," and Mr. Tuck, maddened by this personal turn to the controversy, plunged a knife in Manning's neck and killed him on the spot. In fact, there appears to be no topic, sacred or profane, familiar or unfamiliar, which one can discuss in certain circles at the South without more or less risk to life or limb.

The arrest of Jacob Sharp, James A. Richmond, and James W. Foshay on Tuesday morning confirms in the most satisfactory manner the belief that the District Attorney has obtained evidence against the bribers of the Aldermen. It will be an incalculable gain to the cause of public morals if the bribers can be convicted and sent to the penitentiary in company with the guilty Aldermen. The fate of the latter, which may be regarded as sealed, has already done more to discourage bribe-taking by public officials than anything which has happened for a quarter of a century. The notion is for the first time well disseminated that it is not only immoral to accept a bribe, but it is extremely likely to send the official who takes it to the penitentiary unless he is lucky enough to run away in time. If we can also have it shown that a similar fate awaits bribe-givers, it will be a long time before any man or body of men will venture to return to the business of buying and selling legislation. The spectacle of Jacob Sharp, the most shameless and defiant of all the corrupters of legislative bodies that we have had since Tweed, going to the penitentiary for his crimes, will have a more salutary influence than years of preaching by every pulpit and newspaper in the land.

Mr. Martine's precaution in having McCabe locked up to await his trial to-day is generally approved, as it deserves to be. McCabe may not have thought of running away, but the wonder in everybody's mind, since the evidence against the Aldermen became so overwhelming, has been that the whole of them did not flee to Canada, regardless of bail bonds and everything else. Why they should stay here and await sentence to the penitentiary has been a mystery. Probably their bondsmen are keeping a sharp eye upon them, especially since the amount has been raised to $40,000. In spite of their great profits from the "Aldermanic business" in 1884, it is doubtful if any of the indicted members has saved enough to enable him to raise $40,000 in cash as the price of liberty. It is this fact, probably, which prompts their bondsmen to look after them.

The success of the new Fifth Avenue stages is complete—too complete, in fact, to allow them to furnish room for all the persons who wish to ride in them. They are filled at nearly all hours of the day as they pass between Madison Square and Forty-second Street. Above the latter and below the former point there are usually to be found some vacant seats. We have no doubt that the company could increase the number of its stages with advantage to itself as well as to the public, and it may be that at no distant day we may have the boon of a similar line upon Madison Avenue. A demand for one there is already heard. For the first time in the history of the city we have one method of public conveyance which is regulated with a view to the comfort of the passengers. The person who gets a seat in a Fifth Avenue stage is able to enjoy it without annoyance or molestation to the end of his journey. He does not have to pass up fares, nor be sat upon, nor have his feet crushed by other people, nor is he called upon to give up his seat to ladies who crowd in after all the seats are filled. The novelty of all this is so extraordinary as to make him wonder if, after all, he may not be dreaming.

It is important to keep in mind that at the coming election a vote is to be taken on the question of calling a convention to revise the State Constitution. The political junta which controlled the Legislature last winter omitted to make any provision for printing the ballots. They would have omitted everything else necessary to give effect to the twenty-year clause of the existing Constitution if they could have done so. The clause in question being imperative, and it being within the competency of the people to vote upon the question and to make their votes effective, even without any legislation, it was deemed best to pass a bill on the subject, but it was so passed that the duty of providing ballots was imposed upon private enterprise and liberality. The enterprise has been assumed by a number of political clubs in this city and Brooklyn, and the cost has been generously assumed by the *World* newspaper. It only remains for the people to do their part. If they take sufficient interest in it to cast half a million affirmative votes, the convention will probably be called. Every voter who goes to the polls and does not vote upon this question either way, counts against the convention. The call requires a majority of all the qualified electors participating in the election.

The subjects most imperatively requiring constitutional amendment are municipal government, taxation, prison labor, and private and special legislation. We have treated the last-mentioned subject at some length heretofore, showing how the statute-book is cumbered with laws relating to trivial matters of local concern, and put together so hastily and in such slovenly shape that the courts are often unable to construe them, and are compelled virtually to enact them over again. Private legislation brings the parasites of the lobby together, and breeds the greater part of the corruption that defiles every session of the Legislature. Legislation in the municipal affairs of particular cities and towns is one branch of private and special legislation, and the branch which most needs the surgery of a constitution convention. The misery of our situation is only in part exhibited in the fact that two-thirds of all the money expended under the city government is paid for purposes and in amounts over which the taxpayers have no control. That is to say, the levying of the taxes and the disbursement of the proceeds have been decreed by members of the Legislature not responsible to us, acting under the inspiration of local "bosses." Whatever may be said of the capacity of New York city for local self-government, it is certain that she holds a club that can reach her own Aldermen. She can send them to the penitentiary or drive them in headlong flight to foreign countries when they betray their trusts, and she can put hot brands upon them for life. But she cannot reach those who plunder her from the safe retreats of the rural districts. It is most desirable that the entire responsibility for the government of the city should be left to, or rather imposed upon, the people who pay the taxes, subject only to general laws applicable to all cities of a certain class or magnitude. The city of New York has never had local self-government, and much of the lethargy of public spirit which prevails here, is undoubtedly due to the feeling that it is of no use to try to better our condition while all power resides at Albany.

The opinion seems to gain ground that the nephews of the late Gov. Tilden intend to contest the will left by him, partly upon the ground that he did not fulfil certain express or implied agreements respecting the obligations they assumed for their father in the business carried on at Lebanon, but more especially upon the ground that the law of New York does not authorize the creation of trusts in which a discretion is left to the trustees respecting the disposition of the property. As regards real estate the law is positive. It authorizes express trusts, but forbids discretionary ones. A man may devise lands to trustees for a definite object, but not for an indefinite one, not for an object to be determined by the trustees themselves. Whether this rule applies also to personal property is perhaps an open question. The bulk of Gov. Tilden's property was devised to three trustees, to be applied to some public use according to their judgment. The will was drawn by himself solely. It is known to those most intimate with him that he had intended to have a new will drawn by another lawyer, but that he delayed this important step till it was too late. If the will should be pronounced invalid, it will be a fresh illustration of the saying that no man is fit to be his own lawyer, and that no man is competent to draw his own will. Lord St. Leonards, one of the first lawyers in England, and especially eminent in the drawing and interpretation of wills, himself left one which could not be interpreted by the courts.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, October 13, to TUESDAY, October 19, 1886, inclusive.]

DOMESTIC.

THE Secretary of State having found it impossible to obtain from the Spanish Government any guarantee of compliance on the part of Spain with the terms of agreement sought to be enforced by the proclamation of President Arthur of February, 1884, by which reciprocal advantages were to be secured by both Spain and the United States, the President has revoked that proclamation, and the discriminating duties are to be abandoned on October 25.

The President has appointed Col. James C. Duane to be Chief of Engineers, U. S. A., with the rank of Brigadier-General, vice Gen. Newton, resigned. He was graduated at West Point in 1848, and served all through the civil war.

Dabney H. Maury of Virginia, who was nominated to be Minister to the United States of Colombia, but failed of confirmation because it was charged that at the hotels in Washington he had proclaimed his present belief in secession, or something of that sort, was on Monday reappointed to the same position.

The Civil-Service Commissioners came to New York on Saturday to investigate the workings of the present method of conducting examinations for promotion.

Secretary Whitney has issued the following order to the commanders of all navy-yards: "A custom has grown up in navy-yards of having a list of men—employees—'suspended.' There is no authority of law for this, and you will see that it is discontinued and all such lists erased." The law provides that no new men shall be employed at navy-yards during the sixty days preceding an election, but this does not apply to men already employed and carried along upon the "suspended" roll. The above order is understood to be intended to prevent an evasion of the law, which is now possible.

Gov. West of Utah, in his report to the Secretary of the Interior, says: "The vigorous enforcement of unpopular laws against the people in the majority here, with a prospect of further and more stringent legislation, does not tend to make them more amiable. Under favorable conditions existing here for such a result, an outbreak of violence might be easily provoked. There is no militia in Utah to appeal to, as there is in other well-organized States, to suppress violence, maintain order, and enforce the laws. Even with the authority to organize a militia, I am of the opinion, with the feeling existing here, a better reliance for the preservation of the public peace will be found in the regular United States troops." Respecting the need of additional legislation, the Governor says: "Congress should not adjourn again without providing the necessary laws to bring this people to a realization of the power of the Government."

Senator Edmunds was reëlected by the Vermont Legislature on Tuesday.

The National Executive Committee of Anti-Saloon Republicans issued on Wednesday evening an address to the Republicans of the nation. After showing how the saloon has risen to a position of dangerous political power, how it breeds criminals faster than prisons can be built for them, how it defies the law and plots to prevent proper legislation, the address says: "The saloon has entered politics with its own methods and weapons. It has allied itself with the Democratic party of obstruction and reaction, and to-day rules that party with a rod of iron. While thousands of Democrats are hostile to the liquor traffic, their voice is silenced and their wishes ignored. The machinery, resources, and votes of a powerful organization are thus enlisted to defend and perpetuate this cancer of our civilization. The prestige, resources, and championship of a great historic party are needed on the side of the home and the public welfare. The Republican party is called to this place and work, and called by a cause as genuine and majestic as that which summoned it into existence."

The Committee of the Independents appointed at a recent meeting in Boston has prepared an address to the "independent voters of Massachusetts" in behalf of John F. Andrew. "The Democrats," it says, "are turning to leaders whose sincere devotion to reform is shown by their acts, while Republican aspiration is directed to men whose record proves their determined hostility. President Cleveland and his associates are leading the Democratic party up. Mr. Blaine and his allies are dragging the Republican party down. While the present Administration controls the national Government, we know that the law will be administered faithfully. If Mr. Andrew shall be chosen Governor of Massachusetts, we are equally sure that reform will be secure against disaster here." The address reviews the claims of the two parties upon the Independents, and concludes with an appeal to those who believe in a revised tariff, a reformed civil service, and an honest currency, and who think that patriotic devotion to duty should be encouraged and the base struggle for place rebuked, to support the candidates who represent these principles for both State and national officers. Among the signers are: Charles R. Codman, the Rev. James Freeman Clarke, Darwin E. Ware, Edward Atkinson, Thomas Wentworth Higginson, James Russell Lowell, William Everett, George Fred Williams, Henry L. Pierce, Theodore Lyman, and many others whose names are almost as familiar outside of the State as in Boston.

The County Democracy on Thursday night nominated Abram S. Hewitt, the candidate previously named by Tammany Hall, for Mayor. The rest of the ticket was completed with Tammany and County Democracy men in fair apportionment. Mr. Hewitt has accepted the nomination. Theodore Roosevelt has been nominated for Mayor by the Citizens' Committee of One Hundred, and also by the Republicans, and has accepted.

Mr. Powderly was reëlected Master Workman of the Knights of Labor in Richmond on Wednesday by acclamation.

In the Knights of Labor Convention on Tuesday the report of the Finance Committee was adopted. It increased Powderly's salary from $1,500 to $5,000, the salaries of the Secretary and Treasurer from $1,200 to $2,000, and the pay of the Executive Board and the General Worthy Foreman from $3 a day to $4 a day and expenses, while on duty.

The Home Club has elected five members out of seven in the Executive Committee of the Knights of Labor, and therefore practically controls the order.

Mr. Blaine addressed a large audience of Republicans in Philadelphia on Saturday evening. He continued his tour across the State, speaking briefly while the train stopped at a number of places, and addressing a large audience in Harrisburg on Monday. He spoke on Tuesday at Lewistown, Huntingdon, and Tyrone City, arriving at Pittsburgh in the evening. The burden of his speeches is "British free trade."

David June, President of the Champion Engine Works of Fremont, O., and a life-long Republican, will support Frank Hurd (Dem.) for Congress on his tariff-reform platform.

The Chicago striking pork-packers persuaded Armour's 1,500 beef-butchers to join them, and declared a boycott on Armour's meats. On Monday afternoon about 12,000 of them met on the prairie and almost unanimously agreed to return to work on the ten-hour plan. The packing-house owners will retain all their new men, but hope also to take back most of the old ones. Pinkerton's men guarded the stock-yards during the strike.

The Supreme Court of Pennsylvania handed down on Monday a per-curiam opinion in the South Pennsylvania case, affirming the decision of the Dauphin County Court and ordering the appellants to pay the costs. The decision of the Court was a severe blow to the claims of the Pennsylvania Road. Five distinct appeals were involved, and embraced those of the Pennsylvania and Northern Central concerning the lease of the Beech Creek and the Pennsylvania, Bedford and Bridgeport Railroads, and the Pennsylvania Company as to the lease of the South Pennsylvania Railroad. In all these cases the decision of the lower court was sustained. This leaves the South Pennsylvania Road in the hands of the originators of the scheme; and although the control is nominally with the Vanderbilts, the road is really controlled by the minority, which favors the completion of the road.

The Indian Conference at Lake Mohonk on Thursday adopted a resolution praising President Cleveland for his public and private utterances expressing his interest in securing justice, education, and ultimately citizenship for the Indians; for his revocation of the order opening to white settlers the Crow Creek reservation and the ejectment from Indian lands of illegal occupants and armed intruders. Other resolutions were adopted criticising the wholesale removals and appointments in the Indian service made by the Administration, and recommending the immediate application of civil-service rules to the Indian service. The resolutions were adopted with only half-a-dozen dissenters.

The Protestant Episcopal Convention at Chicago voted by dioceses on Saturday, on the resolution offered by Mr. S. Corning Judd of Chicago, which provided that the words "Protestant Episcopal" be expunged from the Prayer Book and laws of the Church. The Southern delegates generally voted in favor of the resolution, and the Eastern dioceses against it, but nearly every diocese was divided on the question. The vote was as follows: Ayes 112, noes 185. The comparatively strong vote in favor of the proposition was a surprise to the Convention.

In the Atlanta (Ga.) City Council on Monday the Mayor vetoed the ordinance permitting the sale of beer. Prohibition is now fully enforced in the city.

The bondsman of Henry L. Sayles, the indicted ex-Alderman, on Monday presented in court a certified check for $25,000, the full amount of bail which had been forfeited. The District Attorney then asked that the trial of ex-Alderman Francis McCabe be set down for Thursday next, and that in the meantime he be taken into custody. This was a great surprise to Mr. McCabe and his counsel, who were in court. The Court granted the motion, and McCabe was taken to Ludlow Street Jail.

Another move in the Broadway Railroad cases was made on Tuesday, when Jacob Sharp, James A. Richmond, ex-President of the road, and James W. Foshay, ex-Treasurer, were arrested, twenty indictments having been found against each of them by the Grand Jury. They were admitted to bail in the sum of $50,000 each. Thomas B. Kerr, the former Secretary of the road, surrendered himself in the evening, and was likewise admitted to $50,000 bail.

A great gale swept over the country from the Gulf of Mexico to the Lakes during the week. The town of Sabine Pass, Texas, at the mouth of the Sabine River, was swept out of existence by the rapid rise of the waters on October 12. The whole country round was devastated. On Thursday the gale did considerable damage in Chicago and Buffalo, as well as in towns in Illinois and Indiana. In Louisiana, between Port Eads and Point à la Hache, crops worth $200,000 were destroyed by the high waters. The village Johnson's Bayou, La., was also swept away, with even greater destruction of human life. Thousands of cattle

were drowned. An appeal has been made for the survivors, who have lost everything.

The total number of persons who lost their lives at Sabine Pass was 102, and at Johnson's Bayou 145. The destitute at the former place number 300, and at the latter 1,200.

Yellow fever has reappeared at Biloxi, Miss.

The Rev. John Forsyth, D. D., LL. D., died in Newburgh on Sunday night, in his seventy-sixth year. He had been Professor in the Theological Seminary, Newburgh; Professor of Latin in Princeton College, Professor in Rutgers College, and Chaplain and Professor in the West Point Military Academy. In 1882 he was placed on the retired list of the army.

Col. Charles Whittlesey, the distinguished geologist and scholar, died in Cleveland, O., on Monday morning, in the seventy-ninth year of his age. From 1838 to 1860 he was engaged on the geological survey of Ohio and on various mineralogical and geological surveys. In the civil war he was Assistant Quartermaster-General. At the battles of Shiloh and Fort Donelson he commanded the Third Brigade of Gen. Wallace's division. In April, 1862, he resigned his commission and took up again his scientific work. He published a number of works, and was the author of thirty published essays and reports.

FOREIGN.

Gen. Kaulbars, the Russian military agent, was suddenly ordered on Wednesday to abandon his proposed journey to Rumelia. He left Varna on Thursday morning for Rustchuk.

It is reported that Russia has informed the Powers that the immediate occupation of Bulgaria is necessary. The London *Post's* Vienna correspondent asserts that Turkey has rejected Russian overtures for joint action against England and Austria. The inducement offered was the reoccupation of Bosnia and Herzegovina by Turkey, Russia to claim a protectorate over and occupy Bulgaria, Egypt to be occupied by a mixed French and Turkish garrison under the supreme command of a French general, and Greece to be given back her lost territory. The proposals also referred to a Russian campaign against India. France strongly supported Russia, and offered financial assistance to Turkey.

The elections in Bulgaria for members of the Great Sobranye have resulted in the return of 480 Government candidates, of 26 members of the Zankoff party, and of 15 adherents of M. Karaveloff. The Sobranye has been summoned to meet on October 27 at Tirnova.

Russia has presented another note to the Bulgarian Government, declaring the recent elections illegal, and demanding the postponement of the meeting of the Sobranye. The Government refuses to yield. It is stated that Gen. Kaulbars is trying to win over the garrisons at Varna, Shumla, Widdin, and Tirnova, hoping that, acting under the supreme command of the military authorites at Rustchuk, they will work a revolution in favor of Russia.

All the Powers, including England, have formally assured Russia that they disavow Prince Alexander's return to Bulgaria, and will not approve of his reëlection to the throne. Russia has announced that she does not accept the recent elections to the Sobranye as legal.

The French Chambers assembled on Thursday. The Senate arranged its order of business and adjourned. In the Chamber of Deputies, M. Goblet, Minister of Public Instruction, asked priority for a bill dealing with primary education. Bishop Treppel moved that the budget have precedence, on the ground that it was necessary to know the country's financial position before voting more money. M. Goblet was supported by 317 members and opposed by 224. M. Aube, Minister of Marine, laid upon the table a bill to reorganize the navy at a cost of 150,000,000 francs. M. Sadi-Carnot, French Minister of Finance, has tendered his resignation.

A severe contest took place in the French Chamber of Deputies on Monday evening over the order of the day, which related to measures concerning the strike at Vierzon, in Cher. The Chamber debated the strike, and voted the order of the day, pure and simple, despite the Government's objection. M. Sarrien, Minister of the Interior, representing the moderate element in the Government, resigned. M. de Freycinet, the Prime Minister, at a Cabinet meeting held on Tuesday to consider the defeat of the Government, explained that the adverse vote of the Chamber affected the responsibility of the whole Ministry. Thereupon, M. Sarrien, Minister of the Interior, and M. Sadi-Carnot, Minister of Finance, withdrew their resignations. The Cabinet decided to await a fresh debate and vote in the Chamber of Deputies, to ascertain distinctly the feeling of the majority towards the Government. In the meantime M. de Freycinet will endeavor to reach an understanding with the leaders of the majority.

The bill introduced by M. Aube, French Minister of Marine, for the "completion of the French Navy," proposes an outlay of $28,000,000 for the construction of new war ships, and of $12,000,000 for the construction of ports of refuge. It also proposes such a concentration of the work under the contracts that it shall be completed in four years, instead of nine, which is the nominal time named for the whole outlay.

The whole French infantry will be provided with new rifles next spring. The cost of the change will amount to $20,000,000.

Germany has decided to supply her whole army with repeating rifles. The four corps stationed on the western frontier of the empire are already equipped with the improved arms.

The Minister of the Interior of Saxony has issued orders relative to procedure against emigrants returning from America liable to military service in Saxony and claiming to have been naturalized in the United States. If there is no special reason to suspect that such persons emigrated for the purpose of evading service, they will be permitted to take up residence in Saxony for a limited period. Any such person who gives trouble or boasts of his exceptional position, or who, there is reason to believe, emigrated to evade the law, will be expelled from Germany immediately.

An official statement, issued in Berlin on Thursday shows that the value of exports from Germany to America during the fiscal year ending in September was $20,000,000 more than for the preceding fiscal year.

Meyer Karl Rothschild, head of the great banking firm, died suddenly at Frankfort, Germany, on Saturday, from heart disease.

The Pope has condemned the appeals to force by the Carlists in Spain and the Miguelists in Portugal.

The Spanish Cabinet has decided to raise the state of siege immediately, and to summon the Cortes to meet about the middle of November to consider legislation for army reform, with a view to the prevention of the circulation of revolutionary propaganda among army officers.

The Madrid correspondent of the London *Times* says: "President Cleveland's decree taxing imports of Cuban goods under the Spanish flag is considered undiplomatic and discourteous, and, if persisted in, Spain will put the highest possible tax on American goods, and the Cortes will probably increase the Government's powers of reprisal."

The attitude of the Tory party towards Lord Randolph Churchill's new programme is shown by an article by Mr. Chaplin, published in London on Friday. Mr. Chaplin, who was a member of Lord Salisbury's first Cabinet, represents the old Tory party. It will be remembered that he was crowded out by Lord Randolph when the present Cabinet was formed on the policy of maintaining the union of the Unionists unimpaired. He says that the Government of the country was thereby absolutely handed over to Lord Hartington's party. On the Government's intention to "endeavor to lay the foundations of a system of popular local government in Ireland" at the next session of Parliament, he quotes Sir Michael Hicks-Beach's saying last January that the condition of Ireland was not, in the opinion of the Government, favorable for the consideration of local government there. Mr. Chaplin prefers to stand by his earlier opinion. As for the freehold plots, if they mean allotments, he supports them. If, as advocated by Jesse Collings, they mean small holdings, he opposes them. On the question of closure he declared that Lord Randolph's proposal to establish it by a bare majority would lead to serious dissensions in the Tory party, and would do immense mischief, and be ineffective as a remedy. The safeguards suggested are wholly illusory.

The outlook in Ireland has suddenly become stormy. The struggle between landlord and tenant for the abatement of rent, which, owing to depression, was elsewhere being arranged amicably, seems likely to be fought out bitterly on the Clanricarde estate, where tenants demand 25 per cent. reduction, and are offered nothing. Woodford, County Galway, twenty miles from the nearest railway, has been the scene of the formal acceptance by the National League of the responsibility for the struggle. At a great mass meeting, Mr. Dillon expounded the new policy of the League. Tenants were advised to pay the reduced rent refused by landlords into the hands of trustees to be employed in supporting those evicted. Tenants on estates are to act together and refuse to pay any rent unless the reduction is accepted. The National League in such cases will use every effort to support the tenants. This policy was accepted enthusiastically by the meeting, but is not likely to be acted upon excepting on two or three estates where landlords are unreasonable. Possibly it will only be followed on the Woodford portion of the Clanricarde estate, which seems likely to be the cockpit in Ireland this winter. It is difficult to exaggerate the importance of Mr. Dillon's pronouncement. It is not intended to incite tenants generally to extreme courses, but it concentrates the popular forces on a point where a landlord absentee, who is both unreasonable and unpopular, refuses all abatement.

The London Commissioner of Police has written to the Social Democratic Federation advising that body not to hold a procession after the Lord Mayor's show, because it would be likely to cause grave disorders and perhaps lead to serious rioting. The Commissioner warns the organizers of such a demonstration that they must be prepared to bear the full responsibility for any mischief that may occur.

The Marquis of Ailesbury is dead. He was seventy-five years old. His eldest son, Viscount Savernake, was born in 1863.

A gale and floods prevailed along the coasts of Great Britain and Ireland from Thursday to Saturday. Many small vessels were wrecked. Considerable destruction was caused in a number of towns.

The latest reports show that the effects of the recent storm on the south and west coasts of Great Britain were terrible. A Norwegian bark foundered off Wales, and her entire crew, consisting of fifteen persons, perished. Ten bodies have been washed ashore on the Glamorgan coast. The British ship *Malleny* was wrecked in the British Channel, and twenty persons were drowned. The shore is strewn with wreckage. The British steamer *Artos* was lost on Pointe de la Coubre, France.

The Canadian Cabinet has sent a letter of very strong censure to Capt. Quigley of the cruiser *Terror* for hauling down the American flag on the American schooner *Marian Grimes*.

Cholera is still raging fiercely in Corea. No idea can be formed of the extent of the scourge. It has more than decimated the capital, where, out of a population of 200,000, the death rate is 1,000 per day.

THE NEW YORK MAYORALTY.

THE union of the two Democratic factions in this city in a municipal campaign would be looked upon ordinarily as a remarkable phenomenon. The rivalry between them is so deep, the animosities so bitter, the prizes to be fought for so large, that almost anything might be expected rather than harmonious action in city politics. The surprise is rather enhanced by the fact that Tammany Hall has a local organization unequalled for efficiency in the United States. The victory won by Tammany last year was a signal proof of its high state of discipline, and its intelligent mastery of the springs which move the masses in the densely populated districts of the city. We have no more confidence in Tammany as a moral engine than we have had at any former time. Its selection of Mr. Hewitt for the office of Mayor — Mr. Hewitt not being himself a Tammany man, but, on the contrary, one of the organizers of the County Democracy—was not prompted by zeal for reform. It was significant of quite other things. What these other things are, Mr. Hewitt has pointed out in his letter of acceptance with almost startling distinctness.

What has caused Tammany Hall to nominate a candidate not identified with its own organization, and still less with its methods; what has brought the County Democracy to a union with its rival, is the "Henry George movement." This is the electric shock, the universal solvent, which has brought the opposites together, and which is destined to make as great commotion in the Republican party as in the Democratic. The Henry George movement is one stage in a revolution which all men are sensible of, but which few are able to define or describe. Mr. Hewitt has defined and described it in his letter, and has supplied to every man who felt it, but did not know how to put it into words, a clear creed for the faith that is in him. He has stated facts as they are, without subterfuge or false pretence, leaving the citizens of New York to make their election between the existing social and political order, and the new scheme which aims to array class against class on the basis of a poverty qualification.

That the success of the Socialist movement would entail greater miseries on wage workers than any they now complain of, Mr. Hewitt shows conclusively. What he does not show, but what every thoughtful man who has studied the workings of the elements that support Mr. George knows, is that the "movement" is a great conspiracy of the employed against the unemployed, and is a closer, a more inexorable and pitiless monopoly than any railroad or land monopoly that can be found in this country. Its central idea is, that the men engaged in any particular employment, as for instance car driving, have the sole and exclusive right to drive cars on their own terms, and that anybody who drives cars without their permission or who offers to do so, should be beaten and stoned till he desists. And if, as Mr. George hints, the police interfere with the brickbatting and clubbing of the unemployed, they are to be taught that they are the servants and not the masters of "the people." What people? Not the American people as a whole. They are the servants of the American people as a whole now, and they follow the rules laid down for them by the American people. No; they are to be the servants of a particular class or clique, namely, of the clubbers and brickbatters who are striving after a monopoly of employment, and seeking to make the condition of the unemployed more miserable than ever.

Mr. Hewitt has not dwelt upon this feature of the "Henry George movement." He has, however, treated it on broad lines which embrace the whole field of vision. It was certain from the beginning that the attempted monopoly of employment which gave such a striking demonstration of its aims in the great Southwestern boycott under the lead of Martin Irons and in the Third Avenue riot in this city, would crystallize in political action sooner or later. The George movement could not have gained the smallest headway on the barren idealism of land tenure which he represents. It has its roots in an attempted class distinction, which is midway between the employer of labor and the unemployed laborer. It is accordingly as full of false pretence in its assumption of interest in and care for laboring men taken together, as it is of mischief to the American idea of equal rights.

We neither desire nor intend to treat the Mayoralty contest in any partisan manner. Nor do we mean in any way to depreciate what Mr. Roosevelt did for the reform of the city government during his three years of service in the Legislature, or to cast any aspersion on his motives in now allowing himself to be set up as a candidate by the Republican managers. We could give a good many reasons, none of them in any way reflecting on Mr. Roosevelt's talents or character, for thinking that he would not make a good Mayor, and that even twenty years' longer experience of life and affairs than he has had would hardly make him a good administrator, which is by no means the same thing as a good reformer.

This sort of criticism is, however, not necessary to our purpose to-day. What we wish to point out to intelligent Republicans, really interested in the welfare of the city, is, that Mr. Roosevelt's candidacy is not, and cannot become, a serious thing, and that the only probable effect of his running—indeed, we might say the only possible one—will be a diminution of Hewitt's vote and a corresponding comparative increase in George's. We ask any one who doubts this to consider the history and composition of the organization which has nominated him, and which will be, and must be, charged with the conduct of his canvass. We put it to any respectable Republican in this city whether he solemnly and sincerely believes that Mr. Roosevelt is the kind of man which "Johnny" O'Brien, "Mike" Cregan, "Barney" Biglin, "Jake" Hess, "Jake" Patterson, "Sol" Smith, "Steve" French really desire to see in high office; whether it would serve their purposes and aims, as revealed in their political action during the last fifteen years, to have such a man in the Mayoralty, and whether, therefore, any sensible and observing person can for one moment believe that they have nominated him in the hope of seeing him elected, or in the belief that he will be elected.

It must not be forgotten by those who now read of the investigations into the working of the city government set on foot by Mr. Roosevelt when he was in the Legislature, and of the reformatory legislation which he carried through, that the men who have nominated him, and who must, perforce, have charge of his canvass, were the strongest and bitterest opponents of all these measures, and that they resisted them, by lobbying and otherwise, to the utmost extent of their ability; and that some of them, as "Steve" French, for instance, of the Police Commission, and "Johnny" O'Brien of the Election Bureau, were actually part and parcel of the thing to be reformed. Moreover, it is a matter of notoriety, nay of record, that these very men, most of whom live by politics, and some of whom have made large fortunes in the business, have for years been in the habit of putting up candidates for the very purpose of selling them out to Tammany, for a consideration. Their agents have again and again been caught in the very act of distributing Tammany ballots from Republican booths. There is not, we venture to say, a single intelligent Republican in the city who can lay his hand on his heart and say that he believes in their honesty and sincerity in any political action. What construction, then, can any sensible voter put on their nomination of Mr. Roosevelt, except that it is a resumption of business at the old stand, with an unusually attractive stock of goods? In other words, can any one doubt that Mr. Roosevelt has been nominated for a trade, and that the very goodness of his record and of his character are the things which make him most vendible? The more formidable they can make him out to be at the polls, the more they can get the *Times* and *Tribune* to "crack him up," the more they can get for seeing that he does not run too well.

Mr. Roosevelt himself knows or ought to know all this as well as anybody, better than most people. In fact, we look on his willingness to allow himself to be put in the field by such a body as the Republican organization in this city as a strong sign of unfitness for the place he seeks. His credulity, however, or want of perception, whether it be real or affected, will be surely punished on election day. He will not be elected, and the managers of his own canvass never meant that he should. The mischief will not, however, as far as he is concerned, end with his defeat. It will still further increase the widespread want of confidence in the sobriety of his temper and the steadiness of his judgment. This we consider a real misfortune for the community in which he lives, because his capacity for great public usefulness is unquestionable.

PROFESSIONAL ORGANIZERS.

A NEW profession has sprung up in this country within the last few years—the profession of organizing associations of one sort and another. It is not confined, like the legal profession, to a single science, like jurisprudence, but takes in the whole field of human activity. The professional organizer

is a man fond of notoriety, eager to occupy a position which will enable him to pose before the public, usually well supplied with the "gift of the gab," and invariably averse to earning a living by the prosaic methods of ordinary industry. The kind of work which he particularly likes is what has come to be known as "working with his mouth," though he is hardly less partial to those other forms of labor known as wire-pulling and pipe-laying. He always complains loudly of being overworked, and is constantly urging the absolute necessity of his getting a higher salary.

As the name implies, the first aim of this profession is to organize something where there was nothing, and, once organized, to develop it into as complex an institution as possible. The professional organizer "out of a job" looks about him to find a place where a new association or society may be established which he shall "run." He takes kindly to the formation of a charitable organization of which he shall be treasurer. Failing in this, he is quick to see the necessity of perfecting the methods of some existing organization by creating a new salaried office for which he is exceptionally fitted.

In politics, the professional organizer is constantly starting a "hall" or a "league" which, if it does not directly give him a paying place, will establish his "claims" to a lucrative office or to a share in the profits of a fat contract. He is known as the man who compels "recognition," and who must always be consulted. He becomes an important figure in the community, whose movements are carefully watched by the reporter, and whose words are taken down with respect by the interviewer. The more extensive and elaborate his organization becomes, the more important does he grow in the public eye, and at the same time the larger becomes the field for other members of the profession in the subordinate positions which he creates. The man who "organizes the ward" for one of these halls occupies a position of the highest consequence, and the man who "runs his election district" is likely to be the man most heard of in that district.

Like the legal profession, that of the organizer is always overcrowded. Successful as it may seem and really is, there is constantly a large number of men well trained for high positions in it who have no place. There is, consequently, a never-intermitted search for new fields to cultivate. The most fruitful field ever known in this country was opened with the rise of the Knights of Labor. Here was a chance for organization, with the offices and perquisites thereunto appertaining, such as had never before been dreamed of. Anybody might aspire to a good place in this body. The lazy, shiftless fellow, who had never shown industry or application enough to keep a place as a common laborer, could now become a "walking delegate" and dictate terms to the employer who would not have him in his shop as a workman. A worthless rover like Martin Irons might now join the order, become a Master Workman in three months, and in a few weeks more, as Chairman of the Executive Committee of a District Assembly, "order out" thousands of workmen and disarrange the industries of half-a-dozen States. In short, such an opening for the unemployed professional organizer was never before seen or even dreamed of.

The inevitable result has followed. The order has been overrun with organizers, and it is now fast being organized to death. There has never been seen a body of delegates which was more completely managed by a little ring than the present convention of Knights at Richmond. Schemes for increasing the number of offices, raising the salaries and enlarging the powers of the men who hold them, have been the chief business of the gathering. The organizers have got things so well organized that the delegates merely register their will. An intelligent and candid delegate draws this graphic picture of the situation:

"The convention will be remembered by all who have attended it for the acrimony, selfishness, and political scheming which have characterized its proceedings. I will give the organization just three more years to live. And I will tell you why I say three years more. The proceedings here leading to and growing from the election of officers convince me, and have convinced a majority of the honest delegates here, that it will not take more than a year to dissolve the organization after the next general election of officers. That will occur two years hence. Of all the officers elected up to noon to-day there is not a single man who has worked a lick as laborer within ten years. And all of them are professional organizers for what money there is in the organization. They are Knights of Labor for the money there is in it, and the day they lose their grip—and that cannot be at a later day than two years hence—they will leave the order or put it in such shape that it will fall of its own weight. There is nothing of self-sacrifice in the management and nothing for the general welfare in the aims of the management.

"This organization has during the past two years become the bane of the laborer in being transformed into an asylum for deadbeats and paupers, and a scheming school for politicians. Every man who belongs to it now, and does not make money out of it, is a worse slave to intriguers than he ever was to capital, and is his own worst enemy. He is a tool and a dupe."

The professional organizer at his best is a dangerous character; at his worst he is fatal to the cause which he organizes. It has long been evident that the Knights of Labor had attracted all the worst members of the profession, and the downfall of such an order must of necessity be only a question of time.

THE POWER OF CONGRESS OVER THE CURRENCY.

It is probable that personal respect for Mr. Bancroft has prevented the lawyers from a free public expression of their minds on the subject of his widely circulated pamphlet entitled "A Plea for the Constitution of the United States," published last February. There could be no doubt of Mr. Bancroft's sincerity, but there was the gravest reason to doubt the soundness of his main position; and as to his tone of confident invective, and his manner of assuming that the court had forgotten its alphabet, of proceeding by argument to reinstate it in their memory, and of assuming that when once this task was performed his own conclusions followed—all this, to speak within bounds, was regrettable.

Mr. Richard C. McMurtrie of Philadelphia has lately printed a few "Observations on Mr. George Bancroft's Plea for the Constitution," which he entitles "A Plea for the Supreme Court" (Philadelphia: Kay & Brother). There is probably no lawyer in Philadelphia, as there are few lawyers in this country, whose judgment is entitled to more respect than that of Mr. McMurtrie. One reads with interest his measured words when he tells us:

"I cannot and I never could assume the tone of certainty on this very great question that can alone justify the assault on the court. . . . Forced at the very outset to argue the question under the disadvantage of the excitement of the outbreak of the civil war, and when reason was in fact silent, the bias of my mind was and has been to Mr. Bancroft's conclusion. . . . Accustomed to assume as conclusive the statement of Mr. Webster, to which Mr. Bancroft refers, I had somewhat indolently accepted that view as the correct one for lawyers. Mr. Bancroft's pamphlet has had the effect of raising doubts in my mind on the legal questions involved, quite the reverse of its intended effect."

Mr. McMurtrie points out, as a corrective for overconfidence, that not merely the Supreme Court, but all the other judges, presidents, senators, representatives, and cabinet officers who have sustained the legal-tender law, have in reality expressed the opinion that the law was constitutional:

"And ought not Mr. Bancroft, if he was not bound to say that if there be a reasonable doubt as to the existence of the power no court has ever undertaken to declare an Act of the Legislature void—ought he not to have said that the concurrence for twenty-four years of statesmen of no mean character stands as an argument to be overthrown, in favor of the existence of the power? . . . The conception or notion [of the word *constitutional*] is simply that of legal power. Its wisdom or prudence or folly does not enter into that question when dealt with as courts may lawfully deal with it."

The striking and much-forgotten circumstance is insisted upon, that the whole judicial power of declaring laws unconstitutional is itself but a matter of inference:

"Why is the Judiciary the only branch of Government whose views as to the powers they possess by the grant are to be regarded? . . . [As this power] has been created and lodged by inference, and by inference only, in one branch of the Government, . . . is it impossible that other high powers may be found to have been similarly granted?"

Mr. McMurtrie's view is that "sovereignty in respect of the currency of the country was lodged with the United States" by conferring upon that Government the right of coinage. Without that power, "it might have been found, and doubtless would have been found, in the power to regulate commerce"; and he adds: "It is not without weight, . . . in considering the express grant, that there is an unrestricted grant of a power on a subject which includes of necessity the power now being considered." This "sovereignty in respect to the currency of the country" includes the power "to say what is or shall be money. . . . Once grant that a thing is lawful money, and the attribute of being a legal tender exists *ex vi termini;* for being lawful money and a legal tender for a debt are merely convertible terms: one is descriptive of the thing, the other of its object."

Mr. McMurtrie indicates the true significance of the vouching in, by Mr. Justice Gray, of "the powers belonging to sovereignty in other civilized nations." "To say," he remarks, "that when a particular sovereign power is granted, the only mode of ascertaining how it may be exercised, that is, what the grant meant to convey, is to inquire what was the usage among civilized powers in respect of that power, seems to me about as correct a form and as indisputable as the wit of man can suggest in which to state the proposition."

We do not propose to estimate the just weight of the particular arguments of this pamphlet. One who agreed with the conclusions might differ as to some of these; he might think that the argument as to the right of coinage was overemphasized; he might consider that it was far too technical a view to deny the legitimacy of consulting the debates, both State and national, in fixing the true construction of the writing. The true argument here might seem to be that

inasmuch as a reference to the debates, both State and national, is really calculated to shed light upon the subject, it must always be open to judges to make it in construing such a document; that after making it, in this case, the just conclusion is that while some—perhaps most—of those concerned in making and ratifying the Constitution thought that the power in question did not exist, others thought that it did exist; and that, whatever they thought, upon a just construction, the last-named opinion was the right one. Mr. McMurtrie puts forward a view, which Madison urged, that if the debates are to be consulted at all, only those of the State conventions should be looked at. We venture to think that too narrow a doctrine.

As regards the vindication of the court in adhering rigidly to the dry question of legislative power, and in recognizing that if this was fairly to be inferred, no amount of folly or injustice in the exercise of it could justify the court in saying that the power did not exist, the pamphlet is triumphant. In expressing the change in his own opinions, *on the merely legal question*, resulting from a more careful consideration of the subject, and in stating his present view so temperately, Mr. McMurtrie has done an important public service. Most lawyers who are competent to deal with the matter and who will examine it as carefully as the Supreme Court has done, will probably be driven, in one or another way, whether they like it or not, to the same conclusion.

But then, some one will say (as to the effect of such a conclusion on Congress), Will it not rush into all sorts of excess? Here, also, Mr. McMurtrie expresses himself with admirable sense; first, that is not a question for a court to deal with; but, second:

"The conclusion I should draw is, that with freedom there will come a sense of responsibility. While there was supposed to be a constitutional barrier, or even a doubt on the subject, it is more than probable that numbers rested on it as a security against unwise or unjust legislation. Now that the nation is informed that in this as in so many of the possible powers to be exercised, they are unshackled, I think that experience has proved that the power will be more cautiously exercised than it has been."

THE PARLIAMENTARY LEADERSHIP.

LONDON, October 7, 1886.

MR. DISRAELI claimed to have educated his party in the principles of a Democratic Toryism, and Lord Randolph Churchill has taken Mr. Disraeli for his master and model. But it may be doubted whether he has not, like most imitators, exaggerated into vices the qualities of his pattern, and presented a caricature where he intended to execute only a replica. Mr. Disraeli's education course extended over many years. The Conservative party was brought only with great pains and after many difficulties to take the leap of household suffrage. The horse shied and the rider was more than once thrown. Mr. Disraeli dealt with one thing at a time. Lord Randolph Churchill expects from the Tory party a docility and a power of acquisition equal to that of the gentleman who acquired French before breakfast, or of one who should find on his first trial that he could play on the violin. Lord Beaconsfield claimed on behalf of his policy that, while being Conservative, it was "truly Liberal." Lord Randolph Churchill seems bent on establishing for his policy that being Tory it is at the same time truly Radical. Lord Beaconsfield attributed no small part of his success in political life to the fact that he allowed the past with him to be past. When a thing was over, it was done with. He did not trouble himself to reconcile his sayings of one day with his sayings of the day before or the day after. If they served their purpose when they were uttered, that was all that could be required of them. Lord Randolph Churchill has bettered this example. His speech at Dartford is the formal and precise contradiction of almost everything that he said at the general election, as that was in contradiction to almost everything that he had said before. By dint of successive contradictions he becomes in a sort of casual way self-consistent. His speech, however, has raised questions far more important than even the person, considerable as he is, who has delivered it.

The first of these is: Does it express Lord Salisbury's mind as well as Lord Randolph's? and if it does not, does it matter? Will Lord Salisbury think (or say) to-morrow what Lord Randolph thinks (or says) to-day? In a word, who is the real leader of the Conservative party—the Marquis or his nominal lieutenant in the House of Commons? This question raises the more general one: Can the Conservative party be led by a peer? In certain cases it would seem as if this were possible. As between Lord Salisbury and Sir Stafford Northcote, or again as between Lord Salisbury and Sir Michael Hicks-Beach, there could be no question of relative importance—as to which was the ascendant and which the subordinate statesmen. But then neither Sir Stafford Northcote nor Sir Michael Hicks-Beach ever really led the House of Commons. They were Ministerial agents or attorneys, but they had no vital authority or initiative. A man who, like Lord Randolph Churchill, has audacity and self-confidence in the highest degree, who has such a belief in his own future that he is ready to run the risk of disavowal rather than to efface himself for a moment; who knows that he would be as prominent and as powerful below the gangway as on the Treasury bench, can do what he likes. In a single sentence he can commit his Government to any policy or course which he may choose to adopt. All the momentary exigencies, all the critical situations in which a decisive resolution has to be taken, occur, so far as they are of Parliamentary origin, in the House of Commons. In consequence, Lord Randolph, who is never disposed to delay or reserve questions, is master of the situation, whereas Lord Salisbury is little more than a looker-on at it.

This state of things raises from a Conservative point of view the question raised through different motives from a Radical one, of the value of the House of Lords in our constitutional system. If Charles James Fox, and the second William Pitt, and Lord John Russell had been the eldest instead of the younger sons of peers, it is not too much to say that many features of the political history of England during the past century would have been other than they were. It is too much to say that the whole course of history would have been changed, for neither Fox nor Pitt, and still less Lord John Russell, discharged the functions of special minor providences for English affairs. Lord Palmerston never, it is said, took the oaths as an Irish peer, lest he should be elected against his will to the House of Lords, and so debarred from serving in the House of Commons. Pitt and Canning always maintained that the real First Minister should also be the ostensible First Minister, and that the real First Minister should sit in the House of Commons. The late Sir Robert Peel, on the other hand, insisted in his later days that the First Minister ought to be in the House of Lords. Responsibility for the general policy of the Government was enough, he contended, for the strength of the strongest man without the additional strain of leadership in the House of Commons. This dictum, however, probably expressed only Sir Robert Peel's personal fatigue and sense of worry. The solution he proposed would not really solve anything; for the minister who leads the House of Commons being, if he has real initiative, practically the First Minister, the combination of functions is inevitable. If Lord Salisbury had remained Lord Robert Cecil, he would be politically a far more powerful person than he is now, and might probably have resisted with success, or at least have sensibly modified, measures which he has been obliged to accept substantially as they have been framed.

A way out of this difficulty has been suggested which, however, does not lead out of it all, but simply returns upon itself, as the paths of lost wanderers are said to do. Why not, it is said, adopt the plan in force in France, in Italy, and other parliamentary countries, according to which Ministers, for purposes of discussion and explanation, are allowed to enter either Chamber, though they can only vote in that to which they may have been elected. If this rule had prevailed, Mr. Gladstone, who was Secretary of State for the Colonies, but who had failed to secure re-election when Sir Robert Peel's Anti-Corn Law Bill was before the House of Commons, would have been able to take his place in that assembly, and to give his invaluable help in Parliamentary discussion and in the deliberations of the Treasury Bench as well as in those of the Cabinet. Lord Salisbury could come down to answer questions and explain his policy. This scheme finds favor with some respectable and intelligent persons, and a distinguished peer, a member of Lord Salisbury's former Government, has long privately advocated it. But it is exposed to several decisive objections. In the first place, neither the House of Commons nor the constituencies would tolerate the presence among the duly elected representatives of the people of the non-elected members of a privileged class. In the second place, the leadership of the House of Commons does not consist in being the authorized mouthpiece of the Government, in answering questions, or in taking part in debate. Lord Beaconsfield used to say, with paradoxical exaggeration and with some reference to the gentleman over the way, that the best leader of the House was one who could not speak if he would; the next best, one who would not speak if he could. The career of the late Lord Althorp gave some plausibility to the former statement. Mr. Disraeli's power of holding his tongue, his gift of reticence, was a faculty almost as useful to him as his extraordinary capacity of debate. It economized his resources and enhanced his authority, on the principle, *Nec deus intersit*. But the leader of the House of Commons must live in the House of Commons. He must sit through and watch the course of the debate; if he does not frequent those haunts, he must know what is being said in the lobbies, in the library, in the dining-room, in the smoking-room. In other words, the House of Commons is an organized society, with which its leader must be in vital relations. He must be in touch with it in a manner impossible to a mere occasional visitor from a higher sphere, come down to deliver a message or to make an oracular response. A third objection, at least with those who hold to what is called the bi-cameral system, is that if this plan were adopted the House of Lords would lose all its value as a second chamber. Discussion would be withdrawn from it to the House of Commons. The theory that after a matter has been fully debated and decided in the House of Commons, there yet remain statesmen of the highest intellectual and official position

who have a title to be heard, would disappear. At present, Ministers complain that the labors of attendance in the House of Commons, added to those of departmental work, overtax the strongest energies, and contend that the House of Lords is valuable as offering a reserve of statesmanship and administrative capacity, exempt from fatiguing Parliamentary labors. But if Ministers had to attend both houses instead of one only, the evil and the embarrassment would be doubled instead of being diminished.

There is no doubt that the question of the future of the House of Lords is likely seriously to engage men's minds. Nearly fifty years ago, however, in the year of the Queen's accession, Sir William Molesworth considered its reform as the most vital and urgent topic of the time; and the view was common with the party of philosophical radicals, of whom John Stuart Mill was the pride and teacher, and of whom Grote, Roebuck, Charles Buller, and Molesworth were the Parliamentary representatives. The time had not come. It seems nearer now. Mr. Labouchere's motion this year will be renewed next session; the support which it received was considerable, and Mr. Gladstone has uttered words of warning. But the House of Lords is threatened rather by those who might be expected to be its friends within its walls than by its adversaries outside. Lord Salisbury has more than once intimated a desire to see a second Chamber, such as the American Senate, constructed on some other than the hereditary principle, an arrangement which would enable him to take his place by election in the House of Commons. Lord Rosebery, the future leader of the Liberal party in the House of Lords and possibly of the Liberal party in Parliament and the country generally, has more than once publicly spoken in the same sense. Both he and Lord Salisbury put themselves state prisoners in the House of Lords, captives behind the wires of a gilded cage. Their cry is that of the starling. The doors of the House of Lords, as Lord Rosebery pathetically complained, do not open from within outwards. Those who are in once are in for ever, until they are translated to a yet higher sphere. It is noteworthy that the abolition or reform of the House of Lords is the only article of the advanced Radical creed which Lord Randolph Churchill has not made his own. The motive is obvious: he does not want a political resurrection for Lord Salisbury. *Requiescat in pace.* As for himself there are two lives between himself and the Dukedom of Marlborough, and the number is likely, as time goes on, to increase rather than diminish.

The House of Lords has, therefore, a reprieve of a few years. It will not be formidably attacked in the present Parliament, which is likely to be one of at least average duration. Lord Randolph Churchill has his Parliamentary tactics in a single phrase, which seems a little tautological—"The Union of the Unionist members." One is reminded of "the dissidence of dissent," and "the Protestantism of the Protestant religion." It is possible, perhaps, that in endeavoring to secure the alliance of Mr. Chamberlain and the Radicals, Lord Randolph may have not taken sufficient account of Lord Hartington and of Mr. Henry Chaplin, of Whigs and of Tories. Having made a Radical speech at Dartford, it will, however, be easy for him to make a Whig speech somewhere else, and a Tory speech in yet another place. Apart from accidents of foreign war or domestic convulsions, or other incidents in the chapter of accidents, the Union is secured by the force of circumstances and by the preponderance of numbers. In order to give the associated forces of Mr. Gladstone and Mr. Parnell a Parliamentary majority, fifty of the seventy-five recreant Liberals would require to be detached from Lord Hartington and Mr. Chamberlain. There is not the slightest chance of any such conversion being effected. The most hopeful of the Gladstonian Liberals reckon twenty-five members at the outside as possible recruits, and this number is probably balanced by at least an equal number of "waverers" among the Gladstonians, who followed their leader from personal loyalty or from electioneering self-interest, but with many misgivings. The tactics into which Mr. Parnell may be forced in order to keep his more violent supporters in Ireland and in America true to him may alienate these hesitating converts.

The Unionist alliance, on the other hand, is not without its difficulties. It involves constant communication between Lord Hartington and Mr. Chamberlain, of the one part, to use the lawyers' phrase, and Lord Salisbury and Lord Randolph Churchill of the other; that is to say, it involves something like a breach of the system of cabinet government. Lord Hartington and Mr. Chamberlain are not Ministers; yet they have something like ministerial authority without ministerial responsibility. They must know more than they ought to know as outsiders, and yet cannot know enough to act with adequate information. The fact that they are Privy Councillors is not to the point, for, in spite of pedantic contentions to the contrary, the Cabinet has superseded the Privy Council. The statement that, in preparation for his journey to Venice, Mr. Chamberlain paid a long visit to the Foreign Office, does not perhaps indicate that he will have anything to say from Lord Iddesleigh to Count Kálnoky or to Sir Augustus Paget; but it was curious. In the meantime, Mr. Chamberlain's former associate in public life, Sir Charles Dilke, whose relations with him, though not broken, are not as close as they were, excluded from a Parliamentary career, has not reconciled himself to exile from English politics altogether. There is some talk about the establishment of a new evening newspaper, of which Sir Charles Dilke will be the actual, if not, in the first instance, the ostensible editor. But the project is still merely a project. It is in the stage of inquiry and consideration. It may be doubted whether it is capable of successful execution.

L. L.

THE REJECTION OF MR. PARNELL'S RELIEF BILL.

[The present crisis, if so it can be called, in Irish affairs is so important, it is so especially desirable that the public should have the best information within reach, that I asked one of the most competent authorities, a gentleman in an official position, to give the *Nation* his views as to the state of the case at present as between landlord and tenant in Ireland. He has acceded to my request, and the following is his communication.—D. S.]

DUBLIN, October 2 1886.

THE rejection of Mr. Parnell's bill for the relief of tenants is likely to become an epoch in the Irish struggle. The bill was designedly of the most moderate character, and unduly restricted as to the number of tenants to whom it should apply.

It is necessary to look back to 1881 to understand the situation. The Land Law passed in that year was, in the opinion of the tenants and their advisers, quite inadequate. Leaving the previous land acts unrepealed, the decisions under those acts, which had worked such injustice, still remained law. The administration of the Land Law was placed in the hands of persons who, by position, training, association, were more likely to view the matters in dispute from the landlord's than the tenant's standpoint. This was a bad beginning for what was in fact an arbitration between the two classes. The leaders and advisers of the Irish tenantry were at the same time imprisoned by hundreds, and an organized system of intimidation of the Sub-Commissioners was commenced by a large part of the English and Conservative press.

Under the circumstances, it was difficult for men, however well disposed, to act with perfect fairness. Rents were, it is true, generally reduced, but the reductions were much less than those voluntarily given by English landlords to tenants far better able to bear a temporary depression. There is little doubt that where farms had been much improved by tenants, their expenditure served to uphold the rent, and that the best farmers fared worst in the land courts. In the case of voluntary agreements, they were often entered into by tenants who were too poor to pay the expenses of a rent suit on any terms that were offered.

So far as rents were fixed according to the letting value of land from 1881 to 1885, or on the basis of prices, it is clear that of necessity they have now ceased to be fair. They are either above the present letting value, or cannot be paid at present prices, or they now include the value of the tenant's improvement. The Land Commissioners could not have foreseen the continued downward movement of prices. The depression was looked upon, until the last few months, as exceptional and temporary; even now it is scarcely realized to the full by those who do not suffer directly from it. It is true that there are some estates where good relations have always prevailed between landlord and tenant, and where agreements for low rents have been cheerfully given and accepted.

A Royal Commission to inquire into the effect upon rents of the continued decline in prices is a farce. The evidence and the required facts are ascertainable without so cumbrous and costly a method. Composed as the Commission is of two peers and three paid officials of the Government, it is not likely to command attention or excite interest. George Fottrell, the only member of the Commission who is not a partisan of the landlord claims, has already resigned. Recommendations of royal commissions, when opposed to powerful vested interests, have seldom been attended to. This Commission is indicative of a continuance of the "tinkering" method of legislation which has worked such mischief in Ireland. The Bessborough Commission advised that there should be no legislation unless it was radical and exhaustive; but such words are not descriptive of the Land Law of 1881. The continual petty meddling with a system that is radically rotten does unutterable harm. Inability to pay rent arises from idleness, extravagance, and dissipation, as well as from low prices. It is not desirable to protect persons from the natural consequences of their own faults or follies. Yet this is what this tinkering with the rent system leads people to expect. In farming, as in every other business, some men will grow rich, with fair play, where others will starve. The general insecurity and uncertainty inseparable from a system in which almost the whole nation are the tenants of a small class, are fatal to progress and prosperity.

Dr. Walsh, on behalf of the Bishops of Ireland, told Mr. Gladstone that no settlement except "the utter effacement of that system of landlordism which has so long and so ruinously existed in Ireland," would be sufficient to secure the people the right to live and thrive in their native land; he also explained that no confiscation of any species of property was asked for. It may be desirable, and it is no doubt expedient, to put

some temporary stay on evictions, pending a radical settlement of the land question on the lines indicated by Dr. Walsh, but the retention as occupiers of land of unthrifty and incapable persons means a loss of wealth to the country. Many tenants are, from misfortune or their own faults, incapable of working their land; it would be better for the community that their places should be taken without delay by more competent agriculturists. As a war measure it may be right for the National League to try and maintain broken tenants temporarily in their farms, but it is clearly contrary to the public welfare to stay evictions of every sort and kind. It is true, the National League only condemns *unjust* evictions, but in the present temper on both sides it is impossible for the public to distinguish between just and unjust evictions.

A system whereby a whole nation occupies its country in tenancy to a small class, necessarily involves a condition of unrestfulness. The struggle as to the amount of rent to be paid each year is demoralizing and paralyzing. In the coming winter it may be expected that all evictions will be resisted, some passively, some actively. The situation has been described as a pay-as-you-please campaign. Landlords who make liberal reductions may expect to be paid; those who do not may go further and fare worse. It may be asked, What is a liberal reduction? A general answer is impossible, for according to the kind and quality of the produce, the decline in prices has been greater or less. An approximation, an estimate of what would be fair, may, however, be made.

Since 1884, prices have fallen all round about twenty per cent. A farmer paying £25 a year rent, and who sold his produce in 1884 for £100, may this year sell the same amount for £80. Such a farmer would consume part of his own produce; his sales would be to provide for rent, taxes, purchase of necessaries not produced on his farm, for clothes, education of children. Instead of having £75 over and above his rent as income, the farmer will, if he pays his full rent, have this year only £55; his income will be diminished by twenty-six per cent. If the landlord bore the whole loss, his income would be diminished by eighty per cent.; instead of £25 rent he would only receive £5. The tenant, being as a rule nearer the margin of subsistence than the landlord, can less easily retrench his expenditure. If the landlord gave a reduction of forty per cent., the tenant's income would be £65—that is, about fifteen per cent. less than in 1884. The loss would in this case be equally shared between the two: the landlord would forego £10 of his rent, and the tenant's income would be within £10 of what it was in 1884. A reduction of about forty per cent. on rents that were considered fair in 1884 would probably be accepted as reasonable in most parts of the country, and would be arithmetically fair.

In many cases the owner of an estate is not an individual, but a group, consisting of the nominal owners, annuitants, and mortgagees. The respective priorities of claim are settled by law, the nominal owner coming last. Where an estate is heavily charged, the owner has ceased to have any interest beyond such hope as he may cherish of things still righting themselves. The legal expenses of the management of such estates swallow up a large part of the annual produce, and prevent the reasonable consideration of the tenant's condition. In such cases a compulsory liquidation is the only way to set matters on a right footing. The great tenderness shown towards existing and vested interests works far greater injustice and evil to the whole community than an immediate settlement on the only lines possible. Where legal complications and knots cannot be untied they should be cut. Measures of this kind cannot be expected from a Conservative Government, and scarcely even from a Radical administration, unless driven to it by the strongly expressed will of the electors.

A Land Valuer.

Correspondence.

PARTY USES OF THE INDIANA CIVIL-SERVICE REFORM ASSOCIATION.

To the Editor of The Nation:

Sir: As a reader of the *Nation* for many years past, I have similar ideas with you on the much-abused subject of civil-service reform. As a Democrat, I recognize that our party owes its present political supremacy to the standing taken on this question by Mr. Cleveland. When the Civil-Service Reform Association of Indiana was organized I became one of its original members. The affairs of the Association are in the hands of an Executive Committee (of six members, recently changed to four). This Committee, as at present constituted, consists entirely of Republicans.

One of the main objects of the Association purports to be the placing of the benevolent institutions of the State on a non-partisan basis. During the past summer a portion of the Executive Committee engaged in an investigation of the affairs of the State Insane Asylum. The result of their investigation was put in writing. The investigation by this Committee only embraced the Democratic administration of the asylum, although in many particulars the same delinquencies existed under Republican administration of this institution. The report of the investigation was signed by three Republicans, was made public in the Republican organs of the State, in the heat of a political contest, and was not first submitted to the Association for approval. Two of the signers of the report are Republican campaign orators, and are in great demand by the Republican party since the publication of their report.

At the annual meeting of the Indiana Civil-Service Association last week some ten members were present, including the three signers of the report, the Republican candidate for Attorney-General of the State and also Secretary of the Republican State Central Committee. At that meeting I stated that the action of the Executive Committee, in thus making a partial and partisan investigation and report for use against the Democratic party in the pending campaign, was not in conformity with the purposes of the Association or my own ideas of reform; that its only effect would be to transfer the abuses from Democratic to Republican hands; that the report should be sent back to the Committee, with instructions to investigate the management of the institution under Republican auspices, and then present to the people of the State the result. I believed that such a report would tend to awaken the people of the State to the necessity of radical change in these institutions—not from one party to the other, but from both parties. To this end I proposed a reference of the report back to the Committee with instructions to further investigate and report. This motion was voted down by about four to three. In the course of the discussion it became apparent to me that the name of the Association was being used as a fifth-wheel to the Republican campaign coach, and I therefore withdrew from the Association.

I send you these facts in order that you and the friends of civil service throughout the country may know that the Association in Indiana is being used for purposes entirely in conflict with the principles of civil-service reform; and that no good end can be accomplished by it as at present governed. By thus severing my connection with the Association here I am not abandoning my convictions on this subject, but I am protesting against the cut-and-dried arrangements of Republican campaign speakers.—Yours very truly, William V. Stuart.

La Fayette, Ind., October 11, 1886.

PRESBYTERIAN "MISSIONS" IN NEW ENGLAND.

To the Editor of The Nation:

Sir: In an article in your last number, you make the following statement in regard to the Presbyterians: "They sadly shake their heads when they talk of the 'New Departure' in the Congregational Church, and begin planting missions of their own in New England, so as to be ready for anything that may happen." Presbyterian churches have existed in New England from colonial times. The recent revival in Presbyterian missions in New England is due, *not* to the desire to proselyte or in any way to interfere with our Congregational brethren, but to the large immigration of Presbyterians into New England. Many of these, especially those from the British provinces, prefer to organize churches of their own. In doing so, they require some outside assistance at first, as almost all young churches do. Aid is sent to them, if the Board of Home Missions thinks a Presbyterian church in that locality is needed and can become self-sustaining. The fact that the church happens to be in Massachusetts has nothing to do with the question.—Very truly yours, G. W. McI.

Baltimore, October 16, 1886.

PUBLIC OPINION VERSUS LAW.

To the Editor of The Nation:

Sir: John Rae, in a recent number of the *Contemporary Review*, calls attention to the fact that "law in Turkey is a very inefficient instrument for the recovery of debts, but, as often happens where law is a broken reed, its place is filled, and filled better, by an exceptional severity of social and religious sanctions. The Turk is described as deeming it a sacred duty to pay his debts"; and thus "the average of loss incurred by creditors in the Ottoman Empire (other than creditors of the Government) is really lower than it is in most countries."

A single fact is not an adequate basis for an induction; but to one already convinced of the futility of attempting to secure a real and abiding advance in social welfare by legal exactions and restrictions, and of the pernicious consequences of encouraging a supine dependence upon governmental action, instead of stimulating a keen sense of personal responsibility and an energetic public sentiment, the facts referred to by Mr. Rae afford a very suggestive illustration.

Respectfully, Henry Doty Maxson.

Whitewater, Wis., October 12, 1886.

A COMMENT ON POWDERLY.

To the Editor of The Nation:

Sir: The *Nation* has already noticed one part of Mr. Powderly's opening speech at Richmond. May I call attention to another, and may I preface direct criticism by a few general remarks?

Cicero's theorem that what a man places in the second rank contains in reality that particular truth which is entitled to the first, is variously applicable; for, a man's primary judgment being largely swayed by individual bias, in his secondary may be found that impartiality of view which discovers the truth. The little book, 'The Labor Problem,' has already been noticed by the

Nation, and I would only call attention to a consensus of opinion among the symposiasts—opinion often given the second place—the need of a higher mental and moral standard among workingmen and employers alike, less talk of justice and more doing of it, greater mutual consideration. The question, then, resolves itself, as nearly all questions ultimately do, into the fitness of individuals, the condition of the social unit, Tom, Dick, or Harry. There is, in truth, a singular absence of any need for theorizing, and great need for practical Christianity. As are the individuals so is the mass; and all that they who have experience can agree upon is, that if men were better, or when they are better, better methods would, or will, obtain. The theorists and divines show a tendency to make the world-old mistake of supposing that men are the outgrowth of institutions, instead of perceiving that institutions, and all social conditions, are the outgrowth of men; no one questions the reaction of one upon the other. The conspicuous absence in all socialistic theories is the absence of the historical method. Without regard to processes which have already taken place, or are now in operation, without regard to initiatory steps, the Socialist fixes his eye upon as purely imaginary a social condition in the future as Rousseau and his disciples did upon an imaginary Social Contract in the past; and it is as unwise to attempt to control the present by a dream of what ought to be, as it is to fashion it by a dream of what has been. After all, there is but one history, and, despite much movement, only one line of development and progress; and no man is warranted in supposing that new elements will come in to change human nature and the course of affairs. Trees grow roots downward and branches up; they may eventually grow branches downward and roots up, but none of us have ever seen it, and none of us are warranted in supposing it.

From one point of view the history of the world, the history of men under any and all conditions, is simply the history of an attempt to escape from the elemental, binding condition of personal responsibility; the history of a passionate, persistent belief that if some *other* men were only better, and some things only more easy and agreeable, life in general would be a pleasanter and more desirable thing. But it is only when pain, the great educator, has forced men into stern, unrelaxing, individual effort, has forced upon them the perception of consequences, mercifully and prophetically anticipated before actually realized, that out of approximately purified human nature does improvement spring. Humanity is stirred up, leavened, displaced, only to be replaced, and, finally, settles down within more tolerable lines of life, only to go again through the same process when these lines are in their turn overflowed. In our day a large part of society is in a state of fermentation, and men are beginning to talk of government as if it were something arbitrary, unnecessary, something imposed from without. They forget that government is simply some form of life possible to large aggregates of men, men differing widely in moral power, mental power, habits, tastes, aspirations. Men are beginning to talk and write of a State (spelling it with a capital S) as if it were already somewhere existent, as if it were to be Heaven-descended, or skilfully educed by some enchanter's wand; a State in which men are to be (the tenses are significantly passive) well taken care of, made content, made happy.

Among the most depressing things of theoretical Socialism are its glittering generalities, its large admixture of the "forty acres and a mule" principle. Where are the forty acres to come from, and where is the mule? The worst feature of Socialism, and the most disheartening fact in regard to those who have undertaken (in all sincerity, of course) to champion the so-called "cause" of labor, is the direct and indirect teaching that large masses of men have been by their fellows deliberately wronged, defrauded, traded upon; that there are things, possessions, which all men ought to have, and a mode of life which all men can have. It is a terrible thing to teach men so. By those who are supposed to know history are the lessons of history so soon forgotten? We are taught that the strength of a chain is the strength of its weakest link, and the strength of an organization, its mental and moral calibre, is well measured by the mental and moral calibre of the man or men the organization is willing to follow. Sooner or later those intangible things called views, desires, dissatisfactions take form and place, a local habitation and a name, "materialize" as a theory which some man holds out as capable of still further, more satisfactory materialization in practice; and what men only dream of in one sense is actually realized in another. And then when these views, desires, dissatisfactions are focussed in one individual, when through him they find voice and direction, they become a mighty power for good or ill. Like a lever that has found a fulcrum, they may move, and destroy, a country. There is no such engine of destruction as blind followers of a blind leader seeking to realize hopes which are not attainable by methods which are inherently impracticable; and in the revulsion of disappointment the reprisals are terrible.

One part of Mr. Powderly's opening speech reads thus:

"Turn away from these hives of industry, stand for a moment on a street corner, and you will see gayly caparisoned horses driven by a coachman in livery; a footman, occupying his place at the rear of the coach, is also in the garb of the serf. On the coach you will find the crest or coat-of-arms of the illustrious family to whom it belongs. If you speak to the occupant of the coach concerning our country, her institutions, or her flag, you will be told that they do not compare with those of other countries. The child who graduates from the workshop dons the livery of a slave, covers his manhood, and climbs to the footman's place on the outside of the coach. The man who apes the manners and customs of foreign noblemen occupies the inside. The one who with strong heart and willing hand would defend the rights and liberties of his country, has never learned what these rights and liberties are. The other does know, but has learned to love the atmosphere of monarchy better than that he breathes in this land. Between these two our freedom is in danger, and that is why we, as Knights of Labor, most emphatically protest against the introduction of the child to the workshop until he has attained his fourteenth year, so that he may be enabled to secure for himself the benefits of an education that will enable him to understand and appreciate the blessings of our free institutions, and, if necessary, defend them with his life."

There is so much art, ingenuity, and daring in this paragraph that one naturally hesitates to call Mr. Powderly a mistaken but well-meaning man; and I have quoted the paragraph entire in order to show its animus. I for one believe that Mr. Powderly thoroughly understands his position, his opportunities, and the human materials with which he has to deal; but I think he has fallen short of his mission, and of the duty of a "Knight," in not naming these insidious foes of the republic. It is easy to ask Mr. Powderly when he or any other Knight stopped a coach and questioned its occupant as to his views "concerning our country, her institutions or her flag," and, so questioning, found the said occupant to be in heart an alien. It is easy to ask Mr. Powderly or any other Knight to give the case of a child (or any children) "who graduates from the workshop, dons the livery of the slave, covers his manhood, and climbs to the footman's place on the outside of the coach," while "the man who apes the manners and customs of foreign noblemen occupies the inside." It was supposed the "Knights" upheld the doctrine that a man's manhood was not affected by his dress, and that no dress could cover or conceal his manhood. But the whole subtle tendency of the speech is against "the occupant of the coach" simply because he is an occupant of a coach; imputing gratuitously to such occupant views, opinions, "habits and customs" which other men may and do consider detrimental. It has been the method of every demagogue since history began to persuade his fellows of the badness of that which they dislike or envy; and, once persuaded of its badness, the next step is to regulate or suppress the bad thing. In the case of "the occupant of the coach," the best mode of regulation or suppression would be, of course, to take his coach away from him, together with his "gayly caparisoned horses," and his footmen and coachman "in the garb of the serf."

Deliberate lying is dangerous enough; but the half-conscious, vaguely motiveless lying that springs from envy is a thousand times more dangerous. Between them there is all the difference of planting one particular seed and sowing seed broadcast. Who can tell what the growth will be? This part of Mr. Powderly's speech, however, seems definitely planned, and surely it is definitely levelled—it is the speech of the man who has not, against the man who has. Moreover, this part of the speech is characterized not only by want of truth, but, what is almost more serious, by want of even a desire for the truth. An honest man may not be able to do certain other men justice—ignorance and prejudice may stand too closely in the way—but he is characterized by a hearty desire to wrong none.

A Friend of Workingmen.

October 15, 1886.

THE "DIVINE INSTITUTION" IN CONNECTICUT.

To the Editor of The Nation:

Sir: At the dinner-table the other day we were indulging ourselves in a little mutual felicitation, strictly in the bosom of the family, on our ancestral stock. (I wonder if a similar line of remark is common in other domestic privacies, if we only knew it?) We had fallen on that topic, so refreshing to all New Englanders, the contrast between the original settlers of the North and the South. How glad we were that our blood was free from the disgrace of ever having held human slaves!

Just then a letter was handed to me. It was from the old homestead in Connecticut, and there fell out as I opened it a small yellow and faded scrap of paper. It had been found in a chest in the garret, and proved to be a bill of sale given by my wife's great-grandmother to my own great-granduncle. I give the damaging document *literatim*:

"Know all men by the Presents that I Elizabeth Newberry of Windsor for and in consideration of the Sum of Fifty-five Pounds Lawful money in Hand Paid by Henry Allyn of sd. Windsor Have & do by these Preasents give grant & Sell unto him the Sd. Henry Allyn one Negro Man Named Ceaser About Twenty Eight Years of age well & in Health; which sd. Negro Shall be the Proper Estate of the Sd. Allyn & His Heirs for Ever without let or Molestation from any Person whatsoever as Witness my Hand this 16th Day of Augst: A D 1758

"Elizabeth Newberry

"Signd & Dd.
in Preasence of
Peltr [Pelatiar?] Mills
Roger Newberry."

After I had read it aloud, my wife and I looked rather meekly at each other. Both our trees were tarred with the same stick. Alas! pride still goeth before a fall. These evil results of hereditary slaveholding, so apparent (to the New Englander) in the Southern character—was their

"vicious quitch" even in us, also, all "unbeknownst"?

We were shocked to notice the tight grip of these excellent Connecticut people on the hapless "negro man named Ceaser." He was, it appeared, not only to be their Proper Estate here and now, but hereafter and "for Ever." The pale ghost of the "Sd. Allyn," then, was to be attended even in the next world by the ebon shade of his chattel. May we hope that the news of the Emancipation Proclamation has by this time found them out, even there?

The endorsement on the back, in a fine clerkly flourish, is "Bill of Sail for Sesor."

E. R. S.

SOME BELATED PRAISE.

To the Editor of The Nation:

Sir: Though perhaps rather late, I am for two reasons prompted to write you a line; first, because reading George Eliot's Life has shown me —albeit most writers and editors probably have not her susceptibility to praise or blame—that honest and discriminating appreciation is gratefully received by the person who inspires it; and, secondly, because the replies which "Twenty Years Later" have brought out do not exactly hit my own case.

I am not one of those who have regularly read the *Nation* since its first number, for at that period of my existence I was more interested in bread and milk than in the strong mental food which the *Nation* had just begun to dispense. Though I have a dim recollection of the *Nation* during the second administration of Gen. Grant, yet the first really certain thing I remember is this: though brought up in a Republican family, and though my opinions, so far as I had any (perhaps prejudices would be a better word), were all on the side of that party, yet through the *Nation* I was brought to favor the election of Tilden in 1876. As an offset against the three thousand subscribers who left the *Nation* in consequence of the course it pursued during that campaign, perhaps this conversion of a boy of sixteen is not without its significance.

Ever since that time I have read the *Nation* diligently, and the influence it has exerted over me in the formation of opinions in politics, in literature, and in other matters—exerted at the most impressionable age in a man's life—cannot of course be exactly estimated, but I am sure it has been very great. This—the effect of such a paper as the *Nation* on young men—is the point which I wish to emphasize, and which has been overlooked by your correspondents. I like to think, though perhaps here my enthusiasm carries me away a little, that in the last campaign those young men who, like myself, cast their first vote for a Presidential candidate, and cast it on the side of truth and honesty, had, like myself, been aided by the *Nation* in coming to the decision. But be that as it may, I believe that where the *Nation* has most influence is with boys and young men between the ages of fifteen and twenty-five; for at that age the mind is open to new ideas and impressions against which it would be closed at a later period in life.

The *Nation* is to be recommended to such, it seems to me, not so much because it advocates this candidate or measure and opposes that candidate or measure, not so much because it recommends this book and condemns that book, but because in doing all this it inculcates in one a spirit of independence both of thought and of judgment, a spirit of honesty both of thought and of action, the hatred of sham, and the love of truth, justice, and charity—in a word, that spirit of catholicity without which criticism is of little value. Such, at all events, has been the influence the *Nation* has had upon me, and that it may be the same upon many another is the hope of

A Boston Subscriber.

Boston, July 26, 1885.

[The writer informs us that he has just discovered the above, which he had supposed to have been mailed to us at the date affixed, the twentieth anniversary of this journal.—Ed. Nation.]

FEMALE JURORS.

To the Editor of The Nation:

Sir: The Code of Civil Procedure having been amended at the last session of the Legislature so as to admit women to the bar, it seems time to renew the ancient proposal that women should serve on juries. Not precisely because the right to practise law has for its correlative duty service on the jury; for strictly that obligation is correlative to the right to litigate, which women have always possessed, and that, too (as every one knows), with ampler privileges than men. Rather because it admits women's ability to take part in the machinery of justice. Both male and female objectors to the proposal must admit that if women, trained as lawyers, can do the work of men with the same training, untrained women can do the work of untrained men. Indeed, the ability to penetrate to the truth at a glance which women commonly claim under the name of "intuition," ought to fit them peculiarly for the office of judges of fact; and passion and prejudice and accidental convenience could hardly sway female juries more largely than they now do male.

Consider, for a moment, the effect upon the business interests of this city of drawing panels composed half of women. During the greater part of the year—say from October to June, nine months—there sit in New York three jury terms of the Supreme Court, three of the Superior Court, and three of the Court of Common Pleas, two of the City Court, and at least one Criminal Court; *i. e.*, twelve juries, or 144 jurors each day. In Brooklyn there are usually two jury terms of the Supreme Court, one of the City Court, and one of the County Court or a Criminal Court; *i. e.*, four juries, or 48 jurors each day. Assuming they sit five days a week, and calculating four weeks a month, the substitution of six women in each jury would set free in the course of a year 17,280 men. As a matter of fact, twice the number of men actually engaged on cases are kept from their usual employments, so that this substitution would practically add 34,560 days' work to the year.

As the majority of women have abundant and even oppressive leisure, there need be but little deduction from this showing. Even nursing mothers might bring their babies, as they do now when parties or witnesses.

It might be well to call attention to the historical circumstance that women did act as judges of certain classes of facts at least as early as men, and there is no suggestion in the early writers that they did not perform their function as satisfactorily as juries of men.—Yours, etc.,

Wm. Allaire Shortt.

35 Broadway, October 15, 1886.

Notes.

Ticknor & Co. will publish this week Mrs. Browning's 'Sonnets from the Portuguese,' elaborately illustrated by Ludvig Sandöe Ipsen; 'Stories of Art and Artists,' by Clara Erskine Clement, illustrated; and 'Songs and Satires,' by James Jeffrey Roche.

Houghton, Mifflin & Co. will publish directly a full report of the debate at Des Moines on the Andover theory of a possible future probation.

Cupples, Upham & Co. announce 'Two Comedies,' by F. Donaldson, jr., M.D., of Baltimore. They are entitled "An Ill Wind" and "An Abject Apology." Also, 'The Imitators,' a satire in verse upon Boston, by a Bostonian.

'On Honor's Roll,' tales of heroism in the nineteenth century, is in the press of Frederick Warne & Co.

'Girls Who Became Famous' (T. Y. Crowell & Co.), by Sarah K. Bolton, is a series of biographical sketches of well-known women, chiefly American and English, including authors, teachers, and philanthropists. They are interesting, and, though at times far too laudatory, are well fitted to stimulate the reader to high aims and the careful use of time. The title is slightly misleading, as it is not the girlhood of the subjects of the sketches which is specially treated.

It is difficult to see any good reason for the publication of 'Stories from Life' (T. Y. Crowell & Co.), by the same author. All the stories are intended to convey practical instruction on some point of morals, and, while a few are unobjectionable, some are positively vulgar, false in their teaching, or simply silly.

Mr. T. W. Knox's 'Life of Robert Fulton' (Putnams) is more than a mere biography. Only a third of the book is given to an account of the great steamboat pioneer; in the remainder, the history of steam navigation is told from the earliest attempts of Papin and Hull down to the latest torpedo and submarine boats. The author has brought together a great mass of information on the subject, which, with the aid of numerous pictures, gives the reader a clear idea of the progress of naval architecture during this century. Interspersed with much technical matter are anecdotes, short accounts of famous voyages, and notices of the larger steam companies and prominent builders. The value as well as the interest of this useful book is somewhat lessened by the evident haste in its preparation. Among the typographical errors which we have noted is "the doomed [domed] steamer," which we trust is not prophetic. Mr. Knox calls attention to the strange neglect of Fulton's grave in Trinity churchyard in this city. No stone or inscription of any kind marks the spot.

George J. Coombes has brought out a second edition of Mr. J. R. Rees's 'Pleasures of a Book-Worm,' of which we have already spoken favorably in these columns. It is a becomingly pretty book.

The six tiny oblong volumes opening endwise, called "The Pearl Series" (Putnams), offer mainly poetical selections under as many titles—"Reflection," "Fancy," "Wit and Humor," "Love," "Faith, Hope, and Charity," "The Poet's Garden." They evidence a refined taste and a care in book-making much above the average shown in such collections, and really constitute a pretty and a profitable gift. The arrangement is alphabetical by authors, except in the case of the last volume, where it is by flowers; hence there is no more harmonious juxtaposition than the general classification produces. As a whole, the printing is free from obvious errors, but the punctuation is now and again at fault, as in Coleridge's "Fancy in Nubibus," where an intrusive semi-colon makes nonsense of the lines—

"and then a traveller go
From mount to mount; through cloudland, gorgeous land."

Two misprints sadly mar Clough's "Two Musics":

"Stealing whence we *do* not know"

—for "whence we not know"; and

"Turn *out*, oh turn not thou!"

—for "Turn not."

In 'A First School Poetry Book' (Macmillan) the head mistress of the Clifton (Eng.) High

School has attempted to improve on similar collections, attacking afresh the old problem how to cater to the childish understanding without overrating or underrating it. Miss Woods believes in "writing down" to it rather than to err in the opposite direction, in which we cannot quite agree with her, nor think that she does not frequently transcend her own purpose. Poetry for the very young has two main functions, to assist in memorizing what deserves to be inculcated, and to form the taste for literature. It is in the latter respect that we should find Miss Woods's collection faulty, as being too catholic. But it is so full, and contains so many excellent pieces, that it is capable of being used to advantage at school or at home.

Milton's Earlier Poems, more extracts from Johnston's Lives of the English Poets, Bunyan's 'Grace Abounding to the Chief of Sinners,' and English versions of Lessing's 'Nathan the Wise' and Goethe's 'Sorrows of Werter,' make the latest four volumes of Cassell's National Library—already an imposing array of pocket volumes capitally selected.

'The Memoirs of Barry Lyndon, Esq., and a Little Dinner at Timmins's' is the latest volume of the handy Thackeray now being issued by Smith, Elder & Co., in London, and by J. B. Lippincott Co., in Philadelphia.

At last Mr. Alfred Ainger's long-promised selection of Charles Lamb's letters is announced. It will be published in two volumes, thus in a measure completing by far the best edition of Lamb's works, and the only one which has been carried through with thorough scholarship and loving care. It will be published in England by Macmillan & Co. and in America by A. C. Armstrong & Son. Another appetizing announcement is that of a volume of selections from the 'Essays of Elia,' with more than a hundred woodcut illustrations by Mr. C. O. Murray.

Mr. George Redway is about to issue a book likely to interest those who care to consider current theosophy, '*Anima Astrologiæ*, or a Guide for Astrologers,' being the 146 Considerations of the famous astrologer, Guido Bonatus, translated from the Latin by Henry Coley, together with the choicest Aphorisms of the Seven Segments of Jerom Cardan of Milan, edited by William Lilly (1675); now first republished from the original edition, with notes and a preface, by William Charles Eldon Serjeant.

Upon Dr. Austin Flint's death another American was invited by the British Medical Association to deliver the Address in Medicine, the literary honor of the occasion; the selection of a foreigner being, we believe, an unprecedented compliment. This time the choice fell on Dr. Billings of the army, whose speech, reprinted from the *Medical News*, lies before us. His theme, in view of the tendency to coöperative investigation that is abroad in medicine, the effort that is made to collect and tabulate simultaneous professional experience, was "Medicine in the United States," with especial reference to such investigation. The address is most excellent reading for those who wish to extend their knowledge. It is professional, but it is not technical. It discusses in a broad, philosophic spirit the relations of physicians to each other and to the community, not in the trades-union spirit, but as a statesman would, with incidental light on the local prevalence of certain diseases geographically and otherwise considered. The paper contains many of those suggestive remarks, half satire and half criticism, for which Dr. Billings is noted, that clinch the idea as he drives it home—for instance, his condemnation of the creed of fashionable sanitarians (he himself is a sanitarian of the truest type), that for every one to reach the age of three-score and ten "all that is necessary is, that everything shall be clean and every person virtuous." This address was delivered before foreign physicians, but there is no intelligent man at home, whatever his occupation, who might not learn something from it and find food for further thought.

Mr. Percy Clarke's travels in Australia were not very extensive, but he had opportunities to see life there under nearly all its conditions, in the cities, at the mines, on a sheep station, and on a sugar plantation. This he describes with much animation and considerable graphic power in 'The "New Chum" in Australia' (London: Virtue & Co.). He is least effective in his accounts of Melbourne and Sydney, though he gives a fair idea of their appearance and distinctive characteristics; he is at his best when treating of station life. The house and its occupants, the visitors, a neighboring squatter, a drover with a vast "mob" of sheep or cattle on his way to market, the ubiquitous tramp or "sundowner" (so called because he always manages to get to a station at sundown too late for work and just in time for tea and bed), the herding, culling, and shearing the sheep, the running-in the wild cattle, the kangaroo hunts—all are brought most vividly before the reader's mind. Life on a sugar plantation in Queensland is naturally less interesting, the planter's chief excitement arising from the dangers of drought and fire. This industry, which till within a few years was enormously profitable, is now suffering seriously from the opposition of the white workingmen to the introduction of the cheap labor of the coolie or Kanaka. This is the more unreasonable as the whites are "utterly unfitted to work in the burning canefields," but it has nevertheless been so successful as to cause many a fine plantation to be abandoned. A chapter on Tasmania closes Mr. Clarke's book, which would have been much more entertaining but for his exasperating attempts at humorous writing.

The Superintendent of Documents, Department of the Interior, gives notice that Congress provided for the publication and sale of a small edition of the last issue of the map of the United States prepared under the supervision of the Commissioner of the General Land Office; that this wall map measures 5½x6½ feet; and that it will be sent by registered mail on receipt of $1.50 payable to the Superintendent. Only one copy will be sold to any one person, firm, or corporation.

A new journal, advocating freedom in religion and social reform, is to be started in Chicago at the beginning of 1887. A sound financial basis has already been secured; and the editorship has been intrusted to Mr. B. F. Underwood, for five years manager and editor of the *Index* in Boston.

Nothing daunted by the experience of his predecessors, Mr. George F. Kelley proposes establishing in this city an *Art Review*, and expects to issue his first number in the course of next week. Each number will contain an original American etching made expressly for the *Review*, and three copper-plate photogravure reproductions of the work of American artists in all branches. The articles will be signed, and will quickly disclose the support which the editor is to have from the profession.

The "German American Magazine" (*Deutsch-Amerikanisches Magazin*) is the title of a new quarterly, edited by H. A. Rattermann, and published by Rosenthal, in Cincinnati, of which the first number has just been issued. It commends itself both to German Americans and to all German-reading Americans by the portrait and sketch of Friedrich Kapp, whose services to American history in the series of admirable works written by him ought never to be forgotten. The editor gives an account of Kapp's youthful training in Germany and his early experiences in this country, which shows how thoroughly he was fitted for his self-imposed task of representing both his native and his adopted country. Scientific and historical and bibliographical articles make up the bulk of the 164 pages of this opening number, with specimens of German-American poetry, and there are very useful questions and answers on matters personal, political, and historical. The success of this magazine will be a fair test of the extent of the love of German in this country, as well as of an interest in local and especially German history as it has been developed in different sections of the Union, where German settlers, old and new, have left their mark. Mr. Rottermann has an enthusiastic faith in the desire of his German-American citizens to share his own studies.

The English dramatic monthly magazine, the *Theatre*, is no better than it should be, and very much inferior in character and quality to the new French *Revue d'Art Dramatique;* but now and again it prints something worth reading, like Mr. Lee's paper on Phelps in the August and September numbers. This sketch, brief as it is, gives a far more accurate idea of the English actor than Mr. John Coleman's ill-made memoir. Yet a third biography is in preparation, viz., 'Life and Life Work of Samuel Phelps, Comedian,' by W. May Phelps (his son) and John Forbes-Robertson.

Babyhood for October offers a plate of standard shades of the spectrum colors, and narrates the difficulties encountered in the search after them (so carelessly at variance are the standard works) and in the printing. It purposely omits indigo.

A very thoughtful paper in the (Syracuse) *Academy* for October, by Principal Smith of Lansingburg, N. Y., answers negatively the question, "Should algebra precede geometry?" and appeals to five years of experience. His argument seems to us wholly sound, and it would be reinforced by the production of a primary textbook which should abandon the formal and systematic presentation of definitions, axioms, and problems. "All roads lead to Rome" in geometry.

Public Opinion, Washington, a weekly eclectic journal, has attained its first volume (indexed, by the way), and appears to have found a foothold where one might least have expected it. Its reason for existence will have been shown if it induces Congressmen to value "public opinion" for any other than a bread-and-butter motive.

After twelve years of preparation Prof. Friedrich Delitzsch is ready to commence the publication of his 'Assyrisches Wörterbuch.' His work will be almost a concordance and lexicon in one, so numerous will be the examples cited, covering all the published and even some unpublished Assyro-Babylonian texts. J. H. C. Hinrich (Leipzig) in the prospectus states that the work will be published in ten parts, the subscription price to be thirty marks a part. It is expected that four parts will be published during the coming year. From advance sheets we see that the work is (after the fashion of Assyrian publications) to be printed from the autograph MS. of the author.

Mr. Christern has received the prospectus of a work on the application of color in Dorian temple architecture ('Dorische Polychrome') by Prof. L. Fenger of Copenhagen. A portfolio of eight beautifully colored plates will accompany the text, and show the western front of the temple of Ægina, two aspects of the Parthenon, the Propylæa of the Acropolis at Athens, the Theseum, etc., etc. Publication is set down for the present month.

Dr. Theodor Barth, the founder and chief editor of the three-year-old Berlin *Nation*, being at the present time on a visit to this country, his colleague, Ludwig Bamberger, seizes the opportunity to felicitate the public of that liberal

journal on its unexpected success and acquired authority, and to relate the circumstances which led to its establishment. In the number for October 2 one may read the pleasant account of Dr. Barth's political elevation; his opposition in the Reichstag to Bismarck's latter-day economic vagaries; his resignation of a lucrative post in the Bremen Chamber of Commerce in order not to bring upon that city the wrath of the Chancellor excited against himself; his subsequent removal to Berlin, and his perseverance, against friendly dissuasion, in creating an organ of free political and independent literary criticism which now has no superior in Germany.

The ever handsome *Vom Fels zum Meer* (New York: Christern) begins its sixth volume with an attractive number, in which we remark some fine illustrations of Heidelberg, and a supplementary mammoth bird's-eye view of Berlin in this the ninetieth year of the Emperor's life. The spectator stands on the tower of the Rathaus.

The new 'Brockhaus' Conversations-Lexikon' (New York: L. W. Schmidt), in Parts 211-216, nearly completes the letter S. Spain, of which there is a good colored map, is the most important article. In the text are plans of Stettin, Strassburg, and Stuttgart, and a chart of the Suez Canal. The freshness of the article on Strikes is shown by its taking cognizance of the great Southwestern railroad disturbance, and of the Knights of Labor. The article on Spiritualism we find somewhat inadequate, and a natural typographical blunder by which Wayne County is printed "Magne," with no mention of the State of New York, completely disguises the scene of the original "Rochester knockings." This error is at least as old as 1879, and may be indefinitely transmitted. In the sketch of the explorer Stanley, no attempt is made to fix his much-disputed nationality. Among American names we miss Secretary Stanton, who certainly merits a place.

To add (says a correspondent) one more instance in the transformation of surnames in New England (*Nation*, p 307), there is occasionally a "double refraction," as when one portion of the descendants of M. *Blancpied* has acquired the name of Blumpey, and the other taken that of Whitefoot.

—The first volume of Todhunter's 'History of the Theory of Elasticity and of the Strength of Materials,' edited and completed by Prof. Karl Pearson of University College, has appeared. It is a bulky work of 924 pages, and it covers the ground up to 1850; but, so recent has been the great development of mathematical physics, much of the beauty and usefulness of the theory is still reserved for exhibition in a second volume. The editor asks the syndics of the University Press, Cambridge, Eng., to relieve him of the labor of preparing that second volume, the material for which is so immense that both editor and reader may well regard it with a feeling of dismay, as well as of pleasure at the rapid progress of the science. There is scarcely a branch of physical investigation in which it does not now play an important part. From its humble beginning, with the rupture and strength of wooden beams, it has advanced to the planning of gigantic bridges, to the study of musical strings, the colors of crystals, and the constitution of the ether. The value of a book of this kind cannot easily be overestimated. A vast amount of research has been done once for all by a competent person, and the investigator is enabled to begin at once at the point where his predecessors have left off. Even great mathematicians have often wasted their powers in doing work that has been done before, and, if not that, they have at least wasted their time in making researches that can easily be made by lesser men. This book, like Todhunter's other works of the same kind, is material for history, rather than a real history. It is a catalogue and summary of all memoirs and treatises, and not a masterly *aperçu historique*, such as Chasles has given in another subject. To one who objects that it is impossible to see the wood for the trees, it may be replied, however, that the work is primarily intended for those who are in search of trees, and not for those who wish to obtain a far-reaching view of a peculiar phase of intellectual development.

—It is somewhat remarkable that the labor of building up the science of elasticity has been shared in by a large number of mathematicians, and that no one name has been of overpowering influence. In Todhunter's 'History of the Theory of Probability,' one-fourth of the volume is given to Laplace. In this book, no writer has a preponderating number of pages. Poisson has the greatest number, one hundred and ten, and after him comes Lamé, who has eighty-three. Navier, who may be said to have founded the modern theory of elasticity, and Mlle. Sophie Germain, have each fourteen, Laplace and Lagrange have six and ten respectively, Cauchy, to whom the science belongs after Navier, has fifty-nine, and Saint Venant, whose less important papers only are included in this volume, has forty.

—Mr. I. S. Yastreboff's 'Customs and Songs of the Turkish Serbs' has lately been published in St. Petersburg. The author was Russian consul among these people for ten years, and made the entire collection himself. Among the difficulties to be overcome in collecting and noting down his 560 songs was that of gaining access to the Christian women, who live almost the life of the harem, and avoid every occasion of speaking to any man who is not related to their husbands. The special value of the work lies in its treatment of a country which has hitherto been, and still remains, extremely hard to penetrate. Old Servia, so called, was formerly the chief stronghold of the ancient Servian kingdom; it was next half abandoned by the Servians and half settled by the Albanians, and of all Slavic countries Old Servia has been the least visited, because of the dangers of travelling there. Mr. Yastreboff is the very best living authority on its antiquities and ethnography, not excluding even the Servian savants. He is well known for his papers on ethnography, and especially on archæology, which have appeared in the *Glasnik* of the Servian Scientific Society of Belgrade, and have been, in part, printed in a volume in the Servian tongue. The present volume is his first in Russian. It contains popular customs, and the songs which accompany them and the festivals of the calendar in different localities, and which will be of great interest to ethnographers and philologists. Unfortunately he has omitted those songs which occur in the volume published by Miloevitch (Belgrade, 1875), which cuts his work down one-half. It is to be hoped that he will publish them, since Miloevitch's collection does not enjoy the fullest confidence, and contains things which were obviously manufactured from a false notion of patriotism. The corresponding songs collected by Mr. Yastreboff would not only verify the truth of these, but would also indicate their prevalence in other districts and furnish valuable variations. The author promises to publish his notes on Albania.

—The *Revue Internationale* (Florence; Boston: Schoenhof), of which Signor Angelo de Gubernatis is the editor, is a periodical which it has never been safe to overlook, because it might at any time contain something of interest; but the very intermittent character of its valuable papers has frequently made it an extremely disappointing task to look through its pages. The number for September 10, however, contains several attractive articles. The one which addresses the widest circle of readers is that entitled "François Liszt: Souvenirs détachés," by Mlle. Janka Wohl. What gives to this its special interest is the partly autobiographical character which it possesses. The writer tells us that when M. Trifonof published his 'Esquisses biographiques sur François Liszt' two years ago, the master brought her a copy covered all over with annotations in his own writing, with the inscription on the first page, "Rectifications pour mon nécrologe par Janka et Stéphanie Wohl." It is from these abundant notes that Mlle. Wohl selects such as she considers suitable for present publication, in order to give to her souvenirs "the rather unusual prestige of authenticity." In the present paper, which is the first of a series, the writer shows much discretion in the use of her materials, the greater part referring to Mme. d'Agoult (Daniel Stern), about whose relations with Liszt so much has been written that, as Mlle. Wohl says, "it is not only not an indiscretion to tell the truth, but even a duty." The readers of George Sand's letters and of her 'Impressions du Voyage' will recall the ideal pair who occupied so large a place in both. Mlle. Janka Wohl gives us the recollections which the ten years of his youth spent with the Comtesse d'Agoult left in the memory of Liszt in his old age. Not the least interesting aspect of these revelations is the light they throw upon George Sand's writings during this period of her life.

—The same number of the *Revue Internationale* contains another interesting article, "L'Origine des Magyars." It is by Paul Hunfalvy, and is the second paper upon the same subject. In the preceding number Vámbéry gave his theory of the origin of the same people, and now M. Hunfalvy defends his own opinions, which were attacked there, in what must needs be a very learned paper, and is certainly a very amusing and instructive one. M. Hunfalvy, as our readers know, belongs to the school of *Finnists* among Hungarian philologists and ethnologists, and in a work which he published in 1864 he drew his arguments from the Finnish, Esthonian, Yakut, and other kindred tongues, and from the geographical conditions of the modern Finns, Ugrians, Turks, etc. This does not seem a very promising field for a writer in what aims to be a periodical of general literary interest; but out of the unknown depths of learning which he draws upon in the Siberian steppes and the valleys of the Altai, where Finno-Ugrians and Turco-Tartars act the parts of our own familiar Kelts and Kymri, M. Hunfalvy has managed to produce a paper not offensively learned to the unscientific reader, and full of information calculated to enlighten those least prepared. The paper is written in the best of tempers, which is not a usual thing in the disputes of philologists, and especially not of ethnologists. We remark, in closing, another important article, by M. A. J. Boyer d'Agen, 'François Villon, à propos d'un livre récent.' The recent book is 'Le Jargon du xve siècle,' published in 1884 by M. Auguste Vitu; and containing the eleven *ballades* in *jargon* attributed to Villon, five of which were then published for the first time, together with a preliminary discourse, "sur l'origine des Gueux et l'origine du jargon," and an analytical vocabulary. M. Boyer d'Agen gives in his paper the five newly published *ballades*, and also, following each of them, "an essay towards a literal translation," and some very pleasant remarks upon Villon and his life and writings. In this case the author does not forget that though he is writing about a book which is called upon its title-page an *étude philologique*, he is addressing a literary and not a learned audience. His paper in itself is a

charming literary production, recommendable to all who love poetry and poets, and who enjoy reading what others, who share their love, have to say about them.

—A dozen pages by M. Guy de Maupassant begin the September number of *Les Lettres et les Arts* (Paris: Boussod, Valadon & Cie.; New York: Charles Scribner's Sons). In "L'Auberge," this powerful writer depicts, in his usual sober but vivid manner, a great mental tragedy which, unlike his other productions, is never painful to read and is unexceptionable in point of propriety. All the literary perfection of M. de Maupassant's style and of his methods of conception are here freed from the accompaniments which elsewhere render this greatest of French story-tellers so distasteful. The etchings of Alpine scenes by Eugène Burnand which accompany the text are particularly felicitous as illustrations of the author, reflecting as they do his simplicity and force of style, in which every sentence, almost every word, is as effective as the strokes and touches of an etcher. The other story of the present number, "Le docteur Modesto," is as complete a contrast to the last as one of the sea creatures on the limits of animal life, with which the inmates of its laboratory busy themselves, is to a perfect snow crystal of the Alpine summits which shut out M. de Maupassant's inn from the world. This fantastic story of M. Henry Laujol's is adorned by still more fantastic illustrations by Rosset-Granger, which give it a certain half-allegorical charm that adds piquancy to the characters and situations. Both artist and author have made of Signor Modesto Pla y Saballos a thoroughly delightful creation. It will perhaps surprise some of the admirers of Jules Breton to learn that he is also a poet, and has published a volume of poems, called 'Les Champs et la Mer.' The present number of the *Revue* contains some interesting verses by him accompanying a full-page engraving of his recent picture, "Le Soir dans les hameaux du Finistère." The engraving retains the dreamy poetry of Jules Breton's painting better than his harmonious verses do; but that can scarcely be made a matter of reproach. An expressive portrait of the artist by himself is placed at the head of the poem. The beautiful full-page etching by Léon Bonnat of M. Alexandre Dumas *fils* is, however, the finest portrait which has yet appeared in the *Revue*. It accompanies the paper of M. Léopold Lacour upon the dramatist who just now elicits such various opinions from some of the best critical writers of the day. Another extremely interesting portrait is the large seated figure of Pope Leo XIII., by Chatran. It accompanies a very attractive paper, "La Journée de Léon XIII.," by M. M. F. de Carpegna, in which the general outlines of the life led by "the prisoner of the Vatican" are given in a most entertaining manner. The article is very fully illustrated by Marchetti; the most striking and satisfying picture being the full-page one, "Léon XIII. à la promenade," which is full of life and expression. Another attractive paper is that by M. Gerspach, "La Mosaïque décorative du Musée du Louvre," with the symbolical figures of the Renaissance, designed by Lenepveu for the grand cupola, three of which are given as illustrations. Still more interesting is M. F. de Mély's "L'Abbé Aubert, ses Fables illustrées par Marillier," in which the author talks delightfully about the once famous and now forgotten eighteenth-century poet and about the six charming designs in sepia made by Marillier for a new edition of his 'Fables,' of which the Revolution prevented the publication. These lay forgotten in a faded old envelope, discolored and covered with dust, and possibly unopened since the artist or the publisher placed them there almost a hundred years ago, marking upon the envelope "six fables de Monsieur l'abbé Haubert, dessinées par Mariller, qui coûtent soixante-douze livres." Three of these designs are effectively reproduced here in the brown tints of the sepia drawings, and are really exquisite in their last-century remoteness and grace.

—The scruple which has led to the setting up of the "Andover hypothesis" is no new one; and we commend to the disputants the following passage, more than 500 years old, from the "Paradiso," canto xix:

> "Chè tu dicevi: Un uom nasce alla riva
> Dell' Indo; e quivi non è chi ragioni
> Di Cristo, nè chi legga, nè chi scriva:
> E tutti suoi voleri ed atti buoni
> Sono, quanto ragione umana vede,
> Senza peccato in vita od in sermoni:
> Muore non battezzato e senza fede:
> Ov' è questa giustizia che 'l condanna?
> Ov' è la colpa sua, sed ei non crede?
> Or tu chi se', che vuoi sedere a scranna,
> Per giudicar da lungi mille miglia
> Con la veduta corta d'una spanna?"

THE SOUTH-SLAVIC WORLD.

La Péninsule des Balkans: Vienne, Croatie, Bosnie, Serbie, Bulgarie, Roumélie, Turquie, Roumanie. Par Émile de Laveleye. Two volumes. Brussels, 1886 (New York: F. W. Christern).

M. DE LAVELEYE'S work, as the sub-title shows, is not strictly confined to the Balkan Peninsula. Neither does it embrace it in its full extent. It omits Albania, Greece, Montenegro, and other parts. Though treating of Rumania and Turkish portions, it is mainly a study of the South-Slavic world, of the South-Slavic question. Nothing could be more timely for the observer of the political movements of our day than such a contribution to the ethnography and contemporary history of southeastern Europe; and few writers would have executed the task with better trained powers of observation and judgment—especially in economical matters—with greater conscientiousness in forming conclusions, in a more truly cosmopolitan spirit, or with equal refinement and brevity of diction. M. de Laveleye, it is true, is not a Slavic scholar, in a strict sense of the word; nor has he spent much time in travels on either side of the Balkans. But he has made the very best use of preparatory studies, of personal observation, and of oral intercourse with the best-informed in the countries visited. If he here and there slightly fails, it is from an excess of charitableness and sympathy—for representative Slavs and the Slavic cause—a disposition not unmixed with courteous gratitude for kind attentions, and a pro-Gallic leaning towards political combinations likely to become a check on Teutonic preponderance. Making allowance for such amiable foibles, it is a pleasure to follow the Belgian economist in his wanderings through the basins of the Drave and Save, the lower Danube, and the Maritza. Though he has a keen eye for landscapes, costumes, and popular traits, his observations are mainly political or economical.

In Austria, to which empire he once devoted a volume of his 'La Prusse et l'Autriche depuis Sadowa,' he feels everywhere the breath of renovation. That ancient monarchy was formerly ruled by old men; it is now guided by young statesmen. "The Hungarians hold there the reins, and they have preserved in their blood the ardor of primitive races and the decision of the cavalier." M. de Laveleye has fine things to tell of Kálnoky, the Austro-Hungarian Minister of Foreign Affairs, and of Kállay, the Minister of Finance, who has also the special management of the affairs of Bosnia-Herzegovina. The latter, whose political, administrative, and literary abilities he equally extols, advised him to visit that semi-annexed dependency of the Hapsburgs. Going there, through Croatia, M. de Laveleye revisited the old Bishop of Diakovár, Strossmayer, the eminent spiritual leader of the Croat patriots and munificent patron of South-Slavic literature and art, to whom he devotes a panegyric as abounding in praise as that which he once bestowed (in the book above mentioned) on Francis Deák, then the great representative of a cause—the Magyar—which the Croats look upon as the most antagonistic to theirs. As between Magyars and Croats, the writer now decidedly leans towards the Slavic side. He would like to see the dualism of Austria-Hungary transformed, without a shock, into federation, under which Croats, Bosnians, Dalmatians, and Slovenes should form one of the chief component groups. While the Magyars hold the reins of power, the Slavic dependency of "the crown of St. Stephen" develops in its own national way, cherishes ambitious schemes of aggrandizement and independence, and, if forced to choose between two hated alternatives, would even prefer Russian to Hungarian domination. The Croats are Catholics and loyal subjects of the Hapsburgs, but they are Slavs above all; and where the race feeling is uppermost, contention and demagogism do their worst.

Bosnia, according to our author, is the most beautiful province of the Balkan Peninsula. It reminds one of Styria, a land of Alpine mountains and forests. There is a constant succession of valleys watered by rivers and brooks and crowned by wooded heights. Nature has done her best, but man's hand has wrought more destruction than cultivation. Everywhere there are traces of desolation by the sword and torch, of the long-endured blight of Turkish despotism; everywhere evidences of neglect and poverty. The clay cots of the peasant farmers (*kmets*) have no chimneys, and only small windows without glass; the smoke escapes through crevices, and when the wooden shutters are closed there is darkness. The farm animals live in the open air; flocks of sheep and herds of buffaloes roam over the fallow lands, swine and goats in the forests. The cattle and horses are poor. The large forest trees are felled, the fields are poorly tilled with primitive ploughs, no gardens surround the habitations. Plum orchards—from which both excellent fruit and plum brandy (*slivovitza*) are obtained—maize, and poultry yield the main sustenance. Such is the condition of the former village *rayah;* the Moslem proprietors—Slavs, like the peasantry, being descendants of Christians converted after the Turkish conquest—live in the towns. Even now, under Austro-Hungarian rule, the Moslem—beg, aga, or simple merchant—shows a proud and domineering mien. Christian and Jew go humbly out of the way of the little horse which a beg, preceded by his servants, rides, and which holds its head high, like its master. The Moslem Bosniaks are the most fanatical observers of the precepts of the Koran, though they are totally ignorant of its language. Their idiom, their names, are Slavic. They have never practised polygamy. They were formerly often in feud with Stambul; they now bear the Christian domination, which they fought bravely, with dignified resignation, as a temporary calamity. To the country on the whole, however, the Austro-Hungarian occupation is a blessing. Reforms and improvements have been begun in every direction. If carried out wisely, peace will be secured and prosperity developed. Serayevo, the capital, begins to assume a novel aspect. A hotel vying in grandeur and comfort with those of Paris is among the new structures, strangely contrasting with the mosques and baths of Turkish times. The army of occupation brings wealth with it. Railroads have been constructed. Commerce expands, partly through Jewish enterprise. Industry and education are fostered. Yet the inhabitants are little grateful for the change. The

Christian Bosniaks would prefer a union with Servia or Montenegro or with both; the Mohammedan sigh for their former unbridled sway.

Herzegovina is in every way less favored than Bosnia, by nature as well as by the new Government. It shared all the horrors and evils of the old régime; its position prevents it from sharing all the advantages of the new. In 1879 both countries together numbered 1,158,000 inhabitants, living in 43 cities, 31 market towns, 5,000 villages, and 190,000 houses. They were officially classed thus: capitalists and proprietors, 95,000; husbandmen, 85,000; artisans and laborers, 55,000; merchants and manufacturers, 11,000; clergy, 1,100; employees, 700; teachers, 260; physicians, 100. The revenues for 1884 were estimated at 7,400,000 florins, the expenditures at 7,350,000.

Belgrade, the capital of Servia, has in late years undergone a complete transformation. The principal street is lined on both sides with houses two or three stories high, with stores in the lowest, furnished with large show-windows, behind which one sees all kinds of articles of dress and luxury, books, photographs, antiquities, etc. The low Oriental shops and Turkish coffee-houses have disappeared. Nothing recalls the Orient. Of the former Turkish quarter hardly a vestige remains: a few fountains, with inscriptions in Arabic, and a crumbling mosque. New streets with elegant villas rise on both slopes of the central hill, looking toward the Danube and the Save. Our traveller visited the schools and found the pupils loaded with lessons. The long list of subjects taught in the gymnasia includes such studies as geology, biology, anthropology, music, and stenography. Servia is, in various ways, rapidly advancing in the paths of western Europe--not improbably to her ruin. She follows the route of Egypt, borrowing and borrowing, and mortgaging, for the sake of rapid material improvements and in the interest of intemperate ambition, all her resources, and thus giving European financiers a right to interfere in her domestic administration. Scarcely emancipated, she throws away her independence. She no longer pays tribute to Constantinople, but does to Vienna and Paris. In December, 1885, on the morrow of the insensate and disastrous invasion of Bulgaria, the consolidated debt of the little kingdom, which numbers only 1,900,000 inhabitants, had risen to 260,000,000 francs, or nearly 600 francs to each family. And "every moment new loans are contracted—now for muskets, now for cannon. If this goes on, Servia will ultimately be merely a colony of slaves laboring for foreign creditors." "O valiant Kara-George!" our publicist exclaims, "O glorious Milosh! was it for a future like this that you combated?" And the Serbs well deserve a better future. Attached to their country and the domestic hearth—though poor agriculturists on an excellent soil—proud of personal independence and equality, without a proletariat or an aristocracy of birth or wealth, possessed of the rights and habits of communal self-government, they are well formed for a quiet rustic democracy. The pursuit of false political aims, party contentions with inappropriate liberal or radical devices, centralization, and misgovernment threaten to lead them to an abyss. Of King Milan, whom M. de Laveleye knew in Paris, eighteen years before, as a student, and who now received him with marked courteousness, very little is said in a direct way. Allusions to his tyrannical course, however, are not wanting. Queen Natalia is described as charming. The little boy, Alexander, is their only child. "Is he destined to become the new Dushan of the Serb Empire?" A palace fit for a great monarch is being built in the meanwhile.

M. de Laveleye speaks more fully of Alexander of Battenberg, the late Prince of Bulgaria. He briefly tells the political history of his reign, mainly after M. Drandar, a Bulgarian writer. The young Prince arrived in Bulgaria with the best of intentions and full of zeal for the cause of the principality, but without faith in the ultra-liberal Constitution which it had adopted at Tirnova. He gave his confidence to the Conservatives, who aimed at a modification of the Constitution. The people were against them, and in 1879 elected an Assembly in which the Government counted scarcely thirty votes. It was dissolved, but the new Assembly, convened in April, 1880, was more hostile still. Alexander yielded, and appointed a Liberal Ministry, headed by Zankoff and Karaveloff. The Conservatives, however, soon convinced the Prince that his Ministers were steering the ship of state upon the rocks, and the consequence was the *coup d'état* of May, 1881, followed by a dictatorial régime constitutionally varnished. A Russian general, Ehrenrooth, and the Russian Consul-General, Hitrovo, managed affairs in and out of the Cabinet. The Liberals were silenced by force, the freedom of election was suppressed, Zankoff was confined in Vratza. To guard this order of things against an insurrection, the Czar sent Gens. Kaulbars and Soboleff to Sofia. These officers, however, treated the Prince as their ward, and he keenly resented it. The leading Conservative Ministers themselves, Natchovitch and Grekoff, found the situation intolerable. They sought the help of the Liberals in the Assembly against them. The Russian Government saw it was on the wrong track, and, through its envoy, M. Yonin, now demanded and obtained the restoration of the Constitution of Tirnova (August, 1883). But the Conservatives combined with Zankoff, who became master of the situation, against the Russian generals, and they were forced to retire. The Czar, exasperated, recalled the Russian aides-de-camp of the Prince. The Prince dismissed the remaining Russian officers, and recalled the Bulgarian students from Russia. An apparent peace was effected by M. Balabanoff, who was sent to St. Petersburg. In the coalition Cabinet Zankoff outstripped his Conservative colleagues, but he, again, had to yield his place to the more radical Karaveloff. In view of recent events in Bulgaria, the following deserves quoting:

"It is clearly certain that the attitude of the Czar has been supremely irrational, and that the Russian agents in Sofia act an equally unskilful and pernicious part. They want everything to move in their own way, and when they are opposed by the sentiment of national dignity, they endeavor to make a mess of everything, to overthrow the Ministers, to checkmate the Prince, and to prove that they themselves are needed. The only result which they will achieve will be to make the Bulgarians forget all the services rendered them by Russia, and to extirpate every feeling of gratitude.

"Russia's rôle ought to be quite different. She ought to protect and advise, but never to command or intrigue. She has created Bulgaria: let her help her act as an independent state. Why hamper the development of the child to whom she has given life? Let her resume the attitude which once procured her the sympathies of all the Slavs. . . . Thus only can she recover her influence. Otherwise she will preserve as little of it in Bulgaria and Macedonia as in Servia and in Croatia."

During the Servian invasion, in November, 1885, Prince Alexander's conduct is stated to have been admirable. "He is a true soldier, formed in the Prussian school." "But" (and here our author reproduces the impressions of a diplomatist who resided several years in Sofia) "it is not enough to be a lieutenant in the Prussian army to know how to rule nations, especially when one is only twenty-one years old (in 1879), and dreams only of gorgeous palaces, formidable armies, European decorations and alliances. We cannot forget the fable of the astronomer who stumbled into a well in gazing at the stars." This was written long before Alexander of Battenberg fell—the last lines of the work date from the beginning of 1886—and it is not the only evidence of the sagacity of the unnamed diplomatist, or of the general correctness of the information gathered by our traveller. The former was present when Alexander, in July, 1879, arrived in Tirnova, and clearly saw the affection which the Bulgarian people—"un peu rude, mais naïf, bon et doux"—vowed him. It would have been easy to govern wisely, for "the Bulgarians are infinitely more governable than the Serbs, Rumans, or Greeks." But Alexander preferred to be a ruler in the Prussian fashion. He was, besides, very indiscreet. He alienated his ministers by neglect, and caused mischief to himself by blurting out his thoughts. He surrounded himself with young counsellors; his court was "full of hope, but devoid of experience." He became wiser after the failure of his *coup d'état*, and in Karaveloff, according to M. de Laveleye, found an efficient, honest, and patriotic chief of administration. Several pages are devoted to the portrayal of this statesman. The favorable traits depicted show a different man from the Karaveloff of the dethronement and regency drama of August and September, 1886, as we know him from newspaper reports. Balabanoff and Slaveikoff are similarly spoken of with admiration.

Thus far the administration of the young state shows it much superior in wisdom and public probity to Servia. Bulgaria has as yet no foreign debt. The Bulgarian is more economical, laborious, and persistent, stronger and more moral, than the Serb; the Serb is more lively and open, more eloquent and poetical. His bravery and love of liberty the Bulgarian has amply evinced in the recent crises. He is fond of his constitution. Backward in agriculture, commerce, and education, he will advance in everything if allowed to develop the ample resources of his country in freedom and peace. He is more advanced in Eastern Rumelia—the more blessed, though more blood-stained, of the two Bulgarias (the population of both is about 2,800,000)—and still writhing under the most atrocious misrule, both Turkish and Greek, in Macedonia.

Want of room prevents us from following our traveller beyond the Slavic territories of the Balkan Peninsula. In conclusion we must remark that the pages of his excellent book are slightly marred by inaccurate or un-French spellings of Slavic words—"Zajetschar," "Jonine," "Ichtiman," "jougo-slave," etc., etc.—as well as by some incorrect dates, such as "1380," on page 72 of vol. i, "1779," on page 105, "1689" and "1874," on page 157, "1875," on page 295, "1879," on page 348, "May 25," on page 16 of vol. ii, and "1858," on page 158, most of which are probably misprints.

GETTYSBURG.

Battle of Gettysburg. By the Comte de Paris. Philadelphia: Porter & Coates.

THIS book is a republication of the chapters on the Gettysburg campaign from volume iii of the Comte de Paris's history of our civil war, with some corrections by the editor, Col. J. P. Nicholson, and some addenda, consisting principally of a roster of the Federal army and a detailed statement of losses on both sides.

The great labor expended by the distinguished author in the preparation of his account of Gettysburg, the fulness of detail, the elaborate descriptions of the field, the clearness and precision with which he sets forth the events which led to the final struggle, as well as the vigor and graphic force of his descriptions of the complicated series of engagements which constituted the battle itself—all render this account worthy of be-

ing preserved, and of being brought frequently, by new editions, before the public. It is impossible to take up this book without becoming deeply interested in it, notwithstanding the imperfections of the translation. It recalls events on which, for centuries to come, our people will look back with absorbing interest. We can give no higher praise than to say that the author has done his work in a way worthy of his subject.

It is to be regretted, however, that the accomplished editor has not done more to correct the oversights which were to be expected from a foreign author writing at a distance, and that he did not include in his addenda the returns of the strength of the opposing forces.

Col. Nicholson and many other writers assume of this history that, being composed by a foreigner, it is strictly without bias. But that is not always the case. The book is the work of an officer who served in the Army of the Potomac, and who, while inspired with the highest historical aims, writes, we may say always, from a Northern standpoint. This more than once unduly colors the narrative, and leads to the sacrifice of historical accuracy. We have space for but a single illustration. It shall be taken from the manner in which the Count deals with the question of numbers at Gettysburg.

The only data from which these numbers can be obtained with anything like certainty or fulness are the official returns. These returns may not be perfect, but they are the best data within reach, and as the armies were organized, for the most part, in the same way, and were officered by men trained in the same school, the returns may be considered as fair a guide for one side as for the other. Meade's return for June 30, the day before the battle, shows that he had of *infantry and artillery* (omitting general staff, provost guard, etc.) 86,703 men "present for duty." To these were added next day two brigades comprising 5,000 men, about which there is no dispute. This makes the Army of the Potomac number 91,703 infantry and artillery. The Count then proceeds to cut down this return by "3,000 or 4,000, left as additional guards near supply trains, the batteries remaining at Westminster, for all men detached on extra duty, and from 4,000 to 5,000 for the stragglers entered on the returns." To support this last deduction, he states that the return for June 30 was not made out until the end of July, and assumes that these stragglers were then entered as present. For this singular statement he gives not one bit of evidence or explanation. By such means he reduces Meade's *infantry and artillery* from 91,703 to "from 82,000 to 84,000 men."

Now the Army of Northern Virginia contained, May 31, when just about to set out on the campaign, 64,176 *infantry and artillery* "present for duty" (making no deduction for non-combatants). Eight infantry regiments of this force were absent from Gettysburg, but eight regiments not included in it were present in their stead. There must also be added, according to the Count, 62 guns and about 800 artillerymen. Now the Count estimates that these additions outnumber the reductions by 3,500—in other words, these eight infantry regiments, added, outnumbered the eight to be subtracted by 2,700. As this number was about the full strength of eight average regiments in the army, such a calculation is evidently erroneous and unfair. Again, the Count boldly assumes (though here his figures, or those of his translator, are confused) that this army, while on the march from home into hostile territory, was increased by the return of sick and wounded and of conscripts; from which source, and from the exchange of the eight regiments above noted, he estimates that the diminution due to straggling was more than counterbalanced, and that the Confederates had five thousand *more* effectives at Gettysburg than when they left the Rappahannock. There is no return of the Army of Northern Virginia for June, but the returns of Rodes's and Early's divisions for the latter part of the month exist, and they show that Rodes had lost about five per cent. of his strength, and Early ten per cent., not including their losses in battle. If, therefore, Lee's army is placed on the footing of these two divisions, it contained from 60,000 to 62,000 *infantry and artillery* in the latter part of June. These returns do not come down to the battle, and the marches in Pennsylvania were of course attended by further depletion. Had Lee's army grown during its active march into a hostile country by the return of sick, conscripts, etc., it would have been the first case on record of such a result. A comparison of the Federal returns of June 20 with those of June 30 shows, contrary to the Count's supposition, that there was no diminution going on in the Federal army, but, on the contrary, an increase in numbers. That, too, is natural, as the Federal army was in its own territory and near its own base. No deductions from Lee's army are allowed by the Count for "guards for supply trains," and for "men on detached duty," and for "stragglers entered on returns," yet it is plain that these sources of depletion are not less apt to affect an army two hundred miles from its base than an army in a friendly country and but fifty miles from Baltimore. Such deductions are mere guess-work, and had better be omitted on both sides.

It seems plain that against the 90,000 (in round numbers) of Federal *infantry and artillery* reported "present for duty" at Gettysburg, there cannot be set more than 60,000 Confederate *infantry and artillery* also "present for duty." These numbers may be increased or diminished as each one pleases to include or exclude certain classes of soldiers, but the ratio between them should be maintained. They are the numbers fairly deduced from the returns, and an accurate historian would hardly venture to follow the Count in adding to one side and deducting from the other without better ground than the fanciful considerations he offers. Similar errors occur in his statement of the respective cavalry forces.

The criticisms of the Comte de Paris on the conduct of the battle are generally judicious. He sees clearly that the meeting of the two armies was accidental, and that the struggle was not a matter of prevision on either side. He portrays well the difficulties which beset Meade, so recently placed in command, and the efficient service of Reynolds, Hancock, and others on those memorable days. He recognizes the disadvantage which the Confederates suffered from the absence of Stuart and his cavalry. He properly condemns the halting way in which the Confederates fought, though perhaps he lays more of the blame on the Confederate leader than a fuller knowledge of Lee and the Army of Northern Virginia would have justified. Lee's direction of the battle was in accordance with his methods and habits on other fields. He always gave large discretion to his corps commanders. In this instance they failed him, and at first sight it seems as if he might have corrected some of their blunders on the spot, but, after all, it is difficult to say whether he could have done this efficiently.

The battle was lost and won on the second day. It was at dusk that day that victory hung most doubtfully between the two armies, and that the Confederates had almost snatched the prize. That they did not win it was as much their own fault as it was due to the courage of the Army of the Potomac and the skill of its leaders. Lee planned and urged a combined attack on the Federal wings. Longstreet lost hours before he got to work, and then put in his divisions in succession rather than simultaneously. Once in, however, his troops were better handled than Ewell's, at the other end of the line. Ewell did not attack as soon as he should have done. Early, late in the evening, reached the top of Cemetery Ridge, but neither Johnson on the one hand nor Rodes on the other aided him. Hill's corps, though part of it actually pierced the Federal centre, went in too late and too partially; and, when everybody else had stopped, Ewell's left, under Johnson, was pressing its way on the flank of Culp's Hill. Troops that had been fighting Longstreet forced Early and Johnson back at night. Had Ewell's corps attacked with its whole strength soon after Longstreet, and had Hill supported his colleagues promptly, the Federal army might have been driven from its lines that day.

The author, but still more the editor, of this volume, in speaking of the results of the battle of Gettysburg, falls into a vein more suitable to a Fourth of July oration than to a grave historical work. Col. Nicholson considers this battle "as decisive in its character and far-reaching results as the battle of Waterloo," etc. This is a gross exaggeration. The battle of Waterloo, though a stubborn and for a time doubtful struggle, was a crushing defeat of one army by another. It ended a war, overturned a dynasty, and settled the map of Europe for a generation or more. After the close of the battle the beaten army was not able to make any further resistance, and Napoleon gave up the contest. Now, after the defeat of Lee at Gettysburg, the victorious army, whose losses were fully equal to those it had inflicted, was too much shaken to deliver a counter-blow at its adversary. Indeed, the Federal army continued to hold with some hesitation the position for which it had so gallantly fought. Lee retreated without serious molestation to Hagerstown, and when, finding the Potomac impassable, he turned and offered battle there, a week after Gettysburg, the Federal army declined the gage. Lee recrossed into Virginia at his leisure, and when, in the early part of August, both armies once more confronted each other on the Rapidan, their relative strength was not very different from what it had been two months before at the beginning of the campaign. (This does not ignore the fact that the losses of the Confederates were far less reparable than those of the Federals.) If Lee had failed in his expedition northward, he had paralyzed the Army of the Potomac for the rest of the season, and had postponed all movements against Richmond until the next year. Indeed, the Confederate, not the Union army, was the first to resume active operations by forcing Meade from the Rappahannock to Bull Run in October. In the next spring this same Confederate army entered upon its most remarkable campaign, performed its greatest achievements, and at Cold Harbor, just eleven months after Gettysburg, probably came nearer conquering a peace than at any other time in its history. What analogy to all this is found in the history of the French army after Waterloo?

BOOKS FOR CHILDREN.

THE enthusiasm of Prof. Henry Morley, in his introduction to Mr. Ramaswami Raju's 'Tales of the Sixty Mandarins' (Cassell & Co.) is as well founded as it is sincere: "This is a real book of new fairy tales." A slight examination of the rollicking pages shows that it is more than a collection; it is a selection of the best gems out of a heap of jewels. The author, a native of Madras, and a graduate both of her University and of a London law school, gathered while at home a rich store of tales, proverbs, jokes, anecdotes, and colloquial curiosities, chiefly from the lips of travellers, traders, or sailors from various countries of Asia. Three score of

the stories he selected for setting in English, garnishing them well with the idioms and wisdom-morsels of the land in which they first crystallized. Believing that Arabia, Hindustan, and Persia have long enough claimed to be the homes of story, Mr. Raju locates his relators in China, around a prince, and puts the narratives in the mouths of sixty mandarins. These wonder-stories are certainly new in English, though we recognize more than one which, while unpublished in China or Japan, may still be heard under the mat awnings of Tokio or Canton. In doing them into English Mr. Raju has pared off the local moralizing, and all tedious or prolix portions, so that each story leaps of itself, like a Mexican bean. Through all limitations and difficulties, such as beset ordinary mortals, the plot moves to its goal, and the ogre or monster gets his deserts quickly. We find these Far-Eastern fairy tales have beneath them the same root-ideas as ramify underneath Western wonder-lore. Somehow, the "vindictive circumstance," or the law of compensation, spoils the fun of the tyrant or nullifies the power of the dragon. The lovely princess or fair-minded boy is released in good season and due time. Even the Chinese Titania, while allowing the giant a colossal body, reduces his brain to a minimum. The dragon, with all his locomotive machinery of wing, feet, tail, and fin, and enginery of hoof, tooth, claw, or fire-breath, is outwitted by bright lady or small boy. Indeed, our sympathies almost go out in favor of the big creatures, who invariably get the worst of it. The stories are of Persian, Malay, Cochin-Chinese, Corean, and Chinese origin. Some are funny extravaganzas, some mirror national prejudices, and all are full of sly humor, local hits, and common-day logic turned upside down. To give merely the titles is to show the feast of fat things which Mr. Raju has prepared for both young and old folks. Here are a few: "The Fairy Periwinkle of Tonquin," "Little Tullima and the Sunbeam," "The Giant Gimlac and the Philosopher Nee Wang," "The Wonderful Pair of Spectacles," "The Five Princes that Loved a Fairy," "The Story of the Creeper of Lightning," etc. The book is delightfully illustrated by Gordon Browne, who seems to have caught the real spirit of most of these Asiatic wonder-stories.

Among the recent additions to the series "The Story of the Nations" (G. P. Putnam's Sons) is the 'Story of Spain,' by E. E. and Susan Hale. In the case of Spain, the general prospectus of the series led us to expect, not a very complete and detailed history, but a somewhat freer use of what it calls "the side-lights of the poets and novelists" than in the case of most other nations. We were also led to expect that the younger class of readers, for whom the series is more especially intended, would get from its perusal a correct and well-proportioned, even if somewhat meagre, outline of the history of the country. This book, however, is utterly destitute of all historical perspective or proportion. The romantic side-lights are electric lights; the lights of real history are mere tallow candles. Of the 396 pages, exclusive of the table of contents and the index—which, by the way, are very good—the first 150 cover the period from the commencement to the establishment of the Moorish power in the eighth century; while the four centuries between the accession to the throne of Ferdinand and Isabella and the present time, a period which includes by far the most important events in the history of Spain, is "done" in 99 pages, one-fourth of which are occupied by pictures, poetical translations, and blank leaves. The stories of the Abencerrages, of Bernardo del Carpio, of St. James, of Roland, of the Cid, are told with all their romantic accompaniments, although the authors admit that "the historians" consider them not even founded on fact; while the Spanish Armada—as, indeed, the whole war between England under Elizabeth and Spain under Philip II.—is not even alluded to. Mr. Green, in his 'Short History of the English People,' says: "With the defeat of the Armada began a series of victories which broke the power of Spain, and changed the political aspect of the world." The total omission of events so important to Spain can hardly be excused on the ground urged by the authors for the omission of the wars with the Netherlands, that "they scarcely belong here."

Again, quotations of Spanish unaccompanied by translations are certainly out of place in a book in which there is often an evident attempt to write down to the level of very young readers. Thus (p. 227), in describing the departure of the Moorish King from his capital, Grenada, after surrendering it to Ferdinand and Isabella, the authors say: "The spot is still pointed out where the Moorish King paused to look back upon his lost kingdom. It is called 'El ultimo sospiro del moro.'" The translation not being given, of course all the poetry of the designation is lost, except for the very small number of American boys and girls who understand Spanish. Some of the misprints in the book are ludicrous, and some misleading; a couple of specimens will do. On page 120 we are told: "He [Leovigild] put an end to the domination of the Sueves, who had for nearly *two hundred centuries* troubled the country." Even the slowest-paced evolutionist would hardly require so long a time as this to evolve a tribe of savages. On page 179, in the description of the battle between the Saracens and the Franks, we read: "Archbishop Turpin blessed the host, and *assailed* the Franks as they knelt on the ground," etc. Of course "assailed" is a misprint for "assoiled"; but as the latter is not a common word, the young reader may be excused for wondering at the Archbishop's treatment of his own men. The following, on page 392, is something worse than a misprint: "They [the Cortes] offered the crown to Amadeo, the second son of King Humbert of Italy." The romantic tales of which a large part of this volume is made up are generally those of which every person of liberal education wishes to know something, and as a collection of these the book has some value; as a history, it may take the place which some one of the series must necessarily occupy—at the foot.

'The Making of New England' (Scribners), by Sam. Adams Drake, is the story in outline of the exploration and settlement of that section down to the formation of the confederacy of the colonies in 1643. From its clear arrangement, simple style, and the well-sustained interest of the narrative, it makes an excellent introduction to the history of the beginnings of this country, and is, in fact, intended to be read in connection with the school text-books. The author avoids burdening his story with many dry details, by putting them in notes at the end of each chapter. The pictures well illustrate the text; but we think a general map of New England, so shaded as to show the progress of settlement during the successive periods treated, would have been more useful to the reader than the small maps actually given.

In 'The Children of Old Park's Tavern' (Harpers) Mrs. Frances A. Humphrey has produced a very pleasant story of the "South Shore" of Massachusetts as it was in the stage-coach days, when Webster was a member of political conventions, and children with old-fashioned names played old-fashioned games and held their elders in due respect. Dolly and Ned will delight the hearts of all right-thinking young people. Their youthful adventures about the quaint old tavern and among the woods and marshes will interest young readers whose tastes have not been vitiated by the sensational stuff that passes for juvenile literature with many careless parents. Ned's manly bearing, whenever he has done wrong, in forcing himself to look at his actions in a just light and then frankly acknowledging his fault, is conceived in a spirit of sympathy with childhood unusually true and strong, and cannot help but appeal to the better side of any boy's nature who makes a friend of Ned—as we hope many boys (and girls, too) will do.

'Amusing Adventures' (Mrs. Frank Leslie's Publishing House) is a very well described journey of three American lads from New York to India. They visit London, Paris, Venice, and Vienna, and pass through Servia and Bulgaria on their way to Constantinople during last year's war. Their route thence to India is by the Black Sea, Persia, and Afghanistan. A good deal of geographical and historical information about these places and countries is conveyed in an entertaining way, and probably few young readers would detect the fact that the book is written for the pictures, which are very numerous and in many cases exceedingly good. There should have been a general map of the route which they followed, even if it had to be made expressly.

What befell two sailor boys on a yacht manned by boys is the subject of Mr. David Ker's 'Into Unknown Seas' (Harpers). The incidents are very improbable as well as sensational, but the story is thoroughly readable.

The experience of a little girl during her first visit to London is related by Ismay Thorne in a 'Six Years' Darling' (E. P. Dutton & Co.) in a most engaging way. The various haps and mishaps of Trix and Pussie are very true to life and full of humor. The illustrations, by T. Pym, are admirable.

'Rolf House' (Harpers), by Lucy C. Lillie, is the sequel of 'Nan,' and shows how some boys and girls, suddenly left orphans and nearly destitute, struggled to support themselves for a time by keeping an "emporium" for the sale of fancy work. The story is well told, and the characters of the unselfish heroine and her brave cousins are made very attractive; but is it well for children to have the most terrible misfortune which can befall them disguised as it is here and in books of this class?

In 'Rolf House,' as also in 'Jo's Opportunity' (Harpers), by the same author, the truth is wisely emphasized that a girl need not lose her sense of fun and her enjoyment of youthful pleasures for having high purposes of usefulness to those about her. Jo is a poor girl whose native goodness is fostered by her devotion to a girl who has helped and trusted her when all others regarded her as an irreclaimable outcast.

'The Riverside Museum' (T. Y. Crowell & Co.), by "Jak," is a distinct advance on 'Birchwood,' of which it is the sequel. The author has endeavored to show, very successfully, in our opinion, that both boys and girls can find much pleasure, as well as profit, in studying some branch of natural history. The narrative is thoroughly healthy in tone, and does not depend upon sensational incidents to sustain its interest. The account of the old naturalist is very amusing.

A good deal of information about bees is very pleasantly given by Maurice Noel in 'Buz' (Henry Holt & Co.). The daily life of the hive, the division of labor, the perils of the bees, and their marvellous instinct are brought clearly before the mind. One forgets at times that the purpose of the book is not simply entertainment, but instruction.

Few books are better fitted to awaken in boys a healthy impulse for out-door life than the 'Boys' Book of Sports' (The Century Company), edited by Maurice Thompson. It opens with the tale, by the editor, of 'Marvin and his Boy Hunters,' in which instruction in the use of fire-arms is

very skilfully and entertainingly given. This is followed by chapters on archery, fishing, boat-building and sailing, camping, swimming, photographing, etc., and ending with a capital account of a base-ball game, in which the science of effective pitching is taught. These are by different writers, as Charles L. Norton, D. C. Beard, W. L. Alden, and others, who uniformly show great cleverness in their explanations and directions; those on boat-building and ice-sailing, by Mr. Norton, especially being models of accurate and simple description. The illustrations are all admirable, and some are of great beauty. The greater part of this book has already appeared in *St. Nicholas*, but some chapters are entirely new.

'The Little Master' (Boston: Lee & Shepard), by J. T. Trowbridge, recites the struggles of a young teacher to secure discipline in a country district-school. It is interesting, no doubt, but does not leave a pleasant impression on the reader's mind.

It is a relief to turn from the sensational incidents, the slang, and the vulgarity which characterize too many of the children's books of the present time, to the late Mrs. J. H. Ewing's 'A Flatiron for a Farthing' (Boston: Roberts Bros.). She displays a wonderful insight into the workings of the mind of a lonely and fanciful boy, and it is hard to realize that the work is fiction and not an autobiography. The other characters, the nurse and the rector especially, are exceedingly well drawn. The story is true to life, also, in the sudden transitions from grave to gay, and the humor of some passages is only equalled by the tender pathos of others. There is a delicate charm about it which will, no doubt, be more perceptible to the old than to the young, but no boy or girl can read it without being the better for the pure atmosphere which it breathes, as well as the gentle life which it pictures.

'Inglenook Stories' (E. P. Dutton & Co.), by Mrs. Stanley Leathes, are four in number, simply told, and charmingly illustrated with pictures by M. Erwin.

Emigrant Life in Kansas. By Percy G. Ebbutt. London: Swan Sonnenschein & Co.; Philadelphia: J. B. Lippincott Co.

THE author of this book left England when a child but ten years old, and came to this country with his father and brother. They were emigrants for Davis County, Kansas, and their aim was to engage in farming and cattle-raising. The history of the first six or seven years of their life in the West is told by Mr. Ebbutt with fidelity and clearness. He has not wilfully misrepresented, we imagine, though an occasional error is noticeable in his statement of facts. The basis of the survey, for instance, which divides the land into ranges and townships is not the intersection of two lines at the centre of the State; nor is it true, without reservation, that small grain, such as wheat and oats, will grow better than will Indian corn on sod—that is, the first breaking.

But Mr. Ebbutt's errors are always unimportant. His book is absolutely real and honest. The impression which it gives of the homesteader's life is a true one, and the simplicity and plainness of the narrative are refreshing. There is no effort to form an opinion for the reader; there is just the record of the writer's observations and experiences during the most impressionable period of his life. There results a genuine picture of a phase of American life concerning which people east of the Mississippi have but a vague conception. No small number of persons in the United States have never heard of sod houses; but of the also large number who not only have heard of them and realize that the homesteaders in Kansas and Nebraska live in them, but have even seen them from the window of a palace car, how few really appreciate their part in the social economy of the growing West, or can fancy the sort of existence which their occupants lead. A perusal of Mr. Ebbutt's book will help to fuller knowledge in this direction. One may gain, too, some idea of the rapidity with which the West is just now being developed, especially if he is given to understand that Davis County is already among the thickly settled counties of the State. It would amuse a farmer, even out by the Colorado line, to read the chapter on harvesting. "The grain was all cut by machines; one never sees a reaping-hook out there. It requires about six men to keep up with a machine." The reaper that requires about six men to do the binding is now nearly as obsolete as the reaping-hook; and the self-binder, driven by one of the boys or the "old woman," leaves the bundles cut and tied and ready for the shock.

There is every now and then in the book a paragraph of natural history, which reads like a school-boy's essay, enumerating the different kinds of trees. Mr. Ebbutt would be surprised to know that the devil's darning-needle or snake feeder, which he seems to think a strange insect, is only the dragon-fly, and that he might have learned this from a writer as far away from entomology as Archbishop Trench.

The Age of Electricity, from Amber-Soul to Telephone. By Park Benjamin, Ph.D. Charles Scribner's Sons. 1886.

"THIS little work," we are told in the preface, "is not a technical treatise, nor is it addressed in any wise to the professional electrician." It will doubtless find readers among those who are without time or inclination for serious study of the subject, but wish to be what is called "well informed" upon scientific topics of the day—a condition liable to become what Charles Kingsley describes as "knowing a little of everything and knowing it all ill." Mr. Benjamin's book is gossipy, entertaining, and superficial. Its delicate parlor flavor suggests as a fitting title for it, 'The Ladies' Handbook of Electricity.' The author avoids practical detail, and dilutes the information he gives with humorous comments, anecdotes, and poetry.

The first four chapters relate to early experiments and discoveries, and those following, respectively, to the galvanic battery, the electromagnet, the dynamo-electric machine, the electric light, electromotors, electrolysis, the telegraph, the telephone, the induction coil, and miscellaneous applications of electricity. A better arrangement would place consecutively such related subjects as dynamos and motors, the galvanic battery and electrolysis; and the explanation of the induction coil might well precede the references to it in chapters xi and xii.

The descriptions are for the most part clearly given, especially in treating of principles and simple types of applications, where the ground gone over is frequently summarized—a valuable help to beginners. It seems, however, rather an unnecessary resort to primary-class blackboard methods to present cuts illustrating, respectively, the magnet and the unresponsive silver churn of "Patience," and the reciprocal action in the case of an iron churn! On the other hand, the author sometimes sacrifices clearness to brevity, notably in his description of Prof. Jenkins's telpherage circuit, which is faulty and insufficient, and, but for the illustrations, would be wholly unintelligible to the class of readers addressed.

In reference to the telephone, the author's promised endeavor "to state facts, without partisan color," is not particularly successful. Opinion, like murder, "will out," as is illustrated in the rather hysterical statement in the preface, that "the present telephone war . . . is fast becoming . . . a national issue involving the rights of the people against corporate monopoly, and perhaps also in some degree the integrity of our patent system." Again, the index accords to Mr. Bell, as to Reis, the title to "telephonic investigations" only, while Drawbaugh is credited with "inventions" in the same line. Another straw which serves as an opinion-vane is on pages 294-5, where it is said of Mr. Bell that, "just as Reis had done before him and the inventor of the phonautograph before Reis, he made a hollow tube [!] and covered one end with a piece of membrane. The apparatus as Mr. Bell says he made it is represented in Fig. 122. . . . Unfortunately, when he caused the instruments to be made, they would not operate. He says he 'knew from theory that the articulation was there,' but there is obviously a wide difference between knowing the presence of a thing by theory and producing it. This was the condition of affairs when . . . the monopoly of a great public need fell into the hands of" Mr. Bell. The courts, with information before them similar to that open to Mr. Benjamin, have arrived at a different conclusion.

Among the many engravings, we recognize, besides those acknowledged in the preface as taken from Niaudet's work, several from Deschanel's 'Electricity and Magnetism,' and others (although on a smaller scale here) from Thomson's 'Dynamo-Electric Machinery.' In addition to the smaller cuts are five full-page illustrations. The typography is good, with the exception of two or three mistakes in reference-numbers, and the book is attractively bound.

Genius in Sunshine and Shadow. By Maturin M. Ballou. Boston: Ticknor & Co. 1887.

THIS is a volume of what might be called the "chit-chat" of a reader with a good memory and a standard English library. It is a rambling collection, or rather mental drifting together, of the facts of literary, artistic, or dramatic lives, as they are viewed under certain lights. To illustrate: the earlier divisions—there is no table of contents or chapter-heading—tell what noted men or women rose from what poor employments or unfavorable conditions; what stimulants such and such persons used, and what idiosyncrasies of dress or surroundings such and such required before sitting down to write, or whether this one rode horseback or that one walked out-of-doors when composing; and so the volume wanders on through a twice-told tale of gossipy library-talk. It has not the dignity of Disraeli, or any of the interesting writers of the sort of composition it seems to aim at, because it has not the virtue of research, or the quality of literary intimacy and revelation, or the sense of personality which a talker ought to give to his words. But the author confesses that he had no purpose in view, and merely gives these notes to the world at the request of his publisher.

BOOKS OF THE WEEK.

Abbot, Willis J. Blue Jackets of '61: A History of the Navy in the War of Secession. Illustrated. $3.

Ashton, J. Romances of Chivalry, Told and Illustrated in Facsimile. G. P. Putnam's Sons. $5.00.

Baird, Prof. H. M. The Huguenots and Henry of Navarre. With maps. 2 vols. Charles Scribner's Sons. $5.

Brewer-Laubscher. Ohio Corporations Other than Municipal, as Authorized by the Old and New Constitutions and Regulated by Statute. 2d ed., enlarged. Cincinnati: Robert Clarke & Co.

Brooks, E. S. Chivalric Days, and the Boys and Girls who Helped to Make Them. G. P. Putnam's Sons. $2.00.

Brydges, H. A Fortnight in Heaven: An Unconventional Romance. Henry Holt & Co. $1.25.

Charles, Emily Thornton. Lyrical Poems, Songs, Pastorals, Roundelays, War Poems, Madrigals. Philadelphia: J. B. Lippincott Co. $2.00.

Christie, R. C. Étienne Dolet. Traduit sous la direction de l'auteur par C. Stryienski. Boston: Schoenhof.

Colbeck, C. French Readings from Roman History. Macmillan & Co. $1.10.

JUST READY.

A FORTNIGHT IN HEAVEN.

An Unconventional Romance.

By Harold Brydges. 12mo, $1.25.

KLAUS BEWER'S WIFE.

From the German of Paul Lindau, by CLARA S. FLEISHMAN. 16mo. *Leisure Hour Series*, $1.00; Leisure Season Series, 50 cents.

THE ROMANCE OF THE MOON.

Pen and ink drawings, illustrating a quaint tale of the origin of the dew. By J. A. MITCHELL (the editor of *Life*). 12mo, illuminated cover, $1.00.

Henry Holt & Co.

A NET SIX PER CT. INCOME

FROM DEBENTURES OF THE

FIDELITY LOAN AND TRUST COMPANY

OF STORM LAKE, IOWA. CASH CAPITAL, $100,000.

These are regular coupon bonds, $500 and $1,000 each, and are issued in series of $50,000. Each series has an independent mortgage security representing over $130,000 of improved Western farm and city property.

A superior investment for Savings and Trust Funds, where safety is the first consideration. Address

WILLIAM G. CLAPP, Treasurer,

7 Nassau St., New York.

INVEST THROUGH THE SOUND AND RELIABLE Western Farm Mortgage Co.

F. M. PERKINS, President. LAWRENCE, KAN. L. H. PERKINS, Secretary.

PAID UP CAPITAL, $250,000.00.

The choicest 1st Mortgage Farm Loans, also the Company's Ten Years Debentures based upon its paid up Capital and Assets of over $650,000. No Losses. Eleven Years Experience with absolute satisfaction to over 1,500 Investors. Send for circulars, forms, and full information; Branch Offices in N. Y. City and Albany; N. Y. Office, 137 Broadway. C. C. HINE & SON, Agents.

Unmounted Photographs

OF ANCIENT AND MODERN WORKS OF ART,

Embracing reproductions of famous original paintings, sculpture, architecture, etc. Price, cabinet size, $1.50 per dozen. Send 10-cent stamp for catalogue and supplement of over 7,000 subjects.

SOULE PHOTOGRAPH CO.,

Publishers, 338 Washington Street, Boston, Mass.

Please mention the *Nation*.

German Simplified.

An eminently practical new method for learning the German language. Edition for self-instruction, in 12 numbers (with keys), at 10 cents each; school edition (without keys), bound in cloth, $1.25. For sale by all booksellers. Sent, postpaid, on receipt of price, by Prof. A. Knoflach, 140 Nassau St., New York. Prospectus free.

FOR SALE.—VALUABLE COAL PROPERTY on Warrior River, Jefferson Co., Ala., 22 miles from Birmingham, 16 miles from the great Pratt mine, and on the line of Kansas City, M. & B. R.R. 1,200 acres developed vein, 5 feet thick, of the best quality. All particulars of this offering, inviting careful consideration, will be given to responsible inquirers.

CLARENCE GORDON,

59 Liberty Street, New York.

LEE & SHEPARD'S

NEW BOOKS.

FINE GIFT BOOKS:

NATURE'S HALLELUJAH.

From original designs by IRENE E. JEROME, author and artist of 'One Year's Sketch Book,' 'The Message of the Bluebird,' etc. Presented in a series of nearly fifty full page illustrations (9½x14 inches) engraved on wood by GEORGE T. ANDREW. Elegantly bound in gold cloth, full gilt edges, $6.00; Turkey morocco, $12.00; tree calf, $12.00; Spanish calf, $12.00.

UNIFORM WITH

ONE YEAR'S SKETCH BOOK.

Comprising forty-six full-page pictures, 9½x14 inches. Elegantly bound in same styles as 'Nature's Hallelujah,' and same prices.

DORA.

By ALFRED TENNYSON. Twenty illustrations by W. L. TAYLOR, from sketches made in England expressly for this work, comprising many charming bits of English landscape and rural life, engraved on wood by ANDREW. Uniform in style with Lee and Shepard's Illustrated Series of Favorite Hymns, Ballads, and Poems. Cloth, full gilt, gilt edges, $1.50.

NEW NOVELS:

A BOSTON GIRL'S AMBITIONS.

By VIRGINIA F. TOWNSEND. 12mo. Cloth, $1.50. Uniform with Lee & Shepard's Series of the Townsend Novels. Comprising seven volumes.

THE HOLLAND SERIES.

By VIRGINIA F. TOWNSEND. 12mo. Cloth, per volume $1.00. Comprising—

"THE DEERINGS OF MEDBURY."
"THE HOLLANDS."
"SIX IN ALL."
"THE MILLS OF TUXBURY."

These four are among Miss TOWNSEND'S best home stories, and have been out of print for some time. Sold separately.

SIMPLICITY AND FASCINATION.

By ANNE BEALE. Cloth, $1.00. Regarded by the English critics as "one of the finest" modern novels published. New edition.

NEW JUVENILES:

ALL TAUT; or, Building the Boat.

OLIVER OPTIC'S LATEST. Cloth, illustrated, $1.25. Being the fifth of "The Boat Builders' Series." One of the most successful series of books this popular author has written.

J. T. TROWBRIDGE'S NEW BOOK.

THE LITTLE MASTER.

16mo. Cloth. Illustrated. $1.25. Being the Fourth of the popular TIDE MILE STORIES.

YOUNG FOLKS' PICTURES AND STORIES OF ANIMALS.

By Mrs. SANBORN TENNEY. Six vols., boards, per vol., 30 cents *net*. Each volume complete in itself and sold separately. Comprising 'Birds,' 'Quadrupeds,' 'Bees and Other Insects,' 'Fishes and Reptiles,' 'Sea Urchins, Star Fishes, and Corals,' 'Sea Shells and River Shells.'

The series contains over five hundred illustrations true to nature, engraved and printed in the best manner. For supplementary reading in schools, these books are particularly appropriate.

OTHER NEW BOOKS:

THE BOOK OF ELOQUENCE.

A Collection of Extracts in Prose and Verse from the most famous orators and poets. Intended as exercises for declamations in colleges and schools. By CHARLES DUDLEY WARNER. 12mo, cloth, $1.50. A new edition.

THE FAMILY.

An Historical and Social Study. By Rev. CHARLES F. THWING and CARRIE F. BUTLER THWING. Cloth, $2.00.

. . . Rev. Charles F. Thwing, of Cambridge, with the assistance of his wife, has just completed an original and deeply interesting work, "The Family; An Historical and Social Study." The work is the first historical and philosophical study upon the important subject of divorce and other social problems.—*Christian Intelligencer.*

STUDY OF THE ENGLISH CLASSICS.

A practical Handbook for Teachers. By ALBERT F. BLAISDELL, A.M., author of 'Our Bodies,' 'How to Keep Well,' 'The Child's Book of Health.' New edition. Cloth. $1.00 *net*.

A Treatise for Parents and Educators. By LOUISA PARSONS HOPKINS, author of 'Handbook of the Earth,' 'Natural History Plays,' etc. 50 cents.

Sold by all booksellers, and sent by mail, postpaid, on receipt of price. Our new catalogue mailed free on application.

Lee and Shepard,

Publishers, Boston.

G. P. Putnam's Sons,

NEW YORK AND LONDON,

HAVE NOW READY.

I. THE OLD ORDER CHANGES.

A story. By W. H. Mallock, author of 'Is Life Worth Living?' 'The New Republic,' etc. Volume XX. in the "TRANSATLANTIC SERIES." 16mo, cloth $1.00; paper, 50 cts.

"The story is one of the Socialistic politics of our time, and in it, in addition to several more or less well-known figures, Mr. Mallock has introduced Lord Lytton—Lord Arden—who is somewhat cruelly made to play the part of a foil; Mr. Herbert Spencer, who is a mere lay figure labelled a Theistic philosopher; and Mr. Hyndman, who, under the name of Mr. Foreman, is perhaps the most conspicuous person in the book."—*Pall Mall Gazette.*

ALSO, FRESH ISSUES OF THE EARLIER WORKS OF THIS CLEVER WRITER.

"IS LIFE WORTH LIVING?" 12mo, cloth, $1.50.

"The author writes vigorously and makes a strong case for the affirmative to his question."—*Chicago Tribune.*

SOCIAL EQUALITY. A Study in a Missing Science. 12mo, cloth, $1.00.

"The work of a clear and logical thinker, and a forcible and entertaining writer."—*N. Y. Herald.*

PROPERTY AND PROGRESS. A brief inquiry into contemporary social agitation in England. 12mo, cloth, $1.00.

"Those who are interested in social questions will be well repaid for whatever time they may spend on this book."—*N. Y. Nation.*

A ROMANCE OF THE NINETEENTH CENTURY. In the Transatlantic Series. 16mo, cloth, $1.00; paper, 50 cents.

"The motive is admirable—the influence of love in developing the religious instinct in two lovers, and in purifying the character; and upon this idea the author has wrought with remarkable depth of thought and strength of delineation."—*N. Y. Tribune.*

II. CHIVALRIC DAYS AND

YOUTHFUL DEEDS. By E. S. Brooks, author of 'Historic Boys.' 8vo, fully illustrated, cloth extra, $2.00.

Stirring stories, presenting faithful pictures of historic times.

III. THE ROMANCES OF CHI-

VALRY. The Legends and Traditions of Sir Isumbras, Sir Degori, Sir Bevis of Hampton, The Squyr of Lowe Degre, Valentine and Orson, Guy of Warwick, etc., etc. By John Ashton. *A limited letter-press edition*, with fifty illustrations in facsimile of old-time originals. Octavo, cloth extra, gilt top, $5.00.

IV. HUMOROUS MASTER-

PIECES FROM AMERICAN LITERATURE. Compiled by Edward T. Mason. Three volumes, 16mo, uniform with the '*Prose Masterpieces from the Essayists.*' Cloth, neat, $3.75; cloth extra, gilt top, $4.50. The following authors are represented: Alcott, Alden, Aldrich, Baldwin, Beecher, Bellamy, Browne, Bunner, Butler, Cable, Cavazze, Clemmens, Cone, Cozzens, Crane, Curtis, Dodge, Dunning, Hale, Harris, Harte, Hawthorne, Holmes, Howe, Howells, Irving, Johnson, Lanigan, Leland, Lowell, Ludlow, McDowell, Mathews, Ogden, Phelps, Quincy, Roche, Saxe, Spofford, Stockton, Stowe, Thorpe, Trowbridge, and Warner.

*** Putnam's new catalogue, 133 pages, forwarded upon application.

The Nation.

NEW YORK, THURSDAY, OCTOBER 28, 1886.

The Week.

THE decision of the Supreme Court of the United States in the Wabash Railway case is of the highest importance. It utterly demolishes the pretensions of State legislatures and railroad commissions to regulate the rates of freight and fare on goods and passengers passing through the States, or from one State to another. The principles upon which this decision is based are very clearly stated, and are fundamental to the existence of the Union and to the existence of trade. The regulation of inter-State commerce is one of the things committed in express words of the Constitution to Congress. The Constitution itself came into being because of the difficulties and embroilments of inter-State commerce under the old Articles of Confederation. It was precisely this which led to the calling of the Convention, and it would have been wonderful indeed if any doubt had been left as to the intention of those who composed it upon the subject which first stirred the people to "form a more perfect union." Under the assumed right of the State of Illinois to fix a rate of charges upon property coming from the interior of that State, or from the States further West, to New York or to foreign countries, it would be quite possible to throttle such commerce altogether. The right to say that the charges for such transportation shall not be less than the charges upon property transported wholly within the State, is a usurpation of the right to regulate commerce between the States and with foreign nations so far as the same may happen to touch the territory of Illinois. Such a doctrine cannot be broken down too soon or too thoroughly. Three judges dissented from the opinion, upon the ground that the States have the right to legislate upon this question until Congress exercises its paramount right to do so.

A new form of swindling has been invented in the low-lying districts appurtenant to Wall Street, of which the holders of railroad bonds are the victims. A railroad company having borrowed money at some time in the past, when the rate of interest was high or when its own credit was low, and being now in a prosperous condition, desires to pay off its bonds and stop the interest, although they have still many years to run. Such bonds, if the rate of interest is above 6 per cent., command a pretty high premium in the market and are much sought after by investors. Of course, the investors do not want to be paid until the contract expires. The premium on their bonds is the sign and evidence that the course of events has been in their favor. The prevailing rate of interest, which was formerly 7 or 8 per cent., having fallen to 4 or 5, they have now got the best end of the bargain. The newly discovered way to cheat them is for the company to default the interest on the bonds when it falls due, and then have some stool-pigeon offer to buy the bonds at a sufficient premium to induce the holders to sell. It may be asked, Why do not the holders combine with each other and foreclose their mortgage? Evidently because they would obtain in the end, after much litigation and expense, only par and interest for their bonds. This trick is capable of being practised only in the cases of prosperous small roads, branch roads, leased lines, etc., when it is not necessary to use their credit with the general public a second time, for, of course, they could not borrow again on advantageous terms after resorting to such sharp practice. The law does not furnish any practical remedy for such transactions except possibly in the way of indictment of the swindlers for conspiracy. But it seems to us that the Stock Exchange might properly strike from its list the securities of any company which resorts to such practices.

The absence of Mrs. Cleveland from the State Fair at Richmond, where the President made a brief introductory address, has supplied to the newspapers a bit of social gossip which contains as many possibilities of growth as the expulsion of Gov. Tilden's nieces from Greystone by the stony executors. "It is surmised" that Mrs. Cleveland stayed away (although there was no reason for her going at all) because Miss Winnie Davis, daughter of Jefferson Davis, was there, and Mrs. Cleveland would have been obliged to "shake hands across the bloody chasm" with the daughter of the ex-Confederate chief. This would have been an appalling incident, for although Miss Davis was a baby and Mrs. Cleveland an infant of tender years when the war ended, yet the public, being mostly fools, would have considered this shaking of hands significant of dark designs on the part of Mr. Cleveland, and would have said to him: "We will trust you no longer. You are no President for us. You can serve out your present term because we cannot get rid of you constitutionally any sooner. But don't expect us to vote for you again after this female hand-shaking." So Mr. Cleveland, or perhaps the Cabinet, decided that Mrs. Cleveland should not go to Richmond, but should stay at home and look unconcerned, and make a pretence of getting her house settled for the winter. But the Richmond people see through it all. "Miss Davis," says the *Sun's* reporter, "is idolized by this people."

The process of developing the merit system in the civil service of the nation goes steadily forward. It has been a serious defect that the practice of having competitive examinations held under the supervision of the various local boards enabled the appointing power easily to learn the politics of the applicants, and there is no doubt that advantage has been taken of this defect under both Republican and Democratic Administrations. It was left for a Democratic Board of Civil-Service Commissioners to put an end to this abuse, which they have done by adopting a rule that hereafter the examinations of applicants at any place, whether for appointment or promotion, shall be carried on under the supervision of the Commissioners at Washington. This is at once a long step forward in the elimination of partisanship, and a convincing proof that the Commission as now organized is sincere in its professions of loyalty to reform ideas.

The inspectors sent to investigate the doings of Mr. Harrity in the Philadelphia Post-office have made their report. They find that his shortcomings have been due in part to youth and inexperience and in part to the wickedness of the old carriers, who made mistakes purposely in order to bring him into disrepute. They say, also, that there is a conspiracy in the office to compel him to retain men in the service who are unfit, and that the President's order to office-holders is openly violated. Mr. Harrity, in fact, appears to be surrounded by bad men, all engaged in trying to hinder him from doing right. He himself says, in his answer, that he "feels very keenly unnecessary and unjust insinuations or reflections," which is not surprising. But what is needed in all post-offices is men who are so old, experienced, and strong-minded that the bad men will be afraid of them and will not conspire against them, or blunder purposely in order to bother them. In fact, the public service is no place for the "victims of circumstances."

There is in most States so much doubt what the two parties represent in this campaign that it is consoling to find one commonwealth where men know what they are fighting for. The Virginia *Territorial Enterprise*, the leading Republican organ in Nevada, says that in its State "the issue in this campaign is free coinage of silver, or the repeal of the Act of 1878 providing for the purchase and coinage of not less than two nor more than four millions of silver a month." The present Democratic Senator, Mr. Fair, who is a candidate for reëlection, is charged with giving "aid and comfort to the Administration in its hostility to silver," while the Republican Senator and Representative advocate "the free coinage of silver and the restoration of the great industry of Nevada." As for Republicans elsewhere who hold to other views, the *Enterprise* is decidedly outspoken, as may be seen from the following remarks in a recent issue:

> "Now, we denounce the anti-silver resolution of the Republican representatives of Massachusetts as sectional, selfish, and unneighborly, and affirm that the member of the Convention who inspired or penned it, and the delegates who gave it the approval of their votes, are alike unfit to advise or take part in the government of any populated area of the republic larger than a New England township. We stigmatize them as political frauds and financial mountebanks, who would not hesitate to turn the mining States and Territories into a desert in exchange for an advance of three cents a bushel on turnips."

Illinois furnishes a striking illustration of the value of a good high-license law as a temperance agency. The present law in that State compels every locality which permits the liquor traffic to tax it heavily, while it allows each municipality to enforce prohibition if public sentiment will sustain that policy. The Chicago *Tribune* has recently made an investigation as to the working of the sys-

tem, which shows that in several counties not an open saloon can be found, while in twenty-five counties the rule is virtually prohibitory, license towns being the exception, and in a large number of others the prohibition towns are in a majority. The *Tribune* concludes that prohibitory regulations now cover two-thirds of the soil of Illinois, while the area of such regulations is steadily widening. In the places which permit the sale of liquor, the tax is usually very high, reaching in some cases $1,800 or $2,000, and a burden of $4,000,000 or $5,000,000 is thus shifted from the taxpayers to the saloons. It would seem that any candid Prohibitionist must concede the superiority as a temperance measure of such a system to a State prohibitory law, which could not be enforced in localities where the majority favors license, and would simply cut off this great revenue.

The decision of Judge Potter in the case of Mr. Theodore Thomas and the Musical Union is of great importance. The Judge decides squarely in Mr. Thomas's favor, on the broad ground that the by-law of the Union which Mr. Thomas sought to have set aside "is in restraint of trade, contrary to the public policy, and void." The by-law required all musicians to be residents of this country six months before they could become members of the Musical Union. If they were not members of the Union, other members could not play with them, so that the law was practically a decree that all musicians should be without employment during their first six months in this country. Mr. Thomas brought over an oboe-player last year and insisted that he should play in his orchestra, though all its members were Union men. The Union tried to prevent this by heavily fining every man who played with the oboeist. Mr. Thomas paid these fines twice, and then obtained an injunction against the Union. The injunction is now made permanent.

The Democrats of the Thirtieth Congressional District, that of the city of Rochester, have unanimously nominated as their candidate Mr. Theodore Bacon, son of the late Rev. Dr. Leonard Bacon. Mr. Bacon was a strong Republican up to the time of Mr. Blaine's nomination, when he became a Mugwump and worked earnestly for the election of Mr. Cleveland. The present nomination was not sought by him, but was given with entire unanimity and great heartiness. He has accepted it in a speech which, like all his utterances, is a model of clearness and straightforwardness. Thus he said of his reason for abandoning the Republican party in 1884: "I judged that the Republican party, I will not say was less apt than the Democratic to give good government to the nation, but was formally determined to give it bad government." Having helped to put the Democratic party in power, he considered it still his duty, "so long as it gave honest, upright, capable government, to support it with as much zeal and earnestness as he had formerly exerted for its adversary." That the Cleveland Administration has been giving such government he says he believes, and is also convinced that the great mass of honest, intelligent people share his view. He declared it his purpose to stand with the Democratic party so long as it showed itself worthy to be stood with.

The Republican nomination for the mayoralty is a fresh illustration of the enormous difficulty of bringing about a union of decent people for the promotion of municipal comfort and security. We believe that nothing has occurred in the history of New York threatening its welfare so seriously as what is called "the George movement." When we say this, too, we are not indulging in a bit of the ordinary campaign blatherskite, for which, as our readers know, we have a thorough contempt. We mean that it is a movement which is giving an enormous stimulation to anarchical and anti social ideas among a considerable portion of the population. These ideas threaten, unless they receive some decided check, to put a strain on our police and courts of justice which they are ill-fitted to bear, and to cause interruptions in our transportation, manufacturing, and other business, and in the general security and commodity of life, which must seriously interfere with the growth and prosperity of the city. It is no light matter to have the opinion held by 40,000, or 30,000, or even 20,000 voters that all owners of houses and land are robbers, that all employers of labor are extortioners, that transportation ought to be gratuitous, and that the police in suppressing riots are simply the agents of the rich. It is a very grave matter indeed when these opinions are held in the main by foreigners whom it is difficult to reach through the press or the platform. Those who hold these opinions now in this city think they compose a majority, or nearly a majority, of the voting population. Nothing would do more to sober them and bring them back to saner notions of society and government than the discovery that they were only a small minority—that the great bulk of the community was united against them, and that society as now constituted among us, on the basis of liberty and order, was backed by overwhelming physical force, and was absolutely impregnable to assaults of either fanatics or criminals. Nothing, on the other hand, would do more to encourage and enflame them than the discovery either that they were a majority, or that, through the strifes and dissensions of their opponents, they were near enough to a plurality to reach it, if not at this election, at the next one.

Now, this last danger is the very one with which we are threatened to-day. The George movement began to subside rapidly after the union of the County Democracy and Tammany on Mr. Hewitt; it has revived with equal rapidity since the nomination of Mr. Roosevelt. Mr. Roosevelt's respectability and identification in the past with the cause of reform, by making it likely that he will draw a larger vote than any other candidate put up by the Republican Boys, is the very kind of restorative the George movement most needed. It promises a more nearly equal division among people who believe in property and police than anything else could bring about. It thus promises also to bring the George vote nearer to being a plurality than anything else could. Suppose it were to bring the Anarchists and Socialists and Strikers and Dead Beats of every description within 10,000 or 20,000 of full possession of the city government, what do sane Republicans suppose would be the effect on law, and order, and trade, and industry during the coming year? How many tons of articles, and pamphlets, and lectures do they suppose it would take to counteract among the Bohemian, and Polish, and German disciples of George, to say nothing of the ignorant Irish, the effect of this tremendous fact? There is not a city in the Union which would not feel and suffer from the blow; not a single branch of trade or industry which would not, in some degree, have its future clouded by it.

The *Sun* has made what appears to be a careful examination of the list of names pledged to Mr. George's support, and gives an analysis of them by districts. It appears from this that a large proportion of the names are German, for at the outset the *Sun's* account says: "In no labor movement hitherto have the German voters taken any active part. The work of advocacy and agitation has fallen into other hands. This year, however, the labor army is made up most largely of Germans and German-American citizens." The account shows that nearly 6,000 new voters have been naturalized by the George leaders; that there are on the lists many Hungarians, Bohemians, Frenchmen, and Austrian Germans; and that a large proportion of his followers have hitherto voted the Republican ticket. Just how much of the pledged following represents actual voters, nobody knows. The *Sun* thinks that at least 10 per cent. of the alleged 42,526 names are not those of voters. It is also impossible to tell how much duplicating of names there has been, or how many purely fictitious ones have been put on. One thing, however, is evident enough, and that is that the George vote is going to be much larger than that received by former labor candidates—quite large enough to make it the duty of every man who wishes to have his influence exerted most largely for the public good to deposit a ballot for Mr. Hewitt.

The first labor candidate who ran in this city for the mayoralty was John Swinton in 1874. He polled eighty-seven votes in all, the highest number in any one district being eleven. The first labor candidate for the Presidency was Gen. Butler, who was put in the field by the *Sun* in 1884. He got in this city 3,499 votes all told. But Henry George will do far better than either of them, because he has a more attractive programme, and because the Anarchist and Socialistic element in the city population has largely increased of late years. The demoralization which his candidacy is producing among them is very great. In some factories they have almost ceased to work, partly in order to attend his meetings, and partly because they think, if he is elected, work will be unnecessary, as all the poor will be supported out of the rents of the land, which will be paid by the rich to the State. There would be something very comic in the pretence of the Republicans that there is no social or political danger in the George movement, if the crisis were not really so serious.

In a manifesto from the Committee of One Hundred, which must have made a good many people smile, it is laid down that we must not mind Mr. Roosevelt's youth, because at his age "Napoleon had conquered Italy, and William Pitt had long been Prime Minister of England," and Alexander Hamilton was "the foremost statesman of America." But if this be true, why should it be an objection to Mr. Hewitt that he is "an old and infirm man," as the Committee gracefully says it is? Why should we mind this when Dandolo led the storming party at Constantinople when over eighty, and Radetsky won Novara at eighty-three, and Gladstone governed England at seventy-five, and Palmerston at eighty, and Moltke captured Paris at seventy-one? All this is sadly silly, and, let us add, very youthful stuff. The reason for objecting to Mr. Roosevelt's age, in spite of the youthful achievements of Napoleon, and Pitt, and Hamilton, is that Mr. Roosevelt is neither a Napoleon, a Pitt, nor a Hamilton. He is an estimable young gentleman, who has served three terms most usefully and creditably in the New York Assembly—a body which it does not take much more than common honesty and energy to dominate. The rest of his time he has spent on a Western ranch and in field sports. Do not let us be extravagant or absurd about this matter, young friends. Do not make Mr. Roosevelt ridiculous by too much zeal, and thus injure his future usefulness. A good way for you to test the comparative fitness of him and Mr. Hewitt for a great administrative office like the mayoralty, would be to go down town and try to find somebody who would be willing to put Mr. Roosevelt at the head of a great bank, or great factory, or great business organization of any kind, in which his mistakes would be punished by pecuniary loss, and then try to find some one who would *not* be willing to put such a concern in Mr. Hewitt's hands—not only willing but glad. On your way home read Mr. Roosevelt's own letter, written in 1884. It is an excellent letter, but his running for the mayoralty now, under his present auspices, shows that like most young men he is apt to change his opinions suddenly and violently.

In its issue of the 22d instant the *Times* had an article, entitled "Mr. Hewitt on Unearned Property," that we are constrained to pronounce dishonest. It was an attempt to prove that Mr. Hewitt's views on the rights of landowners are substantially the same as those of Mr. Henry George. For this purpose it quotes what purports to be an interview with Hewitt published in the Brooklyn *Eagle* some years ago, omitting the introduction and the conclusion, which were essential parts of it, and then misrepresenting the whole. The matter omitted by the *Times* is in these words:

"There is another phase of this question that I approach with some hesitation, because I am liable to be misunderstood, and perhaps it should not be touched upon at all if not discussed minutely and exhaustively. However, I can raise the question without being called to account, for I raise it for discussion. This is:

. . . . . .

"Every intelligent person knows that John Stuart Mill has discussed the question of increment, and has arrived at the conclusion that in some way it should belong to the people, and not the individual who happens to get possession of it. I think the subject will bear a more exhaustive discussion before the people than it has as yet received."

The matter that the *Times* does quote, and which comes between the two extracts printed above, is a statement of what is known as Mill's doctrine of the "unearned increment" of land values, viz.: that the value of land arising from the general movement of society ought to belong to society instead of belonging to the individual. Mr. Mill himself was never able to formulate a plan by which society could take possession of the unearned increment without injustice, and he was always careful to insist that the present value, before the unearned increment doctrine should be put in force, rightfully belonged to the present owner. It was a sort of dream or intellectual speculation on Mr. Mill's part. Mr. Hewitt, as the text shows, offered it as one of the unsettled questions of political economy, without committing himself to any opinion on it except that it was worth discussion, at the same time warning the reader that it was one of those subjects that should be discussed exhaustively or not at all.

The *Times* makes it appear that Mr. Hewitt yielded his full assent to the unearned increment doctrine, and that this is substantially the same as the Henry George doctrine, that all property in land should be confiscated. "What is noteworthy in these remarks of Mr. Hewitt's," says the *Times*, "is that they embody a statement of the right of property which Mr. George could and would, we think, accept without any qualification, and they suggest the duty of providing for the enforcement of an alleged right of the workingmen—a duty which Mr. George may very justly say that he, for his part, has done his best to perform." What is more noteworthy just now is, that the *Times* did not publish honestly what Mr. Hewitt said, but conveyed a false impression to its readers. It is noteworthy, too, that Mr. George scouts the idea that there can rightfully be any property in land, and that he opposes Mill's contention that land-owners should receive compensation for the property they or their fathers before them have earned and paid for. Mr. Mill's speculations, it should be remarked, never went so far as to consider the case of land-owners whose property had depreciated in value by the general movement of society, nor the case most common in this country, where the general movement of society is principally a movement of pioneer farmers to the public lands—an initial step to the creation of land values without which there could be no other general movement. Probably these considerations were among the reasons why Mr. Hewitt, in the interview attributed to him, cautioned his readers not to make hasty generalizations or jump at conclusions on this subject upon a one-sided statement of it.

Mayor Grace did excellent service at the Hewitt meeting last week in correcting the extravagant statements about the cost of the city government in which Mr. Roosevelt has been indulging. Such statements are to be regretted, because they divert attention from the greatest source of municipal troubles, the control over the city government exercised by a corrupt Legislature. For instance, the city expenditures last year were $35,736,320, but of this the Board of Apportionment actually controls only $13,594,741, the other $22,141,579 being imposed on the city by Albany legislation. So that if the local authorities were never so desirous of economizing, they could only do so in this smaller amount, out of which they have to provide for the public works, the public parks, the public schools, the public charities, the public health, and the street cleaning. There is not another city in the world in such a fix.

The efforts of some of the friends of female suffrage to establish it by getting women's names on the register, in some sly manner, led some of the inspectors to ask the Corporation Counsel for his opinion as to their duty in case any women presented themselves to register or vote. In an evil hour for him he decided against the claim, and said he would on behalf of the city resist in the courts any attempt to procure a mandamus addressed to the inspectors. This has drawn forth a letter from the "Ladies' Suffrage Committee," in which he is denounced in good old-fashioned style as an "artful dodger," a tyrant and usurper, and an impertinent person, whose design is to mislead the Court, and "entrap voters unfamiliar with legal proceedings." But he will not escape the proper consequences of his misdeeds, because "the rising tide of opinion is to overwhelm him and his opinion." Lawyers and judges will evidently have a hard time wherever the women are in a majority at the polls, because they will be required to embody in their opinions not only what the law is, but what it ought to be, which is a much more difficult thing to find out.

The Cutting case gave to the news-gatherers of the Southern frontier a certain prominence as authorities on Mexican affairs, which they do not appear to be willing to relinquish without a struggle. Their method seems to be to mass together all the vague rumors which come to their ears, and telegraph them to the North as what is "imminent" in Mexico, not stopping to notice that their prophecies are self-contradictory and absurd on the face. Their latest prediction is that President Diaz is to be "overthrown" by the original and effective means of making him Dictator for ten years. What they had heard of, in some confused way, and were trying to convey, is probably this: There has been much talk in Mexican political circles of the desirability of prolonging the Presidential term of office. A few days ago the *Nacional*, an Opposition paper, published the rumor, which it acknowledged to be wholly irresponsible, that some of the friends of General Diaz were talking of calling a constituant Congress to make a new constitution for the country, and that they had gone so far as to suggest that Diaz be made Dictator for ten years, so as to insure a fair trial of the new organic law. Thus this floating newspaper gossip, by the time it reaches Arizona, becomes a forecast of the most novel revolution in history—a revolution directed against a President by his friends with the object of making him a Dictator.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, October 20, to TUESDAY, October 26, 1886, inclusive.]

DOMESTIC.

PRESIDENT CLEVELAND visited Richmond, Va., on Thursday with members of his Cabinet, and was received with enthusiasm. At the Agricultural Fair he made a brief address to the people in which he said: "The present Administration of the Government is pledged to return for husbandry not only promises but actual tenders of fairness and justice, with equal protection and a full participation in national achievements. If in the past we have been estranged, and the cultivation of American citizenship has been interrupted, your enthusiastic welcome of to-day demonstrates that there is an end to such estrangement, and that the time of suspicion and fear is succeeded by an era of faith and confidence. In such a kindly atmosphere and beneath such cheering skies, I greet the people of Virginia as co-laborers in the field where grows the love of our united country. God grant that, in the years to come, Virginia—the Old Dominion, the mother of Presidents, she who looked on the nation at its birth—may not only increase her trophies of growth in agriculture and manufactures, but that she may be among the first of all the States in the cultivation of true American citizenship."

President Cleveland has appointed Daniel Lockwood of Buffalo to be United States Attorney for the Northern District of New York. Mr. Lockwood has the distinction of having nominated Mr. Cleveland for Mayor, Governor, and President.

President Cleveland on Tuesday directed the suspension of M. E. Benton (Dem.), United States Attorney for the Western District of Missouri, and of William A. Stone (Rep.), United States Attorney for the Western District of Pennsylvania. District-Attorney Benton is now and has been for some time past engaged in addressing a series of political meetings throughout Missouri. The President endorsed the paper setting forth the above statements, "Let this officer be suspended at once," and returned it to the Attorney-General for an enforcement of the order. The suspension of District-Attorney Stone was made for similar reasons.

The Administration has taken official notice of the charge of the Philadelphia *Press* (now denied) that an internal-revenue official of Philadelphia had issued a circular and attempted to levy assessments upon Federal office-holders. If the charges had been proved, there is the highest authority for the statement that the Administration would have taken summary action.

Commissioner of Pensions Black writes to a Federal office-holder in California, who has been assessed for political purposes: "There are no circumstances under which any assessment can be levied upon a Federal office-holder, and payment thereof compelled. Your official position is not at stake in consequence of the attitude which you have assumed. If you had yielded to the demand of any self-constituted committee, and had paid an assessment, so called, your official position would have been at stake. The money earned by a Federal official in the discharge of his duties is as entirely his own as is that accumulated from any other source, and is as little subject to be drawn upon by any committee, organization, or individual, save its rightful owner."

The Interior Department has issued an order that Indian agents shall not make application for passes to railroad companies, and shall not as a rule accept favors from corporations. The departments are generally endeavoring to place the public service on a high plane, but it is reported that some difficulty is found in obtaining competent persons for Indian agents, because of the inadequate compensation which the law allows. The position of Indian agent is a very trying one, and the climate where the agencies are located is very severe. The positions should be held by persons of much ability and high character, and, for the very low salaries, it is not always possible to induce the right persons to enter the service.

The Civil-Service Commissioners have decided that hereafter the examinations of applicants, whether for appointment or promotion, shall be carried on under the supervision of the Civil-Service Commissioners at Washington, and not be left to the discretion of the local Board of Examiners. It is generally a fact that the members of the local board and the appointing officers, without special inquiry, know the politics of the applicants, and for that reason it has been deemed expedient that the examining papers should be referred to Washington, where the grading will be done and where the examining authorities will be completely removed from any local influence or prejudice.

The United States Government has informed Spain that it will not withdraw the proclamation reëstablishing the 10 per cent. duty on Spanish imports from October 25.

Secretary Endicott has written to Gen. Sheridan: "By direction of the President it is ordered that the hostile Apache adult Indians, fifteen in number, recently captured in Mexico and now at San Antonio, Texas, including Geronimo, Natchez and Percio, be sent under proper guard to Fort Pickens, Florida, there to be kept in close custody until further orders. These Indians have been guilty of the worst crimes known to the law, committed under circumstances of great atrocity; and the public safety requires that they should be removed far from the scene of their depredations and guarded with the strictest vigilance. The remainder of the band captured at the same time, consisting of eleven women, six children, and two enlisted scouts, you are to send to Fort Marion, Florida, and place with the other Apache Indians recently conveyed to and now under custody at that post."

The following telegram from Gen. Miles, dated Fort Apache, Ariz., October 9, has been transmitted to the War Department: "A detachment under Capt. Cooper, Tenth Cavalry, has just arrived at the post, having captured Mangus and his whole party, consisting of Mangus, two men, three squaws, and five children; also, twenty-nine mules and five ponies, all of which were brought in. Viele, Captain, commanding." The Indians above referred to formed a part of Geronimo's band, but separated from that warrior's command last April when he offered to surrender to Gen. Crook. Nothing definite was known of Mangus's movements after the separation, but it was reported that he had escaped into Mexico and had been killed by the Mexicans.

A decision of the United States Supreme Court, rendered on Monday, on the subject of inter-State commerce, is of great importance. The commercial consequences of a logical enforcement of this decision will be obvious. Briefly stated, the majority of the court say: "We must, therefore, hold that it is not, and never has been, the deliberate opinion of a majority of this court that a statute of a State which attempts to regulate the fares and charges by railroad companies within its limits, for a transportation which constitutes a part of commerce among the States, is a valid law." The case came up from Illinois, and is known as the case of the Wabash Railroad. The basis of the suit was the charge that the Wabash, St. Louis and Pacific Railroad Company had, in violation of a statute of the State of Illinois, been guilty of an unjust discrimination in its charges for the transportation of freight.

The New Jersey Greenbackers on Friday nominated Erastus Potter for Governor.

S. S. Cox, Minister to Turkey, has accepted the Democratic nomination for Congress in the Ninth (New York) District. He has resigned as Minister.

The Democrats of the Thirtieth (New York) Congressional District have nominated Theodore Bacon of Rochester. He is one of the most prominent attorneys of that city, and had always been a Republican until 1884, when he supported Cleveland.

It is reported from Illinois that there is a very determined effort to defeat Mr. William R. Morrison for reëlection. The opposition proceeds not only from the Republicans and protectionists, but from personal opponents in his own party. The protectionist opposition is composed of the Republicans and of a certain faction of the labor element under the lead of Jarrett, the noted labor agitator of Pittsburgh. He is reported to be at work in that district in opposition to Morrison, and to be supplied with ample funds from some quarter.

It is said that Collector Magone of this port intends to cause a careful examination to be made as to the special qualifications of any applicant for any of the higher positions in his gift, before the candidate, however recommended otherwise, can hope to receive an appointment. Such an examination may be made by the Collector in person or be delegated by him to experts in whom he reposes confidence. With the introduction of this plan, the system of examination as to fitness before appointment will apply to all positions under the Collector, except those of simple laborers.

The steamship *La Bretagne*, with the French delegates to attend the unveiling of the Statue of Liberty on October 28, arrived in this city on Monday and were welcomed by the American Reception Committee. The French guests number nearly a score, among them being M. and Mme. Bartholdi, Count Ferdinand de Lesseps and his young daughter, Senators Admiral Jaurès and Gen. Pellissier. Deputies Spuller and Desmons, M. Deschamps, Vice-President of the Municipal Council of Paris; M. and Mme. Charles Bigot, Delegate of Press Syndicate; M. Léon Robert, Chief of the Cabinet and Minister of Public Instruction.

Despite the rain, there was a large assembly on Tuesday evening in the Academy of Music in this city, where a reception was given to the French delegates. Speeches were made by President Lafon of the Cercle Français de l'Harmonie, Frederick R. Coudert, Senator W. M. Evarts, M. Spuller, and M. Deschamps. The speaking was followed by a vocal and instrumental concert.

The Board of Visitors of Andover Theological Seminary on Tuesday decided that they had original jurisdiction in the premises over the case of the Andover professors charged with heresy.

Another sharp shock of earthquake was felt in Charleston, S. C., and other Southern cities on Friday.

The Adams Express car attached to passenger train No. 3 on the St. Louis and San Francisco Road, which left St. Louis at 8:25 on Monday night, was robbed of over $50,000 in cash between that city and Pacific, Mo.

Mason W. Tappan, Attorney-General for New Hampshire, died on Sunday at the age of sixty-nine. He was a prominent anti-slavery man before the war, and for twenty-five years he was one of the leading lawyers of the State, and has been prominent on the stump for the Republican party. In 1872 he was one of the main supporters of Horace Greeley.

Cornelia M. Stewart, widow of the famous merchant, Alexander T. Stewart, died in this city somewhat suddenly on Monday morning. Her health had been in a delicate condition for some time. She was eighty-three years of age.

FOREIGN.

Gadban Effendi, the Turkish representative at Sofia, on Wednesday informed the Bulgarian Ministry that he had been instructed to act in concert with Gen. Kaulbars, the Russian agent, whose arrival at Sofia, Gadban Effendi says, he will await before making for Turkey definite proposals to Bulgaria; strongly advising the Ministry, however, in the meantime to concede

the Russian demands, and postpone the meeting of the Great Sobranye to elect a successor to the Bulgarian throne. So soon as Gadban Effendi's information was received, a special Cabinet council was held to consider what he had presented. The result of this council was that Gadban Effendi was informed that "the Bulgarian Government would no more brook Turkish than it would Russian interference, but would resist both, with the comforting conviction that any misfortunes likely to overtake Bulgaria would never compare in seriousness with the retribution awaiting the infatuation of Turkey."

Prince Alexander has requested the Sobranye to ignore him as a candidate for the Bulgarian throne. Communications have been received in Vienna from the Bulgarian Government, stating that they do not intend to nominate Prince Alexander as a candidate for the Bulgarian throne, and that they do not expect that the business of electing a ruler can be proceeded with for a long time yet.

The chiefs of the Bulgarian Sobranye have decided to send to the Czar a deputation who will be instructed to complain of the action of Gen. Kaulbars as Russian agent in Bulgaria, and to ask the Czar to name a candidate for the Bulgarian throne. The Russian consuls in Bulgaria have been ordered to refuse passports to the members of the proposed delegation. Gen. Kaulbars has informed the Bulgarian Government by note that Russia will regard the proceedings of the Sobranye as null and void. A despatch from Athens on Monday said a rumor was current there that the Czar had consented to occupy Bulgaria.

The Sultan has commanded the Turkish Admiralty to expend $7,500,000 on new men-of-war.

The Earl of Iddesleigh, British Foreign Secretary, is engaged in an active exchange of communications with the Porte respecting the British occupation of Egypt. It is said that M. Waddington, French Ambassador to London, acting under instructions from his Government, has protested on behalf of France against the British occupation of Egypt. France and Turkey are in complete accord in their opposition to the occupation, and Russia supports them. It is also reported that Germany has joined France and Russia in urging England to evacuate Egypt.

The London *Standard* asks Lord Randolph Churchill to deter France, in a few terse and pointed sentences, from trying to embarrass England in the Egyptian question. The *Times* hopes that Lord Iddesleigh, the Foreign Secretary, will tell M. Waddington, the French Ambassador, plainly and firmly, that England will judge for herself when her task in Egypt is finished.

A conference of Tories was held at Bradford, England, on Tuesday. There were 800 delegates present. The conference adopted imperial federation as an article of the Conservative faith. Lord Randolph Churchill, speaking on a motion approving Lord Beaconsfield's Eastern policy, said the Government would follow that policy as closely as the changed condition of European affairs would allow.

In the course of his speech Lord Randolph said: "Official accounts reaching the Government of the social condition and prospects of Ireland are of an encouraging character. There is a good harvest and a marked recovery in prices, and from all we can learn, though accurate information is difficult to obtain, rents are being fairly paid throughout the country. Landlords have helped greatly to lessen the difficulties of the crisis. The Irish tenants also have coöperated in a signal manner towards the restoration of order. The people are rapidly appreciating the full significance of the last appeal to the electors, and will gradually shape their political and social action in accordance therewith. If the Unionists firmly follow up the victory they have gained, I think we may conclude without any doubt or hesitation that the question of the maintenance or repeal of the Union is settled for at least two generations. On questions of foreign affairs I have nothing to add or detract from my Dartford speech, first, because Lord Salisbury, at the Lord Mayor's banquet, gave his opinions thereon, and, second, because I have been during my holiday isolated from knowledge of official affairs; not, as some silly hysterical people supposed, in close contact with European statesmen." While denying that the Government had become converted to the "three acres and a cow" policy, he said that they had always favored extensive land reform, and would endeavor to produce a genuine and necessary measure, which, if it failed to go to the length of Jesse Collings's desire, would yet be much too good and valuable to be strongly resisted by his party. Three things Lord Randolph was able to state with certainty: first, the Government did not intend to grant home rule to Ireland; second, it did intend to deal with local government in Ireland; third, it did not mean to be hurried or hasty in that dealing. He asked that earnest attention be given to his remarks on procedure. He said: "I wish to fully and frankly admit that I have changed my mind on the question of the power of closing debate. When both great parties of the State firmly opposed the repeal of the Union and Parnellite obstruction, the Conservatives looked upon closure as a startling and unneeded innovation. They may have been wrong, but what we now deal with is an absolute change in the state of affairs, since the Radical separatists deliberately tolerate and assist the obstruction tactics of the enlarged body of Parnellites pledged not to allow any legislation until home rule is granted. We, therefore, feel certain of your hearty support in changing our minds with the altered circumstances" A resolution was adopted expressing confidence that the Government would follow Lord Beaconsfield's policy, and would vigilantly guard British interests against Russian aggression, and especially prevent any seizure of Constantinople.

Speaking at Newcastle on October 19, Lord Rosebery, who represents Mr. Gladstone's mind perhaps more closely than anybody else, said: "I do not think that on the part of the real Liberal party in the country, those who have stuck close to their colors, there is any wish to be otherwise than conciliatory to our Unionist friends. There are two things we cannot desert, but short of these two things there are many lines on which we might meet again. We cannot desert the particular lines of our Irish policy, and we cannot desert our leader. Some of them do not like our Irish policy, some of them do not like our leader. These are our two vital points. I do not believe an alliance between the Tories and Unionist Liberals can last longer than this Parliament. I do not think it can last as long."

Mr. Gladstone recently wrote to the Leith Liberal Club: "Your club was formed during an epoch of a dangerous schism which every good Liberal will desire to heal. It is the object of the Tories to keep the discussion alive by postponing the question upon which it arose. I rejoice to see Lord Monck, a dissenting Liberal, suggesting a *rapprochement*. I hope he will continue his patriotic labors."

Mr. Justin McCarthy, Parnellite, has been awarded the seat in the House of Commons which he contested for the recent election against Mr. Charles Edward Lewis, Conservative. Mr. Lewis has sat for Londonderry ever since 1872. In the recent election the poll, as counted, gave Mr. Lewis 1,781 votes, and Mr. McCarthy 1,778, and the seat was awarded to the former, who up to date has occupied it, although Mr. McCarthy at once entered a protest and has ever since been pushing his claim to the seat, basing his case largely upon the allegations of illegal electioneering methods upon the part of his opponent. On Saturday Mr. Lewis's counsel abandoned his client's claim, and the seat was declared to be Mr. McCarthy's. Mr. McCarthy also has the seat for Longford County, which he obtained without opposition.

The Most Reverend Thomas Nulty, Roman Catholic Bishop of Meath, preached a powerful sermon in Dublin recently against moonlighters. He denounced in the strongest terms the acts perpetrated by them, called them the greatest enemies Ireland had to-day, and said the outrages they committed served but to perpetuate landlordism, which otherwise, he declared, was doomed.

Lord Clanricarde, in a letter to the London *Times*, declares his intention to concede a reduction in rent to his tenants. This, if carried far enough, will probably avert the threatened outbreak at Woodford, Ireland.

Gen. Lord Wolseley, Adjutant-General, has issued a circular to the English Army, intimating that the Duke of Cambridge, Commander-in-Chief, is dissatisfied with the small progress made in their military training. During the recent inspections, the circular states, the Duke observed that many officers of all ranks evinced great want of knowledge of the duties vitally important to military efficiency, and he strongly insists that the officers shall devote more time and attention to the instruction of their troops. The *St. James's Gazette* says that the Duke of Cambridge, in the freedom of private conversation, expresses the opinion that many of the officers in the British Army are "not worth their salt."

The Earl of Iddesleigh, Minister for Foreign Affairs, and Sir Lyon Playfair have been nominated for the Rectorship of Edinburgh University.

Maj.-Gen. Sir H. T. Macpherson, Commander of the British army of occupation in Burmah, is dead. He will be succeeded by Gen. Roberts.

The loss of vessels along the Wicklow coast of Ireland by the recent storm aggregates $200,000, and, unless relief is afforded, there will be much distress throughout that region.

The Berlin *North German Gazette*, Prince Bismarck's organ, says that Germany has no cause to complain of England's colonial policy. The few questions under discussion between Germany and England will be settled justly and conformably to the interests of both parties.

There have been 150 suicides in the German Army during the past eight months.

The German War Office has decided that all sub-officers must learn telegraphy.

Gen. Von Moltke on Tuesday celebrated the eighty-sixth anniversary of his birth. His health is vigorous.

Baron Frederick Von Beust, the distinguished Austrian statesman, is dead at the age of seventy-seven. He was born in Dresden. It was after the war between Prussia and Austria that Baron Von Beust rose to great prominence. He became Minister of Foreign Affairs in Austria, and his talents as a statesman were henceforth devoted to his adopted country. Becoming Chancellor of the Empire in 1867, he inaugurated a liberal policy and soon became a favorite of the people, overcoming the prejudices which they had at first felt towards him as a German. Himself a Protestant, he labored for religious toleration. He resigned the post of Chancellor of the Empire in 1871, and soon after was appointed Ambassador to England.

The Austrian Budget shows a deficit of 17,000,000 florins.

The Spanish Government has created a Department of Public Safety similar to the French Department of Safety. It will be under the control of the Home Office.

French imports in 1885 decreased by £12,360,000 and exports by £10,504,000.

The French boycott on German beer has elicited strong comments from the press of Germany, especially as it was instituted in Gen. Boulanger's club.

MR. BLAINE AND THE ENGLISH CIVIL SERVICE.

MR. BLAINE talks so much, on all manner of subjects, that everybody who is condemned by the nature of his calling to read his speeches, perforce expects him every now and then to make a display of accurate knowledge about something. But nobody, we venture to say, has ever done so without being disappointed. We have never yet chanced to light on a speech or writing of his on any subject which he seemed to understand thoroughly, whether it be foreign politics or domestic law, political economy or agriculture. That he knows his weakness himself is evident from his vehemence and extravagance. When he is going full swing before a rural audience there is no limit to his audacity, and nobody knows the uses of audacity better.

The way he dealt with the English service the other day was a very good illustration of this. About the condition of the English civil service, of course, he knows nothing beyond the fact that admission to it is obtained in the main by competitive examination, and he hates competitive examination, and has been greatly bothered by it in his political career. He would long ago have attacked it publicly if he had not thought that it had in some inscrutable and disgusting way obtained a hold on popular favor. So he has waited patiently, sometimes in silence, though occasionally hinting that if the truth were known, or if he cared to speak out, he was himself the greatest and the only genuine civil-service reformer of them all.

Some relief, however, came to him the other day in the shape of a brief paragraph from the London correspondent of the *Tribune*, giving an account of the reasons for which a Commission of Inquiry into the condition of the civil service in England had been organized by the present Ministry. The paragraph said:

"Lord Randolph Churchill's Civil-Service Commission is reckoned a great *coup* for the Government and for himself. It means nothing less than a complete overhauling of the chief departments of state. In spite of civil-service reform their condition is believed to be worse than it was forty years ago. The cost of administration has enormously increased. It is doubtful whether the efficiency of the departments has not diminished. High salaries, short hours, excessive staffs, extravagant pensions, imperfect supervision over accounts, antiquated methods of business, and general incompetence and mismanagement—such are some of the charges now brought against the existing system. Lord Randolph Churchill aims at sweeping reforms, increased economy, increased efficiency. The only wonder is that Mr. Gladstone had not long since anticipated him. The proposal extorts praise even from political opponents. The Commission is admittedly composed of strong and experienced members."

Now here Mr. Blaine thought he had found opportunity. Said he to himself, "This shows what competitive examinations, which we have copied from England, lead to. They are a failure even in England. I will restrain myself no longer. I will not pretend to be a reformer of any kind. I will denounce this thing from the stump and expose the humbugs who have so long plagued me." And he did it. He thought that if there was anything wrong with the civil service in England, it must be the mode of admission which caused it.

But now comes one of the leading assailants of the condition of the English civil service, Mr. Benjamin Kidd, and tells the whole story in the last number of the *Nineteenth Century*. He gives a very bad account of its condition, but his complaints sound curiously in American ears, and they do not touch the principle of competitive examination at all. What he attacks is the scheme of 1875, which divided the service in the great public offices into a higher and lower division, with an impassable barrier between them, and each recruited by its own system of examination. The first division was intended to attract men of liberal education, received at the universities or great public schools, between the ages of eighteen and twenty-four. They are examined in the following subjects:

	Marks
English Composition (including Précis writing)	500
History of England (including that of the Laws and Constitution)	500
English Language and Literature	500
Language, Literature, and History of Greece	750
Language, Literature, and History of Rome	750
Language, Literature, and History of France	375
Language, Literature, and History of Germany	375
Language, Literature, and History of Italy	375
Mathematics (pure and mixed)	1,250
Natural Science; that is (1) Chemistry, including Heat; (2) Electricity and Magnetism; (3) Geology and Mineralogy; (4) Zoölogy; (5) Botany	1,000
The total (1,000) marks may be obtained by adequate proficiency in any two or more of the five branches of science included under this head.	
Moral Sciences: that is, Logic, Mental and Moral Philosophy	500
Jurisprudence	375
Political Economy	375

None of these is obligatory. A candidate can offer himself in as few or in as many as he pleases, and trust to his luck. But what a howl would be raised if the Civil Service Commission in this country proposed anything of similar severity. Well, Mr. Kidd's complaint is, that they are too severe, so severe that they do not attract the class of men for whom they were intended; that is, men competent to pass them successfully present themselves only in very small numbers, as they think they can do better in other callings than the Government service. The practical result of this is, that the Government is obliged, in order to fill the vacancies in the upper division, to accept candidates who get very few marks—that is, pass very badly.

Mr. Kidd's second complaint is, that the examinations in the second or lower division are not severe enough. The subjects are as follows:

	Marks.
1. Handwriting	400
2. Orthography	400
3. Arithmetic	400
4. Copying MS. (to test accuracy)	200
5. English Composition	200
6. Geography	200
7. Indexing or Docketing	200
8. Digesting returns into summaries	200
9. English History	200
10. Bookkeeping	200

Lads trained in the elementary schools pass these examinations in great numbers, but they are not, he says, good enough for the Government service. There are seldom men of any attainments (except the "three R's") among them. Consequently, while the upper division is starved for want of good material, the lower one is stuffed with bad material, and there is no communication between them by way of promotion or transfer. This is the whole story. Of course, such a system is likely to result in a defective supply of men for the higher positions, such as are filled under our system by appointments confirmed by the Senate; and the want is felt through all branches of the service, resulting in inefficient control and imperfect information about each other in the different branches. But no one in England proposes to remedy these evils by a return to the spoils system, or maintains that the working of the competitive system has been brought to perfection.

CHIEF ARTHUR AND MR. GEORGE.

MR. ARTHUR, the Chief of the Locomotive Brotherhood, has acquired the distinction which comes from always saying the right thing at the right time. At the meeting of the International Convention of the Brotherhood last week, he maintained his own high level. There were able and distinguished speakers there not belonging to Mr. Arthur's calling, men trained and practised in public debate. Yet Mr. Arthur's speech was much the most impressive of all that were made, not by reason of the position he holds, but by the plain truth and simplicity of what he said. It happens that another representative or spokesman of labor, and a very able man, too, is doing a great deal of talking to the people of New York at this time. The contrast between Mr. Arthur and Mr. George and their respective aims is very marked and radical.

That Mr. Arthur disapproves of the "Henry George movement," he had previously taken pains to make known, by saying that he disapproves of all steps to give a political turn to labor unions, since such steps lead to the arraying of class against class, and unsettling the foundations of the American idea of government. In his speech at the Convention he gave a very terse and pointed statement of the just relations subsisting between employers and employees in this country, from which we quote one pregnant paragraph:

"Neither the capitalist nor the laborer is wholly wrong. No one will justify oppressions complained of by candid and industrious workingmen. The simple statement of their case will command public sympathy and approval. On the other hand, the public at large will promptly condemn the wilful destruction of property and the interruption of business. It is also prompt to disapprove of interference with private rights. *There is room enough for every man in a country like this, and every man disposed to work must be allowed to find the chance.* The workingman of to-day may be the capitalist of five or ten years from now. He is interested in the considerate and friendly adjustment of all industrial questions."

The theory of Mr. George is, that there is no room in this country, or indeed in the whole world, for anybody except landowners. This is the alpha and omega of his social philosophy. It results from this totally false conception of human interests that all classes should be arrayed against the land-owning class, to the end of dispossessing the latter of their holdings without making them any compensation whatever. It is nothing to him that the land-owner may have invested the earnings of a lifetime's toil at the loom or the anvil in order to buy a farm, or get a few acres of ground or a city lot as a security and shelter for his old age. If he is a land-owner he belongs to the hated class against whom all other classes should array themselves. It is nothing to him that the American farmer is the most hardworking of all our workers, and that in the last analysis every other class of workers depends upon his success and could not live a year if he should stop working. He is a land-

owner and therefore a proper subject for spoliation. It is nothing to him that the life of the pioneer and the homesteader is one of suffering and privation scarcely conceivable even in a New York tenement-house. Eventually the pioneer and homesteader becomes a landowner. Eventually his land yields rent or has rental value. This, according to the George philosophy, should be summarily confiscated, and the demand of the homesteader for compensation should be met by saying, "Sir, you robbed me yesterday and the day before and the day before that. Why should I allow you to rob me to-day and to-morrow also? Your rental value is sending children to early graves, and young girls to brothels, and grown men to grog-shops and prisons, and the human race to perdition. We will not trouble ourselves about your compensation any more than we troubled ourselves about compensating the slave-owners for the loss of their so-called property."

Mr. George does not employ concrete examples of this type to illustrate his principles. He prefers rather the grasping railway corporation, with its land grant, the foreign lord who buys out the homesteader after he has subdued his land and perfected his title, the dweller in cities who derives an income from rents of land either rural or urban—anything for illustration except the hardworking farmer or the pioneer facing a winter in Dakota, with no food but frozen potatoes, and no fuel but twisted hay. But he includes them by the necessity of his iron-bound doctrine. Rental value is rental value, whether the possessor is poor or rich, useful or useless, good, bad, or indifferent. His scheme admits no exceptions. The admission of exceptions would scatter it in ruins.

Now, there is not the slightest danger that Mr. George's land doctrines will make any headway in this country. It is only the tendency of them that calls for examination at this time. Mr. Hewitt was perfectly right in saying that this tendency is towards class distinctions. The Henry George movement has acquired such force as it possesses solely because Mr. George's writings tend to draw a deep line between the land-owning class and all other classes. The picture he draws is that of a particular portion of the community rolling in wealth at the expense of the laboring masses. This has captivated the eye of a large number of voters who make no distinctions between sources of wealth, and to whom Mr. George's notions respecting rent and interest are as unintelligible as Sanskrit, and who, in fact, care nothing about those things. To them Mr. George represents only the so-called "conflict between capital and labor," which Mr. Arthur rightly says does not exist, but is only a misnomer for the conflict between thrift and idleness.

THE CZAR AND HIS PEOPLE.

Czar Alexander III. is at this moment the man in Europe whose disposition, temper, and intentions are most speculated about. His shadowy movements and violent expressions of an autocratic will are scrutinized with more eager curiosity even than the doings and utterances of Prince Bismarck, who is universally looked upon as the arbiter of the destinies of the Continent. The German Chancellor is felt to be in an expectant mood, and firmly bent on keeping his purposes, in the present complicated state of European affairs, undisclosed, while the Czar is irritated to a degree of passion which betrays him to the eye of the world. His excited temper, which menaces the peace of Europe, is attributed to a morbid condition brought about by constant exasperation and the never-slumbering fear of assassins. Stories are told of murders committed by his guardians and by his own hands upon persons innocently approaching him. Hereditary insanity is supposed by some to be at the bottom of his strange dealings with Bulgaria, for his great-grandfather, the Emperor Paul, was strangled as a madman, and his grand-uncle, the Grand Duke Constantine, was deemed more or less insane when the crown which belonged to him on the demise of Alexander I. was taken, not without his consent, by his younger brother Nicholas.

All these speculations, however, are of only secondary interest in the light of Russian history, profoundly examined. Russian autocrats are in reality autocrats only in name. The Czar's power is a "despotism tempered by assassination" and also by the will of a controlling portion of the people. Such it has been at least since the death of Peter the Great. It is the Czar's surroundings, supported or swayed by the higher ranks in the army, or a strong popular current, that in the long run shape the policy of the Empire. The wars of Alexander I., of Nicholas, of Alexander II., were wars of the nation just as much as were those of parliamentary England under the lead of Pitt, of Castlereagh, or of Beaconsfield. It was the ambition of generals and the fanaticism of the people (in a limited sense) that decided the powerful attacks on the Ottoman Empire in 1828, in 1853, and in 1877. Russia has had no conqueror, no warlike monarch, on the throne during the present century, but the Russians are a conquering nation. Alexander I. was peace-loving, Nicholas a domestic tyrant, content with his vast dominions and indirect dictation abroad; Alexander II., a good-natured and timid ruler. But not one of them was strong enough to resist a war pressure emanating from the restlessness of the army and the people. Enough is known of Alexander III. to warrant the assertion that he is neither bellicose nor greedy of conquest; that he would like to live in peace if he could; that he is not inclined to risk defeat and bankruptcy for the slender chance of one day entering Constantinople in triumph. Nor are his nearest advisers, De Giers, Tolstoi, and Pobiedonostzeff, men of fighting propensities. But he is pushed along by an irresistible warlike and expansive current formed by the desire of his army officers for promotion, emoluments, and distinction, and by the fanaticism of Slavophils, Panslavists, and revolutionary world-regenerators. His own passion is, in the main, a reflex one.

Ambition and the love of public activity find in Russia only one honorable field, that of war. Domestic activity is servitude under most degrading conditions. The highest officials in the civil service are mere tools. There is no parliamentary arena, no room for manly leadership through the press or the rostrum. Independence of view in the field of literature frequently leads to martyrdom in Siberia, insanity, or premature death in one form or other: Russian literary biography is full of evidences of this monstrous fatality. Honors, popularity, and real eminence, however, lie in the path of the brave soldier. The acts of the hero, of the commander, are his own; he is rewarded as a leader, not as a servile instrument. And Russia is not a decrepit country: myriads of her sons long for action, for fame, for manly excitement. Some look for gratification in the ranks of the army, others in those of conspiring fraternities, others enter the lists of masked journalism; all make for change, for expansion, for war. The followers of such loyal Slavophils as Aksakoff and Katkoff, the turbulent Panslavists of the school of Fadeyeff and Tcherniayeff, the would-be Skobeleffs and Gurkos, all meet on the same ground of aggressive hostility to the Turk, the Magyar, and the Austrian. The Nihilists help along in order to plunge the hated Government into perilous enterprises which might lead to a Russian Sedan, a republican overthrow, and a Moscow Commune. The Russian Government is at this moment, as it was in 1877, both honestly and treacherously goaded into war. Not a voice in the press is raised for peace, for the rights of Bulgaria, for moderation or caution. The heads of the army are anxious to fight. The Czar is maddened by the clamor. The more prudent counsellors must veil their advice. Fear of Germany alone keeps the sword in the scabbard—that is, keeps Alexander III. from speaking the fatal word of command. When France is ready to join in action, that word may be spoken—not because the Czar wills it from pride or madness, but because his nation's patriotism and chauvinism demand it.

THE LATEST ENGLISH MESSIAH.

Marlesford, Eng., September 30, 1886.

On Saturday, the 18th instant, died, near Lymington, a woman who, as the foundress of a crazy superstition, reminds one immediately of Anne Lee. Like that fanatic, though probably without conscious imitation, she gave out that she was the second Christ, and, like her, announced that she should never die. Of both, likewise, the sectators, in consequence of the boisterous and gymnastic character of what passed (with them) for devotional exercises, acquired the designation of Shakers.

Mary Ann Girling was the eldest of the fourteen children of William Clouting, by his wife Emma, whose maiden surname was Gibbs; both of them belonging to the agricultural laboring class. Her birthplace was Tinker Brook, a hamlet of Little Glemham, about four miles from Wickham Market, in East Suffolk. The house in which she first saw the light was torn down a few years ago.

Her schooling was of the scantiest. In her girlhood, besides being an intrepid hoyden, she made herself somewhat notorious by her lawless freedom with young men. For several years, later on, she earned her living as a domestic servant in various places; and she also found employment as a dressmaker. In due course she married a man of the name of George Girling, a

sailor by calling, of Thebarton, near Saxmundham. Her middle age, quite in keeping with her youth, was by no means reputable. For a while she, at that time, supported herself by helping to smuggle and peddle spirits. The story is still told by those who, on their word, were directly cognizant of the circumstances, that on one occasion, when the officers of justice were in pursuit of her, she boldly walked out of a house where she had been in hiding, disguised in her husband's clothes, and, with a cigar in her mouth, passed close by a policeman who was lying in wait for her, and thus effected her escape.

No one was at all surprised when, by and by, she left her husband and took up with another man. After a season she returned, indeed, to her home, but only soon to leave it again, and then for good, in company with a male companion, as before. Her plea was that her husband was deficient in piety up to her own high standard. From the very outset, her ways, for a religious teacher, were certainly abnormal. For instance, she and her new mate, who were incessantly peregrinating together, regularly and avowedly occupied the same bed; an arrangement which, not unnaturally, struck the uninitiated as hardly consistent for those who inculcated, as well as faith, conversation of good report. To the censorious comments which their mutual confidence provoked she was satisfied, however, with replying that her disciple and herself invariably passed the night with the Bible between them. And here it is as well to note that the facts already detailed, and, for the most part, equally those to follow, have been derived from persons, including some of her nearest kinsfolk and former neighbors, who are perfectly acquainted with her history.

At the beginning of her predicatory career she so little deviated, notwithstanding sundry startling eccentricities, from religionists of the humbler sort with whom she came in contact, that she was allowed for some months to hold her services in the Wesleyan Chapel at Stratford St. Andrew, a parish contiguous to Little Glemham. But it very shortly transpired that her doctrine, and no less her experiences and her expectations, had a complexion all their own. Yet for these the Methodist body is in no wise accountable; she having never belonged to it, though it has been erroneously stated that in her early days she was a member of that communion. She was not brought up a dissenter of any kind, but in the doctrines of the English Church.

Her fantastic flights becoming by degrees more and more audacious, she declared before long that she enjoyed visions of Christ. But her strange doings must be referred to very briefly. It must have been in 1870 that the writer remembers her collecting, near Wickham Market, a crowd of several hundred persons, in whose presence, as she had previously given notice, she promised to disappear heavenward in a chariot of fire. In 1871 she made an attempt to expound her views in the Lecture Hall at Woodbridge, and in the end excited a riot, as she had before excited one at Stratford St. Andrew. To say truth, Suffolk very little relished its new light. A period of propagandism in South London next ensued, its theatre being a railway arch in Walworth. If her vagaries were extravagant in the vicinity of her home, they there became ten-fold more so. In the meantime her followers, or at least such of them as were willing to cast in their lot with hers, hardly increased at all in numbers. Except for a seasonable windfall, it is probable that her sect would, thus early, have been dissolved. But it happened that she was enabled to realize her ambition of abandoning her vagrant life and of establishing a communistic settlement for herself and her dupes. How this was brought about admits of being told in a short space.

Among her first converts was Mr. Leonard Benham, a small farmer of Stratford St. Andrew, who, in his infatuation, gave up his holding, sold his all, and made over the proceeds, some £250, to Mrs. Girling, whom he thenceforward cleaved to, for better and for worse, in all her vicissitudes of fortune. There were with her, besides, husbands who had forsaken their wives, wives who had forsaken their husbands, and daughters who had forsaken their parents; such was the persuasiveness of her oratory. But, though her flock for two years or thereabouts consisted of only five men, seconded by eight female rustics, mainly ignorant girls, who had followed her out of Suffolk, and who, like herself, did nothing as yet towards earning a livelihood, Mr. Benham's little fund was inadequate to keep the wolf from the door indefinitely. Just when they were most pressingly in need of aid a maiden lady of the name of Wood, who possessed rather handsome means, was induced to adopt Mrs. Girling's notions, and came to their relief with a liberality which seemed to promise them a comfortable future.

The estate of New Forest Lodge, comprising a farm-house, the usual appurtenances, and thirty-one acres of land, situated in the Southern Division of Hampshire, was bought in 1873; and the whole of the purchase-money, except a thousand pounds, was paid down. When in its most thriving condition, the Community consisted of about a hundred and seventy-five members. If they had been left to themselves, they would, in all likelihood, considering their indefatigable industry, have promptly liquidated their debt and been sufficiently prosperous. But speedy ruin was before them, destined to be wrought by that spirit of wanton mischief and malice which entitles the baser population of rural England to an unenviable reputation for "general cussedness." Though they interfered with no one, others were perpetually interfering with them. Every Sunday they were besieged by intruders, who came solely to vex and to insult. Their crops were pillaged, their cattle were turned astray, their fences were destroyed, and they were molested, persecuted, and injured with relentless perseverance. This state of things continuing for a year and a half, to their progressive impoverishment, they were eventually evicted, and were obliged to seek new quarters.

After a prolonged experience of sharp suffering, the particulars of which must, for shortness, be omitted, they once more settled down, not far from the farm which they had lost, at Hordle. There, reduced to a patch of two acres and a group of miserable wooden huts roofed with canvas, they barely contrived, until they mostly dispersed, a few days ago, to stave off actual destitution. The colony, when broken up by reason of Mrs. Girling's death, had dwindled to seven men and thirteen women. Among the men were Mr. Benham, spoken of above, and a man of the name of Osborn, known as the "Elder," who was originally a farm laborer at Easton, in Suffolk. A master-shoemaker of Benhall, Suffolk, one Bather, who, like them, joined Mrs. Girling when she first took to the business of prophetess-errant, was less constant to his seductress, having long previously parted company with her.

Of Mrs. Girling's creed it is needless, in the interest of common sense and sane reason, to say more than a few words. In her "Last Message to the Church and the World," subscribed "Jesus, First and Last, Mary Ann Girling," she declares: "I am the second appearing and reincarnation of Jesus, the Christ of God, the Bride, the Lamb's Wife, the God-mother and Saviour, life from Heaven," and so on. This sample of her theology, or rather mateology, will amply suffice. There being, in the west of England, a reverend gentleman who professes to be a reproduction of the Holy Ghost, one cannot but wish that the two had been brought to conference, with a view to their coming to terms touching their hypostatic relationship. Like many an enthusiast before her, she claimed to be indented with the stigmata of the Crucifixion. Immunity from death was, she asserted, to be her portion; and the same immunity, she taught, would be participated by all whose faith was as firm as her own. When, therefore, her followers were gathered to the dust, one after another, she made as if she held herself warranted in regretfully denouncing them as devoid of faith in full measure. Equally with the "Peculiar People," she maintained that medical appliances are superfluous for the godly; and it may be that her acting in conformity with this whimsey hastened her end. That she was to die, her silly adherents brought themselves to account incredible. This conviction was the keystone of their fatuous scheme of credulity; and when she was carried off by cancer, there was no alternative available to them but to acknowledge that they had been wretchedly misguided.

On the morning of the next Wednesday succeeding her death she was interred in the churchyard at Hordle; the burial service being read by two clergymen of the Church of England. The chief mourner was her son and disciple, William, now of the age of twenty-seven or twenty eight. Her only other child, Jane, a few years older, who married a man of the name of Bailey, and is now a widow with two children, lives at Ipswich with her father, who keeps a small miscellaneous shop. Mrs. Girling, at the time of her decease, was in her sixtieth year. Of her thirteen brothers and sisters, eleven of whom lived to be adults, she is survived by ten.

The tone in which the English newspaper press has spoken of this woman is noticeable. Even the London *Times*, in its columns devoted to obituary memoirs, is very respectful regarding her "sad and peculiar history"; and other journals, both metropolitan and provincial, commemorate her largely as they would commemorate any highly meritorious exponent of sanctitude. Yet the conductors of those journals, and the contributors to them, are well aware, or ought to be, that, for example, "the limpid purity of her soul" was a thing of which there was not a tittle of trustworthy evidence, and that she differed in nothing, for the better, from a thousand and one bygone deluders of the vulgar and subverters of social order. As no one has suggested, or is likely to suggest, that she was mad, how, to keep to a single point, can those who treat her memory deferentially disclaim for her, as they emphatically do, the appellation of impostor, when confronted with her profession that she bore on her body the nail-marks of Christ's passion? Can they suppose that she really believed herself to do so?

In plain fact, hers, in all the fulness of their repulsive perfection, were the most salient characteristics of that half-savage, the uncultured East Anglian, in whom a combination of unabashable self-conceit, frontless impudence, and sullen obtuseness renders all but impossible the task of convincing him that he is ignorant. Utterly impervious to reason, she was at all times ready with an endless rigmarole of incoherent nonsense, which she discharged with an impetuous and unresting volubility that speedily put almost any gainsayer to flight as his sole resource, if he would escape being ignominiously deafened. More than once, when remonstrated with in public, by a competently learned and acute clergyman, for her bedlamitish pretensions to personal divinity and to immortality on earth, the brazen assurance and the torrent fluency with which she instantaneously replied to his objections, by stringing together a host of wholly irrelevant

passages of disjointed Scripture, were accepted by her gaping gulls as perfectly conclusive of her lunatic positions. Her mere ability to chatter and clamor shamelessly was taken by the simple creatures as the equivalent of sound argument, it being the only substitute for it that had any weight with them. And hence it was that her illiterate partisans were persuaded that her frantic balderdash was incapable of answer. In apology for her it is weakly urged that she was in sober earnest; as if the sincerity of the wilfully and responsibly wrong-headed were not much on the same plane with hypocritical pretence, as to meriting explicit condemnation.

F. H.

A FRENCH HAMLET.

PARIS, October 7.

I WITNESSED a few days ago, not without a feeling of melancholy, a representation at the French Theatre. I had not entered the place for months. It seemed like another theatre, and, if it had not been for Shakspere and "Hamlet," I should probably not have made the effort. I was surrounded by the public of the first representations, and this public seemed new to me—journalists, critics, political men, men of the clubs. Having a passion for "Hamlet," I felt alarmed at once by the cold, pointed, cynical remarks I heard on all sides; this was not the proper mood for the occasion. After the first scenes one of my neighbors said to a friend: "I like it better in English"; and the friend retorted, "And I like it better in music."

That anybody should like it better in English is only natural. I had seen "Hamlet" played, a few months before, at the Porte St.-Martin, with Sarah Bernhardt as *Ophelia*, in a new translation by Richepin, I believe, very literal, in prose; and though the translator had kept as much of the original as he could, I received but little pleasure, except from Sarah herself, who is always surrounded by such a poetic halo, and who can never be very disappointing. The *Hamlet* who played with her made one think that "Hamlet" without *Hamlet* could, after all, be better than "Hamlet" with *Hamlet*. I recognized in him the *Emperor Justinian* of "Theodora," and he brought to the part of the Prince of Denmark a sort of Roman brutality and Byzantine stupidity. I cannot say that I have ever seen "Hamlet" played in English to my satisfaction (though I have seen it many times) except in America. Booth approached somewhat the ideal which I had formed, and which every reader of Shakspere must form for himself.

"I like it better in music," said one of my neighbors at the French Theatre; and, on reflection, I found that there was more in this sentence than appeared at first—more, probably, than my neighbor thought himself. An admirer of Shakspere (I speak of a real admirer) will always procure for himself more enjoyment in reading "Hamlet" quietly at his fireside, in perfect solitude, than by witnessing the representation of the drama. The words of the poet become for his mind a sort of air for variations, a foundation for many thoughts and dreams. The "Hamlet" of the mind will always do better than any "Hamlet" in flesh and blood. The reader is not carried away by the necessities of action; he can follow the Shaksperian thought as a butterfly follows a light; he has an infinite world before himself—he can see a thousand *Hamlets* and a thousand *Ophelias;* he goes down into the abyss of the human soul; he wanders at ease, though he always feels tied as with a cord. It is with music as it is with poetry. Music has this peculiar advantage, that it gives the mind a sort of mould in which you can pour anything you like. I do not much care if Nilsson, when she sings the part of *Ophelia*, exactly translates Shakspere in words; I know the words, and can repeat them to myself. Nilsson becomes at the time a delightful representation of what Shakspere himself contemplated when he thought of *Ophelia;* she is an ideal *Ophelia*.

I remember very well how horrified I was when Gounod set "Faust" to music; I thought it almost a sacrilege. "Faust," the greatest poem of our age—was it possible? I have not much changed my mind about the translator who attempted to translate "Faust" into short French metres: but I was soon reconciled to the music. I am not at all sure that "Faust" played textually in German could ever give complete satisfaction to a good judge. There is, so to speak, too much in it; no common actors could even approach Goethe. Music does not pretend to be an exact translation; it is only an interpretation. The musical drama gives us only the great lines, over which our fancy can play at liberty. I really believe that the most enthusiastic admirer of Goethe can derive some pleasure from Gounod's opera; that he can enjoy the quatuor in the garden of *Marguerite*, the great scene in the church. The French opera of "Hamlet" is not equal to the "Faust" of Gounod, but I have heard it sometimes with pleasure. The two characters of *Hamlet* and *Ophelia* are placed in it in their true light.

Let us return now to the "Hamlet" of the French Theatre. The translation is not a new one; it is the work of Alexandre Dumas, the father. On the 20th of February, 1847, Alexandre Dumas opened a theatre under the name of Historical Theatre. He produced first his own play, "La Reine Margot," and in December of the same year the "Hamlet" of Shakspere, *adapted* by himself and by M. Paul Meurice. The piece had already been tried by him in his private theatre at St. Germain. The principal part was played by an actor called Rouvière; he was, it seems, a good *Hamlet*, but he has never been anything since; this shooting-star disappeared a very long time ago. He had seen and studied Macready, and followed his example. Those who saw him at the time say that Rouvière was a problem in himself, like *Hamlet*. Was he an intelligent actor? or was he totally unconscious? Nobody could ever tell.

The same question may often be asked for actors and for actresses. It may, I am afraid, be asked for M. Mounet-Sully, the present *Hamlet* of the French Theatre. I must begin by saying that I have always had a great weakness for this actor. It is all one to me whether he be utterly conscious or unconscious, if art or nature have more to do with his talent; the talent is real, and, if it has a certain sort of naïveté, it is all the more delightful. Mounet-Sully is handsome; he has large, expressive eyes, good features, a very musical voice, full of tender, of grave, of thrilling notes, a voice which is a charm in itself, independently of all words. His person has a natural elegance, he never has a vulgar gesture; he may be affected, unnatural, even absurd, he is never common; he may walk, move, run, kneel, lie down, jump—there is always in all his movements the curious harmony we observe in a wild beast, in a lion or a tiger. I have seen him in many parts; the modern costume, so plain, so dark, so *étriqué*, does not suit him—he seems unhappy in it. He was born to play in the Romantic dramas or in the classic tragedy. He is a magnificent *Nero* in the "Andromaque" of Racine; he can wear the purple toga and move about like the master of the world. But he is chiefly to be admired in the parts which I must call the parts of madness, though the expression is only half correct. *Hernani*, for instance, is not quite a maniac, but he is half a maniac, he is almost outside of human nature; Mounet-Sully is *Hernani* himself. He plays the part as if he were posssessed by an inner force which he could not control: "Je suis une force qui va." It must have been one of the last pleasures of Victor Hugo to see the *Hernani* of his youth, of his feverish dreams, personified in this way. *Ruy-Blas* also is half a maniac, and *Ruy-Blas* is, after *Hernani*, one of the best parts of Mounet-Sully. I have found him truly admirable in a very different part, in *Œdipus* (a French translation of the sublime drama of Sophocles, by Lacroix); but *Œdipus* also has some of the characteristics of madness—he is not a free agent, he is the unconscious tool of a horrible fatality. I imagined to myself Mounet-Sully playing in Greek, before the Athenians; he really did appear like the victim of the gods, innocent and guilty at the same time, struggling in vain against destiny.

If I have gone into these details, it is in order to explain how Mounet-Sully seemed well prepared for the part of *Hamlet*. Without entering upon useless discussions about the character of the young Prince of Denmark, all the readers of Shakspere will see at once that there was something in the part which would naturally tempt an actor who could play well the parts of *Hernani* and of *Œdipus*. The attempt was difficult, all the more that the translation of Alexandre Dumas and Paul Meurice is very unsatisfactory, as all translations of Shakspere must ever be. When you have called it clever, you have said all you could say about it; but this cleverness is irritating. You have all along the impression of an effort, of a *tour de force;* you feel, nevertheless, cheated, and you cannot but suffer when you mentally compare the translation and the original. I felt at first very uncomfortable, and then I took the resolve to look upon the whole thing as I would on an opera, and to place myself in the frame of mind of a spectator of Gounod's "Faust." It was an opera without music, though the voices of Mounet-Sully and of Mlle. Reichemberg (who played *Ophelia*) are wonderfully musical. I derived, I must say, much pleasure from the experiment. I had before me a most interesting *Hamlet*. Mounet-Sully was especially admirable in the passages in which the madness of *Hamlet* becomes the most intense — the passages where you feel that the madness may have become real, and that the young Prince is on the verge of the precipice.

I must say something of the audience and of the critics. I am obliged to confess that the audience was often fatigued, and the critics often discontented. One of these critics, Francisque Sarcey, who writes for the *Temps*, and who is considered now the greatest authority in theatrical matters, has had the boldness or sincerity to write in his Feuilleton:

"Hamlet! you see, it is stronger than myself; I cannot succeed in being pleased with it. I say it candidly as it is, at the risk of being stoned. When I read it, it goes well. I am not so devoid of all intelligence and of all literary taste that I should not feel, even through a translation, the extreme merit of some passages, that I should not be transported by the awful greatness of a few scenes. But in the playhouse I am nothing but the public. Well! . . .

"The truth is I do not understand *Hamlet;* I don't know what he is nor what he wants. Is he mad or does he simulate madness? or, while he was simulating, has he fallen into his own trap, so that he is sometimes a comedian of madness and sometimes a true madman, without any possibility for us to know where the comedian or the madman begins? I do not know, and it seems to me that nobody knows. . . . Exegesis has only made the personages more problematical; volumes have been written on *Hamlet*, and the more people explain him the more unintelligible he becomes."

This is the verdict of the critic of the *Temps*, and it may also be the verdict of the commonplace, bourgeois public of the Rue St.-Denis, per-

haps even of the more refined but frivolous public of the Faubourg St.-Germain. Such shallow criticism, however, only expresses a sort of physical sensation, a sensation of fatigue, which may be shared by many people. But M. Sarcey goes a little too far when he speaks of the last scenes of the drama, and says: "If these inventions were not signed with the great name of Shakspere, I should find them at the same time monstrous and infantine." "Hamlet" is not a common drama, it is one of the most profound and extraordinary psychological works. Dr. Charcot has said that it is even a deep physiological work, and that the alienists of the day cannot find the slightest fault with *Ophelia*. It will always be allowable to say to many:

"The Lord Hamlet is a Prince out of thy sphere."

But the dramatic element is still so strong and so powerful that, notwithstanding its obscurities and its lyrical parts, "Hamlet" will always carry the suffrages of the multitude.

Correspondence.

THE INDIANA CIVIL-SERVICE REFORM ASSOCIATION.

To the Editor of The Nation:

Sir: In the *Nation* of October 21 I notice a letter from Mr. W. V. Stuart, charging that the Indiana Civil-Service Reform Association is being used for party purposes.

The letter does not correctly state the situation. The former Executive Committee consisted of six members—three Republicans, one Democrat, and two Independents. (I include as Independents only those who voted for Mr. Cleveland, and who have since been anxious for the success of his Administration.) Mr. Stuart says this number has been changed to four; on the contrary, it has been changed to ten. The places are not yet all filled, but so far three Independents and one Democrat have been appointed. Two members of the Executive Committee, a Republican and an Independent respectively, and the President—a Republican who did not vote for Blaine—investigated the Insane Hospital. They found a shameful and corrupt condition of affairs, and the facts reported by them have not been controverted by Mr. Stuart or by any one else. The investigation embraced only the present administration of the Asylum. The report was given to the press regardless of party. It was published by order of the Executive Committee, five members voting for it, and the sixth, a Democrat, not attending, although notified of the business to come before the meeting. Two of the signers of the report have been making Republican speeches in this campaign, both incessantly urging civil-service reform from the highest stand. The report contains the following recommendation:

"The mismanagement of the Asylum—a peculiarly great evil, considering the character of the institution—lies in that abominable system by which the welfare of the unfortunate beings for whom the benevolence was created, is made a secondary consideration to some supposed party advantage or political necessity; and no permanent improvement can be looked for while this continues to be the case.

"The obvious remedy for abuses connected with this institution is the enactment of a law by the General Assembly *providing for competitive tests of fitness to be applied to all persons seeking employment in the Asylum, followed by a suitable probation, prohibiting appointments or removals for political reasons, and placing the administration of this Hospital, as well as the other benevolent institutions of this State, in the hands of non-partisan Boards of Trustees.* We would also recommend that the position of Trustee of the Insane Hospital should not be accompanied with any salary. In most of the States such office is purely honorary, and is filled by a much better class of men than in Indiana."

Mr. Stuart came to the annual meeting stating that he had not read the report, but that "its only effect would be to transfer the abuses from Democratic to Republican hands," and he asked the Association to investigate former Republican management. Republican management ceased seven years ago. It was undisputed in the discussion that that management was partisan and defective, and the Association properly refused to investigate what had ceased to exist, to show a condition of things not denied.

Under the direction of the Association at that meeting the following circular has been sent to nearly all candidates for the coming General Assembly, and would have been sent to all had not the Democratic State Committee refused the names:

Indianapolis, October 16, 1886.

Dear Sir: The Indiana Civil-Service Reform Association believes that it is important to take the civil service of the State, except the elective offices and possibly a limited number of other places, out of the domain of party politics. In pursuance of this object, the Association, at its recent meeting, directed that the following inquiries be sent to those who are now candidates for the General Assembly:

1. Are you in favor of placing the public institutions of the State under the control of non-partisan boards?

2. Are you in favor of extending the principles of the National Civil-Service Law, known as the "Pendleton Act," to the benevolent and penal institutions of the State and to other branches of the State civil service, where practicable?

It is to be hoped that the measures proposed will have the support of the members of the next General Assembly, without regard to party, and the Association asks that within the next ten days you will transmit to the Secretary your answers to the above questions for publication.

Respectfully,
James B. Black, Sec'y.

To this circular a considerable portion of the Republican candidates have made favorable answers, and one Democrat has replied. A State civil-service law seems almost within grasp, and it is to be regretted that Mr. Stuart should, by his impulsive action, tend to oppose that much desired end. Lucius B. Swift.

Indianapolis, October 23, 1886.

[We have received a letter, corroborating the above statements, from Mr. Wm. D. Foulke, President of the Indiana Association. The following extract is all that it seems useful to reproduce.—Ed. Nation.]

It is true that civil-service reform in Indiana finds many more adherents among Republicans than among Democrats. This, I think, has always been the case; it has certainly been so since the Democratic party came into power. A bill for civil-service reform, based upon the New York law, was introduced into our last State Senate. Every Republican voted for it; it was defeated by Democratic votes. The sentiment among Democrats here is almost unanimous in favor of the spoils system. I think no one will deny, not even the President himself, that the present condition of the civil service in this State is unsatisfactory. The Democratic party had omitted to place in its platform any plank favoring civil-service reform. Its administration of State affairs is extremely partisan. The Republican party, on the other hand, has pledged itself to incorporate the provisions of the national Civil-Service Act into the legislation of this State, in order that the abuses which prevail in our benevolent and reformatory institutions may be suppressed. The parties have divided upon this issue. Individual members of the Indiana Civil-Service Reform Association, including members of its Executive Committee, have therefore felt entirely free to avail themselves of the assistance of any party that would pledge itself to reform the monstrous abuses which exist; and some of them have taken individually an active part in the present canvass in behalf of the Republican party, which has promised a non-partisan administration of these institutions. These men believe that as individuals they would not be doing their whole duty to civil-service reform, if they did not do their best to bring these abuses before the people, even in a political campaign, and insist upon a reformation.

GEN. WEAVER AND CIVIL-SERVICE REFORM.

To the Editor of The Nation:

Sir: In writing this letter I do not desire to air any political grievances of the Democrats of this district. The public is not interested in them. I desire to illustrate, in a forcible manner, the viciousness of the system under which we live, for it is only by a recital of the facts in individual cases that the enormities perpetrated under the "spoils" system can be brought home to the people.

Gen. Weaver is not a civil-service reformer, but he has had much to say of the corruption of the Democratic and Republican parties, and two years ago he had a good deal to say, in a general way, of civil-service reform, it being an issue. Therefore, while we had no reason to expect more from him than from his predecessors, we *had* a right to expect as much. It is entirely safe to say that his distribution of patronage has been infinitely worse than anything we have ever known here. Indeed, men who are now supporting him frankly admit that the appointments he has had made are a disgrace to the community, to the party, and to the Administration. I do not mean to say they are all bad; some are good, but in a majority of cases, in fact, in nearly every case, a job or scandal has been disclosed. A history of all of them would fill a volume. I shall confine myself to three cases, but a similar story might be told of a score or more.

The Postmaster at Richland, in Keokuk County, Iowa, is one Stockman. In 1884 one Bassett held this office. After the election Bassett, believing his time short, offered to resign in favor of any Democrat who would buy his stock of goods kept in the same room or building. In said county lived Dr. Bartow and his three sons. They were all active, earnest Democrats, and had always been Democrats. One of the young Bartows bargained for Bassett's stock, conditioned on his appointment. He was appointed on a petition under the Arthur Administration. After Mr. Cleveland's inauguration Bartow, not doubting he should be retained, circulated a petition which received the signatures of seventy-six of the eighty-six Democratic voters in that township or precinct. But Gen. Weaver, it seems, had promised the office during the campaign of '84 to Stockman, and late in the summer of '85 Bartow, after long-continued efforts, was removed and Stockman was appointed. Bartow then got more signatures, affidavits and protests, and sent a friend to Washington to ascertain the cause of his removal. It was found that he had been removed for being an "offensive partisan."

Now, if the charge had been true, his removal would have been justified; but true or not true, Gen. Weaver used it only to accomplish his purpose, for he is not the man to remove one of his own followers for being an offensive partisan. The more offensive they are, the better they suit his purposes. Stockman, who is said to be a Greenbacker, at last secured his commission. During the controversy and the delay, the quarrel between the rival factions became very bitter. One Duke took up the quarrel for Stockman, and old Dr. Bartow for his son, and, two or three days after Stockman got possession of the office, the quarrel culminated in the death of old

Dr. Bartow, Duke burying the contents of a revolver in his body.

Montezuma and Grinnell, in this (Poweshiek) county, are Presidential offices. Mr. J. E. Latchem is Postmaster at Montezuma, and for a complete understanding of these cases it will be necessary to give details, at the risk of being tedious. During the campaign of '84 this Mr. Latchem and Mr. L. J. Anderson were the editors and proprietors of the *Poweshiek County Democrat*, a Weaver organ. The office had for years been under the control of the Montezuma *Republican*, a Republican organ. In consideration of the services of Messrs. Latchem and Anderson, Gen. Weaver agreed to transfer this office to the *Democrat*. After the election, it occurred to Mr. Anderson (who, by the way, is one of Gen. Weaver's most devoted henchmen) that he could do better than divide the spoils with his partner. He had a brother, recently released from the insane asylum, and he arranged with Gen. Weaver to secure the appointment of this brother, Mr. J. E. Anderson. When Mr. Latchem discovered that he had been "left," he raised a breeze, and, as the profits of the paper were small, he demanded of Mr. Anderson that he take his half off his hands. This Mr. Anderson did, giving his note, and securing the same, it is said, by a chattel mortgage on the whole. The note matured, or was about to mature, and Mr. Anderson had no funds with which to meet it. It was now Mr. Latchem's turn to squeeze, and the result was that Mr. Latchem took back his half-interest in the paper, Mr. J. E. Anderson resigned, and Gen. Weaver recommended Mr. Latchem. The *Democrat* is now able to live nicely on the proceeds of a Presidential postoffice, and shouts lustily for Weaver; and thus doth true patriotism receive its just reward.

Mr. D. S. Beardsley is the Postmaster at Grinnell. He was, until the date of the receipt of his commission, editor of the Grinnell *Independent*, a Democratic paper. Mr. W. S. Leisure had been for eighteen years Postmaster. He served as a private through the war, was wounded, and draws a small pension. He is a man of high character, quiet, of a retiring disposition, and never took any part in politics except to cast his vote. No man could be more faithful than Mr. Leisure has been in the discharge of his duties, and consequently his office was one of the most carefully kept offices in Iowa. His commission expired in December, 1885. His patrons very much desired his retention—so much so that, without any request from him, they circulated a petition, and in a few days secured the signatures of over six hundred *voters*, a good many of them Democrats. But Gen. Weaver said, "He must go." Mr. C. E. Schoff was and is the editor of the Grinnell *Signal*, a Greenback paper, a Butler organ in 1884, and always a Weaver organ. In consideration of his services Gen. Weaver promised to secure for him the Grinnell office. The Democrats bitterly opposed the appointment of Mr. Schoff, or of any other Greenbacker, and, for personal reasons that I never fully understood, many Greenbackers opposed Mr. Schoff. Either because of this opposition or because he feared Mr. Schoff could not be confirmed, Gen. Weaver at last, but very reluctantly, abandoned his project, but resolved to recommend no Democrat to succeed Mr. Leisure, unless he would consent to contribute to the support of Mr. Schoff and the *Signal*.

This proposition was made to Mr. J. W. Burroughs, a Democrat, who rejected it with contempt. Mr. A. J. Blakely, a Greenbacker, was also an applicant. The Burroughs and Blakely factions finally "pooled," and proposed Mr. Blakely's appointment, Mr. Burroughs to be his deputy. This proposition Gen. Weaver rejected because it made no provision for Mr. Schoff and the *Signal*, and all applicants were given to understand that no arrangement short of a division with Mr. Schoff would be countenanced. These negotiations were conducted through Mr. Schoff, and principally through Mr. Anderson, the hero of the Montezuma episode. Mr. Anderson was at the time Chairman of the Democratic County Committee, and for a brief period the County "Boss."

At last Mr. Beardsley acceded to the demands of Gen. Weaver and Mr. Schoff, and consented to give Mr. Schoff a certain percentage of the net proceeds of the office, the amount being, I believe, thirty-three per cent., the blackmail to cease when Gen. Weaver secured for Mr. Schoff an appointment satisfactory to him. Mr. Beardsley's name was then sent to the Senate. These disgraceful facts were laid before the Senate Committee, but they decided that, Mr. Beardsley being a man of good character and entirely qualified, they could not go outside and investigate any bargain that he might have made. Mr. Beardsley obtained his commission in August, and soon thereafter took possession of the office. The *Independent* and *Signal* are now living on the proceeds of a Presidential office, and both are shouting lustily for Weaver; and thus hath true patriotism again received its just reward. Mr. Schoff does no work in the Post-office of any kind, and yet he draws part of the salary of a Federal office. He is a sort of pensioner upon the Government, and yet he never fought any of its battles.

In conclusion I will say that no one can complain of the manner in which Mr. Beardsley performs the duties of the office. Probably no man better qualified could have been found; but Mr. Beardsley's friends would be glad to see him released from this shameful agreement, and the friends of civil-service reform everywhere will be glad to see the end of a system that makes such things possible. DAVID W. NORRIS.

GRINNELL, October 4, 1886.

[We retain the date at which the above letter was written. For reasons personal to the author we have held his communication over (at his request of a later date) to avoid the suspicion of being intended to influence the approaching election.—ED. NATION.]

A "DISLOYAL" TEXT-BOOK.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation*, No. 1111, commenting on the stir made about Barnes's 'History of United States,' you say the book has been in use fourteen years without a word of fault being found with regard to its loyalty. This may be true of Newark, but is not of Salem, Marblehead, and other towns of Essex County. This objection has been repeatedly raised for ten years. Are you not mistaken regarding the surrender of Lee at Appomattox when you say that the charge brought against this history of underrating the numbers of Lee's army at the final surrender "is untrue, since the author in a foot-note gave the official returns of both sides"? The author did nothing of the kind. See page 275, edition of 1880. The statement there that the number surrendered was "8,000 men, the remains of the Army of Virginia," is unqualified. In 1885 I made this charge against the book in the school board, and was told that it would be corrected. In the revised edition just issued—revised by Gen. Carrington—the foot-note has been added. In my opinion the paragraph is still very misleading.

But this is not the worst misstatement. On page 240 the book says of the Second Bull Run: "Pope, with 40,000 men, was compelled to fight the whole rebel army." On the first day of this battle, August 28, commonly called the battle of Gainesville, Pope had his original army of 49,500 men (less 3,390 lost at Cedar Mountain), and a reinforcement of 23,000 from the Army of the Potomac, giving him 70,000 instead of 40,000. On that day Longstreet was not present, and Pope fought Jackson with 23,823 men.

On page 241 we read that the "shattered remnants" of Pope's army were "glad to take refuge within the fortifications of Washington." Out of his 70,000 men Pope lost less than 10,000. The night after the last day's fight, Franklin joined him with 10,000, and the next morning Sumner with 10,000, making his "shattered remnants" 80,000 strong. Barnes says that Pope lost 30,000 men. The "Official Records," 'War of the Rebellion,' page 262, vol. xii, part 2, give the losses to Pope's army as 8,105. The additional losses to the Army of the Potomac and Burnside's corps, *from August* 16 to September 2, make the total only 14,462.

On page 247, battle of Chickamauga, we read that "Longstreet pushed a *brigade* into the gap and *swept* the Federal right and centre from the field." Longstreet, who on this day commanded the rebel left, "pushed" Stewart's, Hood's, Kershaw's, Johnson's, and Hinderman's *divisions* supported by Preston's *large division* into this gap. My authority is Gen. Cist of Rosecrans's staff.

These are but a few of the glaring misstatements. Perhaps they are not vital to school history, but if worth stating at all worth stating correctly. They have not been corrected in the revision. WINFIELD S. NEVINS.

SALEM, MASS., October 18, 1886.

TO THE EDITOR OF THE NATION:

SIR: There are two topics in your paper of October 14 which suggest a few words that may be of interest.

In your editorial columns you refer to a "queer controversy" respecting the "loyalty" of a schoolbook, 'Brief History of the United States,' by the late Prof. J. Dorman Steele—which question had been decided, "in a qualified way, in the negative." It is a curious fact that, on this side of the line, the same book has been challenged as leaning the other way. I am myself a member of a school board in which, four years ago, the book was impeached on that ground. To a letter on the subject, the author replied in a spirit of admirable frankness; and, being convinced on investigation, he cheerfully removed the offending passage, and the book was afterwards adopted in the schools. It seems, therefore, strange to us now to read of the charge against his book of disloyalty to the North. Perhaps charge and countercharge may be taken together as proof of his effort to be perfectly fair. At any rate, they show how hard it is to write even a "brief history" of the war which shall be acceptable on all sides. Is it, indeed, as yet, even possible to do so?

My other topic is apropos of your appreciative notice of 'Addresses and Speeches on Various Occasions' by Robert C. Winthrop. It may be pleasing to the many friends and admirers of this eminent citizen to know that to him, by the same school board above referred to, has just been paid a signal honor in the naming after him of a training school for teachers—the first in this State—which, by the aid of the Peabody Fund, has recently been founded in this city. The board declare that this is done "in honor of the illustrious statesman and philanthropist who presides over the Peabody Board." The name was received with approbation by the people, and the Columbia *Register* expressed the hope that "the Winthrop Training School may unite with a perpetual public benefaction the undying memory of a great and good man." This incident, slight

in itself, is related to show that here in the far South, as well as in the North, the name of Mr. Winthrop is held in honor, and that we, too, are proud of such a life. When, on the one hand, one listens to the "fight among the book agents" over a school history, it seems as if the war were still raging; but when the people of the South look upon such a man as Mr. Winthrop, in his old age of "philanthropic labor" for North and South alike, they feel that it is indeed ended.

CONFISCATION OF THE HEPTAMERON.

TO THE EDITOR OF THE NATION:

SIR: To your readers who may not have seen the announcement in some of the daily papers, it will doubtless be of interest to learn that, by a recent decision of the Treasury Department, the 'Heptameron' of Margaret, Queen of Navarre, has been declared an "obscene" book, and that certain copies of an English translation imported by us have been seized and confiscated as such, under the section of the United States Revised Statutes prohibiting the importation of indecent publications.

Mr. Fairchild, the Acting Secretary, in an interview, is quoted as saying in substance that

"if any book is obscene, the confiscated edition of the 'Heptameron' in question is such a book. The illustrations are some of them insignificant, while some of them are decidedly unchaste. The language, while possibly not in itself obscene, is impure in all its suggestions, and the entire scope of the work is unwholesome. Certainly no one would be any better for reading the book, and it can be of no value except as an illustration of certain features of literature. The exceptions which might be made in behalf of such works as literary products might apply to the original Italian (*sic*). They certainly do not apply to English translations."

It is of course wise and necessary that there should be a law suppressing indecent books, and the difficulty of deciding just where to draw the line in regard to such is fully admitted; but that it should now be drawn at the 'Heptameron' will astonish the many persons of undoubted culture and refinement by whom it has heretofore been considered as a classic, not only in the original tongue, but also in the English translation. While without doubt it should not be allowed indiscriminate circulation in public libraries (not because it is at all obscene, but because it is not the best food for youthful minds), it will be generally conceded that the prohibition *in toto* is absurd. It is certain that thousands of copies have been brought into the country without question, and we believe we are not wrong in saying that it is in the collection of nearly every one of scholarly attainments who pretends to a library, and with few exceptions constitutes part of the stock of every bookseller. It would seem right that these facts, as expressing the opinions of those quite as competent as Mr. Fairchild to pronounce upon the merits of the book, should have been given more weight in estimating its character. Surely it cannot be so morally debasing and yet be thus received in our midst.

Now that proscription has begun, it will be decidedly interesting to learn the limit of its extent, and to know if some other long-regarded classics are also to come under the ban, the 'Decameron,' 'Gil Blas,' 'Tom Jones,' Rabelais, etc., and if exceptions are to be made in the case of more modern works, as, for instance, Balzac's 'Droll Stories,' and much of the current French fiction.

The illustrations which are especially complained of by Mr. Fairchild are those of Flameng, the celebrated French etcher, and while a few of them would probably have shocked the notions of our Puritan ancestors, they can hardly in this day be regarded as "unchaste." If prints of a similar nature are to be prohibited, we apprehend that the customs officials will soon find their hands full. Perhaps they would do well to heed the caution given by the New York *Herald* in commenting on the case, and, while straining at a gnat, not swallow a camel.—Very truly,

W. H. LOWDERMILK & CO.

WASHINGTON, D. C., October 25, 1886.

THE REPUBLIC IN FRANCE.

TO THE EDITOR OF THE NATION:

SIR: For the student of politics, as I have before had occasion to remark, there is no field more instructive than the modern history of France. A book has recently appeared with the title of 'Nos Fautes: Lettres de Province, 1879-1885,' which is deeply interesting, not merely as to France, but for the side-light which it throws on our own affairs. To show its full meaning, I must restate the theory which it illustrates. Popular representative government, in its short life of little more than a century, has everywhere been struggling with one problem—how to secure a working relation between legislature and executive, and how to bring public opinion to bear so as to keep each within its proper bounds. If the executive gets the upper hand, its modes of abuse of power are obvious and well known. If the legislature acquires supremacy—which it is quite as eager to do, and has even greater advantages for doing—the speedy results are loose and defective administration, the sacrifice of the national to local and private interests, a shifting and unstable policy, financial disorder, and, in a word, anarchy. The people are blamed for this state of things, though they may not approve of it at all, and, being without leaders, are perfectly helpless in the hands of the politicians of the legislature. They drift helplessly on, till in fear and despair they finally acquiesce in the rule of a strong man, who has the ability to send the legislature about its business, and thenceforward to substitute his will, at least in great measure, for law.

Passing over previous experiences, let us now see what the Third Republic, according to our author, has come to in its sixteen years. It seems that in the discussions on the revision of the Constitution, the word "Convention" was pronounced with a shudder by some speakers:

"But if we look at the matter squarely, have we not already a Convention? Stripped of the bloody memories of the Terror, a Convention is nothing else than a surrender to the deputies—who ought to have nothing but legislative power and a right of control of public affairs—of all administrative and governmental authority. Divided into two chambers or united in one, a Convention is in fact the government and direct administration of the country by members elected by popular suffrage. That is what we see to-day. The Deputies and the Senators impose their sovereign will upon the Ministers, who are only their instruments; they regulate all business, they deal with all questions of *personnel*.

"Certainly, to do this they must come to an understanding with the bureaucracy. But that is easy enough. The senators and the deputies go into the departments, cause the drawers to be opened and the dockets shown them. They adapt themselves readily to a system which, concentrating administrative life in Paris, gives them more prestige in the eyes of their electors. They began with governing and administering in the sole interest of their respective departments. But, little by little, getting a taste for this mode of action, they have greatly extended it. We see the members of the budget commission introduce themselves into the ministries and there do the actual work of ministers. We have seen in recent debates the Chamber take even the direction of diplomacy. Is not that the régime of the Convention? At any rate, it is no longer the parliamentary system, as formerly understood—that is, by the side of the power of the legislature, a ministerial power. To-day the ministerial power is effaced in the direction of the internal policy of the country. There is only one sovereign in France, a being multiple and omnipotent, the deputy."

Is there not here a familiar sound in relation to the politics of this country?

What, in the next place, have been the effects of this dominant power of the legislature? France, as everybody knows, is governed by a strongly centralized administration, and its numerous agents have in the past performed their functions, such as they were, with a certain sense of official honor and with the general respect of the country. After the period known as the sixteenth of May, ending in the resignation of MacMahon and the election of Grévy, on the plea of replacing monarchical officials by republican, the "spoils system" has been put in force in a way which, as described by our author, himself a Republican, is truly appalling. The details are most interesting, but I must pass them by.

Again, as no definite and continuous policy of government can be worked out by an anarchical Chamber, some comprehensive and demagogical "cry" must be got up to influence the country, and this has been found in the war upon the church and religion. Nothing could excite greater alarm and hostility through the country, but the moderates, or as they call themselves, the "opportunists," are steadily losing ground as against the radicals or what were once known as the Jacobins. Of exactly the same kind is the banishment of the members of the royal family. Allowing for the changed circumstances, things are following the same road as in the years after 1789.

The worst effect, however, is in the finances. The Finance Minister has no power at all. The "Budget Committee," corresponding to what we call the "Appropriations" and "Ways and Means," has taken the matter in hand and is perfectly helpless for any good purpose. The result is reckless expenditure and annual and increasing deficits. A large floating debt is rolling up, the Chamber will not listen to any funding scheme, is at its wits' end about taxation, and there seems no resource but that most dangerous of all expedients in unskilled hands, the income tax.

What is the attitude of the people in this state of affairs? So far from their being satisfied, our author describes an increasing uneasiness and discontent which was manifested in the unexpected success of monarchical candidates at the last election, and this although it seems to be admitted that the country is still strongly attached to the republic. The writer says: "Our people are so constituted that they attach themselves to persons quite as much as to ideas, or rather they love to embody their ideas in persons." This is no more true of the French than of any other people, as he admits in saying that there is nobody who holds in France the position which Bismarck does for the Germans, Gladstone for the English, Tisza for the Hungarians, and Depretis for the Italians. In fact, this is just what is impossible under the rule of a legislature. While Thiers still lived, his great services and commanding position insured him the support of the country, and after his death Gambetta held, though with a long interval, a somewhat similar position. Since he died, however, the Ministers are only a succession of puppets, set up and pulled down by the caprices of the Chamber. The people are unable to control that body, while they have not and apparently cannot have a leader. What this tends to is only too plain. In all probability France will continue to drift into more and more hopeless chaos, till some strong adventurer, some new Napoleon, modified, let us hope, by nineteenth-century influences, shall concentrate the energies of the country in a dictatorship based upon foreign war.

Is there not instruction and reproof for us in this lesson? We have greater wealth, a more in-

telligent population, freedom from foreign complications, and local self-government; but the political situation is the same. Not only Congress but the State Legislatures have absorbed nearly all the power of government, and the executive is, as regards positive action, a cipher in their hands. True, we have no state church or royal family for demagogues to ride upon, but Blaine with his "Protection," and Powderly and George with "Labor," furnish very fair substitutes. We have a large surplus revenue, and no army or colonial enterprises or state railroads to swallow up endless millions; but as far as scientific finance goes, we are hardly in a position to criticise the French. One element of superiority we certainly have, and it may well prove adequate to the solution of the problem. Once in four years the nation directly elects its President, and at shorter intervals the States their Governors. Backed by the people, these officials ought to be able to hold their own against the legislatures. But to do this they need to be provided with an adequate arena; to have, through their chosen agents, equally with members, a voice in legislation; to be able to defend the wants of administration, and to shape out and enforce a continuous policy in public debate.

G. B.

Boston, October 25, 1886.

TWO MASSACHUSETTS OPINIONS.

To the Editor of The Nation:

Sir: After reading your editorial review of Mr. McMurtrie's "Plea for the Supreme Court," I am tempted to send you a short extract from the Hazard State Papers, volume ii, page 110, which relates to an event possibly not familiar to the "expounders" of to-day, as it happened about 240 years ago in the time of the New England Confederation. It seems a fort had been built at Saybrook, and the commissioners from the colonies other than Massachusetts thought Springfield should contribute a part of the expense of its erection. Among other reasons for this demand, the Commissioners say that opposition to such payment "would reflect vpon most of the Gouernments of Eurup." "Wee reply," say the men of Massachusetts, "it is noe good argument to say most of the Gouernments of Euroup doe thus therefore it is Lawefull noe more than if wee should say most of the Gouernments etc. opress both Subjects and Straingers ergo opression is Lawefull."

May I quote for easy reference and comparison in this connection the more familiar words of the Massachusetts member of the Supreme Court, delivered in 1884? "The Governments of Europe . . . have as sovereign a power of issuing paper money as of stamping coin." "Congress, the Legislature of a sovereign nation," has power "to make the notes of the Government a legal tender in payment of private debts, being one of the powers belonging to sovereignty in other civilized nations." (U. S. Reports, 110.)

Respectfully yours,

Austin Scott.

Rutgers College, New Brunswick, N. J., October 21.

ARCHÆOLOGY IN THE MEDITERRANEAN.

To the Editor of The Nation:

Sir: I see repeated in a note of the *Nation*, No. 1109, the recommendation of the Archæological Institute to make an expedition into the Cyrenaica. There is no doubt that it would be one of the most fruitful of fields for excavation, but surely the authorities of the Institute must know that an expedition there is absolutely impracticable unless protected by a considerable body of troops. Were it not for this, the Italians and the French would long ago have made explorations. The coast by Cyrene has long been examined, and is continually being searched for tombs, etc.; but to penetrate into the country is impracticable, from the suspicious and warlike character of the natives, who are under no rule and love no strangers.

As to Tarentum, the Institute must be prepared to buy real estate, for the new town is being built over the old, and some of the most interesting sections of old Tarentum are already covered by the new Taranto. There are parts of Tunis which are well worth the attention of the Institute, and the French administration is most liberal in regard to research, while any funds to be spent in Magnia Græcia would be well employed if the advice of the Ministry of Public Instruction as to site, etc., were taken and followed. A search for Sybaris would, if successful, be a splendid triumph for the Institute, and need not cost much. The Italian Government is most cordially disposed to any researches in archæology, and would no doubt materially aid the Institute in its work.

An additional difficulty in Cyrenaica would be the jealousy of the Porte, which holds suzerainty, and would stop any work undertaken without a firman, and probably would not give one. Where the Porte's authority extends, this would prevent; and where the Porte cannot go, the explorers cannot.—Yours truly, W. J. Stillman.

Rome, October 13, 1886.

THE CRISIS AT COLD HARBOR.

To the Editor of The Nation:

Sir: At the end of your criticism of the Comte de Paris's 'Gettysburg' occurs this phrase: "This same Confederate army . . . at Cold Harbor . . . probably came nearer conquering a peace than at any other time in its history."

The fight at Cold Harbor was an ill-judged assault and a bloody repulse; but the Confederates made no counter attacks. Indeed, they were too weak to risk an offensive-defensive movement. Had they done so, they would have found the Army of the Potomac and a corps of the Army of the James strongly intrenched and with batteries in position—a bad field for conquering a peace. T. L.

Brookline, Mass., October 22, 1886.

TRANSFORMATION OF SURNAMES.

To the Editor of The Nation:

Sir: In addition to what was said on this subject in last week's *Nation*, it is interesting to note the transformation of Scottish names into French, resulting from the large immigration of Scotsmen to France during the existence of the ancient league between those two countries in the Middle Ages:

Scottish.		*French.*
Williamson	became	D'Vallançon.
Sutherland	"	Sidrelant.
Menzies	"	Miniez.
Cunningham	"	Coninglant.
Gowrie	"	Gohory.
Crawford	"	Crafort.
Drummond	"	Dromont.
Turnbull	"	Tourneboulli.

Etc.—Yours truly, A Wisconsin Scot.

Milwaukee, October 18, 1886.

DREAMS.

To the Editor of The Nation:

Sir: The writer on "Dreams," in a recent number of the *Nation*, might have added to the illustrious names who may be quoted as having recognized the mysterious authority of dreams, that of Hawthorne, who says (in his tale of 'The Birthmark'): "Truth often finds its way to the mind close-muffled in robes of sleep, and then speaks with uncompromising directness of matters in regard to which we practise an unconscious self-deception during our waking moments." * *

WOMEN AS COMPOSERS.

To the Editor of The Nation:

Sir: The "women in music" question, discussed in late numbers of the *Nation*, calls to my mind a very interesting lecture on "Die Frau als Künstlerin," which Prof. W. H. Riehl, the celebrated German "Kulturhistoriker," delivered in Elberfeld, Germany, ten years ago, and which I wrote down in shorthand. I am able to give his own words, which I shall translate as literally as possible. In the first place, Riehl treats of women in poetry, then he passes to music; and, after having given an historical synopsis of the employment of female singers and players of musical instruments, he continues as follows:

"But the women I am speaking of, *i. e.*, pianists and songstresses, are reproducing artists. They execute, though in a really artistic spirit and in a revivifying way, what other people have produced. Experience in this respect has been very peculiar. Since the end of the last century there have been schools of music in Europe for both sexes, the oldest of which was the Paris Conservatory, founded at the time of the Republic on principles which still prevail, and which have been adopted in most other states. In this conservatory, students of both sexes have the opportunity of receiving the highest musical education. Girls as well as young men have to study harmony, but it is a general experience that the schools of music turn out excellent singers of both sexes and excellent women pianists as well as men pianists, but no female composers along with the male composers. The instruction is the same, the effect is different. Not that women could not learn the technical part: girls generally are more diligent and more attentive and comprehend more quickly and easily than young men do; but although young men do not comprehend so well, they feel called upon to make another use of their technical attainments than women, who, in the main, are only reproducing. There is no partiality, no trace of sexual restraint, as regards instruction; and there are a great many women possessed of all the technical acquirements for composing. Women, thus far, have not yet composed a great poetical work, a great drama or epic, nor any great musical work such as a symphony, an oratory, or a grand opera of any lasting effect. They have, indeed, composed sweet songs, but even those are but exceptional. This fact seems to prove that women's capacity does not lie in this direction."

Respectfully,

Rudolf Tombo, Ph.D.

116 E. 110th St., New York,
October 18, 1886.

ANOTHER WORD OF APPROVAL.

To the Editor of The Nation:

Sir: Among the multitude of young men who will come forward to witness to the truth of what "A Boston Subscriber" asserts in the communication entitled "Some Belated Praise," allow me, although but a three-years' reader of the *Nation*, to testify to the very apparent effects of its teachings in helping me to form a political method—this irrespective of any substantive faith it may have led me to embrace.

Too much cannot be said in praise of the contents, the timely information with which each number of this journal is filled to the brim; but my greatest debt of gratitude to the *Nation* is for the training it has afforded my political conscience in the matter of going to the principle of right in public questions.

Commend me to a journal that is ever on the alert to discover whatsoever things are pure and of good repute, and, when found, is a relentless advocate in their support.

A St. Louis Subscriber.

St. Louis, Mo., October 23, 1886.

Notes.

SCRIBNER'S MAGAZINE, redivivus in name, but otherwise a brand-new creation, will appear on December 15 with a January number. Succeeding issues will follow the *Century's* good example of appearing on the first of the month whose name they bear. It is to be "in the widest sense a magazine of American literature," and its pictorial illustrations will be made quite subordinate to this purpose, while in themselves representing "the most spirited, sincere, and original work done in this field."

Charles Scribner's Sons have in press a translation of Mommsen's 'History of the Roman Provinces, from the Time of Cæsar to that of Diocletian,' by Dr. W. P. Dickson; 'The Second Army Corps,' by Gen. Francis A. Walker, illustrated with portraits; 'Our Arctic Province, Alaska, and the Seal Islands,' by Henry W. Elliott, illustrated; 'Down the Islands,' a cruise to the Caribbees, by William Agnew Paton, illustrated; 'The Sentimental Calendar,' by "J. S., of Dale"; 'Talks with Socrates about Life,' by the author of 'A Day in Athens with Socrates'; 'Among the Law-makers,' a child's book, by Edmund Alton, formerly a Senatorial page; and 'Prince Peerless,' a fairy book, by Margaret Collier.

'Mexico of To-Day' is the title of a work by S. B. Griffin which Harper & Bros. will shortly bring out, with maps and illustrations.

Ticknor & Co. publish on October 28 'Persia and the Persians,' by S. G. W. Benjamin, late United States Minister to that country; 'Recollections of Eminent Men, and Other Papers,' by the late E. P. Whipple; 'Confessions and Criticisms,' by Julian Hawthorne; and 'The Evolution of the Snob,' by Thos. Sergeant Perry.

D. Appleton & Co. have issued Mr. Dobson's 'Richard Steele,' in the "English Worthies" series, already noticed by us in the English edition. They will be the American publishers also of 'Reminiscences and Opinions,' by Sir Francis Hastings Doyle, formerly Professor of Poetry at Oxford; and of 'Sketches from My Life,' by the late Admiral Hobart Pasha, edited by his widow. Finally, they announce a new American novel by George Alfred Townsend, 'Katy of Catoctin; or, the Chain-Breakers,' the significance of the secondary title lying in the fact that the story opens with John Brown at Harper's Ferry, and closes with the death of Lincoln.

'The Volcano under the City,' by a Volunteer Special (Fords, Howard & Hulbert), is said to be a graphic history of the New York draft riots of 1863. It will appear on October 30.

Thomas Whittaker is publishing a "Half-hour Library of Travel, Nature, and Science," illustrated, and especially intended for young people.

Roberts Bros. have added 'Rhoda Fleming' to their uniform edition, now in progress, of George Meredith's works; and Balzac's 'Cousin Pons' to their translations from this writer.

'Humorous Masterpieces from American Literature,' edited by Edward T. Mason (G. P. Putnam's Sons), in three handy volumes, is a pleasing collection of light literature from Irving's day. Nearly three-score authors are represented, and the work may fairly be pronounced successful, since in a case where nearly all the material to be selected from is covered by copyright, it is not to be expected that the best of each writer has been put at the editor's disposal. The aim to include so many littérateurs forbids the highest degree of excellence on the one hand, and on the other we cannot think the effort to take in so eminent a name as Longfellow's has a happy result. The whole is agreeable reading, mostly in the minor variety. By no means do the volumes contain our "masterpieces," or represent at their best our "masters," of humor, but rather they exemplify our average product.

Mr. George Alfred Stringer has collected, under the title 'Leisure Moments in Gough Square; or, The Beauties and Quaint Conceits of Johnson's Dictionary' (Buffalo, N. Y.: Ulbrich & Kingsley, 1886), the more interesting definitions and illustrations of that monument of English literature. The selections are confined to words which are "obsolete, curious, or rarely used," and little is attempted in the way of supplementing or correcting the Doctor's learning by the results of later scholarship. The volume is thus a library curiosity, with some historic literary value. It is a convenient quarto, handsomely printed, and the edition is limited to 300 copies.

Another "leisure moment" volume is a reprint, with additions, of a hitherto privately circulated collection of anecdotes illustrating the 'Self-Consciousness of Noted Persons' (Boston: Ticknor & Co., 1887), compiled by Justin S. Morrill in his unoccupied hours. "Self-consciousness" is euphuistic for "Vanity" or "Proper Pride," as the reader pleases; but, after reading this volume, he may still hold the opinion that the belief that eminent men are vainer than other people is a popular superstition. Mediocrity is really much more conceited than genius is, and where a great nation has one Victor Hugo, every village has its *Bottom*. In the present amiable publication, half the instances are mere truth-telling, or proofs of modesty even, when measured by the man who speaks. There are some slips which indicate second-hand authorities, and others which show carelessness. Of the latter, for example, is the statement that Xenophon, (d. B. C. 350) "is the best historian of Alexander," and "tells his readers that he himself is as eminent among the Greeks for eloquence as Alexander was for arms"! This is not a solitary blunder. The citations cover a wide field of reading, and all the professions in which men achieve greatness.

It is a growing fashion for medical authors to prepare books for the immediate use of intelligent laymen, setting forth the physiology and hygiene of various organs, but wisely refraining from direct advice to the ill. Secondarily these diffuse a mild solution of knowledge, and primarily they draw attention to undiluted reservoirs of the same. Such a group is the following. 'The Hygiene of the Vocal Organs' (Macmillan & Co.) has been prepared by Dr. Morell Mackenzie, a well-known London physician, as a handbook for singers and speakers. To give advice intelligently to those not students of such subjects, complicated as it must be with much physiological and anatomical information, is a very difficult matter; and it is given more easily than it is digested. 'The Management of the Eye, Ear, and Throat' (Cassell & Co.), by Drs. Power, Field, and Bristowe, is an excellent type of this new literature. The triple authors are competent, and, as far as it goes, the work is accurate. The information it gives is useful, but as a domestic guide it will probably not be appreciated in anything approaching entirety, while for a medical student it is too verbose and it stops short of treatment. Mr. Malcom Morris's 'Management of the Skin and Hair' (Cassell & Co.) is a companion to the last named. It contains interesting information, such as all persons should know; but the most of those who should profit by it will wait until prevention of trouble must be replaced by cure.

Time was when a book bearing the title, 'Blood is Thicker than Water: A Few Days among Our Southern Brethren,' and written by a Northern doctor of divinity, would have meant one more immoral apology for the national sin of slavery. The letters, however, bound together under the above caption by the Rev. Henry M. Field, D.D. (New York: George Munro), are a very proper contribution to sectional good feeling, to which there is no longer any obstacle in the institutions of the country. Dr. Field's narrative also shows, as far as his observation extended, that the South has no animosity to cherish on account of the war. He was the spokesman of the party of capitalists who travelled in a parlor car to Atlanta, Chattanooga, Nashville, Birmingham, Montgomery, New Orleans, Vicksburg, Memphis, and Louisville, and had many occasions to contrast the present with the past without eliciting any dissent. There is not much that is new in what he wrote home to the *Evangelist:* perhaps the Louisiana salt-mine on the Gulf at Avery's Island, where Mr. Armour (of the party) found "three of his refrigerator cars waiting to be loaded for their great cattle-yards in Kansas City," is as novel and as interesting as anything. Dr. Field heard and relates many stories of the war by prominent participants, and visited several battle-fields. On page 118 he transfers to the Old South Church in Boston the cannon-ball that lodged in the tower of the Brattle Street Church.

Latham, Alexander & Co., on issuing the thirteenth annual edition of their 'Cotton Movement and Fluctuations, 1881 to 1886,' have put it on the market for sale. Besides the cotton reports of the several States and the customary statistical tables, there is a chapter on the cotton trade of Egypt. A photographic view of the Sub-Treasury in this city, with its Washington statue, and a portrait of the Swiss cotton statistician, Otto Trumpler, embellish the volume.

Part ii of the Annual Report of the Smithsonian Institution for 1884 is wholly given up to the National Museum, whose history is set forth, and its current operations in great detail. A number of ethnological illustrations accompany the text.

We have received the volume of 'United States Naval Uniform Regulations' for 1886. One looks almost in vain among the plates of officers and men for a distinctly American face—a fact attributable rather to the artist than to the well-known heterogeneousness of our sailors.

Mr. Charles H. Levermore's 'Town and City Government of New Haven' forms the tenth issue of the fourth series of the Johns Hopkins University Studies, edited by Dr. H. B. Adams. The subject of dual municipal governments is a curious one, and New Haven furnishes but one example out of many. Mr. Levermore does not treat it abstractly, but historically, tracing the action of the two powers step by step—for example, giving the town's resolutions against the admission of Missouri, and noting the city's silence on that burning question.

The consideration due to the "first number" of any new literary enterprise may well be accorded to *American Art* (Boston).

None such is needed by the *American Bookmaker* (New York: Howard Lockwood), now in its third volume, and a very readable and instructive monthly.

The double number, 8-9, of the eleventh volume of the *Library Journal* contains the papers and other proceedings of the Librarians' Conference at Milwaukee in August and September last. Any cultivated mind will be interested in them. The variety of topics is remarkable.

With the November number *Lippincott's Magazine* apparently returns to the old practice of appearing two weeks in advance of its nominal time of publication. The present number, which is the first of the new volume, has the usual assortment of fiction, experience-papers, and notes, with a rambling article on the recent earthquake, by Felix L. Oswald, or, more properly, on some general features of earthquakes, with especial reference to prognostications of them by signs of nature, the instincts of animals, etc. He does not add anything, that is at once certain and of interest, to the record of phenomena. The num-

ber concludes with a novel by John Habberton, 'Brueton's Bayou,' nearly one hundred pages long.

The announcements of the *Youth's Companion* for its new volume include an autobiographic account of Mr. W. D. Howells's boyhood in a Western log cabin and a country printing office; an article on "Salmon Fishing in Canadian Rivers," by the Marquis of Lorne and the Princess Louise; articles by Francis Parkman based on hitherto unpublished manuscripts describing the adventures of Pierre Radisson among the Iroquois and the Sioux; an article by H. Taine on the "Study of English Literature," and three papers by Prof. Huxley, called "From the Hut to the Pantheon," in which he traces the evolution of architecture.

'The Cayuga Flora: Part I.—A Catalogue of the Phænogamia Growing without Cultivation in the Cayuga Lake Basin,' by Wm. R. Dudley (Ithaca, N. Y., pp. 132, 8vo), is the *vade mecum* of the Cornell students of botany—a truly good one; and its heading or prefixed title, *Bulletin of Cornell University* (*Science*), vol. ii, marks the revival of the work inaugurated by Prof. Charles Frederick Hartt, out of regard and affection for his honored memory.

The October Proceedings of the Royal Geographical Society contains a singularly clear and interesting paper on the Congo Free State, by Sir Francis de Winton, who succeeded Mr. Stanley as its administrator general. He sums up briefly the results of recent explorations as showing that in the greater part of the territory there is scarcely a hundred miles not reached by navigable waters, speaks of the natives as a negative race, whose "chief characteristic is a love for commerce," and reports favorably on the present condition of the country and its commercial prospects, especially in the direction of the ivory and india-rubber trade. In the discussion which followed the reading of this paper before the Society, Mr. Stanley stated that the money for the Congo Railway was ready, but that King Leopold withheld his permission. The latest advices are that the King has determined to build the railroad himself. Following this is an account by the Rev. Geo. Grenfell of his explorations of the tributaries of the Congo, and a paper on the "Alpine Pass of Hannibal," by Mr. D. W. Freshfield, advocating the claims of the Col de l'Argentière in opposition to those of the Little St. Bernard. This paper and the preceding are accompanied by maps. The number closes with the address on the study of geography, delivered before the geographical section of the British Association by its President, Sir F. J. Goldsmid.

Mr. Joseph Thomson's entertaining account of his recent journey up the Niger into the Central Sudan, read before the British Association, is given in the *Scottish Geographical Magazine* for October. He found there an intelligent and enterprising people, professing the Mohammedan faith, well governed, far advanced in civilization, living in a country rich in resources and covered with trade routes—in his opinion, the most promising field for commerce in all tropical Africa. The other paper of the number is on the Afghan Boundary Commission, by Mr. C. E. D. Black, who states that the assertion that there has been a surrender of Afghan territory "has not much apparent foundation," and also that the Indian Government have commissioned Maj. Holdich, the chief surveyor, to prepare a special report on the surveys and geographical explorations made in connection with the Commission.

A singularly happy identification is made in the opening part of vol. vi of Gebbie & Co.'s (Philadelphia) 'Complete Works of Robert Burns.' The striking poem, "The Minstrel at Lincluden," or "A Vision," as it is differently designated, concludes in a strain to show that it was meant to introduce some more important "Ode" or "Song of Liberty," which, as appears from the poet's correspondence, was suppressed from motives of political prudence; and the loss of this "Ode" has been mourned by successive editors of Burns. In the Kilmarnock edition, 1876, an "Ode for General Washington's Birthday," of which only a stirring fragment was previously known, was published entire from MS.; but that this was the long-missing poem for which the "Lincluden Vision" was merely an introduction, was not suspected until Mr. Gebbie was fortunate enough to perceive the connection. The evidence in full is considerable, and, to our minds, conclusive; and the bringing together of the two halves in their original unity is a great poetic gain to both. The "Lincluden Vision," as it now stands, with its prelude of Scotch scenery by night, its address to "Columbia's Sons," and its fiery appeal to "Caledonia," is a very noble expression of Burns's patriotism, his love for world-wide liberty, and the imaginative and eloquent energy of his genius.

Leavitt is to sell next month fifty-five manuscripts illuminated with miniatures, borders, and initials, coming from the great Trivulzio library of Milan. If we can trust the descriptions, the manuscripts are really beautiful and interesting, and deserved to be prefaced, as they are, by an account of the Trivulzio family. But the enthusiasm of the writer, Mr. Charles Sotheran, permeates his style, and culminates in the enigmatical statement, "But of all the Trivulzios, 'the Great Trivulzio' was the Trivulzio of them all."

Among French books announced as in preparation is a volume by M. Ferdinand de Lesseps, 'Ma Mission à Rome en 1849, suivie de Mes Relations avec Mazzini.' M. de Lesseps has recently given several public addresses to workmen upon the events of this period, when, in the early days of the new Government, he was sent by Lamartine as ambassador of the Republic, first to Madrid and afterwards to Rome. If the volume fulfils the promise of these informal talks, several of which have been published from stenographic reports by the *Nouvelle Revue*, it will be a very lively and amusing series of personal reminiscences.

It is with some surprise that we see among the announcements of M. Lemerre, the elegant publisher of the elegant "Parnassiens," a new French translation of the Bible by M. E. Ledrain, an attaché of the Louvre. It will extend to ten volumes—i and ii containing the historic books and iii and iv the legislative, while v and vi are devoted to the moral and lyrical works, vii to the prophets, viii and ix to the New Testament, and x to an *étude critique*.

In their last catalogue D.C. Heath & Co., Boston, announce that they are about to undertake the publication of a series of annotated Modern Language Texts. The plan, if executed as proposed by them, will be more comprehensive than anything that has yet been undertaken in this country in regard to such publications. They give a list of about twenty texts as actually in preparation. These are all to be critical editions, amply provided with notes by several of the leading instructors in modern languages in the various American colleges. Judging from the list of the French texts promised, the publishers will aim rather to furnish reading material for the higher institutions of learning than for ordinary schools, as Victor Hugo's "Ruy Blas" and Molière's "Tartuffe" cannot be presented to very young readers unless sadly expurgated. Instructors in Spanish and Italian will be pleased to have the Selections from Boccacio's 'Decameron' and those from Cervantes's 'Don Quixote.' The German texts announced make up alone three-fourths of the whole list, offering a rich selection from Heine, Goethe, Schiller, and Lessing. They form the most attractive part of Messrs. Heath & Co.'s new announcement. The publications proposed have all evidently been suggested by those who know what is most needed. We are glad to see that a selection from Heine's prose and another from Lessing's critical writings are among the books promised.

—The *Atlantic* for November has a unique contribution of a sort that one expects to find in a foreign rather than an American periodical, in the shape of a sharply detailed history of the disturbances in Corea two years ago. The relations between that country and our own are so slight, and its revolutions occupy so small a place in the world's affairs, that the article would appeal only to a wide-ranging intellectual curiosity were it not for the great brilliancy of the style, and the humor and zest with which the story is told. Through all of Mr. Lowell's twenty pages interest never lags, and at the end one has not only some information about a minor point of contemporary history, but a vivid and enlightening conception of what an Oriental *coup d'état* is and the circumstances of its progress. Mr. Hamerton's third paper on "French and English" compares the aristocracy of the two nations. The article is less novel in ideas than were the earlier ones; but the general remarks on the aristocratic temperament and its modifications under the play of institutions are, as ever, acute and suggestive, while the treatment of the Tennyson peerage (which is a thing still puzzling to Americans) is inimitable. Mr. Hamerton has said that English aristocracy is "now little more than a kind of supreme sanction given to the popular adoration of wealth," and that consequently it excites no such surprise when obscure rich men are made peers, as when Tennyson was ennobled. "The friends of the Poet Laureate," he continues, "thought it rather a degradation for a man of genius to accept the prize of a lower ambition than that which they had believed to be his, while his enemies made quotations from 'Maud' applicable to new titles and new mansions. If Tennyson had been a successful brewer or banker, nobody would have made a remark; his peerage would not have been considered either above him or below him, but simply the natural English consecration of new riches." In another writer this would have been a brutality of irony. Mr. Hamerton goes on to show the advance of the transformation of the peers into a plutocracy accepting "the pecuniary estimate of itself," and thinks "it is a bad sign when an ancient European and Christian aristocracy allows itself to be led and patronized by new families of Jewish money-lenders." He treats the French more tenderly. We have space only to refer to Mr. Van Brunt's simple tribute to the late H. H. Richardson, the architect, and firm estimate of his work.

—It has become so much the custom to call the attention of a jaded public to the appearance of a new periodical by exhibitions of literary skyrockets and dynamite bombs, that the quiet, business-like tone of the first number of the *Quarterly Journal of Economics*, published for Harvard University by Geo. H. Ellis, Boston, seems almost studied. The three leading articles occupy seventy-five pages, but we are sure that no one will begrudge the amount of space taken up by two of them. The first, by Prof. Dunbar, is entitled "The Reaction in Political Economy." His position is substantially that taken by Sidgwick; and although his statements are moderate to an extreme, "the reunion of ethics with political economy" calls forth the deserved comment that "a good deal of the current talk of an ethical political economy appears to contemplate merely the infusion of emotion into economics." Prof. Hadley's article is a statement of some of the conclusions reached by him in his work upon railroads, with a hint that some other organiza-

tions of capital might be subjected to a like degree of public control. The thirty pages by Mr. Dana Horton, entitled "Silver before Congress in 1886," are singularly obscure, and are, we are convinced, quite beyond the comprehension of the ordinary Congressman. There is a department of notes and memoranda, another of correspondence, and an extremely full list of recent publications upon economics in all the principal languages. There is also an appendix, containing in the present number an interesting résumé of Prof. A. Wagner's recently expressed views upon the great problems of political economy. If we cannot say that this number is a brilliant one, we can at least be confident that there will be no falling off in the future.

—A tourist, who has just made his tenth trip across the Atlantic, writes:

"If the manager of a first-class theatre or opera-house, after providing a beautiful house, fine scenery, first-class actors, or singers and orchestra, and charging high prices, should announce that those who wished seats would have to bring them along, he would be considered ripe for a lunatic asylum. It is only the force of habit and an unreasoning conservatism that prevent people from looking at our steamship companies in the same light. Here are several lines of magnificent new steamers, perfect floating palaces, with every improvement and comfort that human ingenuity and science can suggest—large promenade decks, spacious smoking-rooms, ladies' parlors, a fine dining-saloon, electric lights and bells in every bedroom, etc.—but for the most primitive article of furniture, which may be found in the poorest laborer's hut, you look in vain on the deck or that part of the steamer where, in good weather, nine-tenths of the passengers spend the whole day. 'Bring your chair along if you want a seat' is the motto of all the European steamship companies. Surely it is time to put an end to this idiotic custom. To-day, when there is such lively competition between the English, German, and French companies, it is astounding that it has not occurred to one of them to insert the following advertisement in the newspapers: 'We have just launched several superb new steamers, provided with all modern comforts. As the steamers cost us over a million dollars apiece, we concluded we could afford to spend three hundred dollars more, and have therefore bought a few hundred chairs which passengers may use on deck without extra charge. This will save them the expense of buying a chair for every trip, and the trouble of carrying it about as a cumbrous piece of baggage. It will save them the annoyance, when they come on deck in the morning, perhaps feeling very sick, of hunting for their own chairs among several hundred others, for half an hour, and then perhaps finding some one else occupying them. It will put our ocean steamers on a par at least with the ordinary river steamers and railroad cars, where seats are always provided.' I am convinced that any steamship company which should advertise this innovation, would find the expense reimbursed in one or two trips. In truth, the chairs would not cost anything at all; for I am told that at the docks in Liverpool and Southampton several thousand chairs have been stored away for years, having been left there by passengers who did not return by the same line. These might be used, as they will never be claimed by their owners. The present custom of asking each passenger to bring his own chair can be easily traced back to the time when steamers had no promenade decks, or very small ones, and when it was unusual to spend much time on them. But in the newest steamers, such as the *Umbria* and *Etruria*, the whole length of the ship forms one immense deck on which passengers can walk and be happy until they begin to feel tired, when they are obliged to go down stairs unless they have provided themselves with a seat for deck use. It is a monstrous absurdity. Surely the tourists who pay $100 to $150 have a right to claim that they be not treated as steerage passengers; for it is in the steerage that passengers are supposed to bring along their own things—beds, plates, chairs, etc. Which line will be the first to abolish from the first cabin the last relic of the steerage principle?"

—The statue of Columbus just set up in the principal park at St. Louis reminds us how few such memorials of the great discoverer we have to boast of. No other such statue in the Mississippi Valley was known to the speakers at the unveiling of the St. Louis statue on October 12. Indeed, we know not where in the Union to find another except in Louisburg Square, Boston, and on the steps of the Capitol in Washington, both Italian works, and far from admirable. The St. Louis work is gilt bronze, of heroic size, moulded by Müller of Munich, and cast there. It stands at the east entrance of Tower Grove Park on a high pedestal, and looks westward as if just making the grand discovery. If alive it would see statues like itself of Shakspere and Humboldt, and busts of many musicians in the midst of pleasure grounds a mile and a half long—the lungs of St. Louis. The statuary, as well as the park they adorn (containing two hundred and seventy acres), and the ground rent of a ring two hundred feet broad all round it for making improvements, have been presented to the city by about its oldest inhabitant, Mr. Henry Shaw. He was born in Sheffield in 1800, and reached St. Louis in 1819. Sailing from Liverpool early in that year, his passage to Quebec consumed seventy-four days; that from New York to New Orleans twenty-one days; and that up the river to St. Louis forty-five more. This last voyage he just escaped making on a keel boat, which could not have finished it within ninety days. He was a hardware dealer, the first direct importer; and, after a little more than a score of years, felt rich enough to retire. His gains were invested in city lots, which have increased in value so much that he has always paid the heaviest tax of all owners of real estate. After eight years of leisurely and wide travel abroad, Mr. Shaw devoted himself to the development of what he styled "the Missouri Botanic Garden." In this mode of enjoying his fortune he has for nearly forty years exhibited the same energy, shrewdness, and persistence which he had before shown in making his fortune. The first tree which he planted before starting on his travels is now a hundred feet high. His love of arboriculture he dates from the day he first saw a tree on the school-grounds at Mill Hill, where he was educated, which had been planted by Linnæus. Shaw's arboretum, where the owner has been so long rearing every variety of tree that can there be made to flourish, has been a nursery for the adjoining park, and will be invaluable to all tree-planters in its latitude. Yet it has cost no more lucre or labor than either the Floretum or Fruticetum. The whole, with a noble Botanical Museum and Library, were, by the owner's will a quarter of a century ago, bequeathed to the State of Missouri. In this gift the donor has emulated Cæsar, who left to the Roman people "all his walks, his private arbors and new-planted orchards, to walk abroad and recreate themselves."

—The first page of No. 35 of *Skilling-Magazin*, printed at Christiania, Norway, August 28, contains a good likeness of the United States Minister to Denmark, Prof. Rasmus B. Anderson. From the biographical notice appended, we learn that Prof. Anderson is only in his forty-first year, having been born at Albion, Dane County, Wis., January 12, 1846. His father, Björn Anderson, deserves to be remembered for having brought over the first colony of Norwegians in 1836, the small beginning of the stream of immigration from Norway, which in fifty years has brought to this country nearly 200,000 Norsemen. And to the son much credit is due that these foreigners have not formed mere colonies of Norse exiles—of which there has always been grave danger because of the vicious narrowness of the Norwegian priesthood—but have become earnest American citizens. Prof. Anderson has not permitted his diplomatic duties to suppress his literary activity, and, in addition to supervising the appearance of Norwegian translations of his tract on the pre-Columbian discovery of America, and his 'Norse Mythology' (of which last a French edition has lately been published, and Italian, German, and Russian translations are in press), he has nearly ready for publication, in English, the Elder Edda, in two volumes, and 'Norse Folk-Lore Tales,' edited from Asbjörnson's 'Norske Folke Eventyr,' also in two volumes, and has about completed the reading of the proof of a volume containing translations of ten biographical studies by the Danish critic Georg Brandes, which is announced for early publication by T. Y. Crowell & Co., under the title, 'Eminent Authors of the Nineteenth Century.' This book will contain eleven portraits, including one of the author. In the meantime, an etching, by J. Linder of Munich, of the head of this powerful writer—who deserves, perhaps, even a greater place in modern literature than is implied in the expression, lately used of him, "the Taine of the North"—was published with the August number of *Nord und Süd*. Brandes's characteristic countenance cannot be called beautiful, the Jewish element being very pronounced; but much that is likable can be found in it, and the familiar reader will rediscover in his face characteristics already ascribed to the man from acquaintance with his writings.

THE GREAT RUSSIAN MASTERS.

The Great Masters of Russian Literature. From the French of Ernest Dupuy. Translated by Nathan Haskell Dole. Thomas Y. Crowell & Co.

THE first thought which occurs to the reader when he is confronted by a volume of literary criticism, is, Has the author made a minute study of his subject under unusually favorable conditions? Has he had special facilities, either of knowledge or of circumstance, which authorize an attempt to utter a word of more than ordinary significance? These questions are particularly applicable in the case of criticisms on the literature of a foreign nation, and the first requisite for such an enterprise would seem to be a knowledge of the language to be discussed. This is evidently not the view which M. Ernest Dupuy held, when he prepared his 'Great Masters of Russian Literature.' He is dependent upon the French versions of the authors of whom he writes, and he is obviously possessed of an engagingly childlike confidence in what the translators have set before him. He does not acknowledge this; it would be quite inconsistent with the airy grace of his style and his easy assumption of superiority and competence to pronounce an authoritative judgment on his subject, were he to make any admission of that sort. The fact is, however, fatal to his pretensions, in a large degree.

The volume seems to have been reared, like an inverted pyramid, on the microscopical incident that the author had a speaking acquaintance with Turgeneff. He knew the latter so slightly that he trusted blindly to the statement in one of the letters published since his death, that 'Punin and Baburin' was largely biographical, so far as to assert that the great Russian novelist was brought up, after the early death of his parents, by his grandmother. The American translator corrects the blunder so far as the dates of death of the elder Turgeneffs are concerned, but leaves the uninitiated reader to accept the remainder of the statement as an incontrovertible fact. A charming account of the last visit which Turgeneff paid to his estate of Spasskoe-Selo, two years before his death, contains anecdotes of his boyhood which would have convinced M. Dupuy that the grandmother is fiction, and the description of the garden alone a fact. From another source, equally authentic and equally unknown

in either English or French, he might have learned how slight is the foundation for his assertions with regard to the "two outlandish servants" who directed the little Ivan Sergieievitch's moral education. The same source of information would have shown him that there were domestic reasons, quite as weighty as the political ones, for Turgeneff's long residence abroad previous to 1850. They were of tragic intensity, and it was natural that the novelist should not refer to them, although his own conduct was admirable throughout. As for the assertion that Turgeneff ever initiated any school or hospital on his estate, and that he succeeded in spreading a taste for reading, it is founded on the slenderest of facts. Turgeneff did, indeed, supply the funds for an hospital and other improvements, but he was not sufficiently in sympathy with the peasants to originate these ideas for his own estate, though he saw them in operation in villages belonging to his neighbors. What he was told to do, by some person in whom he had confidence, that he did, gladly; and it was only by accident that he discovered why presents of books were so eagerly sought after by his village children. It gratified him until a chance query showed that the books were utilized piecemeal for cigarette wrappers.

So much has been written about Turgeneff's books that it is difficult to find anything very novel to say. The chief interest in M. Dupuy's critical-biographical-analytical sketch is the apposite introduction of quotations of the novelist's own criticisms and expressions of opinion with regard to his work and characters, extracted from the volume of letters published in 1885. The American translator has not always caught the spirit of the quotations. "I will admit, if you please, that the talent with which I was endowed by nature has not grown smaller; but I have nothing on which to set it to work. *The voice is rested* (*la voix est restée*); there is naught to sing, so it is better to be silent." The context should have shown the translator that "the voice remains" is the proper rendering.

The chapter on Gogol consists chiefly of biography and analysis, with the addition of some appreciative criticism of a slight but graceful sort. The translator's note on page 309, which explains his divergences from the French text by a resort to the original Russian, must not be understood as including this part. The misapprehension of French idioms has something to do with it. "Dieu merci, il n'a pas visité les classes," when rendered, "God have mercy, he has not visited my classes yet!" is the exact reverse of the real sense: "Thank God, he did not visit the classes!" The context will prove this, even to one who cannot compare it with the original (p. 76). There is nothing remarkable in Klestakoff's statement (p. 73) that "he wrote the articles on 'The Marriage of Figaro,' 'Robert le Diable,' and 'Norma.'" What the impostor really claimed was, that he had written all three of the operas, as well as the book subsequently mentioned. The French is correct. Another misleading phrase occurs on page 80: "The dénouement has been unnecessarily anticipated" is not the equivalent of "Le dénouement a beau être prévu." It could not well be further from the sense, in fact. The French version of 'Dead Souls' has been used and abused. This version is from the pen of M. Ernest Charrière, who is certainly one of the most original workers in the field of translation that the present generation has seen. It may be stated, without going into details, that this gentleman regards himself as the distinct superior of any author upon whom he condescends to try his hand. The original merely serves him as a foundation for independent embroideries of his own devising. The result is somewhat similar to decalcomania paper abominations applied to a bit of Rose du Barri Sèvres ware. Perhaps, on the whole, he deserves the mistranslation which he here receives. Tchitchikoff's valet Petrushka's manner of reading has become proverbial throughout Russia; but it was not performed as described on p. 88: "What pleased him was not what he read: it was the mere act of reading. It did not trouble him that he was eternally coming upon words the meaning of which the deuce alone knows." The French conveys the correct idea, viz.: that "what pleased him was the reading itself, or rather the process of reading, the idea that the letters were for ever turning out to be some word, the meaning of which at times the deuce alone knew." The "two eyes streaked with yellow saffron" (an interpolation) should read *saffron yellow* (p. 99). It may be remarked here that the Russian words which are so lavishly scattered over the entire book offer no guarantee whatever of the version having been made from the original. They are common words, which are easily supplied without the need of a reference to headquarters.

On p. 103 the following occurs: "Then he offers to put up the souls at lansquenet. Tchitchikoff, in spite of insults, accepts only a part of the queens." What he did was to consent to "une partie de dames"—a game of checkers! "Bon Dieu! la triste chose que notre pauvre Russie!" is unidiomatically rendered by "the sad thing is our poor Russia!" The extracts from 'Taras Bulba' which the translator has added in the Appendix, are taken from the first, not the revised form of the story. Gogol rewrote both 'Taras Bulba' and 'The Portrait,' and the two forms are published in his collected works. The quotation on p. 350, from a letter to his mother, is somewhat differently given in Chas. E. Turner's 'Studies in Russian Literature,' and is there interpreted as one of the wild hallucinations with which he was afflicted, in consequence of religious excitement. Polevoi, from whom the present quotation is taken, may have seen the exceedingly rare edition of the author's works which contains his correspondence with his intimate friends and relations, and he may have possessed the key to the arbitrary system of letters by which the editor, Mr. Kulish, saw fit to designate all the persons therein referred to. Mr. Turner quoted from a review of the letters only, but his theory seems the more reasonable of the two. No mention is made by either author or translator, in the list of Gogol's works, of his well-known comedy, "Marriage."

The time has now come for a new biography of Gogol. The early one soon proved unsatisfactory to its author, both as to the tone and material. A great deal of new matter has since been collected, which has never been used, from recently published letters of the author and of his contemporaries; and a more accurate determination of the psychological processes of his artistic production is indispensable, because of new views which seek to place a different construction on the character of his moods during the last years of his life. It has been stated, for example, that he did not destroy the conclusion of 'Dead Souls' in a fit of religious madness, but in mistake for other papers of a different nature. A publication of this year in Moscow will afford great assistance in the task. Mr. V. Shenrok has prepared an index to the mysterious references in cipher which exist in Kulish's edition, as above mentioned, with the addition of fresh fragments of letters from Gogol and his mother. As Kulish's rare edition is the only one which contains the important materials, and as this recently published guide is indispensable to a clear understanding of it, American readers will be obliged to wait, in company with the author's own countrymen, for something more authoritative than even M. Dupuy, supplemented by Polevoi, can at present furnish. M. Dupuy does well to call attention to the use which Mérimée obviously made of the tragic death of Andrii in 'Taras Bulba' for his much-admired story of 'Matteo Falcone.' A man who, like Mérimée, was capable of perpetrating, on a wager, one of the most remarkable literary mystifications on record, by writing a volume of Servian folk-songs which duped even Pushkin, may justly be considered capable of appreciating and appropriating a telling situation when he met with it.

The public are familiar with most of the facts concerning Count L. N. Tolstoi which are recapitulated here, and interest will probably centre in the description of the state of affairs which has led to the author's present position in the matter of religion. The criticism is, perhaps, as adequate as the space would admit. As far as the two principal novels, 'War and Peace' and 'Anna Karenina,' are concerned, the American public stand on the same footing as M. Dupuy, or nearly so; the mutilated French editions which he used, and from which most of his quotations are drawn (with an amusing spice of original errors), having served as the foundation for those now current. One scene, which was omitted from 'Anna Karenina' in deference to Puritan sentiments, and which exactly tallies with the climax in Don Juan Valera's 'Pepita Ximinez,' excites M. Dupuy's admiration, and he quotes it; but another scene is cleverly substituted in the translation. *Teheran*, in the note on page 236, should read Tiflis.

The book is pleasantly written, and would be a favorable specimen of its class if one could feel a little more assured as to the author's knowledge of his subject and of Russian, and the faithfulness of the translator.

VERTEBRATE ANATOMY.

Elements of the Comparative Anatomy of Vertebrates. Adapted from the German of Prof. Robert Wiedersheim of Freiburg-in-Baden by W. Newton Parker, Professor of Biology in the University College of South Wales and Monmouthshire. With Additions by the Author and Translator. 8vo, pp. 345, 270 woodcuts. Macmillan & Co. 1886.

THIS handsomely printed and richly illustrated work comprises an "Introduction" or general part, presenting too briefly, but for the most part clearly, the structural and developmental features which are common to the branch, and a "Special Part," in which are successively taken up the integument, skeleton, etc. As stated in the Preface, the additions and modifications by which this volume differs from the original 'Grundriss' have been made in collaboration, and for the work as a whole, therefore, the author and translator are jointly responsible.

With only 345 pages, as against Huxley's 431 and Owen's 2,155, many things had to be omitted or treated very sparingly. Upon the whole the choice of the authors will meet with general approval, but the following important matters are mentioned either not at all or so briefly as to fail of usefulness: the brain of Holocephala; the pericardial pore of sharks and rays; the use of the oviducal gland of the latter; the difference in composition between the occipital condyles of the amphibia and the mammalia; the ordinal rank of Hatteria; the ancestral features of Chlamydoselachus; the morphological significance of the vascular foramen in the brain of some Elasmobranchs; the fully demonstrated air-breathing of not only Lepidosteus (p. 257), but Amia. The organs of Ammocœtes are mentioned, but with no distinct intimation that it is the larval form of the lamprey, which is the more needful, since the name is now employed by zoölogists in its original sense of a cyclostomous genus. There is nothing on the general subject of

rudimentary organs, and but few are mentioned. For the most part facts are stated with legitimate deductions therefrom, but in saying (p. 87) that "pectoral and pelvic arches are wanting in amphioxus and cyclostomi *owing to the absence of paired fins*," the authors seem to have overlooked the presence of the shoulder-girdle in certain arm less lizards, and of the pelvis in the legless Cetacea and Sirenia.

The animal tissues are grouped as nervous, muscular, supporting, and epithelial (including glandular). This may serve as a convenient classification, but physiologists will hardly assent to the placing of epithelium and glands with the skeleton as "passive." Since the Table of Classification on pp. 13–14 (which, by the way, includes only existing groups) is evidently intended to exhibit the natural sequence of the orders so far as possible, it is unfortunate that the Cetacea should be interpolated between the Sirenia and the Ungulata, with which the Sirenia are certainly more nearly related by structure, and from which it seems probable they have sprung by a retrograde evolution, a literal "descent."

The following passages bear upon the relations of the human body to other animals and to its own past and present: "The rudimentary character and variety in size of the eleventh and twelfth ribs of man [likewise of the orang] show that they are gradually disappearing" (p. 51). "The cochlea forms nearly three coils in man, one and a half in Cetacea, two and a half in the rabbit, three in the cat, three and a half in the ox, and in the pig almost four" (p. 202). There are noteworthy statements respecting the normal occurrence of hermaphroditism in certain fishes (p. 314), and an admirable summary as to the "theory of the skull" (p. 56). The three theories as to the origin of the paired limbs are clearly and impartially stated on pages 86–87, with a frank admission that the problem is far from settled, but with—judging from figure 68—a preference for the view that the pectoral and pelvic fins are localized remnants of what were primitively continuous lateral folds. A second unsolved problem is well outlined in the following passages (p. 101): "Though it is easy to derive the skeleton of the fin of all the fishes from a single ground-type, it is far more difficult to trace the connection of the latter with the extremities of amphibia. . . . We know of no fossil intermediate forms of limb, and it is at present, therefore, only possible to suggest a hypothesis on the subject."

The foregoing passages show that, owing to the advance in histology, embryology, and palæontology, too often "things are not what they seem" to the eye in the dissection of adults of recent forms, and that modern comparative anatomy is a far more complex subject than the science formerly pursued under that name. Let any who retain the ancient notion that natural history is merely a pastime, and of little disciplinary value, undertake to study this or any good recent work on the subject, and they will probably return to mathematics and the classics as to comparatively "light reading." The linguist and mathematician, however, even if unlearned in anatomy, should they carefully collate certain passages in this and indeed most similar works, would have the right to demand that obvious contradictions should be eliminated. For example, the note to page 155 says that the olfactory lobes of fishes, in the adult, are close to the nasal sacks, and connected with the rest of the brain by tracts; yet figure 115 represents the brain of the perch, a typical "fish," with the olfactory lobes close to the cerebrum, as is, indeed, the case with many other teleosts and all ganoids.

As is usual, in fact universal, in compends of comparative anatomy, the treatment of the central nervous system is least satisfactory, partly from carelessness or lack of information, and partly from the inadequacy of the space assigned to so complex and variable an organ. The parenthesis of *neurenteric canal*, directly after *primitive intestine*, near the bottom of page 129, might lead the uninformed reader to regard the two as synonymous. The diagram of the encephalic cavities, as seen in horizontal section, has been shorn of the preposterous representation of the "fifth ventricle" which marred the original of the present work, but it should either be correlated with the vertical section just preceding it, or the apparent contradiction explained. The names of the encephalic segments are those employed by Huxley and Gegenbaur; but since there is considerable diversity in this respect, the student would be aided by a brief statement as to the segmental names given by Quain and others. The genu is mentioned on page 148, but is named neither in the index nor on the figure of the mammalian brain, and nowhere defined; so that the important generalization that it is the first part of the callosum to appear, both ontogenetically and phylogenetically, would have no special significance for such as might be as yet unacquainted with cerebral anatomy. Contrary to the generalization on page 139, the brain of the little stickleback, a teleost, is relatively much larger than in any shark or ray. While it is true that the human brain is distinguished from that of apes and most other mammals by the greater extension of the cerebrum over the other divisions, yet in this respect man is surpassed by several of the monkeys. What is the student to infer from the statement on page 137 that "the brain of elasmobranchs, like that of cyclostomes, is of a specialized form, characteristic of and confined to the group," when the cyclostomous brain has just been described as "very low, and in many points embryonic"? An even more glaring inconsistency exists between the statement that the teleostean brain is "restricted to the order" (p. 139), and the admission on page 142 that the brains of two ganoids, amia and lepidosteus, are "formed on the teleostean type," the fact being that, excepting for the chiasm, all the ganoids have brains which differ from those of teleosts mainly in the retention of a considerable cavity in the olfactory lobe. The attempt to describe the brains of ganoids, dipnoans, and amphibia under one head will surprise any one who is familiar with them, and is so full of contradictions, errors, and omissions that a detailed criticism would occupy too much space.

The illustrations are numerous, well executed, in some cases colored, accurate; and most of them, especially the diagrams, are clear in themselves (with a notable exception in figure 171); but there are not enough to supply the uninformed reader with "connecting links," and the text is extremely meagre in this respect. The usefulness of the figures is materially diminished by the retention of German abbreviations which are not even explained in alphabetical order. Whatever be the language of the text, the parts represented in figures should have their Latin names, if possible of one word each, and the abbreviations should be formed from the names in accordance with well-recognized etymological rules. That the abbreviations should be explained in any other than alphabetical order would certainly not occur to the average clear-headed man of commercial pursuits, to whom and to his correspondents time and accuracy have a definite money value. Less than one-fourth of the figures are borrowed, and most of these are more or less modified. Huxley's diagram of the typical brain is so much changed as to convey a different and erroneous idea respecting the relations of the "third" and "lateral ventricles." Although unacknowledged, the three diagrams in figure 236 are merely colored reproductions of Huxley's figure 27. Figure 97 is a fair representation of the lancelet, and it is disappointing to encounter in figure 199 Gegenbaur's copy of Quatrefages's caricature.

A special bibliography is appended to each chapter, and there is a "list of thirty two general works on comparative anatomy and embryology" (including only two American, Martin and Moale's 'Handbook of Vertebrate Dissection' and the 'Anatomical Technology' of Wilder and Gage), from which perhaps Monro's 'Fishes' might have been spared. In all the lists the arrangement is alphabetical by authors. Typographical errors are very few. *Mihalkovics*, though correctly spelled in the index, is repeatedly made *Mikalovics* in chapter I, and *Alopias*, a shark, is misspelled *Alopecias*. *Cœlome* and *urinogenital* are unusual but allowable, and perhaps more correct than the ordinary, forms. The Index has a few real omissions, *e. g.*, *pygostyle*, *holocephala*, and *homodynamous*, the latter word, by the way, having been used on page 55, but not defined until page 87. The apparent absence of many common and important words, *fornix*, *maxilla*, etc., is due to the fact that the component parts of the brain and skull are given only under those two words—an arrangement which does not commend itself, and which is not applied to the divisions and appendages of the alimentary canal. *Adrenal* is in the index, but does not occur in the text, and it is not to be expected that all would recognize in it the zoötomical mononym for the anthropotomical polyonym, *supra-renal capsule*.

The removal of the defects referred to, with others not here specified, would leave the work an authoritative though too condensed epitome of the most recent facts and views of vertebrate morphology, and it might then serve as a textbook, under a competent teacher; but—especially in the case of medical students, for whom also it was written—it should be preceded by the examination of vertebrate types by the aid of, for example, the 'Zoötomy' of another son of the distinguished father of the junior author.

RECENT NOVELS.

Hannibal of New York. Some Account of the Financial Loves of Hannibal St. Joseph and Paul Cradge. By Thomas Wharton. [Leisure Season Series.] Henry Holt & Co.

A Secret of the Sea, etc. By Brander Matthews. Charles Scribner's Sons.

The Magic of a Voice: A Novel. By Margaret Russell Macfarlane. Cassell & Co.

Our Radicals: A Tale of Love and Politics. By Fred Burnaby. Edited, with preface, by his private secretary, J. Percival Hughes. Harper & Bros.

THE elements of Mr. Wharton's novel are not new, except in the way of their combination, but they are of a kind that the author very well knows how to make interesting. Wall Street has its romance as well as Bar Harbor, if one only has the faculty for seeing it—a grim sort of romance, to be sure, something like that which Carlyle found in his Reality; but it serves well enough as a centre about which to group the actions and motives and accidents of the little knot of people whom one meets in Mr. Wharton's pages. They are not enchanting people, by any means; and it is only through a feeling of aloofness, as if one in company with the writer were studying them from the standpoint of a critical and curious observer, that they become at all bearable. Roger Lynton, the young fellow who had been West, whose rosy, free views of life were consequent upon youth and a good liver, is the only redeeming figure among them. The

rest, from St. Joseph's groom to the editor of his *Review*, are shining examples of the creed that makes all men strangers—that considers a fellow-man as merely an opportunity to make money. Mr. Wharton's attitude in writing of such people is all that could be asked; he is philosophic, humorous, satirical, never maudlin nor ranting, though now and then, perhaps, somewhat extravagant. He marks out the lines of his story liberally and skilfully; there is no hesitancy or confusion about them. Nor, on the other hand, is there any attempt at subtle shading or sign of that delicate touch which suggests more than it expresses. St. Joseph's brutality is very brutal, Cradge's treachery very black, and Lynton's animal spirits very lively. In fact, the story and the characters stand out with the emphasized actuality that a caricature often possesses.

In direct contrast with the concrete quality of Mr. Wharton's work is the exquisite nothingness of Mr. Matthews's sketches, in which a whim or trick of fancy is enough when amplified to fil out the pages of a magazine tale. The spontaneity of this collection may be surmised from the table of contents, where the titles "Brief as Woman's Love," "Perchance to Dream," and "Perturbed Spirits," occur consecutively. Of course it is impossible for cleverness and simplicity to go together; if they do, the simplicity will quite likely resemble Becky Sharp's. Mr. Matthews's writing is undoubtedly clever; at times one is apt to think that the only fault with it may be that it is too clever. His characters are all delightful and witty and well bred. They are mostly New Yorkers, and, of course, sophisticated. Yet, taking the stories from first to last, there is a fair appearance of simplicity about them that tends to make one suspicious, and to think that the writer is still experimenting in story-telling. The volume is very appropriately dedicated to Andrew Lang.

It is hardly fair to say that 'The Magic of a Voice' is a story presumptuously undertaken, yet its execution falls so far short of its possibilities that the judgment is almost forced upon one. The picture of life as it is led by the gentry of Mecklenburg, with their narrow interests and restricted companionship, is full of local color and realistic touches; but the phase of life is not one that is of itself interesting. It is especially uninteresting when one feels that the recital of its inconsequent happenings is crowding out better things; and this is the case in reading 'The Magic of a Voice.' Given, a dark man, with close-cut hair curling crisply around his open brow, with an eye like a falcon, and other manly attributes, in love with a mysterious voice; the owner of the voice, a tall slender maid, with ash-blonde hair, arms like a Psyche, aspirations in music and the gift of their expression, for principal actors, and the wild waters of the Baltic, the woods, and the rock-bound shore for a romantic setting, one is somewhat exasperated at having to listen to old women gossiping over their knitting. Perhaps the realists are to blame for it all; but one's impression is that the author "gave up" after beginning—lowered the pitch, as it were, to an easier key.

It is but just, in speaking of 'Our Radicals,' to mention that, as Mr. Hughes explains in his preface, the work was left in an unfinished state by the death of Col. Burnaby at Abu-Klea. The author intended making material alterations, but the general character of the book, we fancy, would have remained the same, for anything so thoroughly imagined and worked out as the future history of English politics, with a prime minister who had made his money in Chicago; Ireland in rebellion aided by an American contingent; and the many improbabilities of Fenianism which make up the story, could not have been seriously changed without being destroyed. Extravagance is naturally expected in such a book, but there is such a thing as carrying it too far.

Kean and Booth, and Their Contemporaries. Edited by Brander Matthews and Laurence Hutton. Cassell & Co.

THIS is the third volume of the series of histrionic biographies to which it belongs—a series so happily planned that, were the execution only tolerable, it must prove a fortunate addition to our libraries. Garrick and the Kembles are the central figures of the earlier issues, in which the aim of the editors was successfully carried out. A short biographical and critical sketch of each notable player of the period was given, and then supplemented by well-chosen extracts from memoirs of the stage, in which one reads what contemporaries said of them most to the point. With such collaborateurs as John Norton Ireland, Austin Dobson, and William Winter, the editors could not fail of a high degree of interest, though the level of excellence is lower than these names would justify us in expecting; but with all the defects incident to a corps of contributors not all of whom have achieved reputation, the work is truly a library of dramatic annals well condensed.

This present volume is especially noticeable because of the appearance in it of Edwin Booth in the novel character of a writer. His two subjects are Kean and the elder Booth; and it cannot be a matter of ungracious comparison to any of the others to say that in literary quality, as well as in the subtlety of personal charm, he is out of the range of the rest. A great tragic actor writing of the most celebrated of his predecessors, a great son writing of a great father, has of course an advantage; but it is one of subject, and does not extend to the manner of the expression. With simplicity and ease he places the reader at once at his own point of view as he sits in his "study, or my smokery rather, for little else but smoking is done in the small room to which only a chosen few are admitted, . . . alternately reading memoirs of great actors of the past, and contemplating their portraits and death-masks which hang upon the walls; and somehow I seem to derive a more satisfactory idea of their capabilities from their counterfeit presentments than from the written records of their lives." He goes on to give his impression of the greatest of these dead companions about him, before he comes to the face of Kean, always with imagination and a certain noble instinct; and he does not finish his brief tale without some touches of the finest order. Especially is there a sketch of his father's parting from Kean, admirably struck off—neither too little for clearness nor too much for power. So, in writing of his father directly in a few, but very full, pages of reminiscences of that strange genius whom, he says, he knew "best," there is the same measure, the same justness of feeling and of reserve, the same open modesty of spirit, which are among the rarest and most prized of literary virtues, belonging as they do in the region of character. Nor are there lacking here a few scenes of the sincerest human interest, flashed out with the brevity of the drama itself. That in which he describes his father's "coddling" of him after his début "in the very small part of *Tressel*," though set forth in only a half-dozen lines, is an example; and in general the relationship between the boy and the father is delightful in the refinement of its presentation. It is a pleasing surprise, in this age of large vocabularies and conscious stylists, to come upon writing of this sort, especially from one who has not been suspected of literary grace; it is well to be reminded thus that, when all is said, "the man's the style."

The other papers, which we shall not stop to notice, are upon Payne, Wallack, Mary Ann Duff, Mme. Vestris, Placide, Hackett, Webster, Buckstone, Charles James Matthews, Burton, Frances Ann Kemble, Clara Fisher, and Brougham. Mr. Ireland's are the careful, cautious monographs we have learned to expect from him, and in Mr. Winter's there is the vein of comradery always so amiable a trait of his style. The remaining two volumes of the series will bring the history down to our present era, and include it; and with them the editors will finish a valuable and much-needed work.

Records of an Active Life. By Heman Dyer D.D. Thomas Whittaker. 1886.

"IT may be thought," says Dr. Dyer, "that too much of a personal nature has been introduced, but an autobiography must necessarily seem more or less egotistical." His own egotism, however, is so naïve, so innocent, that it is much more amusing than offensive. Nothing that has happened to himself is unimportant in his eyes, but there is no exaggerated sense of his own importance. When he has preached well, or thinks he has, or been told so, he duly writes it down, and also when he has taken up a big collection, with some natural pride. Indeed, the greatest successes of his life were in the matter of collections and as agent of the American Sunday-School Union and other similar societies. His object in writing a sketch of his own life has been, he says, to show the important events and changes which he has lived to see and in which he has been called to take part. But this object is clearly followed only in the three chapters on the period of the war, and in them the part with which he has no immediate concern, as an agent of the Christian Commission, is extremely slight, and, negatively at least, somewhat inaccurate. For example, in giving an account of the Presidential election of 1860 he says there were three candidates, entirely forgetting Breckinridge, whose candidacy was not unimportant. He was for some time Secretary of the Committee of the New York branch of the Christian Commission, and was evidently the right man for the place. His style grows warm over the great collections that were taken for the Commission, with one "plate collection" of $26,000 in the Academy of Music. Secretary Stanton was an old schoolmate of Dr. Dyer, and Dr. Dyer saw much of him in Washington, apparently being excepted from his habitual contempt for clergymen. Lincoln's relations with Stanton are the subject of some interesting pages. We read of the old black sofa in Stanton's office, on which Lincoln used to throw himself down in a passion of anxiety, and cry out, "Stanton, these things will kill me! I shall go mad! I can't stand it!" and then in a little while, "Stanton, this reminds me of a story," which told with a burst of laughter, he would straighten up and say, "Come, Stanton, let us talk things over and see what can be done."

Dr. Dyer's connection was with the Episcopalians, and his notes of character and circumstance are generally within the limits of their sectarian activity. But for some time, as Secretary of the American Sunday-School Union, he had a wider range. He was evidently a man of easy admirations, well pleased with others as with himself upon the slightest provocation. A good many of his jottings are of the least possible interest to anybody at the present time, telling as they do how he went to such or such a place, and dined with so and so, and met this, that, and the other unimportant person. Occasionally the current deepens, as where the regular incumbent gets up after his sermon and denounces it as the grossest heresy; and occasionally we get a side-light on some really notable

event, such as the trial of Bishop Onderdonk or the singing of Jenny Lind at Castle Garden. Dr. Dyer's economy of emphasis in the different parts of his narrative is remarkable. He has no sense of proportion. He allows more space to Boston Common than to the most famous European sights. His animal spirits are immense, and, without wit or humor, he has a boisterous sense of the ridiculous. He is never so elaborate as when describing some practical absurdity. He goes on for pages about a railroad accident in which his linen duster received the principal injury from a lamp broken or upset. A battle with mosquitoes—"millions of them"—is the topic of another elaborate excursus. We have also an account of the disappearance of a stately gentleman through a register, or the hole where there had been one, in the church aisle. Dr. Dyer was obliged to stuff his surplice in his mouth to check his laughter, and he had an irritating cough through the remainder of the service. Take him for all in all, he must have been a pleasant, kindly soul, well fitted for the work he had to do; but his autobiography has little claim on any one who did not know him well or have some personal or official interest in the circumstances of his life.

The Methods of Historical Study. Eight lectures read in the University of Oxford in Michaelmas term, 1884. With the inaugural lecture on the office of the historical professor. By Edward A. Freeman. Macmillan & Co. 1886. 8vo, pp. 335.

UNDER the term "Methods of Historical Study" are comprised two quite different although nearly related subjects—the methods of historical *instruction*, chiefly academic, and the methods of individual investigation. The first of these, a branch of pedagogic science, has been well and adequately treated, at least for its present stage, in Dr. Hall's 'Methods of Teaching and Studying History.' But we have had no book to which the independent historical student could look at once for inspiration and guidance in his work. To provide such a help, probably no living English writer is better qualified than Mr. Freeman, and his book must at once receive a hearty welcome and accomplish much good. No one needs to be told what are Mr. Freeman's merits as a writer and an historian, and it is enough to say that they are found in the fullest degree in this volume. For the purpose of inspiration and suggestion nothing could be better—unless, indeed, the over-modest student may find himself discouraged by the wealth of erudition which on every page his teacher pours lavishly from his stores. But it falls to the lot of few to have any use for such encyclopædic learning; and it is enough for the follower if he is stimulated, in his own narrow field of inquiry, to emulate the accuracy and thoroughness of knowledge which Mr. Freeman displays in nearly every department of history. His thorough honesty and his sympathetic spirit we can all make our own; and we can all take comfort from such a saying as this (p. 285): "Please to remember that the accurate writer is not he who makes no mistakes, for there is none such; it is he who finds out his own mistakes for himself on his own manuscript, and does not leave them for other people to find out in print."

For *inspiration*, therefore, this book is all that we could wish; as a *guide* it leaves perhaps something to be desired. Mr. Freeman's style has always been criticised as being too full of allusions and remote illustrations and comparisons. It is a commonplace of rhetoric that the more familiar should be used to illustrate that which is less familiar; but Mr. Freeman does just the reverse—he goes to the most distant and least-known times and regions, and brings from them names and events to offer as a parallel and commentary to the subject in hand. If this is a fault in those works which are written for the general public, still more is it a fault in one which is designed especially for young men just entering upon historical investigation. And Mr. Freeman seldom takes pains to explain such allusions, even when a word or a brief foot-note would do it. Take the glowing description of Clermont (p. 205), or of Palermo (p. 315); take the names of classic and mediæval writers in Lecture V; there are few readers, much less listeners, who can get a clear notion of all the facts here touched upon. The picture, instead of being clear and intelligible, is much of it blurred and indistinct. An even worse instance—which we cannot help calling sheer pedantry—is the mention two or three times of the Emperor Jovius. It takes an effort of the memory to recall the fact that Diocletian had the whim of calling himself by this pretentious appellation; and Diocletian is mentioned on the same page (p. 198) in his proper name, without any intimation that the two persons are the same.

This is Mr. Freeman's worst habit of style—that of talking about things and alluding to them, instead of giving information about them; so that a reader of ordinary equipment in the way of historical information, not only is made to feel his ignorance very sensibly (which is no doubt a very good thing), but is left in a kind of bewildered and despairing condition of ignorance—which is not at all a good thing. This is his fault as a writer, we say, which in most of his writings we can pass over as simply his particular fault, and as not interfering with great enjoyment and profit from reading his histories. But in a work of the kind we are now considering, this characteristic of style is a serious disadvantage. What does the young student want, who is beginning the serious work of historical investigation under Mr. Freeman's guidance? He wants to be told how to go to work; how to select his authorities, and how to use them; how these authorities are classified, and just what kind of information is to be derived from each class. Now we are far from saying that he will not get this help from this book. The very titles of the lectures—"The Nature of Historical Evidence," "Original Authorities," "Subsidiary Authorities," etc.—show that the author has attempted to do this; and what Mr. Freeman attempts to do he always does. A great deal of a most fundamental character can be learned upon these heads from these lectures; but not nearly so much as if the lecturer had held himself rigidly to a systematic treatment of his subject, had excluded every allusion which was not familiar as well as apt, and had under each head worked out one illustration completely instead of sketching twenty. He has himself given an admirable example of the correct method when treating of inscriptions—one of the best parts of the work. He shows in detail (p. 245) what may be learned from the inscription on the Pantheon and from that of one of the Scipios, and then proceeds to describe the inscriptions in the Volumnian tomb in a most interesting and instructive way. But even here he assumes that we already know all about the inscription of Scipio. A perfectly satisfactory treatment of the subject would have helped the memory in this case as well as in that of the Volumnii, and would have given the passage from Livy which contradicts the story on the tomb. This is what is needed, not only by the general reader, but by the special class of students for whom this book is designed.

A considerable part of the lecture upon "Classical and Mediæval Writers" is employed in enforcing Mr. Freeman's favorite doctrine of the unity of history, and the impossibility of establishing divisions of periods. This is very important from the point of view of general history, and is a view which has been too often neglected. But, after all, for any point of view except that of general history, the division into periods is a thing of the most essential character. It is very true that modern history is simply a continuation of the streams of ancient history, and that all its elements and forces are to be found in these earlier streams; but, nevertheless, when we consider that no less than three independent streams flowed together at this epoch, when ancient history ends and modern history begins—the stream of Roman imperialism, that of Germanic nationality, and that of the Christian religion—we must admit that here is, if not a new epoch, at least so complete a reconstruction of society as to be worthy to make the basis of a fundamental division into periods.

And this leads us to demur a little at Mr. Freeman's favorite motto—"History is past politics and politics present history." There is a large measure of truth in this, of course, but it can be admitted as wholly true only by very greatly widening the scope of politics or narrowing that of history. Of the three events which we just mentioned, only one can be called strictly political; but surely the Christianization and the Germanization of the Roman Empire are subjects of history in more than their strictly political bearings. On the other hand, the important element of truth which there is in this motto leads us to think that Mr. Freeman undervalues (p. 223) the adaptedness of modern history for the education of the historical student. Perhaps we do not fully understand him—indeed, he speaks in especial of "the sixteenth, seventeenth, eighteenth centuries"; but while we admit fully the advantage of a classical training for the study of even the most modern time, we believe that he who would acquire a living knowledge of past times should be early led to the careful study of his own times by the use of original evidence. "He who is reading his Thucydides is well employed: he is laying the best of foundations." Agreed. "He who is reading his Gregory or his Lambert is well employed, if he has read his Thucydides before them." Agreed again, provided he is going to make mediæval Europe and its institutions his study. But Gregory and Lambert do not stand, for the methods of historical study, upon the same footing with Thucydides. His value is disciplinary in the preparation of the student; their value is in what they contain, as authorities on certain periods. The well-trained classical student may therefore as well pass at once to Clarendon and Alexander Hamilton and Gen. Grant as to tarry with authors who belong to special periods quite as much as these last.

The Story of Music and Musicians. By Lucy C. Lillie. Harper & Bros. 1886. Pp. 245.

THE greatest difficulty which music teachers experience is in their efforts to get their young pupils interested in the dry, technical apparatus without a mastery of which the best music cannot be interpreted correctly. It rarely seems to occur to them that the pupil's interest might be aroused promptly if he could be shown in the case of every seemingly dry detail that "hereby hangs a tale." The author of this little book has been guided by the notion that the technical aspects of music can not only be divested of their terrors for young folks, but endowed with a special charm, by tracing their historic development in each case. From this point of view she gives a brief account of the development of the pianoforte, the musical staffs, the principal forms of music, etc. The great difficulty of condensing such complicated subjects into language intelligible to the young may excuse the want of complete success in a few instances; but as a whole

the book fulfils its promise, and may be read with profit as well as interest by the young folks. Short biographies of the greatest composers are judiciously interspersed to lighten the subject, and in these the author appears to better advantage as a writer than in the technical portions. It was a mistake to attempt an explanation of the fugue. At a stage of study when pupils have yet to be told what is meant by intervals, major and minor, and other elementary matters, they simply cannot understand the points involved.

The only positive error we have noticed occurs on p. 195, where the astonished reader is informed that among composers who were also good conductors "Mendelssohn stands in this century entirely alone." Notwithstanding this authoritative assertion, we still confess to a lingering suspicion that Berlioz and Wagner were not such very great bunglers as conductors, after all, and that even such living composers as Bülow, Rubinstein, and Brahms are not to be altogether despised in that capacity. Nor is it correct to represent Haydn as having "gone further" in music than Bach. As a matter of fact, Bach, though he lived before Haydn and Mozart, was a more modern and advanced composer than either of them. In one place we are told that "the minuet has its origin in music of French origin"; nor is this the worst offence against style, the author's language being occasionally very stilted, as on page 32. There are several typographical errors—Von Beethoven, Bulow, Rubenstein, in place of Van Beethoven, Bülow, and Rubinstein. It remains to note several excellent portraits in this volume.

St. John's Eve, and Other Stories from 'Evenings at the Farm' and 'St. Petersburg Stories,' by Nikolaï Vasilievitch Gogol. Translated from the Russian by Isabel F. Hapgood. Thomas Y. Crowell & Co.

THE issue of this volume is welcome to all lovers of Russian literature, and gives us an opportunity to express again our interest in the writings of Gogol and in the translations of Miss Hapgood. But we have neither writer nor translator at their best on this occasion. The tales are of a character to need careful *editing* as well as translating, if one would give them their full value to readers unfamiliar with the originals; and the value even of the originals can be fully appreciated only by those who remember what these studies were preceded by in Russian literature, and of what they were the precursors. In themselves, spite of their fine qualities, the average reader would not find them interesting; yet they inspired Turgeneff not only with admiration but with very direct imitation. We regret that the translator has not pointed out the how and the why of this. A translator should feel himself to be in the position of a gracious hostess, who does not content herself with simply introducing a stranger to her friends, but makes him cordially known to them. It is also never to be forgotten that imaginative sympathy, as well as careful accuracy, is needed to create highly excellent translation, and that a translation should produce as far as possible on the mind of the reader the same effect (however the effect is produced) that the original makes on the mind of the native audience. This excludes any *quaintness* in rendering a passage which is not quaint in the original, a fault Miss Hapgood occasionally falls into; but it does not exclude an extreme literalness which often gives great vividness to the phrase—one of Miss Hapgood's characteristic virtues.

To illustrate: we find objectionable this: "Her face and eyes expressed so much goodness . . . that you would probably have found a smile too repellingly sweet for her kind face." Even if the Russian word means *repellingly*, it cannot, we feel sure, sound here to a Russian as "repellingly" does to an American. The idea, of course, merely is that the sweetness of a smile would have been *de trop*, or would have been insipid, would have had a certain inharmoniousness with the calmness of her kind face. On the other hand, we find agreeable this: "Fly to Petrus, my child of gold, like an arrow from a bow," or the frequent use of "my little dove," or "dear little fish," as terms of endearment. But Miss Hapgood must be persuaded to give us hereafter (in other translations of this literature) notes, many notes. To the average reader at a public library (and it is to them that such books should be made acceptable) what meaning would such a sentence as this hold (and there are many of them): "As soon as the labors of the field are finished the muzhik crawls upon his oven to spend the whole winter"?

The average reader will find one, and one only, of these tales very delightful. "Old-Fashioned Farmers" Miss Hapgood entitles it, but *proprietors* is more nearly our word for the persons it presents, and the French title, "Un Ménage d'autrefois," suggests more happily still the subject of the story. It is an extraordinarily charming description of an old couple—a Russian Baucis and Philemon—devoted to the pleasures of the table! The first story in this selection, "St. John's Eve," is one that appeared in the first work which gave Gogol celebrity, and, like most of his early tales, is supernatural in character. Another supernatural story here, "The Portrait," is of later date. The longest is "How the Two Ivans Quarrelled," and the saddest, the dreariest, is "The Cloak." There are five in all; and all of them have something—some less, some more—of the admirable imaginative realism which renders many passages of Gogol's writing masterpieces of poetic and vivid description.

Shakespeare's England. By William Winter. Boston: Ticknor & Co. 1886.

THIS volume justifies its title rather by the indulgence of the reader than the exactness of its agreeable author. He has conjoined and made one body of his two previous sketches of English travel, and has given it this happy name "because it depicts not so much the England of fact as the England created and hallowed by the spirit of her poetry, of which Shakspere is the soul." There is more of fitness in the selection than of logic in this ladder of reasons to explain it, for, although the scene is as often in Garrick's London as in Shakspere's, and there are wayside excursions to Gray's churchyard, to Coleridge's tomb, or to Canterbury, yet the little book breathes devotion to Shakspere as the author's daily mood and habit of sentiment; and if the text is frequently leagues and centuries astray from Avon and the Globe, it is usually near some player of the later stage. Mr. Winter is always the dramatic pilgrim. Few are the names of actors or actresses since the Restoration that he has not inscribed in his book of English memories, if any literary or personal charm makes them still a tradition of the theatre. He is preoccupied with this theme, as is natural; but he is also susceptible to sentiment from other and commoner sources, and is for ever expressing grateful appreciation of English charm and ancientness. The narrative flows on and on, without a stone to mark the current even; everything is found delightful, satisfying, perfect, until one begins to feel the compliment growing over-ripe, and the pathos certainly sympathizes with a very moist atmosphere. Then all at once we hear of "the mental strain and bewilderment, the inevitable physical weariness, the soporific influence of the climate, the tumult of the streets, the frequent and disheartening spectacle of poverty, squalor, and vice, the capricious and untimely rain, the inconvenience of long distances, the ill-timed arrival and consequent disappointment, the occasional nervous sense of loneliness and insecurity, the inappropriate boor, the ignorant garulous porter, the extortionate cabman, and the jeering bystander." The effect of this vortex of clauses on the head of the Avon-charmed and Abbey-awed reader is something very sudden and terribly discomforting, though immediately all is smoothed again and quiescent and lulling to the very end. It is plain that this is only a record of "best moments," as was right; a personal impression of scenes loved in imagination, and found delightful before the eyes and a treasure in memory. Let us be truthful: it is not Shakspere's England at all; it is the poet Winter's pleasant excursion where the dead players and a few noble poets and one or two great English events may be thought of most nigh.

Documents Illustrative of American History, 1606—1863. With Introductions and References by Howard W. Preston. G. P. Putnam's Sons. 1886. Pp. 320.

IF historical literature is a true gauge of the prevailing historical spirit, there is reason for encouragement in the volume edited by Mr. Preston. The old-time notion that it was the chief office of an historian to manufacture ready-made opinions for his readers, is giving way to the more rational idea expressed by Mr. Freeman, whom the editor quotes, that the best historical discourse "can after all be nothing more than a comment on a text." It has been so common a practice to omit the text, while giving the comment, that students and general readers will welcome this collection as affording the best possible material from which a knowledge of our political history can be gained.

The question of selection is of the first importance, and we think the editor has chosen well. The adoption of the Constitution, not the Declaration of Independence, is the turning-point in our political existence, and this was the result of the development of previously existing institutions, not a something evolved out of the inner consciousness of the men who composed the Philadelphia Convention. One phase of this development is seen in the growth of the local governments of the different colonies; a second, in the various attempts that were made to unite them; a third, in the question that grew up as to the connection that rightfully existed between the colonies and the mother country. Mr. Preston has selected the charters of seven of the colonies, and these may be considered as representative of all in illustrating the first phase mentioned. A careful study of the charter, proprietary, and provincial grants is of the greatest service in determining the nature of the union it was possible to form between them, and the justice of the subsequent claims made by England. The reproduction of the three plans of union attempted before the Articles of Confederation is, we think, the most valuable part of the work. The New England Confederation has been known mainly through Mr. Palfrey's summary, Penn's Plan has been scarcely more than a name, while every writer has confronted us with the glittering generality that the Albany Plan was rejected because the King thought it too democratic and the colonists too monarchical; but the documentary evidence has not been given. Mr. Preston includes the usual papers which show the animus of the colonists in the struggle with England. It would have been of equal interest had a few of the official acts been introduced which show the spirit of the English in dealing with their colonies. These are quite as necessary illustrations of American history as the acts proceeding from the other party to the contest. The documents given after

the adoption of the Constitution all turn upon the one great question that has grown out of it—the nature of the relation that exists between the State Governments and the general Government.

We regret that while the selection has thus been made so wisely, the usefulness of the book has been impaired by serious omissions. A brief history of the documents themselves should have been given, and we are left quite in the dark, except in one instance, as to whether the transcription has been made from the original manuscripts or from the current printed copies. Particularly in the case of the Kentucky Resolutions of '98 should some note have been made of the corruptions that have crept into the original text. It is well known that Elliot, who is usually taken as the standard authority, in the later editions omits from the first resolution one entire clause—"its co-States forming, as to itself, the other party"—though it is found in the genuine text. On the presence of this clause hangs one of the main arguments of those who believe that the Kentucky Resolutions cannot be considered a precedent for the nullification acts of a later day. Mr. Preston restores it, but without remark of any kind. In connection with the Ordinance of 1787, he tells us that in 1790 it was extended to the territory south of the Ohio, "excepting certain clauses." Here, too, the most vital questions depend upon the character of the omitted clauses, and a definite statement should have been made in regard to them. Again, "only the more important provisions" are given of the second and third Virginia charters; and while these are doubtless sufficient for the purpose, some hint as to the contents of the remaining paragraphs might have been expected. In the authorities quoted, we notice an entire absence of writers who present the Southern view. Place should at least have been found for Tucker, Alexander H. Stephens, and the works of Calhoun. More definite mention should also have been made of Hazard's 'Historical Collections.' These are of the greatest value, and the editor must have been largely indebted to them. It was a grave mistake not to make the running-title of the pages specific, so as to avoid the constant use of contents and index. The date, as well as the title, of the document should have been carried at the head. Again, not to be hypercritical, we do not see the consistency of retaining in the early documents the use of *u* for *v*, while adopting the modern *s*. We fear the author of the 'Memorial History of Boston' will question his own identity if he reads Justin *Wenser* (p. 318).

The book will be welcome to many readers, and we trust a subsequent edition will correct these defects in the editorship. In its present form, it is a popular rather than a scholarly work.

Our New Alaska; or the Seward Purchase Vindicated. By Charles Hallock. 8vo, pp. 209. New York: *Forest and Stream* Publishing Co. 1886. Illustrated.

THE author of this volume has already won an enviable reputation as editor and author in the department of literature consecrated to the fisherman, the sportsman, and their doings. He has returned from the tour of southeastern Alaska full of the enthusiasm which its magnificent scenery, unexplored forests, and prolific waters are so well calculated to produce, especially in the bosom of a tourist and angler. The result is an unpretentious little book, pleasantly written, illustrated by characteristic, if somewhat coarse, sketches, and well adapted to give an idea of the southeastern part of the Territory. While it makes no pretence of adding any great amount of new information to what has been written by others, the text, nevertheless, is chiefly from the author's personal observation, and therefore has value as an individual judgment of the country by an intelligent and travelled observer. If his hopes for the future of the Territory may seem in some particulars a trifle too sanguine, it must be said that the popular view for a long time was inclined too far the other way, and the reaction against obvious injustice is apt to be energetic in one who has the courage of his convictions.

The itinerary of the tour, the native tribes and their ways, the mineral wealth, fisheries and the fauna of the shores and peaks, the glacier fields (with an excellent sketch of the Muir glacier), the characteristics of Sitka, the seal islands, and the resources of the Territory, afford material for entertaining chapters. As a field naturalist, Mr. Hallock calls our attention to many interesting objects which would hardly catch the attention of the uninitiated. We are somewhat puzzled, however, by the reference to a "horseshoe crab" (p. 156), as it seems as if a *Limulus* was intended, and we believe that genus has not been reported by naturalists, as yet, from those waters. If Mr. Hallock saw one, he has made a discovery worthy of more exact record than he gives.

We have noted few slips of any importance, though the author makes no claim to scientific precision. His book will be handy for the summer tourist and useful to the general reader, it being understood always that the region of the Aleutian Islands and of the great river valleys northward from the Aliaskan peninsula have different characteristics from the Sitkan region reached by the tourist. The plea of the author for more attention on the part of Congress to the needs of the Territory in point of legislation is perfectly just, and it is to be hoped may contribute to the realization of the thing desired.

BOOKS OF THE WEEK.

Adams, O. F. October. Boston: D. Lothrop & Co. 75 cents.
Akers, Elizabeth. The Silver Bridge, and Other Poems. Boston: Houghton, Mifflin & Co. $1.25.
Arnaud, M. One Day in a Baby's Life. Adapted by Susan Coolidge. Boston: Roberts Brothers. $1.50.

Warner, C. D. The Book of Eloquence: A Collection of Extracts in Prose and Verse from the Most Famous Orators and Poets. Boston: Lee & Shepard.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 4, 1886.

The Week.

It is very evident that the returns from the general elections throughout the country are going to furnish very interesting material for study. There are few signs of a large popular movement in the direction of either party. The most notable indication appears to be a subsidence in the prohibition movement, which makes a slight showing everywhere. Pennsylvania shows about the usual off-year Republican majority, but no signs of a great awakening because of Mr. Blaine's tour. New Jersey is Democratic, with the Legislature claimed by both parties. Connecticut has no election for State officers by the people, and the Legislature is in doubt. There is a great upheaval in Minnesota in favor of the Democrats, and a large labor movement in Wisconsin, though not large enough to prevent Gov. Rusk's re-election on the law-and-order issue. In Virginia the old Mahone influence appears to have revived with unexpected force. In New York the State has given Judge Peckham a majority of several thousands, but the Legislature has a Republican majority.

The moral of the municipal elections is simply that the party bonds are not in this city strong enough to hold men at really serious crises, and the George movement made this crisis seem really serious to tens of thousands of Republicans, as the result has shown. In other words, a large body of them took the thoroughly sane course of voting for the candidate friendly to property and order, whom they thought most likely to win. Unfortunately, the crisis was not taken seriously by Mr. Roosevelt and his friends. They seem to have looked on the whole canvass as a sort of "flyer" in politics, in which any extravagance of speech or conduct was pardonable, and which at worst would do some good to "the party." What it would do for the city seemed a secondary consideration with them. The size of the George vote, we believe, has startled a good many people. Thirty thousand or thereabouts was what even the most pessimistic were willing to assign him. But there probably never has been an element in an electioneering problem in this city about the exact value of which so little was known. Nobody's opinion about it was really important; but this very fact made the Roosevelt "flyer" all the more objectionable. People now know that what with the boycotting, Socialistic, and Anarchist vote, and the "crank" vote, there is in our city affairs a danger which it will not do to joke about or play tricks with. The election, in fact, will infuse more seriousness into city politics than there has been since Tweed's time, and more even than in Tweed's time.

The great fact which stands out above all others in the returns is, that Mr. Roosevelt has run far behind nearly every other candidate, State and city, upon the Republican ticket. He is behind, not only upon the general ticket, but upon the Judiciary, Congressional, Assembly, and Aldermanic tickets. Moreover, his vote is lower than any other Republican vote within the past six years, except that cast for Gibbs in 1884, which was in no sense a test of the party's strength, as Gibbs was put up to be traded off. The average Republican vote in this city is between 75,000 and 80,000, or from 15,000 to 20,000 more than Mr. Roosevelt has polled. An examination of the figures by Assembly districts shows very clearly that this loss comes in about equal proportion from the "brownstone voters" and the other section of the party. The loss in the latter section is again divided about equally between the Machine "boys" and the George movement. So far as "knifing" was done, it was fully as freely resorted to by the Republicans of the up-town districts as it was by the "boys." Mr. Roosevelt's failure to command the support of the most intelligent element of his own party is very distinctly revealed.

There is considerable doubt expressed concerning the motives of Mr. Blaine's friends in so unanimously and ostentatiously declaring that he is not a candidate for the Presidential nomination in 1888. The Boston *Herald* looks upon the performance as a "chestnut," and declines to take it otherwise than as a joke. It is noticeable that the Butler organ in this city is much impressed by the declarations, especially that of Col. Dudley, to the effect that Blaine would be willing to run against Cleveland, but would refuse to run against Gov. Hill, on the ground that the latter would be certain to carry New York. The transparency of that manœuvre is too plain to deceive anybody. A contest between Blaine and Hill would put civil-service and all other reforms in the background, and make the fight a choice of evils between two spoilsmen—a situation which would delight the Blaine men above all others.

Senator Sherman has been consulted about what he thinks of another nomination for Mr. Blaine, and his response is not especially favorable. He says:

"I have not had any conversation with Mr. Blaine upon the subject. It would be a delicate question to touch upon. If Mr. Blaine wants the nomination I think he can get it. It is for him to decide the matter. No candidate should be named without special reference is had to New York. The duty of the next National Convention, I take it, is to name a candidate who will be acceptable to New York. It is for Mr. Blaine to decide whether he can succeed in that State. If he should be twice beaten, it would be disastrous to him, for that would end him politically. However, it is two years off—time enough for the moulding of sentiment. I haven't heard that Mr. Blaine wants the nomination."

There is little doubt that Mr. Blaine can have the nomination if he wants it. He not only controls the machinery of his party, but he is himself the only issue which the party appears to have left. As for the Independents opposing his renomination, there is no danger of that. They would regard his candidacy as being, on the whole, as satisfactory an arrangement as could be made.

Apart from the effort which Mr. Blaine is making to force the tariff question to the front in national politics—an effort in which all tariff reformers will cordially coöperate—there is considerable evidence tending to show that the American Iron and Steel Association, the head-centre of the extreme protectionists in Pennsylvania, and the never-failing source of money supply for high-tariff propagandism, actively intervened in the recent electoral canvass. Thus, in Mr. Morrison's district in Illinois, Mr. John Jarrett, a well-known agent of the Association, endeavored to rally the Knights of Labor against Mr. Morrison, and seemed to be well supplied with and to use large amounts of money, which, it is reasonable to suppose, was not furnished by the Cobden Club. Evidence to the same effect came also from Connecticut. During the past year a good deal of effective work for tariff reform has been done in that State by a State association, with permanent headquarters at New Haven, and with J. B. Sargent, one of the largest manufacturers of Connecticut, as its president. This movement, at the outset, provoked no opposition from the Democrats; but on the contrary, as it was in line with the general tendencies of the party in other States, and with the policy of the Administration, it enlisted the active support of not a few of the representative Democrats of the State. A short time before the meeting of the Democratic State Convention, however, a secret order went forth that all tariff-reform efforts within the Democratic party in Connecticut were to be repressed; and as a consequence, all over the State, nearly every Democrat who presented himself for nomination as a delegate to the Convention, and who was supposed to be in any way hostile to protection, was defeated. When the Convention met, it rejected a resolution endorsing the fidelity of the two Democratic representatives in the present Congress to the cause of reform, and adopted resolutions respecting the reduction of Federal taxation that were utterly unnecessary and ambiguous. A fortnight later, a Democratic Congressional Convention in the Hartford district, which by an almost unanimous vote had adopted resolutions in favor of a tariff for revenue only, was again called together, when, by the influence of the editor of the Hartford *Times*, these resolutions were rescinded and protectionist resolutions were substituted.

Now, for such extraordinary action, which practically throws the Democratic party of Connecticut out of line with the Administration and with the general tendencies of the party in the country, there must be some extraordinary reason. And it will be found, we believe, in a well-concerted plan on the part of the Iron and Steel Association to send one of their own members to the United States Senate from Connecticut; one who can be relied upon to vote in favor of the continuance of a high tariff, and more especially to work and intrigue to defeat or postpone any reduction of the duties on pig-iron. The man best fitted to carry out this programme is Wm. H.

Barnum, and the prize at stake is something far more important than the control and distribution of patronage, even as it existed before the days of civil-service reform. The product of pig-iron in this country for the present year will approximate five million tons; and under the existing tariff the producers of the greater part of this amount will obtain $6.72 per ton more than they would otherwise be able to get—an aggregate of at least $25,000,000 per annum. Here is an object worth working for, and herein, in our opinion, is to be found the motive that prompted the defeat of Mr. Morrison in Illinois and the election of Mr Barnum in Connecticut, and supplied the necessary funds in both States for the corruption of voters in sufficient number to accomplish these objects. If these inferences are not correct, will some one explain to us what could prompt the present Democratic leaders, in a State so close politically as Connecticut, deliberately to alienate from their support the great body of independent voters, who gave them the electoral vote of the State in 1884?

We are glad to see that at least one leading Democratic paper in Connecticut recognizes the absurdity of the present position of the Democratic party in that State in respect to the tariff. Thus the New Haven *Register* applauds the pluck and honesty of the Massachusetts Democrats—"their firmness of purpose and advanced leadership." They have not been afraid, it says, to put their candidates upon Democratic platforms. *They* have not tried to "evade any responsibility placed upon the shoulders of the party by its time-honored principles." "If the example," it continues, "set by the courageous minority in Massachusetts is followed everywhere, it will enjoy its power for many years. If it falters or follows the advice of *certain of its leaders in this State*, for instance, it will not only go out of power, *but it will deserve to*."

A correspondent of the Boston *Journal* is much concerned about Dr. James Freeman Clarke, who in a recent address spoke of protection as being a system that fostered the interests of one class at the expense of another, and said: "It selects some industries to be taken care of at the expense of others." "It builds up monopolies." "It taxes every man on his clothing, his tools, his house, his food, in order to protect some of his neighbors," etc. And yet, the correspondent says, in one of Dr. Clarke's books he found this inscription: "Copyright 1883. James Freeman Clarke. All rights reserved." This, he thinks, is protection with a vengeance. Perhaps the correspondent cannot see any difference between *meum et tuum* and "protection," but the *Journal* might inform him that "copyright" is merely a public notice that certain property has an owner, like a man's visiting card in his hat.

The speaking both at the unveiling of the Bartholdi monument on Thursday and at the dinner in the evening was unusually good. Mr. Chauncey Depew appeared in what we may call a new rôle as the orator of the day, at the reception on Bedlow's Island, for in the oratorical field he is known to most people only as a humorous and witty after-dinner speaker. On Thursday, however he took hold of the relations of France and America in the past, and the prospects of liberty under the new conditions of modern civilization—a great theme—and handled it worthily. The address was a little florid, but perhaps not too much so for an occasion so spectacular, and one could not help doubting whether some of the Frenchmen present would, if they understood him, have been pleased with some of his characterizations of the first Republic. The part of Lafayette in the Revolution at home, too, was undoubtedly magnified and embellished. But it was not Mr. Depew's business to criticise. His task was to furnish the assembled guests with a fine example of elevated oratory of the demonstrative kind, and he did it in clear and vigorous English.

It is a relief to know that the Andover professors are not to be pursued for "heresy," but for a breach of trust or of contract in teaching differently from what they have agreed and are bound to teach. Andover Seminary was founded to provide systematic instruction for ministers of the orthodox Congregational order. To defend it against the two chief dangers or terrors of Unitarianism and Arminianism, its founders constructed a Calvinistic creed, expressive of doctrine which alone should be taught in that place. They required that every professor should subscribe to this Creed upon his inauguration, and every five years thereafter; that "every article of the above-said Creed shall for ever remain entire and identically the same, without the least alteration, addition, or diminution"; and that no man should continue to be professor unless he continued "to approve himself a man of sound and orthodox principles in divinity, agreeably to the aforesaid Creed." What "heresy" is, or whether anybody was guilty of it or not, might be hard to prove, but it cannot be hard to prove whether the Andover professors maintain the Creed "entire and identically the same, without the least alteration, addition, or diminution," or are given to a "Progressive Orthodoxy."

A more remarkable illustration of the extent to which the Custom-house was made, under the old régime, the refuge of the criminal as well as of the incapable, than the career of the man who has just tried to murder Mr. Beattie, could hardly be imagined. But it illustrates also the abuse of the assumption that every man who served in the war and is now an "old soldier," deserves well of his country and ought to be taken care of. Of this latter abuse there has been a great deal. The number of worthless persons for whom service in the field has operated as a plenary indulgence, is lamentably great. This man Bieral led for many years in New York the life of a ruffian of the worst sort. He was a gambler, pugilist, and brothel-keeper. He was strongly suspected of having murdered his mistress and of having belonged to a gang of thieves. But he enlisted when the war broke out, and displayed in the field the reckless bravery which had characterized him as a vicious scoundrel at home. So when he was discharged he was promptly quartered on the Custom-house, and became a political "worker" under the Tweed Ring, one of the class of men known as "Tammany Republicans." He was dismissed for some offence in 1879, but was soon reappointed. He was such an "old soldier" that there was no getting rid of him. It is not surprising that he came to the conclusion that he had a vested interest in his place, and tried to kill the man who had deprived him of it. And we may be sure he is by no means a solitary specimen of the kind of animal which was quartered on the taxpayers in the good old days, before candidates for office began to be questioned about "the height of the walls of Khartum or the depth of the Polar Sea."

The controversy between Mr. Lowell and Mr. Julian Hawthorne has ended, as we felt sure it would from the beginning, in "a conflict of veracity"—that is, the *World* announces tha Mr. Hawthorne has told the truth, which means, of course, that Mr. Lowell has not. In answer to this, Mr. Lowell writes to the Boston *Herald* repeating his statement that he not only did not know, but never even suspected, Julian Hawthorne's purpose in visiting him, "and that he should have thought he was insulting him by showing any such suspicion," but declining further controversy with Julian, who, it appears, concealed the fact that he had just tried the same game on Dr. Holmes and failed. "A conflict of veracity" between James Russell Lowell and Julian Hawthorne is funnier than these things usually are, but to Mr. Lowell it is of course very painful to have to expose some of the ways in which Nathaniel Hawthorne's son makes money, as well as to suffer at his hands.

Apropos of this, the Boston *Herald* says that the assertion that there is "a very large body" of newspaper men who would be guilty of Hawthorne's offence may be true of New York, but not of Boston, where "any newspaper man who did what Mr. Lowell says Mr. Hawthorne did to him would lose his place and stand a poor chance of getting another." The Springfield *Republican* goes further, and says the number of newspaper men anywhere who would commit Hawthorne's offence is not large, but small. There is no use in continuing or carrying on a controversy on a point which in the nature of things cannot be decided. But we will say this, that in long experience of the newspaper press we have known of scores, if not hundreds, of most shameful and cruel violations of confidence and intrusions on privacy committed by newspaper men, and have never heard of one which led to the dismissal of the offender, if it was one which promoted "sales," or, in other words, brought money into the counting-room. Small lies or outrages, which have no particular pecuniary value, are sometimes followed by punishment, but it is a well-known fact that managers are very apt to stand by, to the last extremity, a liar whose lies feed the popular appetite for amusement. This is not a pleasant thing to say about "our profession," but it is as true as gospel. As a matter of fact, some of the most highly paid newspaper men are notorious liars, perverters, and inventors.

So far as may be inferred from the announcements made up to date, it appears that the list of musical entertainments provided for the present season will not be quite so large as last year. But this is hardly a matter for regret, for there can be no doubt that last year New York had a surfeit of music, especially of concert music. As regards high-class entertainments, two circumstances are especially noticeable—the concentration of all operatic and concert performances in the Metropolitan Opera-house, and the successiveness of the Italian, German, and American Opera seasons. The Academy of Music was by no means perfect as regards acoustic qualities, and the ventilation so bad as frequently to make it quite impossible to enjoy a concert or operatic performance. In the new house the ventilation is perfect and the seats the very ideal of comfort; while the acoustic qualities are better than at the Academy, under certain conditions. Those who believe in the superiority of modern music to that of former epochs have special reason to congratulate themselves on the fact that not only the Oratorio and Symphony Society concerts, but the Philharmonic and the Thomas Populars will in future be heard in the Metropolitan, besides the American and German Opera; for as the size and acoustic conditions of this house imperatively demand the warm-blooded modern scoring, the older compositions will always seem thin, cold, and anæmic in comparison. This circumstance will for ever prevent a successful revival of meagre Italian opera, so that the triumph of German opera may be considered assured as long as the Metropolitan holds its present position. It is a curious coincidence that with the demise of Italian opera, its old home, the Academy of Music, has also ceased to be the centre of our first-class musical entertainments, as well as of fashion.

The Italian performances will but slightly encroach upon the German opera season, which begins at the Metropolitan on November 8, to last fifteen weeks, and which will be followed by the American Opera Company, who will occupy the house from February 28 to April 4. It seems, therefore, that managers have at last recognized the folly of biting off one another's noses, by trying to give two or three operatic performances on the same evening week after week. Instead of having only about three months of opera, as heretofore, New York will this year have almost six months—a decided improvement on the old plan, and a change which brings us a step nearer to the time when New York will doubtless have opera all the year round, like Paris, Vienna, and Berlin—with the exception of a short intermission during the hottest months.

For the benefit of the Irish-American voters in New York the *Evening Post* calls attention to the indignant rejection of the Henry George land scheme by the Irish National League when Mr. George himself was in England, and when one solitary member of the League, Mr. Michael Davitt, announced himself a convert to Mr. George's doctrines. When Mr. Davitt made his first speech in favor of "nationalization of land" on the Henry George plan to an Irish audience somewhere in the north of England, he was hooted, and his doctrines were repudiated in the most vigorous and unmistakable manner. The National League, if we remember rightly, took action upon the subject strongly condemnatory of Mr. Davitt and of the land scheme advocated by Mr. George. The reason why they did so is not far to seek. Mr. George proposes that all land shall be seized by the State, and let to the occupiers on such terms that the Government shall get the rental value. In other words, he seeks to abolish one kind of landlordism and to set up another kind. In the language of political economy, he would substitute the ryot tenancy of India in place of the cottier tenancy of Ireland. He would make the Government the landlord in place of the present owner. This is the whole of his philosophy so far as it can be comprehended, and it is because the Irish people fully comprehend this that they will have nothing to do with Mr. George or his doctrines. They do not want landlordism in any shape. They do not want either landlords or tenants. They are striving after the American system, which has made the cultivator of the soil, as a general rule, the owner of it; which has filled this country with happy rural homes, the nurseries of liberty, that make the republic great and strong. They have the same feeling towards any scheme of "nationalization of land" that the farmers of America would have if the Henry George plan should ever secure a sufficient number of votes to make it worth their while to pay some attention to it. First confiscate the land, says Mr. George, and then tax it up to its full rental value, if you can find out what that is. As a matter of convenience, but not as a matter of right, you may leave the present occupier in possession, but you must treat him practically as though some other person owned the land and he were a tenant under the terms of rack-rent, for it would be a failure in part of Mr. George's scheme if the State should fail to collect the full rental value.

Between this kind of "nationalization" and the ideas and aims of the Irish Land League the divergence is as wide as the poles. Mr. George could not muster a corporal's guard of followers in Ireland, if indeed he could secure any hearing at all, for his visionary scheme. And the Irish are right in refusing to have anything to do with it. The craving of the Irish tenant is for a home and a few acres of mother earth that he can call his own. This was the claim and the demand of the French peasants in the great Revolution, and until it was satisfied there was no peace. Theories of universal happiness growing out of the *impôt unique*, or single tax on land, had been floating in France for half a century before the Revolution, but the people would have none of it. They wanted land for the landless as a sure foundation for a prosperous and free state, and they were right. This is what America has and what Ireland wants and will get some time—in what way, we do not know, but it will certainly not be Mr. George's way. The intervention of the State, when it comes, will be for the purpose of enabling the Irish farmer to buy and own his land and not to hold it as the tenant of the Government, subject to a perpetual tax equal to the rent he formerly paid to an English lord.

The *Tribune* has a report, by cable, of an interview with Dr. Otto Arendt, who is said to be the "leader of the silver party in the German Parliament." Some of Dr. Arendt's views are extremely funny. He says:

> "I believe that bimetallism without England will injure and not help England. The United States, Germany, and France would beat England in commerce with silver countries should they rehabilitate the silver markets of the far East. South America and Central Africa belong to the nation that has the courage to solve the silver question; whoever commands these markets commands the commerce of the future."

We are sure that England will applaud the courage of those nations that prove their faith by their works by making a bold push for the trade of South America and Central Africa on a bimetallic basis. Any nation that chooses to buy more silver than she wants can have an enlarged trade with silver-producing countries. So any nation that buys more wool, or hides, or timber than she has use for can have an enlarged trade with the countries that produce those articles. But it does not follow that a nation can enlarge her trade with silver-standard countries by adopting a silver standard. It is only a few years since Germany and France were silver-using countries, but they gained no advantage over England in trade in consequence of that fact, nor have they lost any since they abandoned silver and became practically gold monometallic countries. The only nation that buys more silver than it wants is the United States. We certainly have made no gain in trade with South America or Central Africa by virtue of our purchases of silver. We are, in fact, an "object-lesson" to the world, showing the futility of the step which Dr. Arendt advises other countries to imitate. Like other bimetallists, however, Dr. Arendt advises the suspension of the Bland bill in order to "force Europe to adopt bimetallism."

Germany, as is well known, makes a specialty of the manufacture of toys, which are exported to all parts of the world, Paris included. The other day the organ of the Patriotic League, *Le Drapeau*, made the paralyzing discovery that in various Parisian shops there was offered for sale a new German toy, representing a school-house, on one side of which was hung a map of France, and on this map, *horribile dictu!* a portion of the terrestrial globe belonging to France was included within the Italian boundary line. To see "France mutilated in such an infamous manner" was more than the editor of *Le Drapeau* could stand; so he accused the Germans of having deliberately manufactured this map in order to corrupt and confuse the minds of French children, and, by accustoming them to the sight of a reduced France, to make them callous to the next theft of territory contemplated by the Germans. Other journals followed *Le Drapeau* in sounding the alarm; and, according to the *Boersen Courier*, a leading Berlin paper took this matter very seriously indeed, and wrote a ponderous editorial on the endangered peace.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, October 27, to TUESDAY, November 2, 1886, inclusive.]

DOMESTIC.

ELECTIONS were held throughout the country on Tuesday. The weather was generally fine and the vote large. An entire new House of Representatives was elected. At the hour of closing this summary, the returns are incomplete, but the indications are that the House will stand, in the Fiftieth Congress (about), Democrats 178, Republicans 145. Frank Hurd (free-trader) was defeated in Ohio, Theodore Bacon (Dem. and Ind.) in western New York, and A. A. Ranney (Dem.) in Massachusetts, where Henry Cabot Lodge has at last succeeded in being elected. The New York delegation will probably contain fifteen Democrats and nineteen Republicans. The Democrats have lost three Congressional districts and gained one

The Democrats elected Rufus W. Peckham, Judge of the Court of Appeals, over Judge Daniels (Rep.), by about 10,000 plurality. The chief interest in New York city centred in the contest for Mayor, which resulted as follows: Hewitt (United Dem.), 90,456; George (Labor), 67,930; Roosevelt (Rep.), 60,474. The union Democratic city and county ticket, Slevin for Register and Beekman for President of the Board of Aldermen, is elected, and Patterson and Dugro, the candidates of the United Democracy, are elected Judges. The city elects seven Democratic Congressmen out of eight, "Tim" Campbell being the one Republican member. The New York Assembly stands Republicans 73, Democrats 55, thus securing (with the old Republican Senate) the election of a Republican Senator to succeed Senator Miller. A large vote was cast in favor of calling a new Constitutional Convention.

The returns from other States are meagre. In Massachusetts Ames (Rep.) is elected Governor by about 9,100 plurality. Beaver (Rep.) carries Pennsylvania by about 50,000 (Blaine's plurality in 1884 was 80,000). Gov. Rusk (Rep.) is reëlected in Wisconsin by 20,000 plurality, the Socialist and labor element having done its best to defeat him on account of his action during the Milwaukee riot. The Democrats have a plurality in Connecticut, but a majority vote is required to elect, and the election is therefore thrown into the Legislature, which is Republican. New Jersey rolls up her old-fashioned Democratic majority for Governor, electing Green by something like 5,000. Robt. Taylor (Dem.) defeats his brother for Governor of Tennessee by about 25,000. Ohio is carried by the Republicans, and Indiana is claimed by both parties. All the Southern States are heavily Democratic, but there have been heavy Republican gains in Virginia. The indications are that McGill (Rep.) may be elected Governor of Minnesota by a reduced majority. The Labor vote in Chicago was about 20,000, and the party hold the balance of power in the Legislature. In Wisconsin the Labor party elected a number of members of the Legislature, and may hold the balance of power.

President Cleveland has issued a proclamation designating November 25 as Thanksgiving Day.

President Cleveland on Wednesday issued a proclamation revoking his recent order in regard to discriminating duties on Spanish imports. The effect of this action is to revive the proclamation of President Arthur relieving Spanish vessels in our waters of differential duties. The apprehension which the representatives of the American lines that were so active in inducing the President to issue his proclamation now have is, that the Cuban officials may disregard the spirit of the old commercial arrangement, which has been restored, and, by irregularities or petty frauds or practices which may not be easily detected, effectually oppress American merchants and defy the agreement to which the Spanish Government has so solemnly pledged itself.

The information has been given at the White House that there will be nothing done in regard to appointments until after the election. The President has not wished to make appointments or removals which would seem to be intended to influence the result in any of the districts, and for this reason some important changes which were said to have been in contemplation will not for the present be made.

Gov. Ross has been advised by the President not to participate actively in the campaign in New Mexico. Being, as he said, anxious to speak in order to break up various rings which exist in the Territory, he wrote to a friend in Washington asking whether or not the President would consider it expedient for him to speak, saying: "I must take an active part in this canvass, not as a partisan, but as one charged with the responsibility of government, for the purpose of securing reform, or be beaten; and to be beaten now would be simply to lose the ground I have gained, and continue to be hampered and seriously embarrassed in the prosecution of the work which I have been set to perform for the next two years. I wish the President to be informed of the dilemma I am in. I can do more than any other man in the Territory towards securing a popular verdict in behalf of decent, honest government, by actively taking the stump. If I do not, the consequences may be disastrous in the extreme. Of course I should be discreet, and conduct my part of the canvass in a dignified, decorous manner, appealing to the reason and loyalty of the people, and not to partisan considerations merely, always and on all occasions remembering the dignity of my office." In reply, Gov. Ross's friend reported the President as saying: "Gov. Ross will best subserve the public weal and the more satisfactorily support the President and his Administration by enforcing a strict observance and faithful execution of the laws, and by securing purity and honest methods in the executive departments of his Territory. To reach this result, however, he is not required himself to take part in the elections."

Secretary Manning on Friday entered upon the full discharge of the duties of his office. On that day he issued a call for $10,000,000 of bonds.

The public-debt reduction during October was $13,201,619.50.

Attorney-General Garland has given an opinion to the Secretary of the Treasury that national banks must deposit interest-bearing bonds to secure their circulation, and that called 3 per cent. bonds cannot be used as a basis of circulation.

Bartholdi's statue of "Liberty Enlightening the World" was formally unveiled on Bedloe's Island on Thursday. There was a great parade of 20,000 soldiers, firemen, etc., which was reviewed by the President, Count de Lesseps, M. Bartholdi, and other distinguished people, who occupied a reviewing stand in Madison Square. There was also a naval parade, which was obscured by mist. At the unveiling ceremonies on Bedlow's Island speeches were made by the President, Mr. Evarts, Chauncey M. Depew, and Count de Lesseps. A dinner was given in the evening by the Chamber of Commerce at Delmonico's to the French guests. Speeches were also made in response to toasts by Consul-General Lefaivre, Frederic R. Coudert, Admiral Jaurès, George William Curtis, Gen. Pellissier, M. Bartholdi, M. Spuller, and David M. Stone.

The decision of the New York Court of Appeals on Friday in the Arensberg oleomargarine case does not examine the constitutionality of the law. A new trial is ordered solely on the ground of an error in the charge to the jury by the trial judge.

Six thousand beef-packers struck at the Chicago stock-yards on Monday, refusing to work ten hours without two hours' extra pay.

The Board of Trustees of Cornell University on Wednesday unanimously rescinded the action taken last June which favored the granting of honorary degrees, and against which the alumni had vigorously protested.

The Yale corporation on Wednesday directed the editor of the annual catalogue to use the name of Yale University hereafter in that and other official publications.

Hans S. Beattie, the Surveyor of the Port of New York, was shot in his office at the Custom-house soon after noon on Monday by Louis Bieral, an ex-inspector. Two or three shots were fired. Bieral was discharged by Mr. Beattie about two months ago, and the shooting was done for revenge. Mr. Beattie's wounds are not thought to be fatal. Bieral bears a bad reputation.

The will of Mrs. Cornelia M. Stewart, widow of A. T. Stewart, was filed for probate in this city on Monday by ex-Judge Horace Russell. The estate is given to relatives. Charles J. Clinch, Mrs. Stewart's nephew, who has been living in Paris, and Mrs. Sarah N. Smith, Mrs Stewart's niece, the wife of ex-Judge J. Lawrence Smith, of Smithtown, L. I., receive one-half the estate after a distribution of $1,500,000 among relatives; the other half goes to ex Judge Hilton in trust, he at his discretion to erect and endow a seminary for women at Garden City, and to make such conveyances of the rest as he may deem fit. No mention is made of the house at Thirty-fourth Street and Fifth Avenue. Ex-Judge Hilton is made the trustee of the estate. The legacies, both actual and estimated, are as follows: Sarah N. Smith, actual, $250,000; Cornelia S. Butler, actual, $200,000; Lawrence Butler, actual, $100,000; Charles S. Butler, actual, $50,000; Kate A. Smith, actual, $200,000; Louise Smith, actual, $100,000; Ellen Smith, actual, $100,000; Bessie Smith, actual, $100,000; James Smith, actual, $100,000; Rosalie Butler, actual, $50,000; Helen Butler, actual, $50,000; Virginia Butler, actual, $50,000; Maxwell Butler, actual, $50,000; Prescott Butler, actual, $50,000: household servants, actual, $25,000; Henry Hilton (in trust), estimated, $9,262,500; Charles J. Clinch, estimated, $4,631,250; Sarah N. Smith, estimated, $4,631,250; total, $20,000,000.

Frank H. Walworth, a young lawyer aged thirty-one, died in Saratoga on Friday. He was a grandson of the late Chancellor Reuben H. Walworth, and in 1873 deliberately murdered his father in this city for ill-treating his mother. He was convicted of murder in the second degree and sentenced to Sing Sing for life, but was pardoned in 1877, and four years later was admitted to the New York bar. Two years ago he married Miss Corinne Bramlette, daughter of the late Gov. Bramlette of Kentucky.

FOREIGN.

At a private meeting at Tirnova on Thursday of deputies belonging to the Bulgarian Government party, it was decided to adhere to the Government policy towards Russia. Gen. Kaulbars telegraphed to the Regency advising the raising of the state of siege at Sofia and Varna. The Russian Consul at Varna threatened to order the Russian war-ships to bombard the town unless the Prefect permitted free access of Russo-Bulgarian partisans to the Russian Consulate, or if he tried to prevent the landing of sailors from the war ships. Gen. Kaulbars on Friday addressed a fresh note to the Bulgarian Foreign Minister, in which he said: "In view of the arrival at Varna of Government emissaries, who are spreading reports that the presence of Russian gunboats there is without importance, I am compelled to inform you that those gunboats will vigorously affirm their importance if events render it necessary."

A state of siege has been proclaimed at Sofia, Bulgaria. A protocol has been signed reviving diplomatic relations between Servia and Bulgaria. Russian cruisers have been de-

spatched to Varna, and it is said that city will be temporarily occupied.

Gen. Kaulbars issued on Sunday an ultimatum to the Bulgarian Government. He complained that Russians in Bulgaria were maltreated and terrorized, and said that if in three days he did not receive a satisfactory answer to his ultimatum, he would rupture his relations with the Regency and leave Sofia, taking with him the whole personnel of the Russian Consulate. The Bulgarian Government immediately ordered the various prefects stringently to protect Russians, and also requested Gen. Kaulbars to furnish the names of Russians who had been maltreated. The Russian agent replied that the Government knew to whom he referred, and that if fresh complaints were received he would act in accordance with his ultimatum. In compliance with the demands of Gen. Kaulbars, all the plotters against Prince Alexander have been released. There is a general feeling of indignation in Bulgaria over the release.

On Monday Gen. Kaulbars refused to accept the reply of the Regency to his ultimatum, and will leave Sofia. He threatened to bombard the barracks and Government buildings at Varna if any opposition was offered to the debarkation of Russians at that place.

M. Stambuloff opened the Sobranye at Tirnova on Sunday. Patriotic speeches were made, the orators dwelling on the importance of maintaining the independence of Bulgaria. Nearly all of the 550 deputies were present in the Sobranye, including thirty adherents of Zankoff and Turkish deputies in national costume. The Sobranye opened with a despondent feeling. In view of Europe's apathy to Bulgarian interests, it is believed to be useless to struggle against Russia's ascendancy, and Bulgaria is willing to accept almost any terms of compromise. On Monday M. Zikoff was elected President of the Sobranye.

The Russian Government has reassured Austria that Russia will not occupy Bulgaria. The Russian consular officials at Varna on Tuesday, with the help of sailors from the Russian men-of-war, tore down a number of placards which had been posted in the city by order of the Bulgarian Government. The Russian Consul threatened to land troops if the authorities attempted to prevent the removal of the placards. Twelve Russian men-of-war have left Sebastopol for Varna.

Advices from Braila, Rumania, say that feverish preparations for war are being made in southern Russia.

The British Cabinet at Monday's council decided to instruct Sir William White, the British Ambassador at Constantinople, to insist upon an immediate conference at Constantinople to consider the Bulgarian question and to demand the suspension of Russian intervention, diplomatic and active, pending the decisions of such conference. The Porte is renewing its *entente cordiale* with England, and is in favor of the proposed conference. Italy concurs, while Russia and France oppose the project. Germany and Austria remain neutral.

It is officially announced in Cairo that the English Government is determined to maintain public safety in Egypt, and not to leave the country to disorder and possibly to a fresh and disastrous revolution.

The London *Standard* announces that M. Waddington, French Ambassador at London, has made no demand respecting England's withdrawal from Egypt, and that he brought no instructions of such a character.

Rumors are circulating in and about the London clubs that Lord Salisbury finds much difficulty in restraining the patrician members of the Government from resigning their offices as a protest against the Radicalism of Lord Randolph Churchill, and that this difficulty is daily increasing. The Duke of Richmond, Lord John Manners, and Mr. Frederick A. Stanley are especially restive under the leadership of Churchill.

Mr. W. H. Smith, British Minister of War, and Lord Randolph Churchill's old enemy, in speaking on Friday night gave remarkable support to Churchill's recent programme. It would not surprise his audience, he said, to hear that her Majesty's Government was perfectly agreed; when Salisbury spoke he spoke for his Cabinet; when Churchill spoke he did so with the full knowledge, assent, and consent of all his colleagues in the Cabinet; when they ceased to be united they would cease to remain in the Government.

In the election for Lord Rector of Edinburgh University on Saturday, the Earl of Iddesleigh was chosen. He received 1,094 votes, and the Right Hon. Sir Lyon Playfair 747.

Returns from the municipal elections throughout England and Wales on Monday show Conservative gains of 89 and Liberal gains of 76.

Lord Hartington has postponed his visit to India.

The business of the British Liberal Conference as arranged will be opened by Mr. Kitson, Chairman, who will introduce a motion expressing unabated confidence in Mr. Gladstone. Mr. Morley will move that the Conference reaffirm its belief in the home-rule project, and renew its declarations upon the questions of land, local government, and free education. The absence of a developed policy discontents the Radicals.

Col. Sir James Fraser, Chief Commissioner of the London city police, has issued orders forbidding the procession of the unemployed workingmen of London, which it was proposed by the Socialist leaders should march through the streets at the same time as the Lord Mayor's pageant.

Application has been made in London to commit Hyndman, the Socialist leader, to prison for non-payment of debts. It has been disclosed that his fortune is gone, that his furniture is mortgaged, that he is unable to pay his rent, and that his wife keeps lodgers. Hyndman went around the country on a lecturing tour without pay, and, as he earned nothing, his relatives had to support him

On Sunday a census of the attendance of the churches of London was taken. It showed that 460,000 persons attended the services in the morning, and 410,000 at night. The largest established church, St Paul's, had an evening attendance of 3,403. Mr. Spurgeon's church was at the head of the dissenting churches, having a morning attendance of 4,519, and an evening attendance of 6,070.

The Rev. Hugh Reginald Haweis, Vicar of St. James's Episcopal Chapel, Marylebone, was announced to preach a sermon on Thursday in the City Temple, Congregational, London, of which the Rev. Dr. Joseph Parker is pastor. When the time for beginning the service arrived Mr. Haweis did not appear, and Dr. Parker announced to those who had assembled that Mr. Haweis's Bishop had forbidden him to preach in the City Temple.

The Earl of Strafford is dead. He was eighty years of age, and the second Earl. His heir is Viscount Enfield, who was Under-Secretary for India from 1880 to 1882, and is now fifty-six years of age.

Baron Monkswell, who as Sir Robert Collier was well known to the legal profession of the United States, is dead at the age of sixty-nine. In November, 1871, Mr. Gladstone made Sir Robert Collier a justice of the Court of Common Pleas, and after he had been on the bench for two days only transferred him to the Judicial Committee of the Privy Council. Mr. Gladstone's action called forth vigorous protests from Lord Chief-Justice Cockburn and Chief-Justice Bovill. The matter came before Parliament, but Mr. Gladstone's action was sustained by a small majority in both houses. Sir Robert was the author of treatises on 'The Law of Railways' and 'The Law of Mines' At the time of the fitting out of the *Alabama* he was Solicitor-General, and he advised his Government not to allow Confederate vessels to be equipped in British ports. In 1885 he was elevated to the Peerage as Baron Monkswell.

The diary of Bishop Hannington, who was put to death by order of King Mwanga of Uganda, Africa, has been published in London, giving the details of the last week of his life. He describes the arrival of his party at Lubwas, where the chief, at the head of a thousand troops, demanded ten guns and three barrels of powder. The chief asked Bishop Hannington to remain with him for a day, and the latter complied. While taking a walk the Bishop was attacked by about twenty natives. He struggled with his assailants, but became weak and faint, and was dragged violently a long distance by the legs. When his persecutors halted they stripped and robbed him and imprisoned him in a noisome hut full of vermin and decaying bananas. He was allowed to send messages to friends, but he believed they were intercepted. On the seventh day he writes that the fever continued, that at night the place swarmed with vermin, that the guards were drunk and noisy, and that he was unable to sleep, At last he became delirious. On the eighth day he was conscious. His entries on this day are brief: "No news. A hyena howled all night, smelling a sick man. Hope he will not have me yet." This is the final entry. It is believed that soon after writing this he was taken out and put to death. Throughout the week there are frequent entries referring to the comfort he derived from reading the Psalms.

The resumption of diplomatic relations between France and Russia is hailed by the French press with a unanimous outburst of satisfaction.

The Customs Committee of the French Chamber of Deputies has decided in favor of the bill raising the duty on foreign wheat from three to five francs.

The Swiss Federal Government proposes to purchase all railroads in that country.

The Hungarian budget shows a deficit of 22,000,000 florins, which has created a bad impression in Vienna. The deficit is attributed first to the fact that in the last budget the Finance Minister estimated the revenue too high and the expenses too low, and second to the depression in agriculture due to the competition of American wheat and flour.

A sensation has been caused throughout Spain by changes that have been made in the army, including the dismissal of 1,400 first-class sergeants and the promotion of 1,300 sub-lieutenants to lieutenancies. The removal of the sergeants was decided upon to prevent the recurrence of army conspiracies.

There is a rising in Afghanistan of the Ghilzai tribe and a part of the Hazaros against the Amir, on account of popular discontent over the excessive rate of taxation.

Intelligence has been received at Auckland, New Zealand, that on September 31 seven native villages were destroyed by a volcanic eruption on the Island of Niafu, in the Tonga group of the Friendly Islands. The whole island has been devastated by volcanic deposits.

A new Hawaiian Cabinet has been formed with Walter M. Gibson as Premier. The resignation of the old Cabinet was due to a defeat on October 16 of the Ministry's amendment to the bill securing the $2,000,000 loan recently authorized by the Hawaiian Legislature. The effect of the amendment was to secure the payment of $700,000 previously lent to the Government by Claus Spreckels.

It is reported in official circles at Ottawa that Canada, through the agency of the British Minister in Washington, will request the American Government to reconsider the draft of the proposed extradition treaty between the two countries. The Canadian Government will probably submit a few amendments, which, it is believed, will prove acceptable to the American Senate

THE MUNICIPALITY AND THE INDEPENDENTS.

The late canvass for the mayoralty in New York city was really what might be called an "object-lesson" in city government. There are two things of which Independents in politics have been long persuaded, and which we have for years been preaching, in season and out of season. One is, that it is useless to try, in cities like ours, either to prevent the creation and maintenance of party "machines," or to keep them in the hands of honest and disinterested men. The best citizens in America are, and always must be, industrious men, that is, men closely occupied with some useful calling of a private nature. They cannot, if they would, make politics a profession. They can only attend to it by fits and starts. The business of party management, therefore, almost inevitably falls into the hands of men who mean to make a living out of it in whole or in part. In the great cities these men will never be very choice specimens of humanity. They will rarely be either respectable or respected. Their devices and desires will be in nine cases out of ten selfish and opposed to the public welfare.

The second is, that improvement in municipal government is almost impossible as long as municipal elections are treated by the voters as political elections—that is, as long as they are governed in the selection of candidates for municipal offices by State or Federal considerations. If, for instance, in casting my vote for Mayor, I am thinking not of its effect on the municipal taxation, schools, police, paving, lighting, street cleaning, sewage, and docks, but of its effect on the next contest for the Governorship of the State, or the next contest for the Presidency, or on the wages of the Southern blacks, or on the tariff, or the silver question, I am, whatever I may be as a citizen of the United States, *pro tanto* a bad citizen of the city of New York. I show thereby an indifference to the health and comfort and security of the human beings who are massed on this island, which nothing but gross ignorance can excuse.

Now, if these things are true—and we have never heard them gainsaid by anybody but a professional politician—there flow from them inevitably two rules of political conduct in municipal affairs. One is, that you should not waste your time in trying to improve the moral composition of the party machines, because the task is impossible. Your preaching amuses the Machinists, and, though it were continued for fifty years, would not change the Machine for the better. Nor can you successfully set up a Machine of your own, for you have your family to support out of a business which calls for all your powers of mind and body. What you have to do is to wait for the regular nominations; if they are good, support them; if they are bad, try to defeat them at the polls, either by supporting the better nominations of the other party, or, in extreme cases, making impromptu nominations of your own. It is on this rule that the Independent movement, both in municipal and national politics, has been based, and it is by close adherence to it that all the Independent successes have been achieved.

The second rule is, that you must by every means in your power discourage the making of city nominations for merely party purposes, that is, for reasons in no way connected with the health or comfort of the inhabitants of the city. It is to the wide acceptance of this rule, to which Mr. Roosevelt so heartily adhered in his letter to Mr. Scott in 1884, that we owe the very great blessing of Mr. Grace's second term. This rule requires you, no matter to what party you belong, to accept good nominations, no matter from which side they come, and accept in preference to any other the good nomination which is most likely to win at the polls. For example, we do not think that there is a pin's worth of difference in the methods or aims of the two party Machines in this city. We do not know of any intelligent man who will privately and in strict confidence maintain that there is. The Democratic Mikes, Jakes, and Barneys are capable of anything of which the Republican Mikes, Jakes, and Barneys are capable, and vice versa There is a difference in their business, it is true, because the Democrats are in a majority, and work in the hope of succeeding, while the Republicans work generally simply to see what they can get for not making the Democratic success difficult or impossible. But, judged by any moral standard, there is nothing worth mention to choose between them, the ultimate or more remote aims of both being the same Consequently, in municipal matters, the duty of a true Independent is to watch for their nominations with a perfectly impartial eye, and when two are presented to him, of equal or nearly equal goodness, to vote for the one which is most likely to succeed at the polls, and resolutely to repudiate and punish all attempts to secure votes on party grounds.

There are many people who think they can "take city affairs out of politics" by inveighing against the introduction of party politics into city administration, before the election, but who nevertheless, when the election comes round, always want us to support the President, or reprobate "the shotgun policy" at the South, by our vote for the Mayor. They are very like the people who strongly favor a reform of the civil service, but still think that none but Republicans, or none but Democrats, as the case may be, should have the offices. What we need of all things now, in this, as in every other city, is a practical example of the working of the Independent doctrine in the refusal of one party or the other to make municipal elections trials of party strength, and the acceptance by one party or the other of its opponent's candidate on the sole ground of his fitness for the duties of the office to be filled. This most desirable consummation Mr. Hewitt's nomination seemed to promise us at last. If the Republicans had confirmed the nomination, we should have made an immense stride towards radical improvement in city government. But the prospect has been greatly damaged by Mr. Roosevelt's candidacy, despite his failure.

THE MAGYAR AND HIS ENEMIES.

Should the present complications in Eastern Europe, as is not unlikely, lead to an open conflict between Russia and Austria-Hungary, the violent animosity which agitates Magyar against Muscovite, and Muscovite against Magyar, will have potently helped to precipitate it. Cisleithanian Austria might behold the encroachments of the Czar in Bulgaria, the brutal proceedings of his *agents provocateurs* in Sophia and Rustchuk, and even the bombardment or occupation of Varna, without unsheathing the sword. She would, however much tempted, anxiously consider the expense and risks of war before throwing down the gauntlet to a neighbor as powerful as he is overbearing. Besides, large constituent parts of Cisleithania are, from race affinity and separatistic ambition, in more or less pronounced sympathy with the power which in its advance flaunts the Slavic banner. The Czechs of Bohemia and Moravia, the Slovenes of Carniola and Carinthia, the Dalmatians, would have to be drawn into the conflict, so far as the approbation of the Reichsrath is required, by a majority vote of Germans and Poles. Not so with Transleithania, which the Magyar rules by his energy and political ability, vastly preponderating over those of his Slovak or Croat, Serb or Ruthene, German or Ruman fellow-citizens, who collectively outnumber him. And the Magyar, ever since the agreement of 1867, which transformed the tottering Austria of the days of Solferino and Sadowa into the rejuvenated dual empire that exists to-day, has become the decisive central element in the domain of the House of Hapsburg. Buda-Pesth is the real political centre of Austria-Hungary. The Hungarian Parliament, not the Vienna Reichsrath, determines the resolutions of Kálnoky, as far as Parliamentary influence goes in shaping them. Tisza, the Hungarian Premier, speaks the intentions of the common Government. Taaffe, the Cisleithanian, only echoes them.

What renders the Magyar so violent an enemy of Russia is not merely the remembrance of Világos, though that remembrance is to Hungarian patriots more justly galling than the recollection of the surrender of Sedan is to Frenchmen. The Magyars had, in a just war for self-defence and freedom, achieved brilliant victories over the forces of Austria and their own domestic foes, had stormed Buda, and proclaimed and conquered their independence, when Russia, to whom they had never offered injury or insult, interfered with overwhelming armies, crushed their exhausted forces, drove Kossuth into exile, and surrendered their gallant commanders, who laid down their arms when the struggle became useless, to the gibbets of Austria. It is not this recollection alone which made the Hungarians shout with joy when the news of the Russian disasters before Plevna reached Buda-Pesth. The Magyars are not vindictive haters. If they were, they would not now be the enthusiastic supporters of the throne of Francis Joseph, under whose orders the thirteen commanders who surrendered at Világos were hanged at Arad, and Count Batthyányi, their Egmont, was shot in Pesth, on October 6, 1849. They still observe the 6th of October as a day of national mourning, but the monarch who restored their Constitution in 1867 is forgiven for what he decreed in his youthful rage in 1849. In the

same way the Hungarians of the last century fought chivalrously for their "King," Maria Theresa, under whose father the last defenders of Hungarian independence before Kossuth were, like the latter, forced into exile. What the Magyar cannot forgive Russia for is the annihilation of Poland, and the constant threat of the annihilation of his own nationality held out by the Panslavists who now rule her. Throughout the history of both nations, Poles and Hungarians, though of different race, have been "dear brothers," as a popular song has it; in a thousand years of close contact not a single war has taken place between them.

Magyar and Muscovite fully understand each other, and hence the intense mutual hatred. The final victory of Panslavism, which has become the creed of the latter, signifies to the Magyar the subversion of his own Government and liberty; subjection in his own land to the combined sway of Slavic tribes whom he has so long dominated and despises as inferiors; the exclusion of his language from courts, schools, and theatres, as the Polish is excluded in the native land of Kosciuszko; the rule of the Cossack, the order which reigns in Warsaw. To the Muscovite the continued existence of Hungary (united with Austria) means a permanent wedge of alien power driven into the Slavic world; the separation of the western Slavs from the eastern; the subjection of Galician Pole, Slovak, Czech, Croat, and Bosniak to a dynasty antagonistic to the Romanoffs; the isolation of Montenegro; the impotence of Servia; the separate existence of Bulgaria; a check to Russian advance across the Balkans; a menace to the Russian sway in Poland

What Russia seeks in Bulgaria is less a station on the road to Constantinople—a centre watched by the jealousy of all the other great Powers—than a lever for dislodging the Austro-Hungarian strength south of the Danube and Save, before raising Slavic insurrections (such as have dismembered Turkey), north of those rivers in the south of Hungary. The Magyar, who is just preparing to celebrate the thousandth anniversary of the existence of his nation—on the soil of Hungary—knows that the celebration must speedily be followed, if not even preceded, by a deadly grapple of the nation with a foe who intends its total destruction, and is vastly more dangerous than any other has ever been. The Turk and the Austrian, against whom he contended in a thousand fights, were his political foes, foes to his freedom and independence, but not to his race. The Sultans who held Buda for 160 years protected the Magyar princes of Transylvania; the Hapsburgs received the crown from the Hungarian Diet, and have generally been loyally supported by the bulk of the nation. The contests were often chivalrous, and Turk and Magyar liked, and German and Magyar esteemed, each other, and do so to-day. Hungary never feared being crushed by the Turks or Germans, by whom she was invaded but not surrounded. She justly dreads the Slavic anaconda with which Panslavism menaces her. Hence her fretfulness in anticipation of the struggle, her chafing under the Fabian tactics of Kálnoky. But a rash "On to Varna!" might prove as disastrous to-day as it did in 1444, when her King and army fell before that town under the cimitars of the Osmanlis.

THE DECAY OF THE NEW ENGLAND CHURCHES.

SPRINGFIELD, Mass., October 28.

TWENTY years or more of uneventful living have wrought some very eventful changes in the social and religious life of the back towns of New England. Depopulated in part by the railroads and the West, and repopulated in part under the changed conditions, some of them have wandered wide of their Puritan traditions, broken up the old neighborhood associations, and locked up many of their churches. Here can be found dozens of places where the Christian faith, that took early and deep root and grew to fill every nook and corner of the community, is rapidly disappearing, and has little or no part in the present life. Other communities there are that never wandered, but have simply stood still and decayed. They lost their best blood to the cities and the West, and they live but in the most woful depletion. Such melancholy instances can be found in the towns that divide Tolland and Windham Counties, Ct., where the average house represents a century of farm life, with heaps of old decaying chaises and implements of another age piled about it; and where the antique inhabitant, clad in his homespun garb, still toasts his toes before crude fireplaces and his bread in brick ovens. Still another phase of the revolution that is working in these New England country towns is the invasion of the Roman Catholics. These followers of a faith so strange and repugnant to New England history are fairly honeycombing her forgotten places. They are building their churches not alone among the hills, but in the choicer valleys. Take Suffield, Ct., the fairest, richest, and one of the oldest of the Connecticut Valley farming towns. Thirty years ago it was a representative Puritan place, proud of its history, its rural aristocracy, and its wealth. One-third of her best lands have recently been possessed by foreigners, a Roman Catholic church has just been built, and over fifty families now worship in it. In what is called the North School District, where less than thirty years ago a dozen exclusive American families clustered about the little wooden schoolhouse, only a single representative of them now remains—a tottering old man whose fourscore years promise a speedy extinction of the Yankee; their places have been taken by Irishmen. Go from this rich and ancient valley town to rocky Mount Holly, on the tip-top of the Green Mountains of Vermont, and one can complete the picture, for there too has the faith of the Puritan been supplanted by that of the Roman Catholic.

But it is the towns where Christianity is dying out from no apparent cause, and where the churches have been shut up not because there was no one to attend, but because no one would attend—these are the towns that present grave problems to those charged with the spread of the Gospel, problems that are strangely overlooked. There are no statistics to support any general statements, nor are they especially needed. They might register the number of empty and decaying meeting-houses, but no amount of them could register the degree of religious coldness that has been reached. But let no one underestimate the facts or the gravity of the problem, for all these deserted houses of worship mean a social chaos in their little communities. Not one of the six New England States but is spotted with these dark, discouraging places. Let any one inclined to doubt this, look over that section of Connecticut above referred to, bounded on the east and west by the Norwich and Worcester and New London Northern Railroads, and settled two centuries ago by colonists from Roxbury, Mass. Here he can gather a faint idea of the downward march of the religion of those colonists. Within a mile of Stafford Springs he will find their faith largely supplanted by a flourishing society of Spiritualists, liberally endowed and owning a house of worship. All over that country he will find church buildings crumbling and old church societies dead; family after family and hamlet after hamlet that have not seen a church service in years; communities that might as well have been in the middle of the dark Continent, so far as Christianizing influences are concerned. Then let the doubter of all this pass into western Massachusetts, where, all over the hills and all through the valleys, the same causes appear to be at work, and the same effects appear on the surface. Montgomery's two churches, Baptist and Congregationalist, were locked up long ago, and the only religious society in town now is a little band of Adventists, scoffed at by all the neighborhood. Becket's conspicuous meeting-house, that can be seen for miles around, has perhaps a dozen worshippers each Sunday and a Chester dentist for a preacher. The church is endowed, and this is the only way to get at the income. Monroe never had a church until a few months ago, when some Boston missionaries invaded the place as they would a heathen country, made a few converts, and have just built a mission chapel. Plainfield has recently locked up the old house of worship because, I am informed, the people would subscribe but little over $100 to have the preaching continued; and this not because they lacked in numbers, but in spirit. A dozen old Puritan towns about this place are coming or have already come to the same end.

Then let any one go into Vermont. There is Vernon, under the walls of Moody's Northfield schools and in the rich Connecticut Valley, whose people are split up into impotent religious factions that belie their pretended piety by incessant quarrels, and kill out all public worship, save occasional services held by one faction or another under some itinerant preacher. Southern Vermont is full of such cases, where two or more denominations forgot their one mission, fell to fighting over one another's differences, and swallowed each other up. Let him look further north to Andover, Vt., which is about to shut up its only church, that has seen a century of active service; to Sherburne, where meetings were discontinued in the town's churches long ago; to Plymouth, where the two old meeting-houses have long been unused, and most of the people do not attend a church service from one year's end to another; and to scores of similarly conditioned towns all through the State. Then go among the New Hampshire hills and find the same causes and same effects; and even the rich valleys of the State are in like manner affected. A correspondent recently noted several farming towns in the immediate vicinity of Nashua whose old church societies had become extinct and their church buildings locked up, and had not been supplanted by others.

It was while wandering this fall among the hills of Vermont, not far from the village of Ludlow, that I chanced upon a most striking illustration of the tendencies of the times in these more quiet sections of New England. Faint traces of the old military road built just after the French and Indian war from Fort Ticonderoga to what is now Charlestown, N. H., lead one along by the shores of two pretty lakes in the town of Plymouth, up over a hill, and by the doors of one of those grand old meeting-houses built over eighty years ago. Around this house of God lies a rural hamlet whose families still largely represent the early settlers, and whose

name has long been known as "The Kingdom." It is within the memory of the younger men of the place when that church was filled each Sunday by people who came from miles around, and when a minister each Sunday discoursed sound orthodoxy from a pulpit perched high up against the wall on a level with the galleries. But in an evil hour doctrinal differences arose among the sturdy farmer members, coldness and apathy crept in, and the doors of the old meeting-house that had so mightily helped to train up four generations were closed. The next generation was allowed to go to the devil if it would; it does not see a religious service from one year's end to the other. The old church is now only a hollow, ghostly hulk, stripped of its pulpit, pews, and galleries by thieving neighbors for use as kindling-wood, and draped with cobwebs and dust. The wind moans through the shattered windows a perpetual note of ruin and decay.

Now what are the causes of these facts about the churches in the New England back towns and their decay and disappearance? Dr. W. C. Prime, in a recent article in the *New Princeton Review*, notes this religious stagnancy. He tells how, in his travels through these parts, he had happened upon many unused meeting-houses, and many more Sunday congregations spiritually dead and numerically dying. But he gives us no idea of the real trouble. He found one meeting-house mouldering because a row had broken up the society; he found one congregation filled with apathy and littleness chiefly because the preacher was possessed of the same qualities.

He draws no conclusions from the first case because he does not know what caused the row; he draws the broad conclusion from the second that the ministers are largely responsible for this declining piety. And perhaps they are, in great part. The avidity with which they have seized upon "special calls of God to go to larger fields of usefulness," where society and salary hold out also many allurements, has robbed those that are left behind of half their power with the country folk, and has lent a ridiculous aspect to their service in the cause of Christ. But all this does not begin to touch the root of the trouble. Blame rather the various denominations, professing the same Lord, charged with the same mission, and supposed to be imbued with the same spirit, who narrowly allow their own petty dogmatical differences to overshadow all, and by this persistent pulling in different directions deprive one another of great power for good and often swallow each other up. How many country towns there are hereabouts, only big enough to support one large aggressive church, where the Baptists and Congregationalists, by refusing to unite their forces for the one great object of redeeming the neighborhood, fall to the earth together or barely maintain an existence in littleness, weakness, and resulting coldness that redeem nothing. Cummington, Mass., the native place of William Cullen Bryant, possibly affords an example of this. Here live yet in quiet seclusion, undisturbed by the Roman Catholics, the descendants of the Puritans—comprising a thrifty and unusually busy community for one so far removed from railroads. The place is just big enough for one large aggressive church. It has two—Baptist and Congregationalist. But the dozen or more Baptists will no more affiliate with the other denomination than with Roman Catholics. They cannot afford preaching all the time, and so they go without it the most of the time. As far as the good of the community is concerned, they might much better burn the church and disband. But the Congregationalists also persist in keeping by themselves, and they too are weak and growing weaker. And by strangely persisting in this division of strength they are fast losing, if they have not already lost, all power as a Christianizing force in the community. The case of this Cummington Baptist Church came before the annual meeting of the Baptist Association for this region, held last month in this city. It was represented that the society was weak in numbers, in finances, and in spirit, and it needed prayer and sympathy and money, not apparently that the cause of Christ might the better be advanced—no mention was made of that—but "to place the society on an equal footing with the other denominations." Such was the grand object of this skeleton of a church, whose members had rather rattle the few dry bones that are left than to seek new life and power for good in a union with those who baptize by sprinkling. And instead of advising these dozen brethren to sacrifice a little irrelevant difference for the sake of the cause they pretended to represent, and to unite themselves heart and hand with the stronger Congregationalists in the work of reclaiming for Christ that neighborhood which sadly needs such work, the Association had the hat passed around and took up $250, not to start them off in this aggressive coalition, but "to place them on an equal footing with other denominations," to enable them to pull a little more strongly in an opposite direction, that the two might the more equally fall together.

Thus has been uprooted of late in New England many a church society. The churches themselves have been very slow to recognize this fact. Only recently representatives of the Free Will Baptists and Congregationalists, mostly from Maine, met in Boston to see if some plan of union might not be agreed upon that their societies in the country towns might be saved from total extinction. The gathering reached no result, but it got upon the right road. In this direction lies the possible solution of at least a grave social problem.

THE AMERICAN ORIENTAL SOCIETY.

NEW YORK, October 29.
